The Immigration Act of 1924 was passed to prevent a horde of foreigners from flooding our shores and depressing our wage scales. Legislators worked out an equitable system, as far as the nations of the Old World were concerned. It was agreed that America could readily assimilate 150,000 immigrants a year, about one-sixth of 1 percent of our population as reported in the 1920 census. A quota was assigned to each nation, based on the number of residents each had contributed to our population.

But, with the exception of Persia and parts of Afghanistan and Russia, oriental nations received no quota at all. Instead, they were described as constituting the "Asiatic barred zone," and were told to keep out. According to Joseph C. Grew, former ambassador to Japan, it was perhaps the worst mistake we ever made in our relations with the Orient. This gross insult placed a potent weapon in the hands of the Japanese militarists. They used it to promote "Asia for the Asiatics" throughout the Far East.

During the war the folly of asking aid from the Chinese while barring them as racially inferior became so obvious that in 1943 we exempted them from the excluded groups. Later the bans against India and the Philippines were lifted. It is time to wipe our record clean of the remaining blot which mar our relations with potential friends and allies.

On a recent trip around the world I heard repercussions of this short-sighted race prejudice at every stop. In Bangkok a newspaperman said that Communist editors in the Far East constantly told their readers that we consider orientals racially inferior and despise them. An American official in Rangoon declared that the Burmese ask constantly if the status of our "outcast law" has been changed.

"The Communists," said a Korean, "accuse America of fighting a colonial war here. If you extend us a quota, it will help show you mean it when you say we deserve equal democratic rights." In Japan the chief news over Radio Tokyo for days dealt with the hearings in the House of Representatives on a bill to abolish this racial clause.

Correcting these abuses would not result in a large flow of foreigners into the United States. Japan's annual quota would be a mere 185, most of the other Asiatic areas would have 100 each. If every excluded group used a full quota each year, their total would not equal 1 percent of our 150,000 yearly immigrants. In actual practice, the number of arrivals would be even fewer. Qualifications such as literacy, health, and ability to earn a living would keep the number of immigrants from some countries low. In all we could expect each year less than a thousand newcomers, a comparatively infinitesimal number.

Public-opinion polls show that the great majority of Americans, including Californians, do not want any person denied citizenship because of his race. A bill to this effect, supported by church and civic groups and by our Departments of Justice and State, has three times passed the House by unanimous vote, only to be stopped in Senate committee. Representative WALTER JUDN, well-known authority on the Far East, and one of the bill's sponsors, is convinced that if it could be brought to the floor for a vote the majority of Senators would agree with the majority of other Americans.

Before the end of World War II the United States and Nazi Germany were the only two major nations that used race as a test for

naturalization. Now we alone maintain this discrimination. In Asia we face a well-organized minority attempting to unite the east against us. We can show the people of the Orient we stand back of our national pledge of "liberty and justice for all" by welcoming worthy persons and providing them equality under our naturalization and immigration laws. From a purely selfish standpoint, wiping discrimination off the books as well as out of our hearts would be worth more to us in the Orient than a dozen Army divisions.

Address of Secretary Acheson at the Opening of the Two Hundred and Fiftieth Birthday Celebration of the City of Detroit

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the *Record* the address of the Honorable Dean Acheson, Secretary of State, at the opening of the two hundred and fiftieth anniversary of the founding of the city of Detroit, Veterans Memorial Building, Detroit, Mich., on Tuesday, July 24, 1951:

LOOKING AHEAD

Mr. Chairman, I am honored to be here today to take part in Detroit's two hundred and fiftieth birthday party.

This is an occasion of importance—to our country and to the world, as is evidenced by the presence here of the distinguished Ambassadors of Great Britain, of France, and of our next-door neighbor, Canada. Their presence reminds us of the many contributions their countries have made to the fabulous growth of this community.

We are also honored tonight by the presence of Dr. Ralph Bunche, citizen not only of Detroit, but of the world.

Two hundred and fifty years ago, this 24th of July, Cadillac brought ashore his 100 men to build a fort where Detroit now stands. In the language of our reports from the front this might be called establishing an outpost in platoon strength. But this would wholly miss its significance, and his own idea of what he was doing.

In the narrow strait commanding the passage between the two great lakes of Erie and Huron, Cadillac saw a secure position, a commanding position, an economic position for trade and commerce. And he saw all of this with the eyes and mind of a pioneer—shrewd, aware of dangers, aware of opportunities, but dominated always by the driving power of an idea—the idea of discovery, of building, of creating, of enlarging, of leaving behind him something new and challenging and alive—something which would change the whole life of man on this globe.

To the pioneer, security came first. He knew the dangers beyond every bend in the river, behind every tree. He had seen hundreds of charred or smoking ruins and the horrors around them. He kept his equipment operational and his powder dry. He understood propaganda, although he didn't know the word. Whatever the word was, it didn't fool him. Most of his people made bullets, sharpened their cutting weapons, built forts and mounted guard while the others cleared the fields, cultivated them, and traded. If the military program failed everyone got killed.

Cadillac was building for a future greater than he could have known. How little could he have foreseen the majestic and powerful community which Detroit has become, a symbol to all the world of the New World's industrial might.

We, too, are pioneers. We, too, are making beginnings that arch into the future beyond the limits of our vision—the beginnings of a world secure, free and infinitely productive. Like the founder of Detroit, we draw upon our faith in the future to meet the dangers of the present.

Here in the heart of this Nation's great productive power is a fitting place from which to look ahead to the job that faces us in the world. For the factories of Detroit, built by American labor, commerce, and industry, symbolize the power of American production which may tip the balance of history in our times.

For us, as for all pioneers, security comes first.

We are in great danger, greater perhaps than many Americans now appreciate. This danger is not less than it was a month ago, although some of us seem to think so.

You may recall Aesop's old fable about an argument between the North Wind and the Sun. They were trying to see which one could take off the coat of a man who happened to be passing by.

The Wind tried first. It blew and blew, and the icy blasts made the poor man shiver with cold. But the more the Wind blew the more the man clutched his coat about him, and finally the Wind gave up.

Then came the Sun. Out from behind a cloud it came, and shone gently and warmly.

And the man, of his own accord, removed his coat.

This fable illustrates our present danger. The icy blast of Korea made many people realize the need for building our strength. But, as soon as the slightest break in the clouds appeared, some of our fellow citizens were ready to relax into the nearest rocking chair.

In Korea, General Ridgway and his command are alert against a trap.

But are we alert against falling into a bigger trap here at home? Will the warm sunshine of a false propaganda "peace" campaign lead us to think that our problems are solved and that we can safely let down our defense effort? That would be a dangerous and costly mistake.

Whether or not an armistice results from the talks in Korea, the fundamental job ahead of us will not change.

The attack on Korea brought home to many of us the readiness of the Communists to risk war. And it gave an impetus to our arms-building program. But it was not Korea alone that was the reason for our defense effort.

Whether or not there is peace in Korea, whether our adversaries are cooing like doves or growling like bears, our job remains the same. The threat we face remains the same.

The world has never known a more ruthless or more powerful challenge to the independence of nations and the freedom of men.

The tactics of the Kremlin are flexible, and may change from season to season. But so long as its power is of threatening proportions, and so long as it does not show a willingness to work for a stable and peaceful world, the danger to us remains.

We must move ahead steadily and firmly to build our strength, regardless of what tune the Soviet Union happens to be playing at the moment. In that strength lies our only security. We must not be distracted from it by the switching-on of a Russian lullaby.

Neither war nor weakness is the way to meet the Soviet challenge. We will counter force with force, if necessary, but war does not solve problems—it multiplies them. Weakness, on the other hand, would lead to defeat, with or without war. Between these

two extremes lies a middle course, which seeks to block Soviet expansionism without war, by building an effective system of collective security, and by making it strong. This is the course we are following.

The job before us—the great rearmament effort of the free nations—has an urgent priority, if we are to reduce the risk of war and pass safely through the dangers of these next few years.

The danger of war and of disintegration will continue until the free nations have fully repaired their military weakness. It must be understood that weakness not only invites attack; what is even more menacing, it paralyzes the will to resist and makes for political disintegration.

The massive effort which is just now gaining momentum in our country and among our allies to build up our armaments is not an endless job, nor one without limits. It has specific goals, both as to amounts and as to time.

What we are building is an adequate deterrent force against military attack. We already have the means to guarantee that a general military attack against us would be costly to the aggressors. We must now achieve a force of sufficient size to make it plain that such an attack could not succeed.

How big does this force need to be? Our best military experts, working together with those of our allies, have developed strategic plans which estimate the numbers of men, planes, tanks, guns, and so forth, which we and our allies need to insure that a Soviet attack upon us could not succeed.

We do not have to match the Soviet armies man for man, or gun for gun, since our mission is to deter, not to attack, but we have a long way to go before we reach a safe deterrent level.

Communist armed forces at present total some 9,000,000 men. The Soviet Union has more than 4,000,000 men under arms. Chinese Communist forces exceed 3,500,000 men. The European satellite regimes have nearly 1,000,000 men.

The Soviet Union has more than 260 divisions, fully mobilized. In addition, the Soviet Union has a trained reserve of massive proportions. The Soviet air force is the world's largest in peacetime, with more than 20,000 first-line aircraft, a large proportion of which are jets of excellent quality.

What these figures mean for us is that we have a long way to go before we can breathe more easily.

Let's look at what we are doing to reduce as quickly as we can this risk of war.

First of all, we are building strength at the center. We are mobilizing the great strength of the United States so that we will have readily available forces, and a production base that will enable us to expand rapidly if necessary.

Within the past year, we have advanced the timetable of this effort, but it is still short of what we must do. If we are to meet our minimum goals, we will have to do more than we are now doing. And it may be necessary to raise our sights to higher goals.

This is a job which needs to be done co-operatively with our allies. We cannot do it alone, or without an effective organization of the total allied effort. Side by side with our defense program at home, therefore, we are helping to build a force in being in Europe.

Under General Eisenhower, the integrated force of the North Atlantic Treaty Organization has been moving rapidly from a paper organization to the beginning of a real defense system. The command structure is functioning; actual divisions are under his command; new divisions are being formed and trained; the nucleus of his tactical air force is conducting maneuvers. A program for expanding the network of allied tactical air bases in Europe has been launched.

The North Atlantic Treaty Organization has come to grips with the problem of developing the military production potential of Western Europe. We are working together to lick the financial problems, the raw material problems, and the many other problems which must be overcome in the process of building strength together.

We are greatly encouraged by the progress our European partners are making in strengthening their unity of operation. Many of us do not realize what progress has been made toward European unity in just the past 2 or 3 years.

The North Atlantic Treaty idea of pooling military strength is a revolutionary peacetime accomplishment. At Paris, several of the European nations are now in conference seeking to carry this principle further forward by establishing a single European defense force. We are deeply concerned with the success of this conference, and we are doing all that friendly cooperation can do to help it succeed.

This effort is of a piece with the bold vision and promise of the Schuman plan—which will pool the coal and steel industries of Western Europe.

The vast free market of the United States, which allows raw materials and human skills to be used efficiently, has shown us the value of breaking down local trade barriers. We do not have one automobile industry in Texas and another in North Dakota and another in Florida. We build steel mills and parts factories and assembly plants wherever they can efficiently serve the entire country, without regard to State lines. The Schuman plan is a step in this direction in Europe.

By such steps as this and the proposed European defense force, we believe that our European partners can continue to move toward greater unity and greater strength.

Although our joint progress toward an effective defense force in Europe has been considerable, it is not enough, when measured against the goals that are necessary to insure our common safety. No one can be satisfied with the progress so far made. A greater effort is required, from us and from our allies. This effort must be measured according to our economic capacities since economic health is an important foundation for defensive strength.

Along with our effort at home and in Europe, we are also seeking to build other situations of strength in Asia, the Middle East, and other parts of the world, as a bulwark against further advances of Communist imperialism.

The treaty of peace with Japan will be taking concrete form in a little more than a month, and it will be followed by security treaties with Japan, and with Australia and New Zealand. These are in addition to our long-standing commitments to the Philippines, whose security is as much our concern as the defense of our own land.

What we are now doing, in this total effort at home and in various parts of the world, is building up the capital equipment of a defense system. We started with very little, and several years of very hard effort are before us—even harder than we have yet put forth.

But the greater our effort now, the more rapidly will we pass through the present period of maximum danger.

When we have achieved our goals, when we have acquired the capital equipment of an adequate defense, we must not again be foolish enough to destroy it, to relax our guard. Once the capital cost has been met, military expenditures and military aid programs will be substantially less. Once a level of defense has been achieved which should deter any power from plunging the world into war, the task will shift from creating defenses to maintaining them. But they must be maintained, and fully maintained.

Until we reach that point, it would be as dangerous to relax our effort as it is to fall asleep in a blizzard. This is something we must all of us understand thoroughly, so that no one will be able to lull us or divide us, or in any way keep us from building the strength and unity which spell safety for us.

When we have a stout shield of defense, our problems will change, and become more manageable. So long as the Soviet regime remains what it is—committed to the aim of world communism directed from Moscow, dedicated to a fundamental hostility against states that are not subservient to its will—we cannot ever afford to become less vigilant of our freedom.

The danger of war may be reduced, but the struggle will continue. The Soviet threat is much more than a military one, and we can expect that the effort to subvert free peoples, to lure them into captivity with empty promises of a better life, will go right on.

Therefore, we must continue to offer real leadership toward the kind of life that people want. Behind the protection of our military shield, we can increase our cooperative efforts toward higher living standards and toward economic development.

We would also be able to give much more help in other problems beside those created by the Soviet Union—in such problems as arise from the awakening of the vast populations of Asia and the Middle East, and their desire for national self-expression and for the improvement of their conditions of living.

Our practical help to the people of the Middle East, of Asia, and of Latin America can be both to their interest and to ours. For it is crucial to the future peace of the world that these turbulent and dynamic forces emerge in forms that will be constructive and truly progressive.

We are the natural allies of these peoples. We have with them a common interest in peace, in progress, and in freedom. We can enter with them into a partnership of peace.

As we carry forward these activities, and as we maintain our military shield, the temptation for the other side to use force will be reduced. Instead, they will be more willing to begin the peaceful adjustment of some of the issues. It will be to their, and to our, self-interest to do so.

We are of course prepared to undertake such adjustments at any time. We would welcome any genuine opportunity to reduce the level of tension in the world—but we must always be alert against the baited hooks of phony propaganda.

The ultimate purpose of all these efforts—whether military, economic or political—is to bring a realization in the Soviet Union that no one power is going to dominate this world, and that it would be foolhardy for any power to try to do so.

When this realization sinks home in Moscow, we can begin to hope for those changes in the Soviet regime which will make for a more peaceful world.

What sort of changes do we need to look for?

It is not that we want to compel other countries to adopt our form of government or our economic system. What we are concerned about is whether their system is one which inevitably attempts to dominate other people.

If the Soviet Union is to become a friendly member of the world community—within the meaning of the Charter of the United Nations—there must be real evidence that the Soviet rulers have renounced their hope of world domination, their dedication to the forcible overthrow of other governments, and the isolation of their people from the outside world.

No one can now predict how or when such change may come about. We must be prepared for the possibility that it may take many years.

We know that many strains and tensions exist within the Soviet world. We know that such things as the perpetual mobilization of the people, the suppression of national freedom in the satellite countries, the inevitable frictions of police-state rule, all must have, over a period of time, a significant effect. Ultimately, these factors, when added to the realization of the Kremlin that intimidation, falsehood, and the sowing of confusion can be neither successful nor profitable, may bring about a change in the Soviet system, which, in turn, will reduce the fear of war in the world.

The Soviet rulers are aware that we shall have to overcome difficulties of our own in the meantime. The maintenance of even a limited mobilization level also puts strains on us. The Communists are counting on these strains to make us tire of our burdens, to break our nerve, to bring about our collapse, to break down our economic system, and to weaken our political institutions. They stand ready to profit by any weakness which we might show.

But we confidently believe that time is on the side of freedom so long as we make good use of it. We can meet the test of time better than they can. We have faith that free societies can outlast, outproduce, and outbuild a police state, and can better stand the tensions of partial mobilization. We of the free world have geography, resources, manpower, and moral values on our side. So long as we also have a firm and resolute will, we shall come out on top.

This is the picture of what we face. The prospect may be hard and long. It may mean many more sacrifices for us, more shortages, higher taxes. But there is no easier way through the dangers of the present. If we shirk it, the alternatives are war or surrender.

You all remember the poster which said: "Uncle Sam needs you." And the finger of Uncle Sam pointed at each of us, and followed us. This, too, is a job for all of us. There is no man or woman in America so important, or so unimportant, that he can shrug his shoulders and say: "Let somebody else do it." Whether you work with a wrench, a gun, a hoe, or a pencil, you are an important part of this job.

Today as in the time of Cadillac, the real strength of our free society in an emergency is that the individual free men and women pitch in and deliver the goods.

Make no mistake about it—this is an emergency, an emergency as great as any our country has ever faced.

We shall need a new birth of patriotism, above our personal interests and our party loyalties—a patriotism which is strong enough and mature enough to inspire us for the long haul.

We shall need the kind of faith that gave courage and strength to the pioneers of America.

We need a faith that can look ahead and see a job that may take years, which surely will take patience, moderation, restraint, steady nerves, and lots of effort—a faith that will say: "We can do it."

Question of the Week

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. BENDER. Mr. Speaker, if our United Nations allies are ready to accept Red China into membership, what does Secretary of State Acheson do?

Price-Control Regulations

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. MOULDER. Mr. Speaker, under unanimous consent and leave to extend my own remarks in the RECORD and include therein a letter from B. W. Harwood, owner and operator of the Harwood Hotel, Camdenton, Mo., I first state that I favor and have supported and voted for the bill to extend the Defense Production Act, and all other proposed acts of Congress to provide for the prevention of exorbitant and inflationary prices. However, regardless of our acts and passage of such laws, the bureaucratic administrators formulate and promulgate such ridiculous, impractical, and complicated orders, rules, and regulations thereunder, which irritates and agitates the people and destroys the effective purpose of the price-control laws passed by Congress. The following letter from Mr. Harwood is an example:

HARWOOD HOTEL,
Camdenton, Mo., July 16, 1951.

HON. MORGAN MOULDER,
House Office Building,
Washington, D. C.

DEAR MR. MOULDER: As you know, I have owned and operated the Harwood Hotel Restaurant here in the Missouri Ozarks for the past 20 years. We have quite a business here and folks drive here from miles around to enjoy our good country food.

It now looks like all the folks are going to be powerful disappointed when they get here if all these regulations I have been getting from Washington mean anything.

Here is what people like me are up against. I would like to have your ideas as to what I should do. I hate to close the place up but I can't operate under the present rules and regulations.

For example, I quote a miscellaneous amendment from Ceiling Price Regulation 25, amendment 1. This seems to deal with the deckle on a piece of corned beef. It says, "The hard fat along the sternum edge (the area on the bone side of the brisket which is adjacent to and directly under the sternum bone) of the boneless brisket shall be trimmed level with the boned surface of the brisket and to within $\frac{1}{2}$ inch of the lean lying between this hard fat and the border of the skin surface fat." This amendment also states, "The web muscle (full lip) shall be left attached with the thin narrow edge, trimmed to expose the narrow portion of lean meat."

Now, Mr. MOULDER, after reading that one, I am sure in a fog. I showed it to my cook and right then and there she threatened to walk out on me, and good country cooks are hard to get these days. She said she had no idea where the sternum bone on a piece of corned beef is located and neither do I. She also said that if the web muscle had to be left attached to the lip it sure would not look like much on the blue-plate special.

You will also note on this regulation 25, amendment 1, a great deal of reading about udders and tails. We have never done a big udder or tail business, but maybe we could try. I wonder how a big juicy udderburger would appeal to the customers. I can just hear the children saying, "Mudder, can I have an udder udder?"

It looks like the days of the good old country ham and red-eye gravy will just be

a pleasant memory. The customers will have to be satisfied with a good portion of baked tail.

I notice there are still some things we can serve, however. You will note in regulation 14, amendment 3, dated May 18, 1951, it says—I quote under item 36—"Excluded are truffles, capers, canned snails, sugar, Easter-egg dye, and rattlesnake meat."

So when you next come in to see me, better brace yourself. Looks like you are due for a big dish of canned snails, truffles, and rattlesnake meat. There is nothing better, I guess, than a big, rare rattlesnake steak.

Now you know me pretty well. Please write to me and tell me, Am I going crazy? Or maybe someone else is wrong.

Yours very truly,

B. W. HARWOOD.

C. J. Ryan, Secretary to Congressmen

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. SADLAK. Mr. Speaker, this morning as I came into my office, my secretary handed me an excerpt from last night's Star. A glance at the heading provided the shocking news that a friend of many years would visit me no more. I first became acquainted with Charles Ryan when I came to Georgetown as a student in the fall of 1926 and I made the first visit to my Congressman. At the office of Congressman Richard Freeman, I met his secretary, Mr. Ryan, and during the course of my studies which coincided with his secretaryship, Charley, as we all knew him, accommodated me many times with books, documents, pamphlets, and data which were most helpful to me. This friendship grew closer when I came to Washington as a secretary and Mr. Ryan visited me since he was a constituent of my boss. As fellow secretaries we had worked closely together and when I became a Member of Congress Charley Ryan was among my frequent callers and one who always brought helpful suggestions. The article to which I referred at the outset gives a résumé which I desire to have included with these remarks as it will tell to many of Charley's friends on the Hill about his untimely demise and relates his association with the various Members of the House whom he had served during these years. I noted at the funeral this morning a delegation of secretaries and our former colleague, Harve Tibbott, with whom Charley had sealed a bond of loyalty and friendship.

C. J. RYAN, SECRETARY TO CONGRESSMEN

Charles J. Ryan, 54, secretary to several Members of Congress during the last 28 years, died Monday after a 6-month illness at his residence, 3726 Seventeenth Street NE.

A native of Connecticut, Mr. Ryan first came to Washington as a secretary to the late Representative Richard P. Freeman, of that State. Born and reared in Stonington, he was in the real-estate and insurance business before coming here.

Mr. Ryan was with Mr. Freeman for 10 years. He later served as secretary to Representatives Dr. William L. Higgins, of

Connecticut (1933-37), Harve Tibbott, of Pennsylvania (1939-49), and Robert W. Kean, of New Jersey (1949-50).

While secretary to Representative SHEEHAN, Republican, of Illinois, this year Mr. Ryan was forced to retire because of ill health.

Mr. Ryan attended the National University Law School and Georgetown University. He received his law degree from Georgetown in 1930.

He is survived by his widow, Mrs. Esther O'Connor Ryan, of the home address.

Prayers will be said at 9:30 a. m. tomorrow at the residence. Requiem mass will be at 10 a. m. at St. Francis De Sales Catholic Church. Burial will be in Fort Lincoln Cemetery.

Hitler's Heritage Stalin's Undoing

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. SIEMINSKI. Mr. Speaker, Hitler rattled his saber, drew it, fell on it, and died. Stalin holds Hitler's saber. It will prove his undoing.

The diplomacy of the United States has placed the Communists in a tough spot in the Far East. I should like to quote an editorial in the Bayonne Times dated Tuesday, July 24, 1951:

THE REDS' DILEMMA

The diplomacy of the United States, about which it is eternally fashionable for Americans to be shy and deprecatory, has placed the Communists in a pretty tough spot in the Far East. When they return tonight to give their answer on whether negotiations or war will proceed they have a choice between (1) breaking off the negotiations on what is obviously a trumped-up issue, and (2) knuckling under on still another point.

The no-foreign-troops question is a trumped-up issue because it has been a Communist demand from the first day that Malik returned to the Security Council last August. At that time he got the United Nations answer, that the UN cannot pull its troops out of Korea until Korea's neighbors, China and the Soviet Union, prove they can be trusted. The answer is still the same, and the Communists know it. If on June 23 Malik made his proposal on the cease-fire at the thirty-eighth parallel with such a condition as this in mind, then the Communists have plainly been trying to attain by trickery what they have been able to get by neither war nor diplomacy. If the war is resumed because of a breakdown on this point, it is hard to believe that even the most loyal Communists will miss the fact that here, again, we have had a case of Communist double-dealing.

But suppose the Communist negotiators troop back to Kaesong tonight to yield on this point. Then their situation is different, but still bad. The Communists thought they were being smart when they led the people of the Soviet Union, China, and the captive countries to think that the United States and the UN were suing for peace. But if they now yield on the troops issue, as they yielded before on making Kaesong a neutral city and on the admission of UN reporters, what becomes of all their big talk?

Maybe it's time for us to be a little less defensive about our foreign policy. Perhaps we can even afford to bring a little.

The Port of New York-New Jersey Authority

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. SIEMINSKI. Mr. Speaker, the Port of New York Authority should be renamed the Port of New York-New Jersey Authority because so many of its operations take place on the land and coast of New Jersey. The time has arrived for this not-so-benevolent sharecropper, the Port of New York Authority, to consider the economic welfare of the people of New Jersey and especially those of Hudson County.

I refer to an article on the port of New York in the June 1951 issue of Fortune magazine. It renders high praise to the efficiency of the personnel on the Port Authority, but it scolds the city of New York for falling asleep at the switch of progress and letting its port facilities go to pot. Baltimore and Philadelphia are outpunching New York for new shipping business. The people on the Jersey shore line are victims of New York's port going to seed.

If the name of the Port of New York Authority were changed to include New Jersey, I am certain the port of New York would straighten up and fly right.

Mr. Speaker, I intend to develop this topic from time to time.

Know Your Waterways

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I wish to submit an article by the Marine News, of New York, published in the Washington Post, of even date, as follows:

KNOW YOUR WATERWAYS—A LOOK AT THE RECORD

Sites were chosen along the Delaware River recently for two great new steel plants. Already one of the busiest inland waterways of the Nation, the Delaware is becoming a greater national asset with each passing year. The proposed deepening to Trenton will add tremendously to its usefulness.

Tows of more than 6,000,000 gallons of petroleum products from along the Gulf Intracoastal Waterway are reaching industry and private consumers along the entire Mississippi-Illinois waterway system as far north as the Chicago, and St. Paul-Minneapolis areas. The improved Monongahela River is tremendously important to the Pittsburgh steel-making area. The Great Lakes waterway system, with its locks, harbors, and connecting channels, is the greatest waterway asset in America. The improved St. Marys, St. Clair, and Detroit

Rivers are the busiest waterways in all the world. With a season of only 7 to 8 months they each handle more than twice the combined tonnage of the Suez and Panama Canals. Every American ship and navy yard is on a Federal waterway.

The Gulf Intracoastal Waterway grows in importance year after year. Of 36 United States ports handling more than 3,000,000 tons of cargo annually, 10 are along the Gulf Intracoastal Waterway. Houston, with its 55-mile deep-water channel to the Gulf, is the third largest port in the Nation.

These are but a few examples of some important present-day waterways, parts of which at one time or another were dubbed by some as pork-barrel projects. Provision for their construction and maintenance was included in a bill which is derided year after year as the "pork barrel" river and harbor bill. (Marine News, New York, N. Y. George H. Palmer, president and publisher.)

Information Specialist, What's That?

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 9, 1951

Mr. BENDER. Mr. Speaker, you remember the period when undertakers became morticians and painters became interior decorators. About the same time, newspapermen became information specialists.

In the Federal Government, publicity men decided that this was a good title to mask propaganda. Today, no Federal agency is complete without a goodly number of information specialists who pound away at typewriters, whir the mimeograph machines, and pour out "dope" by the newsprint ton to an eagerly waiting world. Nine-tenths of their effusions get into the nearest wastebasket.

A joint conference committee on appropriations has recommended a 25-percent reduction in budget estimates for salaries paid to Government press agents and information specialists. In one department alone, the Pentagon Defense Department and armed services offices have an annual payroll of \$1,484,853 for these specialists. This is an increase of more than \$1,000,000 in the last year. Five hundred and twenty-five people are on the payroll in this department of public relations, 200 more than last year. Besides this the Army and Air Force in the last year have dished out \$5,868,000 to private business for advertising and promotion purposes. This includes the distribution of handouts to newspapers, magazines, radio and TV stations. One drive costing \$66,000 in a single contract was directed at influencing the ladies to join the services.

Isn't it about time we stopped wasting money for purposes like these? The Army, Navy, and Air Force don't need propagandists. They have written their record in American history. There is no sense in creating nice, soft jobs for some people at our expense.

The Southwestern Power Administration: A Case History in Plunder by Bureaucrats

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Economic Trend Line Studies:

THE SOUTHWESTERN POWER ADMINISTRATION: A CASE HISTORY IN PLUNDER BY BUREAUCRATS

To those who follow closely congressional appropriation hearings, it has been evident for many years that bureaucratic officials, in a great many instances, are much more interested in expanding their personal power than in performing a public service. Congressmen, even though they desire to protect the public interest, do not have the time or the facilities to carefully consider the hundreds of requests for funds. This situation permits unscrupulous public officials to request unreasonable appropriations, thus aggravating the serious problem of governmental waste. A good case history of this plunder is provided in the development of the Southwestern Power Administration and its entourage of lawyers, engineers, and bureaucrats who seek ever greater domination over the electric power industry in Missouri, Arkansas, and Oklahoma.

In order to appreciate the background of the current situation, it is necessary to go back to the Rural Electrification Act of 1936. This was a very sound piece of legislation and had the approval of farmers, farm associations, and several private utility companies. The act provided for loans to co-operative associations organized to furnish electric energy to those rural areas not receiving central station service. The provisions carefully excluded any Federal agency or bureau from using funds to enter into competition with local borrowers or private industry. No generating plants or transmission lines could be built without the approval of the proper State regulatory body. It was clearly the intent of Congress in this law to confine rural electrification to home rule and protect existing private electric industry.

The Flood Control Act of 1944 was another law pertaining to the generation of power. This legislation was enacted to enable the War Department to dispose of incidental electric energy generated at multiple-purpose dams where the primary function was flood control, irrigation, or navigation. Again, Congress set up in the law adequate safeguards for private utility firms. Rates charged for power were to be high enough to provide for all operating expenses, amortization, and interest on the projects. All funds collected were to be turned over to the United States Treasury in a trust fund in order to assure that taxpayers in Maine, Florida, and California would not have to subsidize cheap electricity in the Midwest. The Department of the Interior, which was authorized to dispose of the power, was specifically prohibited from building or acquiring transmission lines except where such lines were necessary to make power available to appropriate agencies.

Despite the specific limitations on bureaucratic action and the protection afforded to private electric facilities in these two laws, a concerted move has been under way for 10 years to cripple private companies and satisfy the greed of public power fanatics. In

1941 the Rural Electrification Administration and the Federal Works Agency, together with certain elements in the White House, literally stole Pensacola Dam from its rightful owner, the State of Oklahoma (over the protests of the State's governor) and proceeded to build 193 miles of transmission lines to serve an area already served at Lake Catherine, Ark. Mr. Douglas G. Wright, present Administrator of the Southwestern Power Administration was placed in charge of Pensacola Dam.

In 1943, when dams at Norfolk in the northern part of Arkansas and Denison Dam on the Red River between Oklahoma and Texas were completed, the Southwestern Power Administration by presidential edict, was established with Mr. Douglas G. Wright as Administrator. Also, in 1943, prior to the passage of the Flood Control Act of 1944, with its provisions for depositing all funds derived from the sale of power in the Treasury of the United States, the bureaucrats succeeded in getting a very innocent sounding amendment passed to Public Law 216, Seventy-eighth Congress, first session. This amendment provided for a continuing fund of \$100,000 to be made available to the Southwestern Power Administration "to defray expenses in connection with emergencies and to provide for continuous service." During the period from 1943 to 1950, it was not necessary to spend 1 penny out of this "continuing fund" as all expenses of the Southwestern Power Administration were provided by annual appropriations by Congress.

By 1946 the bureaucrats and their political cohorts evidently felt that the time was ripe to smash completely the legal restraints placed on them by Congress and destroy the business managed electric companies. In that year, the Department of Interior brazenly came before Congress with its request for its so-called comprehensive plan covering the area of Arkansas, Oklahoma, and parts of Missouri. The plan called for an expenditure of \$223,000,000 in Federal funds for the construction of 18,000 miles of transmission lines and some 850,000 kilowatts of steam generating capacity.

Fighting for their right to continue in business, the electric utility companies appeared before Congress in opposition to the plan, pointing out that it would duplicate every foot of transmission line of the twelve companies supplying the area and place the Government directly in the power business. Congress refused to enact the plan, but permission was granted to build one transmission line connecting the Norfolk and Denison Dams. The project cost \$7,500,000 compared with the request of \$223,000,000.

Undaunted, the Department of Interior came back to Congress in 1947 and requested \$30,000,000 for transmission lines. The Department officials confessed they had overstepped their authority in asking for the original grant. They were so sorry for their request Congress again refused to grant funds. However, in 1949 the appropriation was pushed through Congress with the aid of Fair Deal legislative support. Also, in the same appropriation bill, an amendment was introduced to raise the continuing fund of the Southwestern Power Administration from \$100,000 to \$300,000. There was absolutely no need for this action. A continuing fund is promptly replenished as soon as expenditures are made, and when such a fund becomes a part of an appropriation bill, payments may amount to billions of dollars per year. In essence, it is a blank check to its beneficiary.

Now the Department of Interior and the Rural Electrification Administration were prepared for a battle of extermination against private power companies. Through the efforts of the National Rural Electric Co-operative Association supercooperatives were

formed in Missouri, Arkansas, and Oklahoma. Various loans in the order of \$10,000,000 and \$20,000,000 were requested by each of these cooperatives from the Rural Electrification Administration. Some loans were made to construct generating capacity of three to eight times the requirements of members. Also, thousands of miles of transmission lines were projected. Contracts were entered into between these supercooperatives and the Department of Interior, providing for the sale of the entire output to the Department of Interior (Southwestern Power Administration). To all intents and purposes, both the generating plants and the transmission lines upon completion become the property of the Southwestern Power Administration. This scheme was contrived despite the specific disapproval of Congress under the provisions of the Rural Electrification Act of 1936 and the Flood Control Act of 1944. In passing, it should be noted that the contracts between the cooperatives and the Southwestern Power Administration provide for rates about 5 percent higher than existing rates of private utility companies to these same cooperatives.

The only block to date in this nefarious alliance to plunder the Federal Treasury and ruin private industry is the certificate of convenience and necessity which must be issued by the Arkansas Public Service Commission. Final action, as of this writing, has not yet been taken on the application.

This story constitutes one of the boldest plans ever placed in operation by greedy bureaucrats to use Federal funds to expand their own power and influence. The proposals and actions have been arbitrary and against the clear intent of the law. Millions of dollars have been spent and appropriated without consideration of economy or justification for service.

Mr. H. Stephen Raushenbush, a distinguished Socialist and former head of the Power Planning Division of the Department of the Interior, made this pronouncement:

"While the long-time aim of the liberal and radical groups is the abolition of the profit system for private use, our present strategy should be to take every opportunity to prove that there is something better than the profit system. Within the next 10 years we are going to have a chance such as we have not had in the last 40."

Then, after the completion of the socialization of the electric utility industry:

"We must force our experts on agriculture, trusts, coal, power, subways, housing, milk, etc., to tell us correctly which the next steps are and identify ourselves with their success."

Undoubtedly, Mr. Raushenbush's statements are still shared by some members of the Department of the Interior. They are also shared in Moscow.

The story of the Southwestern Power Administration is a story of socialism in action. It is also a chapter in greed and power hunger of bureaucrats and their self-seeking lawyers and engineers, the public servants paid by American taxpayers.

Earl Warren's Record Makes Him Popular

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JOHNSON. Mr. Speaker, a Gallup poll recently conducted "from Maine to California" showed that, if Governor Warren, of California, and President

Truman were running for President, Warren would get 52 percent of the votes, and Truman would get 29 percent, the remaining voters being undecided.

Among independent voters, where a candidate must get his votes to win, Warren would get 53 percent; Truman would get 18 percent; the remaining votes being undecided.

Why this fine showing? It is because of Governor Warren's magnificent record as a public official; attorney general and Governor. He has handled the problems of California with consummate skill during 10 trying years when California's population was increased by 4,500,000. His appointments were good; he got along with the legislature; he balanced the budget; he set aside a sizable sum of money for a "rainy day"; in short, he did such a good job that the people returned him to the governorship three times by overwhelming majorities. He attracts a tremendous vote because he is an outstanding executive and he has the human touch as well. The overwhelming majorities which Warren has received indicate the confidence the people of California, of all shades of political opinion, have in his record as Governor.

Executive Requests for Appropriations— Proposed Amendment of Legislative Reorganization Act of 1946

EXTENSION OF REMARKS OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, July 27, 1951

Mr. O'MAHONEY. Mr. President, the Baltimore Sun of July 26, 1951, carried an editorial commenting most favorably upon the bill introduced recently by the senior Senator from Arkansas [Mr. McCLELLAN] and the junior Senator from Michigan [Mr. MOODY] to amend the Legislative Reorganization Act with the purpose of holding Government expenditures to a minimum. Both the bill and the editorial deserve the attention of the Senate, and I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PLAN TO CONSERVE THE TAXPAYER AND HIS DOLLAR

The latest congressional effort to get on top of the legislative budget problem is S. 913 which Senators McCLELLAN and MOODY are pushing. Technically the new bill would be an amendment to the legislative budget section of the Legislative Reorganization Act of 1946. Its purpose is not as ambitious as the full-dress balancing of expenditures with revenue contemplated in the Reorganization Act. What Messrs. McCLELLAN and MOODY are trying to establish is merely a joint committee to exercise a sharper selectivity in the Congressional judgment of appropriation requests from the executive branch.

The problem at which the Senators are shooting is inherent in the nature of our

Government. The executive agencies tend to be manned with more or less permanent personnel. The hot shots at the top of these agencies and the specialists in the lower echelons have years of experience in their field. The best of them are always under temptation in the defense of pet projects to try to hoodwink the less seasoned Congress people who come and go with the fortunes of elections.

The result is that Congress, under always heavier pressure to economize, sometimes doesn't know where the really soft spots in proposed spending schemes are to be found. Across-the-board cuts of 5 percent or 10 percent are often necessary and might well continue to be necessary under the new McClellan-Moody plan. But the Messrs. McCLELLAN and MOODY hope that by a more selective examination of executive requests they might be more able to spot waste and so protect the really useful spending plans.

So the McClellan-Moody joint committee would be drawn from the Senate and House Appropriation Committees, and armed with a permanent staff of budgeting experts. These specialists would have the seasoning and the experience to stand on equal terms with the permanent experts from the agencies. They would have sweeping powers of inspection of agency records and estimates. The hope is that they would in time meet the executive-branch experts on their own ground and signal their Congressional principals when to use the ax on the phony spending proposals.

All such schemes are an effort to tighten the historic legislative control of the purse strings. In a time of \$60,000,000,000 budgets with \$90,000,000,000 budgets looming, the public will demand the most careful study of all these plans for conservation of the taxpayer and his dollar.

Assistance to Foreign Countries and the Kem Amendment

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, July 27, 1951

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "They're Lions at Home," published in the Omaha (Nebr.) Evening World-Herald of July 20, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THEY'RE LIONS AT HOME

Some weeks ago Congress passed the so-called Kem amendment which forbids the administration to extend American economic aid to countries which carry on trade behind the iron curtain.

The purpose of this amendment was clear. Congress wanted to serve notice on the beneficiaries of American hand-outs that henceforth they will not be allowed to work both sides of the street. They will not be permitted to accept free merchandise from the United States and then pass it along, in the channels of trade, to countries which are avowed enemies of the United States.

The administration fought this amendment bitterly. It contended that such a law would cramp the style of the advanced thinkers who dole out America's billions overseas, and would make it impossible for them to act in accordance with their unparalleled wisdom.

So Congress made a concession. It provided that the ban could be set aside in any specific instance certified by the National Security Council.

Shortly after the Kem amendment was passed the NSC took advantage of this provision in an astonishing way. It set aside the entire amendment for 90 days. And at the same time it announced that two countries—Austria and Norway—had been granted permanent exemptions.

This week the NSC certified another permanent exemption—for India.

The reasons offered in this instance were truly remarkable.

The NSC set forth that the recent food loan to India had made that country more friendly to the United States, and that cutting of aid now would "reverse the trend." And it added, completely dead-pan, that:

"It is not likely in any case that India would adapt its trade policies to obvious American pressure."

Here is another revelation of Washington's appeasement mentality. As has been the case in Korea since that war began, America's spokesmen are afraid to stand stoutly and proudly for the interests of this Republic—for fear they may hurt the feelings of some other nation.

And in each instance the men responsible are the same. The Messrs. Truman, Acheson, and Marshall are the authors of the soothing-syrup policies toward Red China, and they are also the dominant members of the board which now is quaking at the thought that India may be displeased by what the Congress in Washington has done.

Congress, representing the people, took the view that nations which trade with the enemy are doing great harm to the United States and to its soldiers at the front—and that certainly the United States should not subsidize this trade by way of its foreign-aid program.

That was and is a reasonable view. We think beyond question a majority of the people would subscribe to it, and would want to see the Kem amendment firmly enforced.

But these men in Washington, who are so excessively timid in the face of the enemy, become brave as lions when confronted with congressional opposition.

In this case they are taking advantage of a safety-valve clause in a law passed by Congress, in order to brush aside the plain will and intent of Congress. In effect they are taking the law-making power into their own hands on the grounds that they know best.

Administrative arrogance of this sort is nothing new in Washington. And this, we surmise, will not be the last instance of it unless Congress cracks down hard.

Sales of Narcotic Drugs to Teen-Age Children

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 27, 1951

Mr. WILEY. Mr. President, on Wednesday, July 25, the distinguished chairman of the Senate Crime Committee [Mr. O'CONNOR] introduced on behalf of himself and the other members of the committee, including myself, a bill (S. 1900) to provide an increased penalty for the sale of narcotic drugs to persons under 17 years of age. This bill was referred to the Senate Judiciary Committee. Our colleague's comments on

this subject may be found on page 8807 of the CONGRESSIONAL RECORD.

I can think of few subjects on which the American people are undoubtedly more unanimous in their convictions than that of eliminating the human vampires who feed on the blood of teenage youngsters by selling them habit-forming drugs. If ever there was a vicious breed of individual whom society should punish it is these adults who lead youngsters down the horrible path of dope addiction.

Editorials all over the Nation have commented on this subject and on the Senate Crime Committee's exposé of dope traffic as it affects our children. I have in my hand two such editorials from Wisconsin papers. The first is an editorial from the Racine, Wis., Journal-Times of Tuesday, July 10, entitled "Get the Narcotics Sellers." The second is an editorial from the Thursday, July 19, issue of the Manitowoc Herald-Times entitled "Kill That Rattlesnake." This editorial comments in particular on a campaign which is being waged by the Wisconsin Aerie of the Fraternal Order of Eagles against the narcotics traffic.

I ask unanimous consent that the text of these two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Racine (Wis.) Journal-Times of July 10, 1951]

GET THE NARCOTIC SELLERS

For the teen-age victims, it began as a lark—an excursion into the unknown, like the first ride on a roller coaster. Or it started as a challenge—the proof of daring so they could keep up with the crowd and not be called a "square."

Then the roller coaster became something they couldn't get off. In place of "squares" they became "junkies," "mainliners," and other names in a strange doped-up jargon that is finally beginning to shock America. Instead of a lark, it was a down-hill ride with little chance of anything at the end but tragedy.

These were the youngsters the Nation suddenly became aware of after their stories were aired in New York and later before the Senate Crime Investigating Committee in Washington—stories of kids who but for the grace of God could be ours. These were the kids enmeshed in the growing drug peril, addicts whose lives are pretty sure to be ruined no matter what we do for them now.

How did it happen? Some blame it on a general break-down in family life. Others say it starts in the slums and breeds on delinquency, or that the new American credo has put too much emphasis on "being accepted by the gang."

All of these ideas, added together, are only part of the answer. The big factor is that the stuff that makes dope addicts is available—as available, in many cities, as ice cream and candy.

How can we stop it? By going to work on the real dope fiends. The fiends aren't the ones who use marijuana, heroin, and cocaine; they're too smart. They sell it, and the customers have to keep coming back for more and more, until they will do almost anything—as the customers themselves have testified—to get the "stuff."

The fiends are the pushers, who like to get their customers young, because teen-agers are susceptible, and once they get started, will get other teen-agers to go along with them. United States Narcotics Commission-

er Harry J. Anslinger figures there are 10,000 youthful addicts now, triple the number since 1950. The fiends—the pushers—are willing to give away samples, the evidence shows, to get another steady customer.

For the peddlers it's big business. And the overhead is low; overhead in this case being the price the peddlers have to pay when they're nabbed. Anslinger points out that the average sentence, up to now, has been 18 months. What with pardons, paroles, and commuted sentences, a peddler regards punishment like that as a vacation.

What would happen if we go tough? The same thing that happens when the rats find there's poison around the corn crib. In St. Louis, Anslinger point out, an 18-year sentence for a convicted peddler started the rest of them running out of town.

Other things would help, too. Although Anslinger doesn't agree, many experts put up a sound argument for education—a carefully planned program to drive home to our youngsters the horrible facts of dope. And it's only merciful that we take steps to provide hospitals where those who have already been victimized can be treated, even if the treatment is only a dim hope for escape from the nether world of addiction.

There's a chance for the rest of our children. There are laws pending in Congress and in many States that would require minimum sentences of 2, 5, and 10 years for first, second, and third convictions of drug peddlers. There's even a proposed Federal law with a death penalty for peddlers who sell to minors.

We hope Congress was listening when the teen-agers spilled out their stories of the lark that turned out to be a roller coaster on the road to horror.

[From the Manitowoc (Wis.) Herald-Times of Thursday, July 19, 1951]

KILL THAT RATTLESNAKE

A committee of Wisconsin Eagles, headed by Judge Albert H. Schmidt, of Manitowoc, has embarked on an ambitious job—stamping out the illicit trade in and use of narcotics and dope. This is a program that should send every Wisconsin citizen, regardless of whether or not he is affiliated with the Eagles, flocking in wholehearted support.

And Manitowoc can well feel proud of its former county municipal judge for 28 years, Albert Schmidt, who was the leading figure in the drafting of the proposals to kill this rattlesnake. Judge Schmidt, always a leader in programs of community welfare, has taken on a real battle this time, and every man and woman in the Nation should consider it their civic duty to join in the crusade against this terrifying monster—illicit narcotics.

The recent newspaper stories concerning the alarming increase in the use of dope, particularly by high-school youngsters in the overcrowded major cities of the United States, have been nauseating.

We have read of despicable characters who reap a rich harvest plying their illegal dope trade among boys and girls ranging as low as 13 and 14 years of age. Think for a moment what you would like to have done to any moronic ghoul who started your teen-aged boy or girl off down the path of physical and mental destruction on the needle.

Now read closely the proposals for punishment of convicted narcotics criminals as suggested by Judge Schmidt's Eagles committee. They provide life imprisonment and death—and without probation or suspension of sentences by our courts.

The Eagles program also provides room for every thoughtful man and woman—interested in maintaining a strong America—to join in the crusade against dope right in his and her home community.

It should be, and must be, the duty of all to fall in line with Wisconsin Eagles in this tremendous job of public welfare. And it

must be done at once. Sometime in the future may be too late. The dope menace is that serious.

Necessity of Flood-Control Projects

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, July 27, 1951

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement made today before the Subcommittee on Army Civil Functions of the Senate Committee on Appropriations by the distinguished senior Senator from Oklahoma [Mr. KERR], regarding the necessity for appropriations for the construction of flood-control projects.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. KERR of Oklahoma. Mr. Chairman, the destruction caused by floods at Kansas City and in nearby areas of Kansas, Missouri, and Oklahoma in the past few weeks is fresh in the minds of the members of this committee.

You have heard this disaster described as the work of a flood that comes once in a hundred years, but I want to say to this committee that some place in that area is hit by just such devastation almost every year. It is not uncommon for a large part of our total annual rainfall to hit the earth in a few hours on the heels of months of drought. Sometimes these rains fall upon the northern part of the Arkansas-Missouri Basin in Kansas and drain into the Missouri River. Sometimes they fall on the southern part of Kansas and drain into the Arkansas Valley, flooding the fertile lands of northern and eastern Oklahoma as they go.

One of the tributaries of the Arkansas River which carried the great Kansas rains into Oklahoma this year was the Neosho which damaged a dozen Kansas cities before it reached Miami, Okla., where 3,000 people were forced to leave their homes. The damage in Miami and Ottawa County alone is estimated at \$6,000,000.

Another Kansas-Oklahoma tributary of the Arkansas is the Verdigris, which had already this month destroyed thousands of acres of promising crops in Kansas and Oklahoma, and flooded several cities before the rains came which brought devastation to Kansas City and the areas along the Missouri as well.

A third is the Chikaskia. This year we have had floods on all three, on the Arkansas, in western Oklahoma, and at Waurika in southern Oklahoma, too.

Out in Oklahoma people ask me why our Government cannot do something to protect them if it has so many billions to spend for the protection of people across the seas. I believe that the members of this committee feel about this just as I do, and the big question in your minds is: How can we go forward with a program of flood-control work at the same time that we are faced with an international situation which threatens to engulf the entire world?

My answer to that question is this:

First, there are flood-control projects on which the Congress has taken three steps—authorization, planning, initial construction—but which have been halted because of the international situation.

Second, there are projects on which the Congress has taken two steps—authorization and planning.

Third, there are projects on which the Congress has taken the first step—authorization.

I believe that Congress must continue to advance these projects.

In the first group, the people of Oklahoma and Arkansas are interested in a vital project on the Verdigris River—Oologah. The Army engineers tell us that had Oologah been built it would have this year saved crops worth \$2,700,000 in its own valley. This is nearly 10 percent of what it will cost to build—and there have been five floods on the Verdigris in Oklahoma in the last 10 years, each of which has been as great or greater than the biggest flood on the river this year.

The floods on the Verdigris are so common that only the highest of the bottom lands are farmed. Oologah would protect 84,000 acres of the richest land in the world from most floods, and when it is built the annual value of the crops in that valley which it will protect will be not \$2,700,000, but, at least, \$10,000,000. We are advised that construction of Oologah can go forward in an orderly manner for 18 months before any steel is needed. The expansion of the steel industry which is now in progress will be completed by the fall of 1952, and the present pinch relieved.

In the second group of projects, those authorized and planned but not started, we Oklahomans have a keen interest in the Toronto Dam on the main stem of the Verdigris in southern Kansas. Toronto should be started, and as much work done as is possible without entering the competition for steel at this time.

Over in the Kansas River Valley, I am informed, the proposed Tuttle Creek Dam is in the same class with the Toronto Dam on the Verdigris.

I believe General Pick has advised this committee that any flood-control program for Kansas should include them both. Altogether there are at this time three reservoir projects in the recent flooded section completely planned and ready for construction money: Oologah, Toronto, and Tuttle Creek.

In the third group—authorized but not yet planned—are six comparatively small Kansas dams which mean much to us in Oklahoma. Four of these—Strawn, Council Grove, Marion, Cedar Point—are on the Neosho. Two—Neodesha and Elk City—are on the Verdigris.

We in Oklahoma believe that Strawn should come first because, had it been built, we would not now be faced with the terrific job of rehabilitation at Miami, Okla.

Mr. Chairman, there is another and important reason why work should go forward as rapidly as possible on Oologah and Toronto. The people who live on the reservoir sites are entitled to be paid for their land so that they may move to their new homes. They have been put on notice as to the Government's intentions. Neither public agencies nor private citizens can afford to make additional investments which they know will be flooded when the dams are built. Few private buyers want land which they know is soon to be condemned by the Government. These people are caught in a blighted area, and common decency calls for us to treat them justly.

Recently, we who represent the States of Arkansas and Oklahoma directed attention of this committee to the critical situation at Braden's Bend on the Arkansas River at the Oklahoma-Arkansas line. Here is a place of potential tragedy because caving banks are about to divert the larger flow of the Arkansas into the channel of the Poteau, a smaller tributary. When this occurs—and it

will soon do so unless prevented—floodwaters will take with them not only thousands of acres of fertile land, but also rail and road bridges and parts of the industrial area of Fort Smith.

We cry for flood control on the upper reaches of these streams, but we would not have you forget the need of immediate action down stream where these floodwaters must be contained.

Bank stabilization at Braden's Bend and other critical points in Arkansas where railroad bridges and gas and oil pipelines are threatened, will take no critical materials, nor is it a costly work if taken in time.

Measured by the benefits, all of these proposed projects are profitable public investments—not pork barrel or give away. In the potent words of the Kansas City Star "The Time To Take Action Is Now."

Gentlemen, the elements do not wait for us. The people of our section need flood protection now. We have seen the two greatest floods in the history of eastern Oklahoma hit Fort Smith, Ark., on the Oklahoma border within the span of a few days. Members of the Senate who flew over St. Charles, Mo., when the Missouri was at its peak this week, carrying 600,000 cubic feet a second past that point, saw a great flood. Yet not once but twice in 1943, in a matter of days, the Arkansas carried more than 800,000 cubic feet a second from Oklahoma into Arkansas and took with it 23 human lives and did hundreds of millions of dollars damage to private and public property. No matter how many problems we may have, I do not see for the life of me how we can ever with a clear conscience fail to do what is required to achieve adequate flood control. The greater our needs for production, the more important it is we be prepared to meet them.

We can go forward with construction that does not take steel now. We can complete the planning job. For Oologah we can save at least 1 year. For Tuttle Creek, and Toronto, we can save two. For Strawn and other authorized dams in Kansas, we can save three.

There is a tendency in talking about flood-control projects to confine ourselves to the cold, economic aspects of the problem. But I was struck by a remark made by our new Governor of Oklahoma, Johnston Murray, in talking to members of the Public Works Committee when they were in Oklahoma.

You know Governor Murray has had about the same experience in the first few months of his administration that I had as Governor 8 years ago. Then as now, soon after the legislature adjourned the State was hit by a tremendous flood. I went into the flooded areas and saw the human misery which goes along with economic desolation. Governor Murray has done likewise and his remark about what he saw is very important. He told us he had observed it is the little people who suffer most when their homes and their crops are taken by the floods. No one can see such misery and ever forget it, Mr. Chairman. We must see to it that this does not happen again.

Election in Finland

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 27, 1951

Mr. MUNDT. Mr. President, all Americans were highly gratified to read in the press the recent articles about the

election in Finland, in which the outstanding anti-Communist public official in Finland was elected to the Parliament.

In that connection, Mr. President, I ask unanimous consent to have printed in the Appendix of the Record two newspaper editorials in regard to the contribution which Finland is making in the direction of freedom.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

FINLAND STANDS FIRM

The Finnish election results are in and they indicate little change in the country's political complexion. The Social Democrats have edged out the Agrarians as the leading party, but no one party is strong enough to form a government by itself. Finland's Communists did not increase their vote and are no nearer power than they were before the election.

All this may seem prosaic and unexciting at first glance, but closer scrutiny reveals a good deal more. Basically the election represents a defeat for the Soviet Union and for the "progressive" forces in Finland it has so ardently supported. The Soviet propaganda barrage against Finland's non-Communists these past few months has been intense indeed, implicitly carrying threats of what may await that tiny country if it does not elect leaders more to Soviet liking. Within Finland the Communists have been handsomely financed and have been able to stage an election campaign far out of proportion to their previously demonstrated numerical strength in the population. They have been aided by discontent over rising inflation. Yet despite all this their position after the election is essentially unchanged. They represent a secondary political power, significant more because of their servitude to and relationship with the U. S. S. R. than because of their internal strength.

The Finnish people have stood firm where a nation with weaker nerves and less courage might have surrendered. Their example should not be lost upon the nations of Western Europe, most of them much larger than Finland and in less perilous geographic position vis-à-vis the Kremlin's armed forces.

FINLAND AND NEIGHBOR

One of the mysteries of Soviet foreign policy has been the Kremlin's dealings with its northwestern neighbor, Finland. Finland has a common border with the Soviet Union stretching from the Gulf of Finland 800 miles north to the Arctic Ocean. Twice in the past 12 years Finland and Russia have been at war—in 1939-40, when Russia attacked the Finns, and again from 1941 to 1944, when Finland served as a base for the Nazi attack on Russia. At the war's end the feeling in the west was that from now on the Kremlin would keep a tight grip on Finland.

Oddly enough, this has not been entirely the case. True, the Russians have dictated Finnish foreign policy—Moscow kept Helsinki from joining the Marshall plan, and the two countries have a treaty of "friendship and mutual assistance." But in domestic matters Finland is no satellite. Democracy flourishes and anticommunism is pronounced. The Government is a centrist coalition led by the Agrarian Party. Most Finns sense that the Soviet is a threat to their independence, but it is a danger they have grown accustomed to and do not worry about very much.

ELECTIONS WERE FREE

Last Monday and Tuesday Finland held its triennial national election for the 200-member Eduskunta (Parliament). Although the Russians contributed to the Communist Par-

ty campaign, Moscow did not interfere with the voting. The election was free, the ballot secret. Following Finnish custom, the chairmen of each election district first turned the ballot boxes upside down to show they were empty. Half a dozen parties competed. The main issues were domestic—taxes, state subsidies, Government spending, and, probably most important, high prices.

The Government parties and the Conservatives lost seven seats to the Communists, chiefly, it was believed, because of discontent over the rising cost of living. But the CP is still in third place; it was unable to regain the strength it won 6 years ago. Moreover, the Finnish voters showed their independence of the Kremlin by electing to the Eduskunta Russia's *bête noire*, Väinö Tanner, former leader of the Social Democrats, who was imprisoned at the behest of the Soviet on charges of drawing Finland into World War II against Russia.

Finland's present Government will now resign and a new administration will be elected—presumably from among the centrist parties. The Communists are already demanding key Cabinet posts, but most observers predict they will not get them. On the other hand, the new Government, whatever its composition, is expected to continue Finland's policy of guarded friendship toward Russia.

Cost Upon Russia Heavy

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith the following editorial entitled "Cost Upon Russia Heavy," which appeared in the Daily News Democrat of Festus, Mo., on July 23, 1951:

COST UPON RUSSIA HEAVY

It is too early yet to predict with any degree of certainty whether a truce can be agreed upon at Kaesong. It can be said, however, there is some indication that the Chinese are taking a hand, and may overrule the Soviet on their troop-withdrawal proposal. This presumption falls into various unsubstantial reports there is much unrest in some of the satellite countries.

There is wide speculation to the effect that the Soviet Government has lost the "cold war." Russian leaders, it is pointed out, have seen numerous failures in their strategy during the past 5 years. These failures culminated in the rearming of the west. Noting some of the Communist failures. They failed to dominate Greece. They failed to block the Atlantic Pact, and they failed in the siege of Berlin. Now it appears they may fail in the aggression of Korea.

The victories against communism have been costly, and the United States has carried the heavy end of the burden, both in blood and in money. Russia has not been compelled to send her soldiers into the conflict, but she has lost heavily otherwise.

Through her rearmament program, Russia has placed a heavy strain upon the people of that country, and the standard of living has gradually depreciated. It has put a heavy burden upon the Communist satellites, draining off much of their industrial production and food stuffs into the channels of war. It is generally believed that the economy of all free countries today is far stronger than

that of the countries dominated by the Soviet nation.

There is a feeling abroad and considerable information to support it, that Russia may resort to new tactics. Opening of peace offensives ostensibly for the purpose of lulling the western powers to sleep, is expected in the very near future.

After a bad beginning at Kaesong, where our representatives went under a flag of truce, the mistake has been rectified and we meet the enemy upon equal terms. The Communists had sought to prove to their world the U. N. was coming to them. The tough policy of General Ridgway put the Communist delegation in its place, and if the truce can be won, the Soviet will have lost another of her undertakings against the free world.

H. R. 4387—Income Limitations for Non-Service-Connected Pension

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I have received from Mr. Russell E. Sullivan, who is the national executive committeeman of the Disabled American Veterans from the second district, which comprises Connecticut, New York, and New Jersey.

In this letter, Mr. Sullivan calls my attention to a provision in H. R. 4387, passed by the House of Representatives on June 20, 1951. This is what is commonly known as the income limitation bill, that increases the annual income limitations governing the payment of pension to veterans and their dependents.

The provision to which Mr. Sullivan objects is the one that provides that income from all sources be included in the computation of annual income. I was a member of the subcommittee of the Committee on Veterans' Affairs that held hearings upon the measure. The chairman was the able A. Leonard Allen, of Louisiana, who has always been so fair and so considerate of our veterans and their problems during his 15 years of service in this House.

During all of the testimony concerning the bill and in the discussions later in executive session it never entered the minds of the subcommittee members that the pension for which an applicant was trying to qualify would be included in the computation of annual income.

When I received this letter I talked with an official in the office of the assistant administrator for legislation at the Veterans' Administration, and I asked him for an opinion as to what interpretation the department would place upon such a question. This he could not give me, and I expressed my surprise that in preparing the report upon the measure his office did not foresee the likelihood of such a question being raised. I can only reiterate that it was not the

intent of our committee that a pension be included in computing income.

If the matter is not clarified in the Senate, where the bill is now being considered, I hope there will be an opportunity to do so here. Mr. Sullivan's letter follows:

DISABLED AMERICAN VETERANS,

Washington, D. C., July 20, 1951.

Hon. EDITH NOURSE ROGERS,

House of Representatives,

Washington, D. C.

DEAR MRS. ROGERS: Mention is made of H. R. 4387, sponsored by your committee, which passed the House on June 19 and is presently pending in the Senate.

A review of the bill discloses that income from all sources shall be included in computing gross income to ascertain if a widow without dependents earns more than \$1,800 per year, or \$3,000 per year in the case of a widow with dependents. Of course if she did she would be ineligible for the pension provided for the widows of war veterans.

The inclusion of the provision pertaining to all income, which would include insurance that the veteran paid for in his lifetime, seems unjust.

Within the last few days Warren Petersen, of Wallingford, Conn., a World War II veteran who lost his leg in combat in Europe in 1944, had an automobile accident. His remaining leg had to be amputated in order to get him out of the car, and some 3 days later he died of the injuries. He left a widow and three children, all under 5, and one of whom was born 2 hours before his fatal accident.

As a non-service-connected death case his widow will get a pension of \$42 a month plus \$12 for the first child and \$6 a month for each of the other two children, making a total of \$66 a month for food, clothing, shelter, medical expenses, and education when the children get older.

You can readily appreciate that the amount is not nearly enough to maintain a decent American standard of living and when one considers that the accident that cost Warren Petersen his life might never have occurred had he the use of the leg he lost in combat in World War II, the situation seems even more tragic.

Then, if he had insurance that paid off in monthly installments over the year, the widow and orphans might find out that the income from it prevented the pension being paid because of the provision in the law mentioned above.

Can you possibly do anything to have the law amended before final passage so as to eliminate income from insurance and also possibly raise the amount paid for each dependent child? The above case shows why such action should be attempted.

Sincerely yours in comradeship,

RUSSELL E. SULLIVAN,

National Executive Committeeman,

Second District (Connecticut,

New York, and New Jersey).

Address of Hon. James P. S. Devereux, of Maryland

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. BEALL. Mr. Speaker, under unanimous consent to have my remarks inserted in the CONGRESSIONAL RECORD, I include the following address made by

my colleague, Congressman JAMES P. S. DEVEREUX, at the picnic of the Federation of Republican Women of Montgomery County on Saturday, July 14:

I have been in receipt of many letters, some urging stronger controls, some advocating abolition of all controls. The great majority of the people, who take a stand one way or the other, do not specifically state what controls should be lifted or what controls should be made stronger. Some of these requests, undoubtedly are prompted by self-interest and others believe that their stand is the proper solution to higher prices.

When we speak of higher prices, we must first understand the cause for higher prices. Basically the reason for higher prices is inflation and to impose direct price controls would not, in itself, cure inflation. Inflation is the evil we must combat and that is the fundamental issue at stake.

I think a homely example would be to liken our entire economic problem to a pot of boiling water. We might temporarily be able to keep the pot from boiling over by placing a heavy lid on the pot, but eventually if enough steam were generated even an extremely heavy lid would eventually be blown off. This would be the operation of direct controls.

However, if we attack the problem at its source, that is, the fire under the boiling pot, and reduce that fire, we will keep the pot from boiling so violently and thus prevent it from boiling over.

The other day on the floor of the House an amendment was offered to the administration's defense production bill, which deals with controls, providing that the administration exercise all of the indirect controls as well as such other controls as the ultimate bill would provide. Unfortunately, this measure was defeated and it was said in the press that the proponents of the bill had been attempting to scuttle the Defense Production Act, whereas, in fact, they were simply directing the administration and the Federal Reserve Board to use such powers as they now have by existing law.

In a war economy, such as we have today, there is no question in my mind that we must have allocation of certain materials which, in itself, is a control, and it may be, in cases where things are in extremely short supply, that some direct price controls will have to be imposed. But to get to the root of the evil, that is inflation, I feel that we must attack the problem by reducing buying power which is now competing for the goods and services that are available or increasing production. In this connection we must understand that inflation is caused by having more money bidding for various commodities than we have commodities available for sale. When such a situation exists, when there is an oversupply of money as compared to the amount of goods available, prices will rise according to the natural laws of supply and demand.

Specifically I believe credit restrictions must be imposed. Possibly in some cases the present restrictions are too harsh, but we must remember that the use of credit restrictions is one way that the purchasing power of the public is reduced and therefore there is not as much money available to make purchases or compete for the available commodities. When that condition exists, the law of supply and demand will automatically reduce prices.

There are two basic ways for the Government to obtain money; one is through taxes and the other is by borrowing (that is, selling bonds).

To digress a moment, I think we should understand one of the basic structures in our financial system. The vast majority of bonds sold by the Federal Treasury are sold to the member banks of our Federal Reserve System. When these bonds are sold to a member bank, each is paid into the Treasury,

which is used in the conduct of our governmental affairs.

But here is a point that I do not believe the majority of the people of our country understand. After these bonds are obtained through purchase by a member bank from the Federal Reserve System, that bond, in turn, may be pledged as security within the Federal Reserve System in order to have more money issued to the member bank, thus creating more and more money as this transaction is repeated.

At one time in the history of our banking system should a member bank of the Federal Reserve System wish to have money issued to it, it was obligated to put up sound commercial paper (which represented an equity in real property) or gold reserves. They are still obligated to do this but in a greatly lessened proportion than they were years ago.

From this it can be readily seen that the Government, in itself, in not keeping up to sound standards is, in itself, depreciating our currency and is not acting in good faith. The Federal Reserve Board has the power now to require better securities upon which to insure currency and thus increase the dollars value.

The question that now confronts us is if we need money in order to meet our governmental obligations, what do we do. One thing, of course, is to raise our taxes higher and higher, but if taxes continue higher and higher so as to destroy all incentive, there is no doubt in my mind that production will decrease and we will then have a scarcity of materials which, in turn, will invite inflation.

There is still another approach to the situation. Supposing we arrange our affairs in the Federal Government so that it is not necessary to require the billions and billions of dollars for the operation of its affairs, then it will not be necessary to sell additional bonds which, as I pointed out, are inflationary, or to increase taxes, which are not only stifling to production but work an extreme hardship on fixed-income groups.

I have been in Washington for a comparatively short time as your Representative, but I am thoroughly convinced that economies can be exercised in the Federal Government as have been attempted from time to time from sincere Members of the Congress regardless of party affiliations.

In conclusion I would like to point out that there is no one simple answer to this very complex problem, and that with so many factors to contend with, we must use all available means in order to beat inflation.

The Pledge to the Flag

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. HOFFMAN of Michigan. Mr. Speaker, most of us have time and again said:

I pledge allegiance to the flag of the United States of America and to the Republic for which it stands: one Nation indivisible, with liberty and justice for all.

Presumably, as we uttered those words, we believed them. Yet today some of us who follow through and translate into action the thought expressed in that pledge, are bitterly denounced by others who apparently are doubtful of the soundness of the principles enunciated in the Constitution; so

lacking in faith in the ability, the courage, and the endurance of our people that they fear our ability to defend ourselves; have reached the conclusion that we must purchase the friendship of other nations, rely upon them for our own national security.

Because I have vigorously and unceasingly opposed any surrender of our sovereignty, our entry into any international agreement which would make us subject to the orders of a superworld government, I have been bitterly criticized by editorial writers, radio commentators, and columnists who follow the international line.

More recently an editor in my district, because I cannot support the internationalists' candidate, General Eisenhower, as the Republican nominee for President, referring to my opposition to membership in an international organization, wrote that Eisenhower's views "may not accord with the narrow insularism of Mr. HOFFMAN or Colonel McCormick," and that it did no "constructive good for Mr. HOFFMAN to smear him as a candidate of Wall Street and the internationalists."

I made no attempt to smear General Eisenhower. He is an outstanding, patriotic American. Wall Street and the internationalists are supporting him. That is well known.

I just do not agree with General Eisenhower's views as expressed earlier this week, that American youth should be conscripted to fight in an international army, in an international uniform, under an international flag, an international commander and in an international war.

Another editor expressed the opinion that I had outlived my usefulness in Washington. His opinion seems to grow out of the fact that I have vigorously and consistently opposed the New Deal and recurring wars abroad.

I plead guilty to consistent opposition to the New Deal, for I have from the very beginning been opposed to its policies, which have given us national bankruptcy, inflation and two wars.

Those who criticize my "agin" attitude should remember that the Ten Commandments all admonish us against certain sins.

The editor to whom I just referred writes:

Certainly somewhere between Colonel McCormick and the President there must be a middle ground—a middle ground that provides for protection of our interests in the world-wide maneuvering and at the same time gives some protection to the American taxpayer.

The fact that each of these editors refers to Colonel McCormick leads me to wonder whether they are really dissatisfied with my services here as their representative, or whether they are peeved because of the editorials in Colonel McCormick's Chicago Tribune which advocate the adherence to constitutional procedure and avoidance of undue involvement in the affairs of other nations.

My views do not grow out of the editorials printed in the Chicago Tribune, although I am happy indeed to find that they are in accord with the Tribune's

editorial policy, which to me seems to be one of unwavering support of the principles enunciated in the Declaration of Independence, the Constitution and the Bill of Rights.

In my humble opinion, the Chicago Tribune is not only an outstanding newspaper from the news standpoint, but it speaks and reflects the views of Midwest people who have faith in our form of government, still adhere to the advice of Washington and Jefferson that we avoid entanglement in the affairs of other countries.

What the internationalists are doing to this country is set forth, in part at least, in an editorial from yesterday's—July 26—Tribune, which reads as follows:

DENATIONALIZING AMERICA

Preliminary agreement has been reached among France, Italy, West Germany, Belgium, and Luxemburg to merge their land, sea, and air power in a 2,000,000-man internationalized force to operate under General Eisenhower as commander of the European army. These nations would confirm the arrangement in 50-year treaties and would leave the way open for other nations to enter the compact.

The joint force would have its own uniform, would employ standardized arms, and would be under an international parliament, identical with the governing agency to be created under the Schuman plan for pooling Europe's coal and steel. Defense matters will be in charge either of a European defense minister or of a committee composed of representatives of the participating nations.

If this arrangement is to be limited to Western European nations and is to be regarded as a device by which they may avail themselves of the military strength of West Germany, a state which is now not a member of the North Atlantic military pact, it is welcome. Anything that can develop cohesion among these states and bring them to make a greater contribution to their own defense will relieve the United States of some part of its present very heavy burdens.

But approval of the arrangement depends upon whether United States forces assigned to the Eisenhower army are to stand aside from the European military and political compact and are to exist as an organization independent of, but associated with, the European organization. Unless there are safeguards of this kind, the United States can find itself hopelessly enmeshed with Europe and on the way to losing its national sovereignty.

Senator OWEN BREWSTER, of Maine, back from a trip to Europe, had brought a disquieting report that Eisenhower contemplated a non-national army to represent all 12 Atlantic Pact nations, among them, of course, the United States. The Senator said that the general's conception was that this force would function under a single flag, would have a common uniform, and would be directed by a single command. If this organization were to comprehend the United States, the perils need only to be enumerated to become manifest.

With the flag, of course, there would have to come into being a new superstate represented by the flag, and in turn representing the 12 member nations. This state would have at its disposal an army, navy, and air force, which are already in existence, at least in a rudimentary way. Possessing these attributes of super-sovereignty, it could hardly stop short or possessing itself of the other powers which characterize states or supranational authorities of the kind conceived.

It would be bound to have a common discipline for the common forces, which requires a common code of law and a common

judicial system. If the soldiers, sailors, and airmen were to swear allegiance to a new flag, they would all expect equality under it. Pay scales of a dozen national forces would have to be brought into line. That suggests the creation of a common currency.

A common currency, of course, could only rest upon a common economic and fiscal structure, suggesting that each member state would pool its production, waive control over its trade, and give up the national practice of budgeting, taxing, and spending as an individual country. All of these functions of national government would have to be transferred to the superstate, with its flag of General Eisenhower's invention.

A common military establishment, naturally, could only carry out a common foreign policy, so each of the member states would have to place the conduct of its diplomacy in the hands of the supranational authority. Each nation would further be obliged to yield the power to declare war or maintain neutrality.

All of these powers having been lost, there would be little left to national legislatures. The American Congress would be reduced almost to a nullity. The American citizen would find himself under a new flag, alien to him, and would discover that his concerns were now administered at some distant place by a foreign authority. The President of the United States might retain his title, but his station would be honorary and his duties nil.

Americans would awaken to the fact that their country had been pulled out from under them, and that it had none but a fictitious existence and sovereignty. They would find that they were now sharing equality in the lot of the British Socialists, the Icelanders, and the Portuguese, who only a few days ago held a totalitarian presidential election in which there was but one candidate. Americans would find themselves in the reluctant embrace of a France 25 percent Communist. They would be under a common flag with these and the people of seven other foreign countries.

At a stroke Eisenhower would realize all of the ambitions of the proponents of the Atlantic Union movement and suchlike one-worlders. That this is his ambition is attested by his own pronouncements. When he took over command of the Atlantic Army, he said that henceforward he could be only one-twelfth American. When he spoke in London the day before the anniversary of American Independence, it was to urge the European nations of the Atlantic Pact to unite politically. His reception at the hands of Britons was cool. Apparently now he would reassure them by putting the United States at their permanent disposal.

Mr. Speaker, perhaps, when some of those who criticize the Tribune and your humble servant's views have had experience under law as administered here in America by an international organization, they will realize then, if they now cannot, just what local government by internationalists means.

Submerged-Lands Legislation

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

WASHINGTON, D. C., June 4, 1951.

HON. HARRY S. TRUMAN,

The White House,

Washington, D. C.

MY DEAR MR. PRESIDENT: As you know, the matter of quitclaim legislation which, at the expense of the other 45 States, would make an outright gift to California, Texas, and Louisiana of the Federal oil lands lying off their coasts, is again being proposed and strongly agitated by certain groups of Senators and Congressmen.

That the selfish and regional interests who are sponsoring this legislation can claim any support whatever from representatives of the 45 States who will be despoiled of their rightful share in this immensely valuable Federal property, indicates the measure of success with which they have carried on their extensive campaign of misleading propaganda, and have descended upon Washington with one of the wealthiest and most powerful lobbying groups in history. They have influenced the Congress with such adroitness and success that a great many Congressmen and Senators whose support they have enlisted, and whom both you and I know to be entirely honest and intelligent men, are apparently unable to comprehend the obvious fact that in voting for such a measure they will be betraying the interests of their own constituents and the overwhelming majority of the American people. The issue reduces itself to the simple question of whether all the people of all the 48 States are to enjoy the benefits of the national wealth lying off their coasts, or whether the Congress is to be misled by the propaganda and lobbying of the three coastal States and a few big oil companies, into betraying the vast majority of the American people by supporting away their property to the selfish enrichment of the interests which have misled them.

Most surprising to me is the information that quitclaim legislation is being advocated by a number of Congressmen and Senators from the reclamation States. California and Texas are two of these States, and I can of course understand why the representatives of those States might desire the Federal property along their coasts to be given away. But it is my information that quitclaim legislation is being advocated by some of the representatives of the other 15 reclamation States, namely, Arizona, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, and Wyoming.

If the Mineral Leasing Act is applicable to these oil lands in the marginal sea, then all the reclamation States stand to realize tremendous financial benefits from the Federal ownership and administration of this area, inasmuch as 52½ percent of all Federal royalties collected under that act (by 30 U. S. C. A. sec. 191) passes into the reclamation fund. The application of the Mineral Leasing Act is now pending in two cases in the United States District Court for the District of Columbia. It is expected by everyone, including the Justice Department, that this question of the application of the Mineral Leasing Act will be decided in one of these cases this fall.

Now if the court decides that the Mineral Leasing Act applies, it will mean, as I have already pointed out, that 52½ percent of all Federal royalties from the lands now sought to be quitclaimed away will go into the reclamation fund, from which the people of these 17 semiarid reclamation States will benefit enormously by reason of the irrigation and power projects which will be undertaken in their States. But at the present time we have before us the amazing spectacle of representatives of some of those States agitating in the Congress for the enactment of legislation which would give away the oil lands from whose royalties the reclamation projects are to be financed, and which would thereby cut off irretrievably the

principal source of the finances through which those projects in their own States would be carried out and paid for. And I have just learned, even more to my astonishment, that inasmuch as the budget for the next fiscal year now contains no funds for reclamation construction, a number of Senators from the reclamation States of Colorado, Idaho, Montana, Nebraska, North Dakota, Utah, Wyoming, and Washington, will concentrate their efforts upon the inclusion of \$17,516,000 in the Bureau of Reclamation budget, in order to start one new project in each of those States during the fiscal year beginning July 1. This situation appears especially ridiculous in light of the fact that over \$33,000,000 is now being held in escrow pursuant to agreement between the Federal Government and California, by way of royalties from oil taken off the shores of California alone. This is only a small part of the total sum that would inure to the United States, the total being estimated by some to amount to many billions of dollars.

The public apathy toward this situation, especially in the reclamation States whose interests are most vitally concerned, is hard to understand. For the most part, these people have been deluged with false propaganda, just as their Senators and Congressmen have been. But even harder for me to understand is the gullibility of those representatives of the reclamation States in Congress who are advocating this legislation directly in betrayal of the vital interests of their own people.

You know that I have always said that the best antidote for false propaganda lies in education and in placing the true facts before the people. But up to now the facts have been largely withheld from the people and misrepresented to the Congress. Certainly if the facts are given to the people they will be able to understand where their interests lie. These facts, simple as they are, apparently are not understood by some Representatives in Congress. It would appear to me, if I may so state, that you could render an inestimable service to these people of the reclamation States, as well as to the Nation as a whole, if you would explain this situation to them.

Sincerely yours,

BURTON K. WHEELER.

A Farmer Looks at Taxes

EXTENSION OF REMARKS OF

HON. RUTH THOMPSON

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Miss THOMPSON of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Michigan Potato Growers News:

A FARMER LOOKS AT TAXES

(By Fred H. Sexauer, former president of Dairymen's League)

Politicians and some economists deal in so much double talk about taxes that we of the soil sometimes become a bit confused. Items of five, ten, twenty, fifty, and seventy billion dollars roll off the tongues of the bureaucrats like water out of the end of a hose. Talk of billions is so common today that the words million and billion are often confused with each other. Probably this is because neither a million or a billion can be understood by most of us. Anything less than a billion dollars becomes confused with

fractions or the sum to the right of the decimal point.

To some of us taxes mean hours and days of work. How much is a billion dollars? As I figure it, \$14 per working person for each of the 70,000,000 working people in these United States is just \$1,000,000,000. Working 8 hours a day at \$1.75 per hour a man earns just \$14. So \$1,000,000,000 of taxes is the total production of every working man and woman in these United States for one 8-hour day. Sixteen billion dollars added to the tax bill of this country is the total work of each and all of us for 16 days, about 2½ weeks.

A total estimated tax of \$71,000,000,000 a year means 71 days of our labor—not only my labor, not only your neighbor's labor, but the labor for 71 days, that is 14 weeks, a quarter of a year, of every man and woman working for gain in the United States of America. And if you happen to get less than \$1.75 per hour it may even mean more days and weeks.

When the President makes a tax request of Congress he is actually asking for hours, days, and weeks of your life and mine. When Congress appropriates that money they appropriate so many hours of our labor.

No one will deny that taxes are the products of yours and my hours of labor and are necessary to run the Government, but we are interested in whether or not those hours of labor which we have put in are wasted. I do not want them wasted in the support of useless officeholders or the maintenance of nonessential regulators or the wastefulness of the military. When the President asks for, and Congress appropriates, a week of my time and deprives me of the products that that week of mine would earn for me, I want to know that that week is going to be used as faithfully for my country as I would use it for myself.

When an army sells useful material as surplus they are selling my time. When the RFC makes a bad loan to or through some palace favorite they are loaning hours of my labor. When some regulator lives on Government salary and does not produce he is living on the products of my labor.

Taxes are the productivity of men's hands and brains, and the use of men's hours of labor. The dollars are only the tokens by which labor, brains, or savings are taken from the individual and transferred to the state.

The next time an appropriation of a billion dollars is mentioned just say to yourself, "There goes another day of my earnings; another day's production of this Nation which I never will be able to buy."

Don't figure taxes in money. Figure them by your hours of labor—of hand and mind—and your savings from past hours of labor. (Michigan Milk Messenger.)

Resolutions of New Haven Chapter, No. 31, Disabled American Veterans

EXTENSION OF REMARKS OF

HON. JOHN A. MCGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. MCGUIRE. Mr. Speaker, in today's mail I received a letter from Russell E. Sullivan, of New Haven, Conn., national executive committeeman, Disabled American Veterans, for the States of Connecticut, New York, and New Jersey, in which he enclosed copies of resolutions presented to the annual convention of

the Department of Connecticut of the Disabled American Veterans which was held in New Haven on June 16 and 17, and which I had the honor to attend, by New Haven Chapter, No. 31, which is located in the largest city in my district. The resolutions were all adopted by the Connecticut DAV convention and are to be presented to the National Convention of the Disabled American Veterans which is to be held in Milwaukee, Wis., commencing August 13. They appear to be worth while, and I am taking this opportunity of calling them to the attention of the Congress.

Resolution 1

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled here in New Haven, Conn., this 12th day of June 1951. That we go on record as favoring enactment of legislation by the Congress of the United States that would grant to war veterans hospitalized in the facilities of the United States Veterans' Administration the privilege of sending letters through the United States mails without the payment of postage; and be it further

Resolved, That copies of this resolution shall be presented to the annual State convention of the Department of Connecticut, and if adopted there shall be presented at the national convention of the Disabled American Veterans to be held in Milwaukee, Wis., commencing on August 13, 1951.

Resolution 2

Whereas there is an urgent need for stenographic service to supplement the work performed by the national service officers of the Disabled American Veterans, and

Whereas, following completion of the in-service training program of the Disabled American Veterans under public laws enacted by Congress, the secretarial service formerly furnished by the Veterans' Administration was withdrawn: Now, therefore, be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they go on record as favoring enactment of legislation by the Congress of the United States which would provide for and authorize the Veterans' Administration to furnish stenographic service to the full time accredited representatives of organizations incorporated by an act of Congress.

Resolution 3

Whereas there are over 1,000 veterans from Connecticut presently hospitalized outside of the State, and

Whereas there are over 300,000 veterans in the State of Connecticut and there exists only one hospital bed for each 993 such veterans, and

Whereas when the West Haven Veterans' Administration hospital opens there will be only one hospital bed for every 241 veterans; and

Whereas this figure of veterans per bed will rise because of the casualties occurring in the Korean conflict; and

Whereas there are over 500 Connecticut veterans hospitalized in the neuropsychiatric hospital of the United States Veterans' Administration at Northampton, Mass.: Therefore be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on record as favoring conversion of the United States Veterans' Hospital at Newington, Conn., from its present status of general medical to that of a neuropsychiatric hospital upon the opening of the new West Haven Veterans' Administration Hospital so that the many Connecticut veterans presently hospitalized outside the State may re-

ceive treatment closer to their homes and loved ones.

Resolution 4

Whereas disabled veterans, as a group, have a shorter life expectancy than the average person; and

Whereas existing Federal civil-service laws provide that all persons employed by the Federal Government must take a reduction in pension of 3 percent for every year of age they are under 60 at time of retirement; Therefore be it

Resolved, That New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, does go on record as favoring enactment of legislation by Congress which would provide for optional retirement, without reduction in annuity, for persons employed by the United States Government upon attaining the age of 55 with 39 years of service.

Resolution 5

Whereas the United States Veterans' Employment Service has performed an excellent job in the placement of seriously handicapped veterans; and

Whereas there are constantly being released from the Armed Forces veterans, who because of service-connected injuries or wounds are in need of guidance, counseling, and placement service; and

Whereas the appropriation for the aforesaid service has been reduced below the standard which will permit it to continue its important and necessary function; and

Whereas the income tax paid by veterans placed by the aforesaid service by far exceeds the amount appropriated and also the amount recommended for appropriation. Therefore be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they go on record as asking Congress to appropriate sufficient funds to maintain the staff and administrative force of the United States Veterans' Employment Service in the manner in which it was last year when their service proved so efficient and worth while.

Resolution 6

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled here in New Haven, Conn., this 12th day of June 1951, That they do go on record as favoring enactment of legislation by Congress which would grant to the widows and dependent children of veterans of World War II and the Korean conflict the same pension rights presently enjoyed by veterans of World War I.

Resolution 7

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled here in New Haven, Conn., this 12th day of June, That they do go on record as favoring enactment of legislation by the Congress of the United States which would grant widows of veterans and their dependent children more liberal earning rights before suffering the loss of their pension, i. e. that the widow without children be permitted to earn \$2,000 per annum in lieu of the \$1,000 limitation presently imposed and the widow with children be permitted to earn \$5,000 in lieu of the \$2,500 limit presently imposed, before losing their pension, and further that income from insurance shall not be counted in ascertaining gross income.

Resolution 8

Whereas there is presently pending before Congress legislation, which if enacted into a law, would reduce the sick and annual leave presently granted to Federal employees; and

Whereas such a reduction in leave, if enacted into law, would work considerable hardship on the large number of disabled veterans now in Federal service who need

such leave for pension and compensation examinations, out-patient treatment, and hospital treatment of their service-connected disabilities: Therefore be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on record as favoring enactment on no legislation which would reduce the amount of sick leave or annual leave presently granted to Federal employees.

Resolution 9

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled here in New Haven, Conn., this 12th day of June 1951, That they do go on record as favoring enactment of legislation by the Congress of the United States that would provide that one of the dependent children of veterans who lost their lives in the service of the country, or who subsequently died of service-connected causes shall be entitled to the educational benefits which would have accrued to the father under the Serviceman's Readjustment Act of 1944, had he lived, in those instances where the father never took advantage of the law because of death or other reasons.

Resolution 10

Whereas the Veterans' Administration has closed hospitals in various parts of the country, despite the protest of veterans' organizations and Members of Congress from effected areas, and

Whereas it is felt that such action should have the approval of Congress before being taken: Therefore be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on record as favoring enactment of legislation by Congress that would provide that no Veterans' Administration Hospital would be closed without the prior approval of the Congress of the United States.

Resolution 11

Whereas there has been introduced from time to time in Congress legislation which, if enacted into law, would materially weaken the Veterans' Preference Act of 1944; and

Whereas there exists, under presently existing legislation, ample opportunities for Federal agencies concerned to take care of nonveterans who might be reached in a reduction in force: Therefore be it

Resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on record as opposing enactment of any legislation which would grant nonveterans with certain specified years of service exemption from the provisions of the Veterans' Preference Act of 1944

Resolution 12

Whereas the Hoover Commission has made recommendations which, if enacted into law and placed in effect, would result in the abolishment of the Veterans' Administration and the splitting up of its functions among the other Government entities, and

Whereas such an act would result in inferior and less centralized service to the veteran, especially the disabled veteran; and

Whereas such an act would place the presently existing Veterans' Administration hospital program under another Government agency that would not deal with veterans as a group: Therefore be it

Resolved by New Haven Chapter No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on record as being opposed to the enactment of any legislation which would change the presently existing Veterans' Administration set-up.

Resolution 13

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled, That they do go on rec-

ord as favoring enactment of legislation by Congress which would provide that the dependent children of veterans who lost their lives in the service of their country in time of war, or who subsequently died of service-connected causes shall be entitled to hospitalization at United States Veterans' Administration facilities in those instances where the widow executes an affidavit of financial hardship.

Resolution 14

Be it resolved by New Haven Chapter, No. 31, Disabled American Veterans, in regular meeting assembled here in New Haven, Conn., this 12th day of June 1951, That they go on record as instructing their commander, Rudolph Raffone, and the other elected delegates to the Department of Connecticut convention, which is to be held in New Haven, Conn., on the weekend of June 16, to present these resolutions for appropriate action by that body, and further, that if adopted that action shall be taken to present them to the national convention of the Disabled American Veterans which is to be held in Milwaukee, Wis., for 1 week, commencing on August 12, 1951.

The Late Admiral Forrest P. Sherman

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. GOODWIN. Mr. Speaker, under the direction of Hon. Thomas L. Thistle, mayor, arrangements are under way for memorial services for the late Admiral Forrest P. Sherman in Melrose, where the admiral grew up and in whose public schools he received his early education. The plan has the spontaneous approval of all the people of Melrose in the desire to honor to the full the memory of their most distinguished citizen. In the meantime, the following resolutions have been passed by the city government:

RESOLUTIONS ON THE DEATH OF ADMIRAL FORREST P. SHERMAN, CHIEF OF NAVAL OPERATIONS, UNITED STATES NAVY

CITY OF MELROSE,
IN BOARD OF ALDERMEN,

July 23, 1951.

Whereas the untimely passing of Admiral Forrest P. Sherman, Chief of Naval Operations of the Defense Department of the United States, has, in a very special way, laid a burden of deep sorrow on the hearts of the people of this city of Melrose where he lived as a youth and grew to manhood, and which he always regarded as his home; and

Whereas it is now remembered that the career of Admiral Forrest P. Sherman, from its earliest beginnings, was marked by a constant tenacity of purpose in the attainment of the high goals he set for himself, surpassing brilliance and intrepidity in assisting in the defense of his country in time of war and, during the period of his services as Chief of Naval Operations, a knowledge and understanding of the responsibilities given to him and an appreciation of their relation to the welfare of his country and the security of its citizens which gained for him the complete confidence of his superiors and, indeed, of all the people of the United States, to a degree which warranted entrusting to him missions of the most vital importance to its continued existence as a free

democracy and the maintenance of its prestige among the nations of the world; and

Whereas it is further remembered that the achievements of Admiral Forrest P. Sherman have not only brought richly deserved credit to himself and distinction to the country which he so faithfully served, but peculiar honor to the community of which it could truly be said that he was its most illustrious citizen: Now, therefore, be it

Resolved, That we, the mayor and members of the board of aldermen of the city of Melrose, in the Commonwealth of Massachusetts, acting in behalf of the citizens of said city, do hereby give solemn expression to our sincere regret and sense of irreparable loss in the death of Admiral Forrest P. Sherman; and be it further

Resolved, That these resolutions be spread upon the records of the board of aldermen and that a copy thereof be prepared and sent to the family of Admiral Forrest P. Sherman as a token of sympathy to them in this tragic hour.

RONALD H. WINDE,
President of the Board of Aldermen.
THOMAS L. THISTLE,
Mayor.

Western Europe

EXTENSION OF REMARKS OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. WEICHEL. Mr. Speaker, it is not often that we get the layman's view of conditions in Western Europe and I want to include, in his own words, the interesting observation of Mr. R. P. Johnson, of Fremont, Ohio, in the *Fremont*, covering his recent trip to Western Europe:

JOHNSON'S MESSAGE

Since my return from Europe, I have been asked by some of the employees to give my impressions of these various countries in comparison to ours. This could be simply stated by saying in a few brief words that every minute of the day all America should inwardly utter a prayer of thanks that they are Americans, that they live in America, and that they should keep America free.

The trouble today is that we have too many crackpots and too many "isms" favorable to a change in our way of life. And to try, by copying the European manner of doing things, we will eventually destroy all the good things we enjoy in our country.

For a long time the best things in America have been done by Americans, have been thought out by them and certainly were not copied by foreign influence. It is gradually becoming more so every day that a state of condition the like of which exists in some of these foreign countries will occur here unless we put on the brakes and slow down some of our political leaders in Washington.

It is hard to give a mental picture of what transpired during my trip, but I will do the best I can, and, of course, anyone else who would make the same trip would probably come back with entirely different views, depending on the motive of their trip.

In the first place, England struck me as being beyond the standpoint of trying to recover any of her past glories. Up until the last war, England more or less dominated the civilized world and controlled the destiny of millions of people in her Empire, whose influence was spread over all countries with the

exception of ours. Since the war you may have noticed the disintegration of this great Empire, reminding us all of the crack-ups in history of other great empires, such as the Roman dynasty, the Napoleonic era, etc. I don't feel that there is a chance of her ever regaining the place she once enjoyed for the simple reason that she has lost a great portion of her colonial possessions and is living entirely in the past, just like people do in their old age. They think in the past and can't see the future.

The English Parliament, like our Congress, is the ruling body in England today, although the English people look to their King as the symbolic head of their Empire. This is purely tradition and is something that they would not want to dispose of, even though the role of the King is meaningless as a governmental force, and all Britain is ruled by a present-day socialistic form of government.

The English people are rationed to the standpoint of bare necessities, far worse than the austerity you read about in the papers. The American visitors, on the other hand, are unrationed and feel guilty of getting all the things they want to eat in the hotels, because they know that the great majority of the people are struggling along on practically nothing. In fact, one meal that I could have ordered would have been a week's ration from a standpoint of meat and dairy products for a whole family for a week. There is no country that can properly get along when they produce only 35 percent of the things for their existence. England, on this hand, imports 65 percent of things they eat, or else they would not survive. Therefore, instead of trying to improve agriculture by better utilizing their vast estates and putting in farm and other supplies, they are continuing to go along their old way of doing things. From a machine and industry standpoint, I got the impression that they are at least 25 years behind us and do not believe that they want to get used to mass production or volume production and do not care to learn anything about it. They apparently are not technically inclined and their scale of living is very low in comparison to the standard of living our average employee enjoys. In other words, it is impossible for the average workingman in England to ever own a car, and the best he might be able to get would be a bicycle.

Culturally, they undoubtedly surpass us. From a standpoint of cleanliness their streets are spotless. No one throws paper or cigarettes or waste material on the sidewalks or streets, and their homes, likewise, are spotless. Generally, my impression of English methods and philosophy is that we could not learn anything from them that would improve our lot here in America.

This was true in Belgium, France, and Italy as well. In these four nations enormous amounts of American money on the Marshall plan and ECA programs has been spent which bolstered their economies to at least a favorable condition which their own governments could not have achieved without this aid. It has kept their economy going and has helped restore their industry and agriculture economically to a great extent. I don't believe that any of these countries are appreciative of this fact but rather that they feel we owe it to them because they have the opinion that they saved the United States from devastation by stemming the German military ambitions. They do not seem to realize that America was forced into that war. Furthermore, I got the impression that they expect and believe we should pull them out of the fire at all times in the future, such as in wars that might be contemplated by aggressor nations like Russia. They do not want to make the supreme effort of trying to help themselves.

At one time I was against the spending of Marshall plan money and hand-outs, and, for that matter, I still am against it. But as long as we are doing it I believe we should put it out with a string on it to make these people self-sufficient. I cannot help but feel that this mistake is going to cost us dearly in the future. Certainly they should not be given any money unless they show a willingness to help themselves and there should be some method of paying this money back, even if it took 500 years.

Another distressing thing about these four countries is the fact that, excluding socialistic England, they are all leaning toward communism. It is going to be a long tedious time (if ever) for them to work themselves out of this frame of mind because their habits have been brought about over a period of centuries and most of them are of peasant origin and do not have the education or desire to get ahead. My biggest observation in these countries, again excluding England and taking Belgium, France and Italy into consideration, is that education is at a premium and for the preferred few. Consequently, where you have illiteracy and ignorance you breed communism and all the things that communism stands for. This was one thing that struck me forcefully. Their papers in the metropolitan cities such as London, Paris, etc., are only two to four sheets, containing no news worth mentioning, have no funnies and consequently could be eliminated as far as enlightening the public in the standpoint of what is going on.

All the time we were in Europe you would never think that there was a war going on in Korea, as most of the papers carried it in one small paragraph. With the lack of information and current events they certainly will not take an interest in the Korean war that has been wished upon us. They have no magazines like we have here. They also lack comics and humor and no country can get along without some of this. I was very much impressed with Germany. Germany has had no benefit of any ECA or Marshall plan money up to now and still they are forging ahead by doing things the hard way. I have always found that the best people are the ones who are just a little hungry, which seems to cause a stimulation of ambition to bring about some sort of a change. This stimulation is apparent in Germany and I believe, for that reason alone, Germany will eventually come out of this with more scientific developments and in better shape than the other nations in Europe.

In Holland and Germany, I found there was no illiteracy, everybody must have an education. At least it shows that they are trying for the better things in life such as we have. There is a lot of room for improvement, such as having a better form of government. I would not want to find any better people though than the German people we met and I would definitely say that the great majority of them were not in sympathy with the Hitler movement when Hitler was in power. They have had the unhappy experience of always getting a poor leader and then being good followers. If they could get out of the habit of this they would become a great nation. This could be applied to Holland as well. This goes without saying that Switzerland should be the best country of all because it is free of wars and they take advantage of things that come to them, being very proud of their money and not like all the rest of them, anxious to get American dollars.

The situation of labor in all of these countries outside of Switzerland is about the same. The American labor union leaders should make a trip as I did and spent some time in these factories and compare it to

the American standard of conditions that exist here. Undoubtedly our labor leaders have been over there, but I believe they haven't informed the rank and file as to how much greater our standards of living and working conditions are.

There is no 40-hour week in any of these countries. They work 10- and 12-hour days, 6 days a week with no overtime, and their scale of wages gives them a bare existence. The rate of pay is from 15 to 30 cents an hour. And in our money, of course, would be extremely low because they cannot buy the luxuries and can buy only the necessities of life.

You do not find the safety regulations or any of the factory conditions that you do here. And, the only thing that I can find extremely different was probably the amount of men that were doing a given job. To me this means inefficiency. Unlike our American plants that are well staffed and equipped, our men given assigned duties, the European plants, while utilizing many men on a single operation, are not flexible. In our plants one new piece of equipment would release many men who could be utilized in the research and development of new and additional products. Over there, generally speaking, one new machine would just cause 5 to 100 men being laid off. This explains the multitude of products we have here which has, in turn, raised our standards of living to where they are. In Europe they manufacture just one of this and one of that. While over here we have many models of say refrigerators, cars, etc. We manufacture so many of these, then so many of that, and so on. Over there they are too standardized, and when they have made this they are through.

Burdensome taxes in these countries stifle incentives and ambitions of these individuals to the extent that industrial enterprise is suffering due to a lack of improvement and development. Germany before the war had been a leader in the industrial and chemical and machine industries. Naturally, the war has broken up a lot of this leadership. But I was impressed by some of the rubber and plastics machinery German engineers are developing.

I can foresee just such a thing happening to all of us here if we do not stop some of the fantastic things that are happening in Washington. When you destroy a good middle class of people, such as we have in America, you destroy the whole population morally and otherwise. You can't make 90 percent of our population poor through taxation without economy and still have a good country.

This may be dull reading to some of you, but these are my impressions of my recent trip to Europe in quest of advancements in Machinery which might be adaptable to our own plan. I still feel that America is a leader and controls the destinies of the world.

We need statesmen, diplomats, and smart people in our Government in the future if we are to survive.

Voice Challenges Reds To Let Oatis Speak on the Radio

EXTENSION OF REMARKS OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the Washington Daily News of today:

VOICE CHALLENGES REDS TO LET OATIS SPEAK ON THE RADIO

The Voice of America today challenged Czechoslovakia "in the name of decency" to let William N. Oatis broadcast daily from Prague so that the American people will know that the Associated Press correspondent is still alive.

The Voice broadcast its appeal to Czech President Clement Gottwald.

"One hundred and fifty million men and women of America and hundreds of millions elsewhere in the free world, want to know whether one man held in jeopardy in your country is all right," said a Voice commentator. "Let's see you be big, Mr. Gottwald, let's see you do one decent thing in a lifetime of indecent acts. Bring William Oatis to the Prague radio every night."

"Bring him drugged, if you must. Bring him mouthing anti-American propaganda if you must. But bring him."

The Voice commentator conceded his request was unusual but added that he was trying to speak man to man to Gottwald.

"This request would not have been necessary, Mr. Gottwald, if you had even allowed Ellis Briggs, the American Ambassador, to see William Oatis," the Voice said. "But you have allowed no one to see him, no one but your own, and the reports of such sycophants as you can muster are not acceptable to the American people."

"* * * We do not want to hear one of these days that William Oatis is ill, and that despite everything the six doctors you have sent to attend him he has passed away quietly in the night."

"Nor do we want to hear that somehow by some strange writ of Communist law that William Oatis is no longer held in a Prague jail, but has been removed to more distant places."

"I request that every night for as long as you illegally hold William Oatis, you bring him to the microphone or Radio Prague to report to the American people on his health, his well being, and his treatment in the past 24 hours. The American people, for whom I speak now, request that William Oatis speak to them over Radio Prague for 5 minutes every day so that they can hear with their own ears that their compatriot still lives."

Veterans' On-the-Job Training Program

EXTENSION OF REMARKS OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PATROON BROADCASTING CO., INC.
Albany, N. Y., July 25, 1951.
WILLIAM T. BYRNE,
Representative, New York District 32,
House of Representatives,
Washington, D. C.

DEAR SIR: Today I am finishing a 2-year on-the-job training course as a radio news reporter. Without the help of the Veterans' Administration, I do not think I would have been able to learn the reporting business as I have.

The VA on-the-job training program has enabled me to learn this profession—and has made it possible for me to overcome a

disability and enabled me to earn a good living.

I have already thanked the VA, and I want you, as my Representative in Congress, to know I really appreciate the assistance the Federal Government has given me, not only from an educational standpoint; but also from a medical standpoint.

Sincerely yours,

ED GRAHAM,
News Reporter, WPTR.

Flood Control in the Missouri River Valley

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. D'EWART. Mr. Speaker, some comment has been heard within the past few days concerning the need for a Missouri Valley Authority to prevent a recurrence of the recent tragic and disastrous floods suffered by residents of the lower Missouri River basin.

Mr. RANKIN, of Mississippi, said on July 16 before this House:

That disaster could have been prevented, if Congress had passed my bill to create a Missouri Valley Authority.

Senator MURRAY, of Montana, told the Senate on July 23 when he presented his bill, S. 1883, which establishes a Missouri Valley Authority with unlimited powers:

The old methods and programs to control these floods in the Missouri Valley which have been followed through the years have completely failed.

Senator KEFAUVER, Tennessee, told the Senate on July 24:

For many years now we have been appropriating millions of dollars annually for flood-control work. We have built levees along the great rivers—built them higher and higher and higher. Then when the floods come, we pile sandbags on top of the levees, as we are now doing south of St. Louis.

I believe it is time to ask ourselves just how wasteful is it to build these local, or levee, flood-control works without also controlling the water in the headstreams.

Fortunately, in the Tennessee Valley Authority, we have visible and concrete evidence of what proper flood-control methods at the source of the water can do in preventing disastrous floods.

Mr. Speaker, we have a coordinated plan of development which envisions the control of the headwaters of the Missouri River, as well as the construction of main stream structures to regulate the river flow, irrigate 5,000,000 acres of land, and produce hydroelectric power. That plan is commonly known as the Pick-Sloan plan; technically it is known as the Missouri Basin project, authorized by Congress in the 1944 Flood Control Act—Public Law 534, Seventy-eighth Congress.

The critics of the Pick-Sloan plan and advocates of the valley authority scheme say our plan has failed. Mr. Speaker, let us look at the facts. Construction was initiated on the Pick-Sloan-plan

structures in the fall of 1946. In the 5 years of construction the Republican River, which joins the Smoky Hill and Solomon Rivers at Junction City, Kans., to form the Kansas River, is completely controlled. Dams at Enders, Bonny, and Medicine Creek along the Republican River tributaries in Nebraska are completed. An on-stream dam at Trenton, Nebr., is 50 percent complete and another on-stream dam at Republican City, Nebr., known as Harlan County Dam, was closed last week. The residents of the Republican River watershed suffered a flood in 1935 which caused untold millions of dollars in damage and took the lives of 110 persons. A flood again in 1947 took the lives of 12 persons around Cambridge, Nebr. Despite heavy rains in that watershed this year, the Republican River remained in its banks. Too, due to these completed structures mentioned herein, the flow of the Republican River was cut to a minimum during the high crest of the Kansas River downstream.

Two dams have been completed in the Smoky Hill River Basin in Kansas, an important tributary of the rampaging Kansas River—Cedar Bluff Dam, near Ellis, Kans., and Kanopolis Dam, upstream from Salina, Kans. The residents of the Smoky Hill River Basin suffered no damage during this recent heavy moisture period in Kansas. Too, the regulation of the flow of the Smoky Hill River prevented that stream from contributing to the high crest of the Kansas River. Each of these structures are multiple purpose and provide storage for irrigation purposes, as well as flood-control and river-regulation purposes.

On the main stream of the Missouri River, we have under construction, today, Garrison Dam in North Dakota, which is 42 percent complete; Oahe dam and Fort Randall Dam in South Dakota, which are 4 percent and 46 percent complete, respectively. These structures will serve flood control, river regulation, irrigation storage, and hydroelectric power generation purposes.

In addition to the structures, others are well along in planning which will fit into the operation of this integrated plan of development designed for the maximum use of the water resources in the Missouri River basin.

Therefore, it would appear, Mr. Speaker, that we have made great progress in the 5 years the Pick-Sloan plan has been under construction.

In order to correct the recent floods, the construction of Tuttle Creek Dam, north of Manhattan, Kans., where the Blue River joins the Kansas; Glen Elder on the Solomon River; Kirwin on the North Solomon; Webster on the South Solomon and Wilson Dam on the Saline River, all in Kansas, must be completed. These projects are all authorized as a part of the Pick-Sloan plan. They were scheduled for construction in an orderly manner for completion of the plan, which is estimated to take 40 years. In view of the recent floods, the responsible agencies and Congress should reconsider present construction schedules.

The valley authority advocates say our plan has failed. It is interesting to note that Senator MURRAY's bill, S. 1883, directs the authority board of directors in

formulating such a unified plan and recommendation, to give particular consideration to the general plans set forth in House Document No. 475 and Senate Document No. 191, Seventy-eighth Congress, second session, as revised by Senate Document No. 247, Seventy-eighth Congress, second session—section 7 (a), page 16, S. 1883.

Mr. Speaker, those documents set forth the details of the Pick-Sloan plan. Is it possible that those who say our present plan has failed would adapt the same plan to their purposes?

The valley authority advocates paint in glowing terms the accomplishments of the authority system in the Tennessee-River system. Total Federal expenditures in the Tennessee Valley since its inception have exceeded \$1,000,000,000. Mr. Speaker, the Tennessee Valley has 41,000 square miles of drainage; the Missouri Valley has 530,000 square miles of drainage. The TVA has been in operation for 18 years; we have been in construction in the Missouri basin 5 years. We can accomplish similar wonders with a smaller proportionate amount of money and in less time under our present Republican form of Government.

In flood time or drouth the proposed MVA is a socialistic monster. It is uneconomical and unsound. It is phony. We do not need it now or ever. Its primary purpose is not to control floods, but rather to set up a new political order in the Missouri basin.

Minnesota, an Ideal Family Vacation Spot

EXTENSION OF REMARKS OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. HAGEN. Mr. Speaker, for all but Members of Congress, summer is a time for vacation, a time when families go away together for rest and enjoyment, a time for getting better acquainted, for building new strength. I would like to remind the people of the land that one of the finest vacation spots in the world for families to get real enjoyment is my own great State of Minnesota.

For fear that I may be accused of boasting, I would like to call your attention to what is said about Minnesota as a vacation spot by Mr. Frank Cipriani, travel editor of the Chicago Sunday Tribune. Read Mr. Cipriani's articles and then come up to Minnesota for the finest vacation available. I think it might do the Congress and the Nation some good if we took a recess in our labors here and all the Members visited Minnesota. I will guarantee you will be better for it when you return to your duties here.

The article follows:

MINNESOTA, AN IDEAL FAMILY VACATION SPOT—
STATE OFFERS ALL OUTDOOR SPORTS
(By Frank Cipriani)

Minnesota calls itself the land of 10,000 lakes, but actually it has more than 11,000,

and most of them provide the kind of a summer vacation that the entire family can enjoy.

The season is now open, of course, and already early summer vacationers are out in the woods, on the lakes, in areas of rustic surroundings—fishing, boating, hiking, and relaxing. The volume of vacationers will swell when the schools close, releasing scores of thousands of youngsters to travel with their families.

You can get to Minnesota by train, plane, bus, or private car, and you can take your vacation relatively near—in the St. Paul-Minneapolis area which is well geared for visitors—or go up into the far north country, which is still, in many sections, quite rugged and wild.

What will a Minnesota vacation cost this year? Probably a little more than last, but not much more in most cases, and no more in others. The State has 4,000 resorts, ranging from a few rooms to many, and most operators are trying to keep price levels down against rising expenses.

Rates vary, but fall into ranges of \$25 to \$75 a week for housekeeping cottages, \$2 and up a day per person for sleeping cabins, and \$6.50 to \$15 a day per person for accommodations on the American plan (with meals). It is important that if you intend to vacation in Minnesota this summer that you make reservations now.

Minnesota is a big State, rich with all the natural endowments for outdoor recreation and pleasure—lakes, forests, absorbing scenery, invigorating summer climate, and considerable wildlife. It has Indians, too. It has more than 40 State parks and waysides, many of them with picnicking and camping grounds, and at least one, like Itasca State Park, north of Park Rapids, with housekeeping cabins, and a hotel overlooking Lake Itasca.

Minnesota has so many outstanding resort areas that it is difficult to single out any special areas, but you can't overlook, among the many, the Arrowhead region covering 10 counties in the northeastern part of the State; Detroit Lakes, west and north of Brainerd, center of more than 400 lakes, Miles Lacs Lake, 425 miles from Chicago, or Lake Minnetonka.

Actually you can go anywhere north of the Twin Cities and at random find yourself a select spot tailored to your personal liking and finances.

Far northwest is the remote Lake of the Woods region, cutting into both Minnesota and neighboring Canada. This is a wildly spectacular area, abundant with wildlife and fishing. Here, incidentally, is the northernmost point in the United States. In short, for those who like their holidays both outdoors and rugged, Lake of the Woods is the answer.

Northeast is International Falls, gateway to an unbelievably spacious wilderness, with all the fishing, hunting, and canoeing to satiate the most enthusiastic outdoors enthusiast.

Then there's Hibbing, in the midst of the exciting Arrowhead resort country with thousands of lakes; Ely, in the heart of the vast Superior National Forest, and also Virginia and Grand Marais, likewise gateways to this widespread wilderness.

This forest is truly a forest. It covers some 3,500,000 acres. Here one may find a little interlude of solitude from the busy streets, jangling phones, speeding cars, and squawking radios of the big city and here, also, one may find a good, healthful outing in addition.

Another big woodland is Chippewa National Forest, which embraces many lakes, including the sizable Cass, Winnibigoshish and Leech Lakes. Cass Lake, the town, is a main gateway. Nearby are half a dozen reservations containing 15,000 Chippewa Indians. Early this month they hold their annual pow-wow.

The fabulous Paul Bunyan country is centered in Bemidji, just west of Chippewa Forest. This is excellent summer vacation country. Fish are as plentiful as the tall tales they tell about Paul Bunyan. This legendary gentleman could, they'll tell you, blow the roof off the bunkhouse every time he sneezed. His voice was so loud people nearby had to wear ear muffs, and once he blew so hard he bowled over 12 acres of trees. Well, maybe so. Anyway, the fish up this way are real.

Just at random, here are a few other fine vacation spots in Minnesota: Eden Valley, Nisswa, Alexandria, Aitkin, Duluth, Gross Lake, Lake Vermilion, Pelican Rapids, Crane Lake, Lake Kabetogama, Big Fork, Blackduck Lake, Baudette, and beautiful Hiawatha Valley, touching Winona, Wabasha, Lake City, Red Wing and Hastings.

A number of special events are scheduled in Minnesota during the summer, principal ones among them the Aquatennial at Minneapolis July 20-29, and the canoe derby at Bemidji July 13-20, this tying up with the aquatennial.

For a happy summer vacation, try Minnesota this summer.

Mr. Speaker, other newspaper articles containing information concerning how to reach resort areas in Minnesota were published in the Chicago Tribune for June 3, 1951. This information will be of interest to Members of Congress, I am sure, so I am inserting it in the CONGRESSIONAL RECORD as follows:

HOW TO REACH RESORT AREAS IN MINNESOTA

If you are among those who will be vacation bound to Minnesota this summer, here are some suggested routes to that area.

To reach resorts or vacation spots in the northeastern part of the State—Mille Lacs, International Falls, Bemidji, and so forth—probably the best way to go is U S 14 to U S 61 to St. Paul for the first leg of the trip. St. Paul is approximately 430 miles from Chicago.

There is just one qualification on this suggestion of U S 14: To find smoother roads, the Chicago Motor Club advises taking Ill. 72 from Chicago northwest to Ill. 31, jog north to Huntley Road, then Ill. 47 and north to 14.

The roads recommended in Minnesota are reported in good condition for driving at the present time.

A stretch of 70 miles on U S 61 south of St. Paul closely parallels the Mississippi river and is widely known for its scenic beauty.

Mille Lacs is a well known resort area about 75 miles above St. Paul. To reach it from St. Paul, take U S 10 and 169. This vacation spot, a great expanse of teeming water and virgin woods, is often referred to as the "sportsman's paradise" because of its excellent hunting and fishing.

Northwest on U S 169, on the way to International Falls, is the town of Hibbing in the heart of the Minnesota Arrowhead country. A great scenic attraction here is the world's largest open-pit iron mine.

International Falls is at the Canadian border on the shores of Rainy Lake. To get there from Hibbing take Minnesota 73 to US 53. Motorists are warned not to pick up hitchhikers in this area because of border jumps.

The town of Bemidji, a place of fame in Minnesota because of its claim to being the home of Paul Bunyan, can be reached by returning from International Falls on U S 71. Huge statues of the legendary figure, Paul Bunyan, and his blue ox, Babe, stand near the lake.

From Bemidji take U S 371 to U S 10 to U S 52 into Minneapolis.

To return to Chicago from Minneapolis, take U S 65 to U S 52 down to Dubuque, Iowa; cross the Mississippi here on U S 20

and turn south on Illinois 80 to U S 52 Illinois 64 (North Avenue).

A wider circle of resort areas of Minnesota can be made by taking U S 61 from St. Paul through Duluth and along the wilder shores of Lake Superior up to Grand Marais (the scenic Gunflint trail is just north of here); turn back to U S 61 to Little Marais and turn right on Minnesota 1 to the city of Ely, in the heart of the Superior National Forest and the gateway to the famous "roadless area" resort and canoe country.

From Ely, cross over to Hibbing, Grand Rapids and Bemidji on Minnesota 1 to U S 169, and 169 to U S 2; then by coming down U S 171 to U S 10, you could go left through the Mille Lacs region and down U S 169 to Minneapolis.

Another way to reach the northeastern corner of Minnesota above Duluth, is up through Milwaukee, Green Bay, and the north woods of Wisconsin. This gets you into the glistening lake and tall-woods region faster than via Madison.

Take Illinois 42 (Sheridan Road) to Illinois 173; cross over to U S 41 just beyond its reconstruction point and up to Milwaukee; Wisconsin 27 to Green Bay, Wisconsin 29 to Wisconsin 47 to U S 45; then 45 to U S 8, left to Wisconsin 47 through the resort area around Rhinelander and Eagle River up to U S 51; then take 51 to U S 2 and left into Duluth.

The return from Duluth could be made on U S 53 to Eau Claire, Wis., and U S 12 to Madison, from Madison take U S 14 to Chicago.

Look to the Record

EXTENSION OF REMARKS OF HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. MILLER of California. Mr. Speaker, there has been a lot of small talk regarding the loans made by the Reconstruction Finance Corporation to the Henry J. Kaiser enterprises.

Presently the gossips hit at the loan to the Kaiser-Fraser Co.

The Richmond Independent, of Richmond, Calif., answers some of these fatuitous statements in an editorial entitled "Look to the Record," which I include in these remarks.

It might be well to remember that Kaiser steel paid back all of its loan ahead of schedule and more important it paid dollar for dollar the amount the Government had invested in the Fontana steel plant though it was a war baby. Another steel company paid about 20 cents on the dollar for a steel plant built under comparable conditions.

The Richmond Independent is qualified to speak. It is published in Richmond, Calif., where Kaiser set records for shipbuilding in World War II.

The editorial follows:

LOOK TO THE RECORD

Last week a United States Senate subcommittee made a public declaration in which it said that the Reconstruction Finance Corporation loans to the Kaiser-Fraser Automobile Co were not in the public interest and should not have been made.

It seems to us that the subcommittee did not delve very far into Henry J. Kaiser's

record of financial transactions with the Federal Government, or it would not have come to such a conclusion.

In the first place, Henry J. Kaiser and his various enterprises have been very good customers of Uncle Sam, as far as paying back principal on loans, interest on loans, rentals, and Federal taxes. In fact we can almost go as far as saying that he has been the best customer the RFC or any of the other money-lending bureaus have ever had.

Let's look at the record. It shows that Kaiser and his various firms, Kaiser-Fraser, Kaiser Steel, Kaiser Aluminum, and Kaiser Metals have paid to the Government in principal, interest, and rentals, \$253,956,397. And in addition the Kaiser firm has paid Federal taxes, on these properties involved in the loans, to the tune of \$139,146,911. The grand total is almost \$400,000,000.

Now, at the present time Kaiser-Fraser owes the RFC something like \$62,000,000, peanuts when you consider the amounts of the other loans, all of which have been repaid. This debt to the Federal Government is current, the interest is being paid, the principal is being paid, and they are not behind in their payments.

Henry J. Kaiser has been subjected to all kinds of congressional committee investigations. Each time he has come out as clean as the proverbial whistle—clean because he has never resorted to outside influence, under-the-table practices, or fraud in his dealings with the Government.

The subcommittee said, in part:

"It does not believe that the interest of the general public was such as to justify the use of public funds to continue the operation of Kaiser-Fraser as an automobile company."

To which we say "Tommyrot!"

The Kaiser-Fraser loan was one of the best the RFC ever made. At least they have the Kaiser family holdings as security, something they did not have in cases too numerous to mention, but one in particular which could bear a little more scrutiny—namely the Luston company which nicked the Government for untold millions. And the RFC was left holding the bag to the tune of those millions.

Apparently the Senate Banking Subcommittee cannot see the forest for the trees, or is it bad for the Government to make money by lending money?

Kaiser has borrowed many millions from the Federal Government. He has paid back all but \$62,000,000—with interest—and it is a lead-bottom cinch that the \$62,000,000 will be repaid when it is due.

Yes, the RFC could do worse, much worse, than lend money to Henry J. Kaiser and his companies. The Banking Subcommittee is way off base on this report.

Northwest Airlines Celebrates Twenty-fifth Anniversary

EXTENSION OF REMARKS OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. HAGEN. Mr. Speaker, in this day, when we read of rocket planes that travel more than 1,500 miles an hour, it is hard to realize that aviation is a very young industry. As we watch the hundreds of planes landing and taking off daily at the National Airport, adhering to regular schedules and transporting thousands of passengers to every part of

the Nation and the world, it is almost impossible to believe that only 25 years ago, commercial airlines were just beginning their first flights.

This year Northwest Airlines, with its main office in Minnesota, celebrates its twenty-fifth birthday. The history of Northwest Airlines is a modern adventure story, an adventure story of American business with all its courage, its skill and its far-sightedness. In these times, when we have so many fears concerning the system of free enterprise, I commend the following to your attention, the story of Northwest Airlines' 25 years, which appeared in the Minnesota Historical Society publication of St. Paul, Minn., entitled "News for Members" for July 1951:

AVIATION HISTORY

Northwest Airlines, the only major airline with home offices in Minnesota, is observing its twenty-fifth anniversary this year. The illustrations on these pages will give you some notion of the progress made during those years in the field of aviation. Above are two of the first planes used by Northwest. On the opposite page is a 75-passenger, double-decked stratocruiser, last word in aviation luxury.

Obviously things have changed since Northwest Airlines began operations on October 1, 1926. On that crisp fall day, an open cockpit Curtiss Oriole biplane took off from the St. Paul airport and pointed its nose toward Chicago. The cockpit carried a mailsack instead of a passenger, and the plane flew an irregular course over numerous check points like a railroad bridge, one farmer's barn, and another farmer's silo. In that year, a one-man mechanical force, four pilots, and two planes comprised the operating division of Northwest.

Today the original 400-mile route has grown to more than 20,000 miles and the staff well into the thousands. The fleet of 2 tiny planes has grown to 10 Boeing stratocruisers, 21 Martin 2-0-2's, and 17 Douglas DC-4's. The silos used as navigation aids have been replaced by radio beams, paths of lighted beacon towers, and dozens of other modern devices.

The four pilots who flew the first flights are gone, but shortly after the line was founded they were joined by others who are still in the harness with Northwest. They are the ones who remember many of the personal, humorous incidents that occurred during those 25 years of serious growth.

For example, the oldtimers recall how airlines grew from open mail planes to cabin planes for passengers, competing with railroads by offering complimentary meals aloft. That sounded fancy, but early passengers recall how they flew serenely along in a Hamilton plane built for one pilot and four passengers. Complimentary meals aloft was quite a ceremony then. The pilot would place the stick securely between his knees to keep the plane on an even keel. Then he gingerly handed back to one passenger and another cardboard lunch boxes containing cold fried chicken and French fried potatoes.

In July 1927 Northwest started its passenger service, and the next year they began flying mail by night. By the winter of 1933, the company was flying from Chicago to Spokane, Wash. Since that time New York City, Alaska, and the Orient have been added to its ports of call.

The history of aviation in Minnesota is still to be written. But the MHS is beginning now to collect information on all phases of this subject before it is lost forever. The growth of the Civil Aeronautics Department is a chapter in itself. Perhaps you know some of the pioneers in this field who should

be interviewed or encouraged to write their reminiscences, or who have letters, diaries, and other manuscripts bearing on the early days of aviation in the State. If so, please tell us about them. Aviation is a vital chapter in the story of Minnesota, a chapter we must begin to preserve now before it is too late.

Admiral Sherman

EXTENSION OF REMARKS OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. SHEEHAN. Mr. Speaker, today at 3 p. m. the Nation will honor Admiral Forrest P. Sherman by interring his body at Arlington National Cemetery.

The great qualities that went into the make-up of the man and naval officer are intimately revealed in the following article by John S. Knight, editor and publisher of the Chicago Daily News, on Wednesday, July 24:

THE EDITOR'S NOTEBOOK

WARTIME MEETING REVEALED SHERMAN'S GREAT QUALITIES

I first met Admiral Forrest P. Sherman on a sweltering August afternoon in the bombed-out city of Manila.

It was in 1945 and 16 Japanese envoys headed by Lt. Gen. Takishiro Kawabe had just stepped from an American C-54 transport plane at Nichols Field to sue for peace.

These representatives of Emperor Hirohito were flown to the Philippine capital to talk with General MacArthur's staff concerning the terms of the official surrender.

Like all other correspondents in Manila, I was worried later that day over the "scuttlebutt" that only a limited number of reporters would be invited to witness the wind-up of the Pacific war aboard the battleship *Missouri* in Tokyo Bay.

Admiral Sherman apparently sensed my feelings and said quietly, "What are your plans?"

I replied that I hoped to get into Japan on one of General MacArthur's planes.

With a twinkle in his eye, the admiral remarked that perhaps I had seen too much of the Army and the Air Force and not enough of the Navy. He added: "Why not fly back to Guam with me tonight? If you do, I think I can find room for you on the *Missouri*."

That was good enough for me and I accepted the invitation at once.

During the flight to Guam, I had ample opportunity to become well acquainted with the man who was later appointed Chief of Naval Operations.

Admiral Sherman impressed me from the start as having distinguishing qualities that set him apart from the usual run of Navy brass.

Although Sherman was a first-rate fighting man, having been awarded the Navy Cross for extraordinary heroism when the aircraft carrier *Wasp* was sunk by a Japanese submarine, I was attracted most by his scholarly mind and his keen perception of political and economic problems.

The following day, Admiral Sherman sent me by Navy plane to Iwo Jima and from there by destroyer to join the U. S. S. *Iowa* in Sagami Bay.

A seat upon a 16-inch gun turret overlooking the captain's promenade deck of the *Missouri* was my reward on that memorable

"surrender Sunday" for being tossed about on a tiny destroyer for more hours than I care to remember.

On Monday following the surrender, Gen. Julius Ochs Adler (New York Times) and I flew back to Guam with Adm. Chester Nimitz and Adm. Forrest Sherman.

Here again, we were delighted with the fine quality of Sherman's mind and I wrote at the time: "We shall be hearing more about Sherman as time goes on."

Admiral Sherman died in Italy last Sunday after concluding a series of major defense conferences in Western Europe.

At this critical stage in world affairs, he will be hard to replace. More than any other one man of the Navy, Admiral Sherman made the most valuable contribution to unification of the Armed Forces.

When Admiral Denfeld was fired as CNO for making a last-ditch fight against a single Department of National Defense, Sherman was given Denfeld's job.

At first, Sherman was resented by Navy partisans who thought he was "too friendly" to the other services. This feeling was based upon Sherman's staff work with officers of the Army and Air Force when unification was still in the planning stage.

Later, the critics' panning turned to praise. For Sherman, in his quiet, efficient, tactful way, did more for the Navy in his relatively short tour of duty as CNO than all of the shouting admirals put together.

Like MacArthur, Admiral Sherman was well versed in fields other than those pertaining to the military. He knew history and politics and had the intuition of a trained diplomat.

For this reason, Admiral Sherman represented his country abroad with dignity, firmness, and understanding.

It is tragic indeed that his career has been ended at the very moment when the country is in the greatest need of his services.

Alaska Grows Up, Should Be Admitted as State

EXTENSION OF REMARKS OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. HAGEN. Mr. Speaker, there is considerable interest in Alaska these days for several reasons. I believe the membership of the House will read with interest a fine article, published in the *Eagles'* magazine for July-August 1951 entitled "Alaska Grows Up."

The article is written by Richard L. Neuberger, and it points out the fact that Alaska is no longer a primitive frontier, but a huge northern Territory, making giant strides toward statehood and industrial development. The article follows:

Alaska is coming of age.

Ten years ago Alaska was still predominantly a wilderness. It could be reached from the United States only by boat or plane. Its population was a mere 72,000. Statehood seemed far off. Industrial development was even more distant.

Today Alaska is a land of thriving, cosmopolitan communities. A broad graveled road with magnificent bridges ties it to the rest of the North American continent. Its population is 127,000, a prodigious gain of more than 75 percent since 1940. Statehood al-

ready has been approved by one branch of Congress. It is possible that Alaska soon may become a world center for the production of aluminum and pulp and paper.

Last year an event occurred which symbolizes Alaska's new status. For the first time in history more people traveled to Alaska by automobile than by steamer. The number of visitors arriving by sea in 1950 was 17,430. But 22,507 persons rolled into the Territory over the 1,522-mile Alaska Highway, constructed in World War II.

Even more significant, 5,984 of the people arriving by car did not leave Alaska. The population of the Territory is still growing—in spite of the fact that in the decade between 1940 and 1950 Alaska had the greatest proportionate increase of any area under the American flag, even including California.

Alaska's six Eagle aeries, scattered all the way from the British Columbia line nearly to the Arctic Circle, are located strategically to be part of the Territory's biggest boom.

Aerie No. 162, in Ketchikan, which packs more canned salmon than any other community in the world. Five miles outside Ketchikan, ground has been broken for the first pulp mill ever to be erected in the north. It will tap the continent's largest remaining stand of spruce and hemlock timber. These trees grow in the vast Tongass National Forest.

Douglas Aerie is situated in a suburb of Juneau, the Alaskan capital. Douglas lies directly across a narrow salt-water inlet from Juneau. Many men associated with territorial agencies are brothers in Douglas Aerie. They are helping to direct the expansion now taking place in Alaskan industry, agriculture, and transportation.

Aerie No. 25 serves Skagway, where Jack London and other cheechakos sloshed ashore half a century ago to hunt gold in the Klondike. Skagway is the site of the proposed Taiya hydroelectric project, which would exceed even Grand Coulee Dam in the production of kilowatts.

Most of the brothers of Aerie No. 25 work for the narrow-gauge White Pass & Yukon Railway, which ascends the mountains to Whitehorse, principal military base along the Alaska Highway.

Anchorage is by far Alaska's biggest city. More than 31,000 people inhabit the Anchorage area. This is an amazing increase of 567 percent over 1940. Where a decade ago bears roamed and lordly moose foraged there now are supermarkets, housing projects, and busy bus lines. Aerie No. 2509 engages in many community enterprises in this city, which is also the headquarters of the Alaska department of the United States Army.

Fairbanks has a bustling Aerie. It also has Ladd Field, most strategic air base in the Far North, where extensive cold-weather experiments are conducted. No artificial ice ever is required. In temperatures as low as 66 degrees below zero Superforts take off casually from Fairbanks for routine flights over the pole. Fairbanks is also the terminus of the Alaska Railroad, supply line of the Territory, and the source of good jobs for many members of Aerie No. 1037.

Valdez is on a wooded harbor along the coast. It is the point at which the famous Richardson Highway touches tidewater. This was the first road ever built in Alaska. Cargoes are put ashore at Valdez and trucked over windswept passes to the Alaska Highway.

Brothers of Aerie No. 1971 are among the men who perform this rugged task at the steering wheel. Frequently they move critical military loads in temperatures so low that antifreeze solution has been known to harden in radiators.

The Alaska of 1951 challenges many long-held notions of what life is like along this rooftop of North America.

It distinctly is not primarily a realm of grizzled prospectors, man-eating brown

bears, Eskimo igloos, and gun-totin' adventurers. These picturesque things are there, of course. But they are the exception and not the rule.

Alaska is growing up. It is becoming increasingly civilized with each passing day. It is not so unlike the Pacific Northwest States of Washington, Oregon, and Idaho—familiar to thousands of Eagles.

Juneau's Baranof Hotel is as luxurious as many hotels in the distant "States." Members of Aerie No. 1037 who work on the Alaska Railroad operate a streamlined train which would do credit to numerous transcontinental systems. This train is the Aurora, rolling between Anchorage and Fairbanks. At a banquet in Ketchikan or a ball in Juneau, one is sure to see the latest in women's fashions.

Nor is Alaska exclusively a land of snow and ice, winters are severe in the interior but the cities along the sea have milder weather than St. Louis or Boston. Visit a beach near Ketchikan or Sitka. You will find children romping in the sand, bathing beauties posing beside the waves, and cottages ringed with wild flowers.

Alaska is just coming into its own. For example, Skagway now has a population of 600. Yet the Alaska Development Board points out that a project is possible at Skagway which would boost the population to 40,000.

In the mountains high above Skagway, the Yukon River rises and flows 2,000 miles to the Bering Sea. But Skagway, on the shores of the Pacific, is a mere 19 miles away. What if some of the Yukon's headwaters were diverted backward to Skagway? This would accomplish in 19 miles a drop in elevation which now is distributed gently along 2,000 miles.

Water thundering through tunnels and canyons to Skagway could generate 12,000,000 kilowatt-hours of electricity annually. This would be the greatest power project in the world.

Because power is the principal ingredient in aluminum, the Aluminum Co. of America has taken a 50-year lease on 350 acres in the Skagway area. The largest light-metal plant ever constructed could be the eventual result.

Stroll down the main thoroughfare of a thriving Alaskan city, such as Juneau or Anchorage. You will not find it greatly different from any Eagle community of comparable population in the far-off United States of America.

Men do not wear mackinaws and parkas. They wear business suits and overcoats—perhaps with rubbers in the rain or galoshes in the snow. There are supermarkets and movies and doctors' clinics. Busses look just like busses in the States. Daily papers are published, such as the Anchorage Times and the Fairbanks News-Miner.

Of course, you will discover some contrasts with the United States. Prices are higher in Alaska than in any other place over which our flag flies. It is not uncommon to pay \$1.50 a dozen for eggs, \$1.35 for a lettuce and tomato salad 50 cents for a dish of ice cream and \$2 for a haircut. Wages, too, are higher. A master carpenter on a construction project may earn \$700 during a month.

The number of white men in Alaska outnumber white women at least 2 to 1. This means there are comparatively few families. It is frequently a big event in a remote hamlet when a new schoolteacher or nurse arrives to assume her duties. Often she does not remain single for long.

I remember talking to a pretty brunette nurse in Ketchikan. "When I decided to go to Alaska," she said, "I thought I was going to live on a frontier. I took along all sorts of rugged equipment. But in my first letter home I sent for my best evening gown. I never saw so many formal parties before in all my life. A few months later I sent for

my bathing suit. I believe my folks in Omaha thought I had been shipped off to Miami or Honolulu by mistake."

Alaskan people are public spirited. Juneau's citizens, aided by Eagles in nearby Douglas, recently raised \$71,000 in a few months to help finance a public library. Furthermore, the capital city recently became the first Alaskan community to pave all its principal streets.

Anchorage, the fastest growing municipality anywhere on this continent, has accomplished miracles in a few years. It has established a new water and sewer system, modernized its telephone exchange, built many additional schools, and developed parks and other recreational facilities.

Gov. Ernest Gruening, of Alaska, cites these feats as evidence that Alaska has come of age, that it is ready for full membership in the Union. Although it is hard for us to realize, Alaska is more populous than at least 15 States were when they were accorded stars in the flag. President Truman has advocated statehood, and the United States House of Representatives has acted favorably on a statehood bill.

In spite of the advances made by Alaska toward civilization, don't forget to bring your fishing equipment and shotguns if you head north. There are still countless lakes where only a few white men have fished. The 28-inch trout will snap at a bent pin. Ducks and geese abound in the marshes. And if you have an adventurous spirit, you can trudge up the Stikine River or into the solitude of Kodiak Island in quest of the world's biggest meat eater, the Alaskan brown bear. But be sure to take along an experienced guide and a rifle which never jams.

Alaska today is on the march to statehood and industrial development. But enough of the frontier remains to make any pulse beat faster.

Central Valley Recreation Project

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. MILLER of California. Mr. Speaker, in California, between August 1 and 10, extensive celebration of the initial operation of the great Central Valley reclamation project will be held beginning in the north near Shasta Dam at Redding and continuing day after day southward to the end of the Friant-Kern canal at Bakersfield. These spontaneous observances will follow the course of the water as it moves southward in man's most ingenious engineering work. Local communities and people who have waited and prayed for the water to flow in the ditches for many years have formed committees and are planning the events, the greatest of which is scheduled for Tracy where the great pumps that reverse the flow of the San Joaquin River will go into operation on August 4. Prominent friends of the Central Valley project from all over the country will join in these celebrations. The President may attend. Secretary of the Interior Chapman will be there. Many members of the committees of the Congress that have considered this project through the years will attend and

speak on the invitation of the organizing committees. Governor Earl Warren of California and many other State and local dignitaries will be present and will participate.

Since my district is in part in the Central Valley and the Contra Costa canal, an important part of the project, serves my constituents, I join all the people at home in inviting everyone to look toward California between August 1 and August 10 and to see what it means in the West to put a great reclamation project into operation.

It has proved annoying that some have attempted to detract from these celebrations and to throw cold water on the spontaneity of the occasion. For the information of my colleagues, I include an editorial published on July 12, 1951, in the Tracy Press and a news item which appeared on July 11 in the Stockton Record. I also attach an editorial by Paul C. Bodenhamer that appeared in the July 9 issue of the Redding Record-Searchlight. They follow:

[From the Stockton (Calif.) Record of July 11, 1951]

CVP 3-DAY FESTIVAL TRACY'S OWN IDEA, PROMOTED BY CITY—PETE COCHAIRMAN ANSWERS SOLON CHARGE; RECLAMATION BUREAU IS NOT TRACY HOST

TRACY, July 11.—"Tracy's Central Valley project pumping plant celebration to be held August 3-5 is Tracy's project—good, bad or indifferent—and not the Federal Bureau of Reclamation's," said Bruce Hotchkiss, celebration cochairman, today.

Hotchkiss' statement came in answer to accusations by Los Angeles Representative NORRIS POULSON (Republican) who said the Reclamation Bureau is spending hundreds of thousands of dollars illegally on self-praising propaganda in connection with the opening of the CVP.

Poulson declared California farmers have a right to celebrate the arrival of water for their fields, but Reclamation Bureau officials should be servants, not hosts at the party.

CHAMBER OF COMMERCE AIDING

Commenting on this Hotchkiss said, "The Tracy Pumping Plant celebration was a product of mine and Tracy District Chamber of Commerce secretary, Bob Monagan's, imagination. It stemmed from a desire to obtain publicity for Tracy. It is thoroughly independent of Bureau of Reclamation efforts—they have had no members in it nor directional efforts.

"As a matter of fact," Hotchkiss added, "the Bureau has even bucked us on several ideas for the fete."

Hotchkiss explained the conception and workings of the Tracy group by stating an independent corporation was formed in February of this year. It was named the Tracy Pumping Plant Celebration, Inc. The organization was formed to plan and promote a celebration. The board of directors was formed of Tracy citizens who hired Art Craner, for 14 years director of the Los Banos May Day celebration, as director to promote the fete.

INVITE PRESIDENT

"Through Craner's efforts and the possibility President Truman might attend the dedication of the plant Tracy and the celebration has gained widespread publicity," declared Hotchkiss.

The celebration group before actual formation, invited the President to attend the dedication ceremonies. Following formation, the corporation has successfully promoted a queen contest in which a \$7,500 profit was made. "Through our own efforts," Hotch-

kiss said, "we have been able to finance our group."

This has been done, he went on, by selling carnival rights, campaigning for funds from contractors and by selling concession rights and program rights.

"We even held a dinner and auction in March from which we raised \$500 on which to operate. We auctioned prizes donated free of charge by local merchants."

[From the Tracy Press of July 12, 1951]

FEDERAL BUREAU PROPAGANDA

A recent article in a national weekly magazine titled "How Government Pressure Boys Squander Your Money," and a blast from Congressman NORRIS POULSON the past week have centered attention on the propaganda activities of Government bureaus, especially the Bureau of Reclamation, in connection with the celebrations incident to the dedication of the Central Valley project this summer.

According to the magazine article this Bureau has spent untold sums of the taxpayers' money in lobbying and glorifying itself through expensive cocktail parties, air junks, and by publication of books and other promotional material, which has been mailed to newspapers throughout the entire United States. Every Bureau employee, this article explains, is a press agent who is expected, by official suggestion, to get out and meet the folks, even joining luncheon clubs and chambers of commerce and churches, because Congress is very sensitive and susceptible to what goes on at home, and the more friends we make here the more easy it will be back in Congress to get our appropriations.

There are a lot of mighty fine people working for the Bureau of Reclamation in the Tracy district who should not be blamed for such activities, for we are sure most of them do not believe in such tactics. Working for the Bureau of Reclamation is a job, a way to make a living, and all of the Bureau people we know here are earning their money. Few if any of them have the time to spread propaganda, and it is probably the last thing they would think of doing anyway.

The Bureau of Reclamation is not the only offender in this regard, either. Though the expenditure of official time or Federal funds to influence legislation is punishable by fine and imprisonment, it is apparently becoming established procedure in a great many Government agencies. The thousands of pitchmen on the public payroll, creating artificial desires for more and more Government services, cynically egging on each and every pressure "gimme" group, are spending huge sums to convince us that they need still more tax funds, money that should be going to more worthy purposes.

Just for the record, the celebration Tracy is going to state here on August 3 to 5 is not financed in any way by the Bureau of Reclamation, and indirectly by the taxpayers. All the necessary cash is being raised in one way or another by the local corporation handling the event.

[From the Redding Record-Searchlight of July 9, 1951]

NONE OF THE BUREAU'S BUSINESS?

NORRIS POULSON, a Congressman from Los Angeles, has sent us an eight-page mimeographed release from his office in Washington, D. C., blasting at the Bureau of Reclamation for what he calls an "orgy of illegal spending to praise its own officials." The only thing it proves conclusively is that Representative POULSON's hatred for the Bureau affects his judgment. His statements are so extreme and intemperate, they so frequently exaggerate and distort the facts that it is hard to give any real consideration to whatever just complaint POULSON may have.

"The Bureau of Reclamation," the Congressman says, apparently in all seriousness, "never did anything unselfishly or for the good of anyone but itself. The Bureau is a political cell, and its sole purpose is to destroy individual rights and become the absolute master of the western half of this country." What has set him off is the Central Valley water festival, August 1 to 10, in which Redding and other towns are participating enthusiastically. Poulson declares:

"The festival should be none of the Bureau's business, and Bureau henchmen should be excluded along with smallpox. The Bureau built the Central Valley project only through suzerainty and the tolerance of a hopeful and trusting people, and the Bureau should be the servants of those people, not their hosts. The party should not be given either by or for the Bureau, but by the Bureau's rightful employers, the Central Valley farmers, who must pay the project bill." And again:

"For several months every city, town, and crossroads hamlet in the United States has been inundated by a flood of organized hypocrisy, both oral and written, from the bureau propaganda mill, the greatest fountain of misrepresentation in the Government. No lobby in the Nation could afford to issue a small part of the material, mostly blather in this case, with which the Bureau has littered editors' desks and harangued civic gatherings from Canada to Mexico. And even more.

"Up and down the length of California a regiment of selected Bureau missionaries have been traveling for months, spreading the gospel of their greatness on every village and farm. * * * The Bureau's plans comprise a display of wanton spending at a time when any GI in Korea would give a month's pay for one smell of a Central Valley alfalfa field instead of the constant stench of rotting corpses. * * *

"The Bureau has one goal; to secure a stranglehold on all sources of water, all projects, all rights to the use of water. That done, there is nothing the people can do, except pay the bills and genuflect before the leering faces of their masters, the mercenaries of Strous, et al. * * * These are the people, the Bureau and its menials, who are demanding that the citizens of California pay them homage for 10 days at the same time they are striving to wreck the State's economy."

Come, come, Congressman. Sensible, constructive criticism—which the bureau needs and deserves—might improve the bureau. But folks around here, who have had lots of first-hand experience with the bureau and the Central Valley project, know that it simply isn't so that the Bureau never did anything for the good of anyone but itself or that its sole purpose is to destroy individual rights or that a regiment of Bureau missionaries has been calling on every village and farm. Folks here may even wonder why you, living outside the project area, show such great concern and why you—or somebody—should go to the expense of mailing out your mimeographed blast.

The fact is that 12 or 13 years of work are being climaxed in August when the project commences fully integrated operations. The Bureau built it and has a right to be proud of it. The Bureau cooked up the celebration and is working with the various communities, such as Redding, but the local communities are running their own shows. Redding chamber of commerce, for instance, is working on an observance here and regards the celebration as a good thing which will bring Nation-wide publicity to the State and to our own city.

This paper has had some pictures and maps and factual material (much of it at the paper's own request) from the bureau, but it hasn't been inundated with material, hypocritical, or nonhypocritical. And while

the editor's desk is littered, it is not with bureau material.

There are interests that hope to gain their own selfish ends by destroying public confidence in the Bureau of Reclamation. Congressman Poulson is playing their game, and not very subtly.

Why We Are Short of Metals

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. REED of New York. Mr. Speaker, a resolution will soon come to the floor of the House to permit lead to enter at a reduced duty or free because the metal is in short supply. The fact is that procurement authorization for lead under ECA to May 31, 1951, amounts to \$57,300,000. How long are the flames of inflation to be fanned into a destructive flame by giving away our vital metals? It only creates a greater domestic shortage which of course forces up the price. Not only this, these gifts are paid for by our taxpayers. Does destructive taxes mean nothing to the spendthrifts operating the ECA?

Under leave to extend, I am inserting the following:

MARSHALL PLAN PROCUREMENT AUTHORIZATION
TOTAL \$12,500,000,000

To July 16, 1951, the Economic Cooperation Administration reports procurement authorizations as follows:

Cumulative total for Europe (including MDAP and GARIOA).....	\$12,046,254,000
Cumulative total for Yugo- slavia-MDAP.....	27,900,000
Cumulative total for Far East area.....	495,854,000

Total authorizations... 12,570,008,000

By dishing out American tax dollars to try and rehabilitate the economies of European countries in many instances the Federal Treasury has supplied funds for the procurement of strategic and critical materials which were in short supply in the domestic markets, thus creating an inflationary cycle which the Government now proposes to check or halt by heaping new tax burdens onto the American business economy.

A program reaching such economic asininity deserves more than passing consideration by the American people who must shoulder the burdens of the ultimate costs. Here are some facts to think about.

To May 31, 1951, the procurement authorizations for nonferrous metals were as follows:

Copper.....	\$352,800,000
Aluminum.....	123,000,000
Zinc.....	79,600,000
Lead.....	57,300,000
Brass and bronze.....	9,300,000
Nickel.....	6,200,000
Tin.....	2,000,000
Others, including precious.....	19,700,000

Total authorized..... 649,900,000

The inflationary effect of the procurement authorizations under ECA are shown by the wholesale prices reported by the

Bureau of Foreign and Domestic Commerce, which were:

	April 1946	May 1951
Copper, per pound.....	\$0 2120	\$0 2420
Aluminum, per pound (scrap).....	.0741	.1725
Zinc, per pound.....	.1200	.1750
Lead, pig, per pound.....	.1721	.1700
Brass sheets, per pound.....	.302	.3770
Tin, wholesale, per pound.....	.9400	1 3986

As we have so frequently warned, it is time to close Uncle Sam's international gift shop instead of authorizing new expenditures which will burden the American productive economy and contribute to inflation.

United States Advisory Commission on Information

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

ASSISTANT SECRETARY OF STATE,

Washington, July 27, 1951.

HON. JOHN J. ROONEY,

House of Representatives

DEAR MR. ROONEY: One of the misstatements that was made in the so-called Voice of America appropriations debate in the House on Thursday, July 26, is so unjust that I believe you will want to correct it in the RECORD. In that debate Congressman TABER said, with reference to the United States Advisory Commission on Information: "I talked with a member of the Advisory Commission a little while ago, who said he had not been called to a meeting in a year. The editor of the Saturday Evening Post, who was on that Commission, has never been called to a meeting, and he wrote just a little while ago just what he thought about the situation and the way it was not being carried on for the good of the American people to get across the message of where America stood."

In the absence of Mr. Erwin Canham, the Chairman of the Commission, who is even now abroad where he is looking into some of our operations, I think I should state the facts. There have been six meetings of the Commission within the last year. Every member has been invited to attend each of these meetings, and each of the members has attended at least some of the meetings, in addition to looking into the operations individually. I attach a full list of the meetings and the attendance at each.

Also, as I believe you know, the individual members of the Commission have spent a great deal of time looking into the operations of this program abroad.

In addition, I attach a letter from Mr. Ben Hibbs, the editor of the Saturday Evening Post, indicating that he has attended every meeting called since he was appointed to the Commission and reflecting his true views about the program.

I am sure you will want to see that the record is set straight on this.

Sincerely,

EDWARD W. BARRETT.

DEAR MR. BARRETT: I understand that it was said on the floor on Congress one day this week that I have never attended a meeting of the United States Advisory Commis-

sion on Information since my recent appointment as a member of the Commission. This is untrue. There have been two regular meetings of the Commission since my appointment, and I have attended both of them. In addition, I spent a full day in New York recently inspecting and investigating the radio, film, and publication operations of the State Department's information program. Furthermore, I have access to much written material dealing with the program, and I spend a great deal of time between meetings reading this material and informing myself about its various phases.

Since my appointment, the Commission has made one report to Congress. I did not sign this report for two reasons. At the time the report was written, my appointment had not yet been confirmed by the Senate, and I felt I had no legal right to sign. Secondly, at that time, I had just been appointed and had not had time to inform myself about the information program or the work of the Commission. Since then, I have informed myself, and if I had the opportunity today to sign the report, I should do so without hesitation.

I understand that it was also said on the floor of Congress that I recently "wrote something" expressing critical views of the Voice of America. This is not true. I have written nothing about the Voice of America since I have been on the Commission. We did publish a few months ago, in the Saturday Evening Post, a guest editorial written and signed by an outside writer, and in this editorial the writer was in some degree critical of the Voice.

My position is that there is room for improvement in the whole State Department's information program, as there always is in any activity, governmental or private. But I do not believe this program has been a failure, and I do believe that it is being steadily improved. Moreover, I believe most urgently that the program is of such enormous importance that we simply can't throttle it by denying funds for its continuance. Sincerely,

BEN HIBBS,

Editor, Saturday Evening Post.

**Title of the States to Submerged Lands
Within Their Borders**

**EXTENSION OF REMARKS
OF**

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution, adopted by the House and Senate of the State of Maryland:

House Joint Resolution 8

Joint resolution requesting the Congress of the United States to enact a bill confirming the title of the several States of the Union to submerged lands within their borders and requesting the Senate Committee on Armed Services to hold hearings to obtain information and to recommend to the Senate appropriate legislation defining the delimiting territorial waters of the United States

Whereas the State of Maryland is the owner of approximately 1,600,000 acres of submerged lands covered by the tidal waters of the Chesapeake Bay and its tributaries, as well as some 61,000 acres of submerged lands of the Atlantic coastal shelf within 3 miles from the shore, subject only to Federal powers of navigation, commerce, and national defense; and

Whereas in 1775 the State of Maryland succeeded to all rights of Lord Baltimore, and, as a sovereign, the State also became entitled to the recognized public-law rights of a sovereign to land within its borders under navigable waters; and

Whereas by virtue of the Federal Constitution ratified by Maryland on April 28, 1788, the State of Maryland's rights to these submerged lands under navigable waters were recognized and forever formalized, subject only to delegated Federal powers of navigation, commerce, and national defense; and

Whereas for more than 170 years the United States Government, Congress, and

the Supreme Court have uniformly, unanimously, and consistently recognized that title and the rights which accompany it; and

Whereas in 1937, for the first time and as an original proposition, the Federal Government began to assert, through the agency of Secretary Ickes, claim to the marginal seas by reason of the fact that oil was being extracted in those areas by the States; and

Whereas the Supreme Court of the United States in 1947 in a suit instituted by the Department of Justice entitled "*U. S. v. California*" (332 U. S. 19), overthrew more than a hundred years of established precedents in a night-makes-right decision and held that the United States had paramount rights over the submerged lands adjacent to the shores of California while not deciding the question of ownership; and

Whereas in a subsequent decision, entitled *Toomer v. Witsell* (334 U. S. 385), decided in 1948, the Supreme Court held that the power of South Carolina to regulate fishing in the marginal sea area within its boundaries may be exercised only "in the absence of a conflicting Federal claim," citing *U. S. v. California*; and

Whereas the President of the United States has heretofore issued an Executive order authorizing the Secretary of State and the Secretary of Interior to recommend establishment of zones for Federal regulation and control of "fishery resources" and "fishing activities" in "those areas of the high seas contiguous to the coast of the United States," and the Department of State in December 1948 notified coastal State officials that it will begin to put this program into effect, and

Whereas said Federal executive agencies have introduced in Congress and will attempt to speed the passage of a bill bestowing Federal ownership and control of the marginal seas of all the coastal States, and

Whereas the Department of Justice in the proceeding above referred to entitled "*U. S. v. California*" is attempting to persuade the Supreme Court to declare that the San Pedro Bay off the coast of California is a marginal sea and so a Federal area except as to points within headlands which are within 6 miles of each other, and

Whereas the headlands of the entrance of the Chesapeake Bay are more than 6 miles apart; and

Whereas the Department of Justice has publicly expressed the belief that the Chesapeake Bay, like Delaware Bay, is a "historic exception" to the 6-mile headland rule, and

Whereas, while the Department of Justice and the Executive branch of the Federal Government have stated that the marginal sea rule did not apply to navigable waters within the boundaries of the State and that its extension would not be sought, there are many in office in the Federal Government who believe and strive to the contrary, and

Whereas if the Department of Justice and the executive branch of the Federal Government could persuade the Supreme Court to overthrow more than a hundred years of established precedent and to rewrite the Constitution of the United States in the case of the marginal sea, there is no reason to believe that they cannot in the near future similarly persuade that Court to extend that doctrine to the Chesapeake Bay and the inland waters of Maryland and all other States, and from there to all public lands and natural resources, and so destroy our present system of dual sovereignty and constitutional government; and

Whereas the claims of those who would extend the Federal power are sought to be plausibly and immediately masked under the needs for defense of natural resources, including oil, and the necessity of Federal power over marginal seas for national defense; and

Whereas actually the establishment of the open seas at a point within 3 miles of the

shore line may, in many cases, if not all, materially weaken the position of the United States in international law and thus hinder national defense, and

Whereas the Congress of the United States has heretofore passed a bill (which was vetoed by the President of the United States) to retain in the States their formerly undisputed sovereignty and rights with the saving provision as follows: "*Provided, however, That nothing in this act shall affect the use development, improvement, and control by or under the authority of the United States of said lands and waters for the purposes of navigation or flood control, or the production or distribution of power, or be construed as the release or relinquishment of any rights of the United States arising under the authority of Congress to regulate or improve navigation or to provide for flood control or the production or distribution of power*", and

Whereas a majority of both Democrats and Republicans in the Congress, since the decision of *U. S. v. California*, have always favored the passage of such a bill, and

Whereas similar bills are now pending in the Congress of the United States. Now, therefore, be it

Resolved by the General Assembly of Maryland, (1) That the State of Maryland is emphatically in favor of continued State ownership and control, subject only to constitutionally delegated Federal powers, of lands and resources within and beneath navigable waters within the boundaries of the respective States and requests Congress to pass suitable legislation to that end;

That the Senators and Members of the House in Congress from Maryland are hereby requested to give active opposition to all pending and proposed measures which would create Federal ownership or control of lands, fish, or other resources beneath navigable waters within State boundaries, except such rights as are delegated to the Federal Government by the Constitution of the United States and that our Senators and Members of the House in Congress are hereby requested to give their active support to legislation which would recognize and confirm State ownership of such property, and

(2) That the Senate Committee on the Armed Services be requested to hold hearings at the earliest practicable date for the purpose of obtaining such information as may be necessary to enable that committee to recommend to the Senate appropriate legislation defining and delimiting the territorial waters of the United States consistently with the sovereignty of the several States of the Union, the international rights and obligations of the United States, and with due regard to the national defense, to commerce, and to the conservation, development, and utilization of the resources of the marginal seas and the constitutional relationship with national economy and national defense, and

(3) That a copy of these resolutions be mailed to each Senator and to each Member of the House in Congress from Maryland and that Senator Millard E. Tydings, as chairman of the Senate Committee on the Armed Services, be and he is hereby respectfully requested to introduce a resolution in the Senate substantially similar to resolution (2) hereof and to expedite the hearings referred to in that resolution.

Joint Resolution 2

(1) That the State of Maryland is emphatically in favor of continued State ownership and control subject only to constitutionally delegated Federal powers of lands and resources within and beneath navigable waters within the boundaries of the respective States and requests Congress to pass suitable legislation to that end;

That the Senators and Members of the House in Congress from Maryland are hereby

requested to give opposition to all pending and proposed measures which would create Federal ownership or control of lands, fish, or other resources beneath navigable waters within State boundaries, except such rights as are delegated to the Federal Government by the Constitution of the United States, and that our Senators and Members of the House in Congress are hereby requested to give their active support to legislation which would recognize and confirm State ownership of such property

Congressman Brooks' Report on European Trip

EXTENSION OF REMARKS

OF
HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. VINSON. Mr. Speaker, under leave to extend my remarks, I include a report submitted to me by the Honorable OVERTON BROOKS, of Louisiana, relating his observations and conclusions as a result of his recent trip to Europe. I think Mr. BROOKS' views are so ably presented, and his report contains material of such importance to legislation now pending before the Congress, that it should be incorporated in the CONGRESSIONAL RECORD so that all Members of the House may benefit from it.

The report follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 3, 1951.

HON. CARL VINSON,
Chairman, Armed Services Committee,
House of Representatives,
Washington, D. C.

DEAR MR. CHAIRMAN In reference to my recent trip to Europe, along with other Members of Congress from the Foreign Affairs Committee, Appropriations Committee, and the Armed Services Committee, I desire to submit to you several observations and recommendations. At the outset, I wish to state that the short time which this group of Congress spent in Europe was not such as to permit an exhaustive examination of the subject of European economy or European defenses. Nonetheless, it was long enough to give us some definite ideas along this line within the free countries of Western Europe. I am writing this memorandum with the thought by placing these observations before you, to some extent, our program of joint national defense might be strengthened by timely and proper constructive suggestions and criticisms.

ECONOMIC RECOVERY

In the briefings which I received as well as my own personal observations I was impressed by the remarkable economic recovery being made by the free nations of Western Europe. While the group I visited consisted of England, Norway, Holland, Belgium, France Italy, and the American and French zones of Germany, the reaction was similar wherever I turned. Nor did I rely entirely upon briefings and upon my own personal observations. Insofar as I did converse with local people, I found almost a completely unanimous sentiment to the effect that the home country had progressed along the road to a wholesome and stable economic recovery. Just how much of this recovery was due to our own efforts and how much to the nat-

ural courage and perseverance of free people in Western Europe is difficult to say; but certainly the progress has been such as to justify serious thought and consideration of the program of an immediate reduction in ECA expenditures and the elimination of them at a reasonably early date.

As is the case in this country to a much lesser degree, inflation in Europe is a great and grim fear. There is no doubt that this fact has delayed recovery, and it is only the economy is anchored to a definite level of value that economic progress timidly raises its head and attempts to set the stage for real wholesome recovery. I was shocked to realize, for instance, that the French franc, which in the days of World War I was one of the strong currencies of Europe, and worth something like 23 cents per franc in American money, had sunk to a low point where it is roughly exchanged at one-third cent per franc. In the competitive market the franc is worth even less than this figure. In spite of this rank inflation of currencies, where the values remained constant for an extended period of time, business has had the tendency to move toward normalcy, shops to fill with wares for merchandising and customers seem eager for the bargain counters.

COMMUNISM

With the return of a more stable economic condition, the fight against communism has apparently been pushed ahead. More than any other country visited in Europe, France presented the spectacle of an internal struggle to free itself of communism. Our party was in Paris on the day of the election and the day following. Some of us even visited voting places unofficially to observe the serenity with which the French conducted their elections. Although we left France too early to pass judgment upon the results of the election, subsequent events have clearly indicated that slowly, with a painstaking effort, the great people of this country are repudiating communism and placing their trust in more stable parties, doctrines, and a more patriotic element of their population. It is true that the Communists still produce the greatest popular vote of any party, but the so-called center parties, together with the remarkable strength of the de Gaullists' factions, make it obvious that the majority of the French people still stand true to their democratic traditions. I believe with an artful handling of this situation and full cooperation by our people, the Europeans will respond to democratic doctrines in the future as they have in the past.

MILITARY POSTURE

At this juncture, I wish to emphasize that I detected throughout Europe the budding desire of its people to be more adequately armed to defend themselves. It is obvious that this national defense movement is growing in these countries and is indicated by the building of military organizations and the effort to obtain equipment for defense purposes. England, being located on an island, presents, of course, a different situation. It has maintained its navy and a semblance of an army and air force. On the European Continent, every country visited showed our group by active determination and by military maneuvers and in other ways its desire for immediate national defense, and the physical attitude and moral ability to handle organizations and equipment intended for that purpose. I was impressed by the eagerness of the young men in Norway, Belgium, the French zone, and other places to learn to handle the equipment presently available and to work in cooperation for a larger defense effort.

GENERAL EISENHOWER

Easily the most appealing figure in all Europe is that of Gen. Dwight Eisenhower. He has the enthusiasm of a much younger

man, the experience of his great command in World War II, and the prestige of a man who enjoys a unique place throughout the world and especially in Western Europe. With tireless energy, great organizational skill, and a relentless enthusiasm, he is bringing together the leaders of the free people of Europe into a cooperative effort at national defense. Wherever the name of General Eisenhower is used, the impression upon Europe is apparent.

Illustrative of this fact are the attacks the Communists are making upon him from time to time and his fine work throughout Europe. The satirical cartoons from Communist sources of his landing in France constitute the beginning of a campaign of abuse and misrepresentation and attacks upon him which have continued to this present hour. I was very much impressed by the frank and logical manner in which the general has put together his ideas for a logical program of European military cooperation in defense of Democratic Europe.

ENGLAND

The group spent a day visiting the air bases in England. The British bases, of course, were built in World War II but are in excellent shape at the present time. The American bases being built are to be engineered along the familiar lines of bases within the United States and are to be paid for under joint arrangement by the United Kingdom and this country on a 50-50 basis. Without any definite contracts as to the length of tenure, it seems to be agreeable that they be occupied by the troops of this country as long as is necessary to meet the exigencies of this present emergency.

I noted especially in England, and throughout Western Europe generally, the trouble which each base is having with the shortage of spare parts for mechanical equipment. I talked with members of British B-29 crews who told me at different times that this was a great problem. Some of the crew members complained about engine trouble and mechanical disorders of the B-29, and in doing so they exhibited a lack of complete understanding of the mechanism of this great plane. All complained of inability to obtain spare parts, but they also indicated this situation was improving. It was with a matter of pride I learned that not a single B-29 had cracked up during its use by the British aviators.

As to spare parts, it seems to me that in most instances some arrangement could be worked out whereby these parts might be obtained overseas. Arsenal are available in England, Belgium, France and other places for the making of spare parts and the very fact that these arsenals, machine shops and foundries are located near at hand, will make the matter of spare parts production a simpler one and bring about greater efficiency in the proper maintenance of the complicated machines and equipment overseas. This problem should be worked out as soon as possible in the interest of a better European defense.

COMMUNISM

The early returns gave the Communists a popular vote of 5,001,618 with a reported 103 seats definitely captured by them. As against this, the de Gaullists polled 4,039,887 votes with 115 seats. The center parties polled in excess of 7,000,000 votes with a total in excess of 376 seats and 21 seats were left to independents. This gives some idea of the political situation existing in France and gives some idea of the struggle through which this country is going at the present time.

GERMANY

Everybody in Europe realizes that Germany is the key to the European situation. More than ever, today Western Germany is necessary to a proper solution of our problems. We were told the Ruhr problem had

largely been solved and that coal mining and steel production are progressing reasonably satisfactorily. The French zone still has some pressing economic problems which are at once apparent to one who talks to the people living in that zone. Until Germany finds its proper place in the field of affairs among the free people of Western Europe our difficulties in this direction will continue.

It has been proposed that out of Western Germany we attempt to set up a small army of perhaps 250,000 persons, carefully controlled and with special equipment. This army might be called the German constabulary or it may be a part of our Army, or it may be as an independent force. Properly handled and properly controlled such a force might add a great deal to the stability of Central and Western Europe, but great care should be used to avoid a return to anything like the militarism which preceded World War II in Germany. I might state that since Germany has been shorn of a large part of its eastern provinces and has been divided between the Soviet and Western Powers, the European fear of a consolidated militant Germany is greatly reduced, if not eliminated.

AMERICAN TROOPS

My time while in Germany was spent largely with American troops in our occupied zone. I went by train from Wiesbaden, headquarters of the air command, to Grafenwohr with Maj. Gen. Paul Dahlquist, then commanding general of the First Division, but now recently made corps commander. The Fourth Division was there moving into Germany and one of the great problems which it had encountered was the housing problem.

This is getting to be a most serious problem in numerous places in Europe. The ability to obtain housing is not as fluent now as it was immediately after the end of World War II. People have become settled in their homes and are not easily dispossessed. The influx of some 5,000,000 people from the Russian occupied zone in the east and from other countries has made the housing problem a difficult one. In advance of the coming of the Fourth Division an effort was made to satisfactorily arrange for housing; but in spite of great efforts made, as additional troops are brought into the occupied zone of Germany our housing troubles mount. It may become necessary that we build considerable housing in our occupied zone of Germany even at this late date.

I spent time inspecting units of the First Division, especially the Sixteenth Infantry. I am glad to report that I found this division cared for with modern mechanized equipment, including tanks, machine guns, rifles, trench mortars and modern artillery. Moreover, the commanding officer has thought wise to utilize the old German maneuver areas available to their maximum possibilities. Not only do local units of our troops use these maneuver areas constantly, but units from all parts of Germany and from Austria are brought in for training there.

In spite of the present size of the maneuver area, our troops badly need additional acreage for that purpose. As more troops enter the occupied zone for large-scale maneuvers the need becomes more pressing and in time we may really suffer from lack of available training areas.

Both in the field and in the billet morale of our troops seems to be high. The improved methods of procurement and distribution are helpful to the company and battery mess and at the same time a limited amount of food, especially fresh foods, may be purchased locally. Of course additional facilities for recreation are always desirable but the need for it is nothing like as great as it is in places such as in Stevensville, Newfoundland, where the long winters and in-

accessibility of the bases make outside entertainment practically impossible.

POSITION OF SPAIN

Wherever we went in Europe the question was asked as to the possible position of Spain in reference to the military recovery of that continent. In every instance where military men were requested opinions, they almost invariably were to the effect that Spain constituted a tremendous asset which was being overlooked. I think what attracted the military so much were the armies of Spain. Poorly equipped, it is true, but with seasoned manpower available and dependable for emergency purposes.

The view of the United Kingdom, and to like extent that of France, is against the association of Spain into any organized defense of Europe. The fear was manifest in some quarters that the association of Spain into an organization for the defense of Europe would be an element of weakness which might indicate in the minds of many that the Pyrenees rather than the Rhine was the 1951 Maginot Line of defense. There is no doubt but what the view of people such as this should be desired and should receive consideration. At the same time, if the over-all purpose of our being in Europe now is to build up defenses, it is difficult to understand just why a large nation such as Spain, with a comparatively large army available, can be completely ignored.

FRANCE

The French-occupied zone presents a startling contrast to that of the American-occupied zone. Under ECA expenditures we have primed the factories and workshops of our occupied zone in Germany and as a result progress is seen at every turn. People are busy, in fact bustling. The land is being tilled to the very limit of available acreage and crops seemed to be good when we were in the area. Smokestacks belched smoke and the prevalence of the dinner pail in the hand of the worker gave irrefutable evidence of employment. At the same time no systematic effort is being made to rebuild the bombed-out plants and homes. People still live in houses with one or two walls crumpled up into a pile of debris, roofs with openings to the sky in places and floors warped and unstable. Until the German people feel assured that the Russians will not come in and take over, they are withholding reconstruction on a large scale.

In the French zone employment is not at the level of the American zone. The air of industry and of assurance does not prevail. The people dress more shabbily and the lack of large governmental expenditures by the occupying powers is evident.

On the other hand, the maneuvers of the French troops while in this zone presented a spectacle of alert activity. The young men in the unit on maneuvers used tanks with facility and confidence of training and enthusiasm. The marksmanship was excellent.

One of the great problems of the future which must be met is the pay of troops of this country. Of course, the pay of our own soldiers is far higher than anything else in Europe. So low, in fact, is the pay of soldiers from other countries that often this is a source of much friction. A movement is now on to attempt some equalization of pay among the European countries. Such a program cannot and should not affect the pay of the American soldiers.

On the other hand, when the economies of the free countries of Western Europe will permit some increase in pay might be fully justified. It is not hard to train an unskilled man and produce out of him an excellent mechanic and artisan. With low pay the difficulty comes in trying to keep him in the armed services after he has acquired a technical skill needed in civilian

industry. Army careers are broken short by lack of pay and career men are forced to turn to civilian fields for funds needed to maintain their families and meet their responsibilities.

In making these suggestions, however, I know that pay is one of the heavy expenditures in any defense program. If the European nations themselves are to meet this problem they are going to be required very soon to raise to a much higher level their own expenditures for national defense. I believe it would be unfortunate if our country attempted in the organizing of the defenses of Europe to enter into the pay problem. Our people are the highest paid and Canada comes next, with others in the descending line. This is one problem which is pushing for an early solution.

While presenting this idea, I was interested in the program sponsored by high commanders in our occupied zone for a savings program for American troops. Our staff officers are encouraging not only the enlisted men but the officers to set aside funds for the proverbial rainy day when they may be needed by American soldiers for themselves or their families. I was surprised at the very high percentage of savings in some of the areas in the American zone, and I especially commend the commanding officers who have sponsored and carried on such a program with the results obtained. With inflated markets overseas in many instances and the dollar lacking the purchasing power it normally should have, our troops do not make a mistake in setting aside funds for use when they return to their homes in the United States.

Respectfully yours,

OVERTON BROOKS,
Member of Congress.

In Memoriam, Forrest P. Sherman,
Admiral, United States Navy

EXTENSION OF REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following order of services at the funeral of Admiral Forrest P. Sherman at Arlington Cemetery this afternoon:

ORDER OF SERVICE

Hymn, Christ, The Lord is Risen Today—Band.

OPENING SERVICES

(All standing)

"I am the resurrection and the life," saith the Lord: "he that believeth in Me, though he were dead, yet shall he live; and whosoever liveth and believeth in Me, shall never die."

I know that my Redeemer liveth, and that He shall stand at the latter day upon the earth; and though this body be destroyed, yet shall I see God: whom I shall see for myself, and mine eyes shall behold, and not as a stranger.

We brought nothing into this world, and it is certain we can carry nothing out. The Lord gave, and the Lord hath taken away; blessed be the name of the Lord.

PSALM XXVII

(Read responsively, all standing)

The Lord is my light and my salvation; whom then shall I fear? The Lord is the

strength of my life; of whom then shall I be afraid.

One thing have I desired of the Lord, which I will require; even that I may dwell in the house of the Lord all the days of my life, to behold the fair beauty of the Lord, and to visit His temple.

For in the time of trouble He shall hide me in His tabernacle; yea, in the secret place of His dwelling shall He hide me, and set me up upon a rock of stone.

Therefore will I offer in His dwelling an oblation, with great gladness. I will sing and speak praises unto the Lord.

Harken unto my voice, O Lord, when I cry unto Thee; have mercy upon me, and hear me.

My heart hath talked of Thee, seek ye my face. Thy face, Lord, will I seek.

O hide not Thou Thy face from me, nor cast thy servant away in displeasure.

Thou hast been my succor; leave me not, neither forsake me O God of my salvation. I should utterly have fainted, but that I believe verily to see the goodness of the Lord in the land of the living.

O tarry thou the Lord's leisure; be strong, and He shall comfort thine heart, and put thou thy trust in the Lord.

PSALM CXXI

I will lift up mine eyes unto the hills, from whence cometh my help?

My help cometh even from the Lord, who hath made heaven and earth.

He will not suffer thy foot to be moved; and He that keepeth thee will not sleep.

Behold He that keepeth Israel shall neither slumber nor sleep.

The Lord himself is thy keeper, the Lord is thy defense upon thy right hand.

So that the sun shall not burn thee by day, neither the moon by night.

The Lord shall preserve thee from all evil; yea, it is even He that shall keep thy soul.

The Lord shall preserve thy going out, and thy coming in, from this time forth for evermore.

GLORIA PATRI

Glory be to the Father, and to the Son, and to the Holy Ghost;

As it was in the beginning, is now, and ever shall be, world without end. Amen.

THE LESSON

(All seated)

ST. JOHN XIV 1

Jesus said, Let not your heart be troubled: ye believe in God, believe also in Me. In My Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again, and receive you unto Myself; that where I am, there ye may be also. And whither I go ye know, and the way ye know. Thomas saith unto Him, Lord, we know not whither Thou goest; and how can we know the way? Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by Me.

THE CREED

(All standing)

I believe in God the Father almighty, maker of heaven and earth:

And in Jesus Christ His only Son our Lord; who was conceived by the Holy Ghost, born of the Virgin Mary; suffered under Pontius Pilate, was crucified, dead, and buried. He descended into hell. The third day He rose again from the dead. He ascended into heaven, and sitteth on the right hand of God the Father almighty: from thence He shall come to judge the quick and the dead.

I believe in the Holy Ghost, the holy Catholic church, the Communion of Saints, the forgiveness of sins, the resurrection of the body, and the life everlasting. Amen.

THE PRAYERS

(Seated, with head bowed)

The Lord be with you.

And with thy spirit.

Let us pray.

Our Father, who art in Heaven, hallowed be Thy name. Thy kingdom come. Thy will be done, on earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive those who trespass against us. And lead us not into temptation, but deliver us from evil. For Thine is the kingdom, and the power, and the glory, for ever and ever. Amen.

Remember Thy servant Forrest, O Lord, according to the favor which Thou bearest unto Thy people, and grant that, increasing in knowledge and love of Thee, he may go from strength to strength, in the life of perfect service, in Thy heavenly kingdom, through Jesus Christ our Lord, who liveth and reigneth with Thee and the Holy Ghost ever, one God, world without end. Amen.

Almighty God, our heavenly Father, in whose hands are the living and the dead; we give Thee thanks for all those Thy servants who have laid down their lives in the service of our country. Grant to them Thy mercy and the light of Thy presence, that the good work which Thou hast begun in them may be perfected; through Jesus Christ Thy Son of our Lord. Amen.

Almighty God, who hast created man in thine own image; grant us grace fearlessly to contend against evil, and to make no peace with oppression; and, that we may reverently use our freedom, help us to employ it in the maintenance of justice among men and nations, to the glory of Thy Holy Name; through Jesus Christ our Lord. Amen.

Almighty God, Father of mercies and giver of all comfort, deal graciously, we pray Thee, with all those who mourn, that, casting every care on Thee, they may know the consolation of Thy love, through Jesus Christ our Lord. Amen.

THE BLESSING

Unto God's gracious mercy and protection we commit Forrest. The Lord bless him and keep him. The Lord make His face to shine upon him, and be gracious unto him. The Lord lift up His countenance upon him, and give him peace, both now and evermore. Amen.

THE GOD OF PEACE

The God of peace, who brought again from the dead our Lord Jesus Christ, the great Shepherd of the sheep, through the blood of the everlasting covenant; make you perfect in ever good work to do His will, working in you that which is well pleasing in His sight, through Jesus Christ, to whom be glory for ever and ever. Amen.

Hymn, Eternal Father, Strong To Save—Band

(Guests will remain in their seats until the funeral cortege clears the amphitheater.)

All that the Father giveth me shall come to me, and him that cometh to me I will in no wise cast out.

He that raised up Jesus from the dead will also quicken our mortal bodies by His spirit that dwelleth in us.

Wherefore my heart is glad, and my glory rejoiceth: my flesh also shall rest in hope.

Thou shalt show me the path of life; in Thy presence is the fulness of joy, and at Thy right hand there is pleasure for evermore.

THE COMMITTAL

Unto Almighty God we commend the soul of our shipmate departed, and we commit his body to the ground—earth to earth, ashes to ashes, dust to dust—in sure and certain hope of the resurrection unto eternal life, through our Lord Jesus Christ; at whose coming in glorious majesty to judge the world, the earth and the sea shall give up

their dead, and the corruptible bodies of those who sleep in him shall be changed, and made like unto His own glorious body; according to the mighty working whereby He is able to subdue all things unto Himself.

I heard a voice from heaven saying unto me, Write: From henceforth blessed are the dead who die in the Lord: even so saith the spirit, for they rest from their labors.

THE PRAYERS

The Lord be with you,
And with thy spirit.

Let us pray.

Lord, have mercy upon us
Christ, have mercy upon us.
Lord, have mercy upon us.

Our Father who art in heaven, hallowed by Thy name. Thy kingdom come. Thy will be done on earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive those who trespass against us. And lead us not into temptation. But deliver us from evil. For Thine is the kingdom, the power, and glory forever and ever. Amen.

O God whose mercies cannot be numbered, accept our prayers on behalf of the soul of Thy servant departed, and grant him an entrance into the land of light and joy, in the fellowship of Thy saints. Through Jesus Christ our Lord. Amen.

Almighty God, we entrust all who are dear to us to Thy never-failing care and love, for this life and the life to come; knowing that Thou art doing for them better things than we can desire or pray for; through Jesus Christ our Lord. Amen.

O Lord, support us all the day long, until the shadows lengthen and the evening comes, and the busy work is hushed, and the fever of life is over, and our work is done. Then in Thy mercy grant us a safe lodging, and a holy rest, and peace at the last. Amen.

BENEDICTION

The Peace of God, which passeth all understanding, keep your hearts and minds in the knowledge and love of God, and of His Son Jesus Christ our Lord: And the blessing of God Almighty, the Father, the Son, and the Holy Ghost, be amongst you, and remain with you always. Amen.

May the souls of all the faithful departed through the mercies of God rest in peace, may light perpetual shine upon them. Amen.

Aid to the Palestine Refugees

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith a statement by Msgr. Thomas J. McMahon, president, Pontifical Mission for Palestine, and national secretary, Catholic Near East Welfare Association:

STATEMENT FOR THE HOUSE COMMITTEE ON FOREIGN AFFAIRS

I am particularly interested in section 204 of title II of the proposed draft of the Mutual Security Act of 1951, as presented in the background pamphlet, Mutual Security for Fiscal Year 1952, and in the relevant prefatory pages, especially page 26 entitled "Aid to the Palestine Refugees."

Thus, my competence in answering the gracious invitation of the House committee lies in the fact that, for several years, I have been actively engaged in relief and humanitarian work among the people of the Middle East and that for the past 3 years I have been personally and physically present there to direct the activities of the Catholic Church in behalf of the Palestinian refugees. Accordingly I am more than deeply interested in the prolongation of every aid possible, on the part of our Government and of every agency, whether public or voluntary, to the Near and Middle East and more precisely to the Arab refugees of Palestine.

That it is absolutely necessary to continue such aid everyone even remotely acquainted with the problem must admit without qualification. We who have worked so long among these destitute Palestinians would view with very genuine horror any other point of view. The Palestinian Arabs are the innocent victims of the warfare that engulfed them and forced them out of their homes, and as the fourth successive year of this tragedy now begins, it finds them in the same continuing need, while their state of mind must be described as one of despair. The United States cannot afford to forsake these exiles, and the radical motive for such aid goes far beyond a mutual-security program. It is basic justice on our part to keep on helping these hundreds of thousands of innocent victims, of homeless people.

We go well beyond politics when we point out to the designated representatives of the noble and generous American people that there can be no security in the Middle East until the problem of the Palestinian refugees is solved. The very existence of the problem has caused not only complete privation among the victims themselves, it has also brought about an economic and moral crisis in the Middle East, embittering every honorable citizen of the nations involved.

Now, in all honesty, let it be said that the magnanimous aid of the American Nation will not be the only factor in solving what I consider the most aggravating problem in the pattern of a hoped-for world peace. By all means, and out of strict justice, let the United States vote as much monetary aid as possible to the United Nations' program for the relief of the Palestinians, but in a greater degree we beg our legislators to see clearly what is involved.

In the very excellent explanations of the Mutual Security Act, you write of the continuance of direct relief, though on a diminishing scale, and of the reintegration of the refugees in the economic life of the Middle East. What have you done for a just settlement of the Palestine question? What have you done to compensate the homeless people who did not give up their homes voluntarily? You will never achieve peace in the Middle East until you have given these hundreds of thousands of people the rights that are most certainly theirs. You have been voting to the UNRWA and its antecedent agencies a respectable aid each year since the problem began, but it is another thing to solve the problem at its roots.

We must not think of the Palestinian refugee as unkempt, almost unworthy objects of charity. Among these good people the number is legion of those who are wonderfully trained, well cultured, genuinely moral, men and women who could take their places with you and with us all in any walk of life. Why then should we speak of a dole for such as these? In the name of God, let the representatives of the American people examine the roots of the Palestine question and seek to make some reparation for man's inhumanity to man.

Let us by all means vote the aid that has been determined for the refugees of Palestine. Since it is all too little with which to solve the problem, it is our bounden duty

to go much further and try to end the restlessness, the misery, the homelessness of these poor people. There is no doubt that men of good will in this country will thereby make the Middle East as much a part of the free world as we are.

Peril on Your Food Shelf

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, recent years have seen marvelous advances in the scientific processing and packaging of food. Our tables are set with wholesome delicacies more tempting and easier to prepare than most of us dreamed possible. Yet, with all this progress, a new and pressing danger appears.

There does not appear to be any regulation in the Food and Drug Administration requiring a firm to receive the approval of that Administration prior to marketing any substance. In addition thereto, the Food and Drug Administration accepts the statement of the marketing firm on face value that the safety of the preparation has been established.

The following article appeared in the July 1951 issue of the American Magazine. The author, Congressman JAMES J. DELANEY, is chairman of the Nonpartisan House Select Committee To Investigate the Use of Chemicals in Food Products. This body has been holding hearings for nearly a year to determine the effect of such chemicals on the Nation's health. These hearings have revealed evidence that hundreds of untested and unproved chemicals, in the hands of irresponsible food manufacturers, are threatening the health, and even the lives, of our families.

PERIL ON YOUR FOOD SHELF

(By JAMES J. DELANEY, Representative from New York)

Not long ago a frozen-food packer was told that this new shipment of peaches would stay bright and fresh looking if he added a touch of thiourea. He tried it. The chemical worked a miracle of freshness and coloring. The shipment went out.

Another frozen-peach firm did the same thing. Before shipping out its product, however, it invited the local Food and Drug Administration inspectors to test the food. Samples were fed to experimental rats. Within a few hours they all died.

By nearest chance the inspectors then learned of the first packer's shipment. From that moment on, there took place as exciting and dramatic a chase as ever thrilled a Hollywood film audience. And this time the stakes were more than the price of an admission. They were the lives of thousands of men, women, and children.

Fortunately, the episode had a happy ending. All of the peaches, still bright and still deadly, were intercepted before they could be eaten by unsuspecting American families.

Other episodes have not ended so happily.

Several years ago a salt substitute was put on the market for use by people on a low-salt diet. It contained lithium chloride, a chemical whose effect had been only super-

ficially tested. Three persons died before the salt could be withdrawn from the market.

These instances point up a blunt fact: Our food supply is being doctored by hundreds of new chemicals whose safety has not yet been established.

Many of these chemicals were developed during and after the war. Most of them may prove harmless, but enough have been proved dangerous and even deadly to make us wonder if our health is threatened.

In the year that the House committee has been investigating this problem, scores of noted scientists have testified that the rapid rate at which substances, heretofore foreign to the body, are being introduced directly or indirectly into our food is alarming and may have a serious effect on the health of all of us, especially our children.

Nothing is more important to the American family. It is axiomatic to say that the survival of the country, as well as its democracy, depends on the health of its citizens. The shocking number of our young men who cannot meet the relatively modest physical requirements of our armed services must make each of us ask the reasons for this reservoir of ill health in the midst of such a varied and abundant food supply.

The growing number of mental diseases makes one wonder if there is not some connection between that problem and the many new chemicals used in our foods. In New York State alone, mental hospitals now care for 117,000 patients—almost 1 patient to be supported by every 100 citizens.

Why then, one asks, are new chemicals added at all?

The answer is easy. They are relatively cheap, easy, and work wonders as preservers, blenders, softeners, bleachers, emulsifiers, insect and fungus killers, and crop stimulants.

In one product, for example—bread, testimony has revealed that many bakers have been able to reduce the amount of shortening in the last several years by about 50 percent. This they have done by chemical emulsifiers first put on the market in 1947.

Here is the over-all scoreboard at the present time: The Food and Drug Administration has listed 704 chemicals which are being used in our regular food supply, of which only 428 are known to be safe. In other words, 276 chemicals are unknown and untested quantities, and some of them may be slowly poisoning us.

This potentially lethal situation is due to a curious loophole in our present laws—a tragic legal joker that permits us to become a nation of 150,000,000 guinea pigs guilelessly testing out chemicals that should have been tested adequately before they reached our kitchen shelves.

Doctors testifying before the House committee have stated that there may be some connection between these new chemicals and the increase of such diseases as cancer, polio, and the mysterious virus X.

It must be said emphatically that no reputable food manufacturer would knowingly use any substance known to be harmful. Indeed, most of the big processors of nationally advertised products—companies like Swift, General Foods, Quaker Oats—maintain elaborate laboratories where tests are constantly being made to safeguard the public. An organization like the A. & P. has several thousand people continually engaged in laboratory and field inspection of its products. They, as consumers themselves and as honest businessmen, are as anxious as anybody to ensure a pure and wholesome food supply.

But here is the rub: There is absolutely no law to prevent a small, unscrupulous manufacturer from turning a quick dollar by using a substitute which is untested or, at best, inadequately tested.

And most important of all, there is also no law to compel testing new chemicals to determine what the cumulative effect would

be over a period of time. On the whole, scientists are not so much concerned with the acutely toxic chemicals whose deadliness can be readily detected. They are more concerned with the small and insidious effects of substances which do harm only after being fed to people for months or years.

Under the present set-up, the Food and Drug Administration can act legally only after the food product has been put on the market.

It is important to contrast this situation in regard to food with the situation in regard to drugs. In the latter, no such peril exists. The public is adequately protected. An amendment to the Food and Drug Act, passed in 1938, requires that a manufacturer submit evidence to show that a new chemical is noninjurious before he introduces it—even if the tests take 10 years to complete.

Since no similar safeguard exists with food, many chemicals are used with no real knowledge of what they will do to the human system. Certain ones which cannot be bought in a drugstore without a prescription, for example, can be bought indiscriminately in a feed store to be fed to livestock or sprayed on crops, often ending up on our table.

A decade or so ago this situation was relatively innocuous. But since the war, during which new agents were discovered almost daily, the use of chemicals in foodstuffs has blossomed and spread like the proverbial green bay tree.

In Massachusetts, to cite a case, a big brewery not long ago got the idea of using hydrofluoric acid in its beer. It made unnecessary the sterilization of the beer, a tedious process. The acid, however, is a serious poison. Before the Government was able to step in and stop the practice, the beer had been sold all over the country.

In Indiana, a manufacturer took to using a mineral oil in his popcorn instead of butter or other fats. He treated the oil with butter color, labeled it "edible fat," and sold it all over the United States. Mineral oil will not only wash out the fat-soluble vitamins in the food it is used in, but, by lining the stomach, will prevent the absorption of necessary vitamins from other foods eaten, leading to a dangerous vitamin deficiency. The fact that the popcorn was sold largely to children made the case more tragic.

There are hundreds of other cases—perhaps not so dramatic but potentially just as serious.

There is nothing wrong with chemicals in themselves. Some, like common salt, have been used a long time in food products to enhance both taste and nutritive value. The introduction of vitamin D, another chemical, into milk has undoubtedly proved beneficial, and reflects a desire on the part of manufacturers to give consumers better and richer products. The enrichment of hominy grits with a component of the vitamin B complex has worked wonders in wiping out the disease of pellagra in certain poorer sections of the South, where that food is a staple.

In general, nutritionists agree that no new chemical should be added, however, unless it is definitely proved safe, serves a useful purpose, and is not a substitution in whole or in part for a natural food element.

Such is not the case at present. Here are a few foods in which chemicals are playing a questionable role:

Poultry: Chicken producers, especially in the East, have found that by inserting a synthetic hormone called stilbestrol in the necks of male chickens they can add weight quickly and increase the market value of their products. The chemical pellet causes the fowl to assume female characteristics. He becomes tender, develops greater deposits of fat, and grows faster.

Recently, it has been alleged that the residue of these chickens, sold to mink

farms, caused the minks to become sterile and stop reproducing. As a matter of fact, there is a bill in the House of Representatives now to compensate the mink growers, who say they followed the advice of Department of Agriculture bulletins in feeding these chickens to their minks and thereby made the animals incapable of reproducing.

Canadian authorities have outlawed the use of stilbestrol, fearing it might cause sterility among people.

The product is still widely used in this country. It is spreading to sheep, pigs, and cattle. There is no legal way to prevent the amount used per animal being stepped up at any time to hasten the fattening process.

There is no evidence that the chemical is injurious to human beings. The point is, we don't know. Meanwhile, it continues to be used.

Bread Because of the demand of the housewife for ever softer, ever whiter bread, chemical ingenuity has flourished in this field.

For at least 25 years, Agene (nitrogen trichloride) was widely used to give an artificial, quick-aging effect to flour. Three years ago an English chemist found that bread made from this flour caused epileptic fits in dogs. Although there was no evidence that it had a deleterious effect on humans, millers and bakers voluntarily agreed to abandon its use. The point is that no adequate tests had ever been made on Agene.

Bread softeners are now almost universally used. Some companies urge the consumer to "feel how soft the bread is" on the package. They do not explain that this extra softness is arranged chemically. Polyoxyethylene-monostearate-type softeners were first introduced in 1947, when the price of shortening was high. Testimony has shown that many bakers have reduced their shortening about 50 percent since they started to use this surface-active agent.

In 1949, two companies alone sold 30,000 bakers 10,000,000 pounds of chemicals. These chemicals are used as substitutes for fluid milk, butter, eggs, essential oils, and organic materials.

Although again there is no conclusive evidence that these new chemicals are harmful, there is plenty of evidence that they have reduced the nutritive content.

Dr. Anton J. Carlson, Chicago University's eminent physiologist and one of the world's greatest nutritionists, testified before the House committee that the insistence on white bread is a snob factor that comes down to us from the days of the Roman Empire 2,000 years ago, when the wealthy classes had white bread and the slaves dark bread.

Testimony concerning bread has also revealed that it costs a bakery only one-half cent more to produce a loaf of the highest quality than it does to produce one of the lowest quality. There would be little or no surplus of milk or wheat in this country if all bread products contained milk and flour in quantities found desirable by nutritionists. Such a policy would be a boon not only to the consumer but to the farmer as well.

Soft drinks: The phosphoric acid used to blend soft drinks should not be used, experts have testified, without more testing. Experiments at the Naval Medical Research Institute showed that a human tooth put in soft drink's containing this chemical lost its enamel and became soft in 24 hours.

On rats it was shown that their molar teeth dissolved down to the gum line if the rats were well fed for a period of 6 months but were given nothing to drink but this beverage. Dr. Clive McCay, Cornell University nutritionist, has stated that the acid may account for this deleterious effect, not the sugar.

"Since soft drinks are playing an increasingly important part in the American diet

and tend to displace such good foods as milk, they deserve very careful consideration," he says.

Meat: Some of the new chemicals reach our food indirectly through the use of insecticides and fungicides. The use of DDT, for example, has been widespread in dusting crops. It has been widely hailed as a wonder chemical in keeping the insect army under control.

Although, several years ago, it was shown that there was no immediately discernible toxic effect when it got into the human system in small quantities, it was not realized until recently that DDT will store itself in the body fat and can, eventually, have a cumulative and serious effect on the liver. It is also interesting to note that people suffering this last winter from virus X exhibited the same set of symptoms as people suffering from DDT poisoning.

The Texas Research Foundation, an independent, nonprofit organization financed entirely by private business interests, recently analyzed ordinary meat products bought at random in local meat stores and found that the degree of DDT contamination in fat meat ran as high as 69 parts per 1,000,000. The Food and Drug Administration has set 5 parts per 1,000,000 as a safe maximum. Toxicity tests have shown that even as little as 5 parts per 1,000,000 DDT will produce slight but definite liver injuries in rats.

Fruits and vegetables: Chlordane, first introduced commercially in 1947, has been used as an insecticide on a large variety of fruit and vegetable crops. In the first 9 months more than 1,000,000 pounds were sold. Since then its use has become even more widespread. The director of the Food and Drug Administration's pharmacology division, Dr. A. J. Lehman, recently testified that chlordane is four or five times more poisonous than DDT and that he would hesitate to eat any food that had any chlordane residue on it at all.

As a result of testimony developed by Vincent A. Kleinfeld, chief counsel of the House committee, Dr. Charles S. Cameron, medical and scientific director of the American Cancer Society, revealed that we are by no means sure whether the residue of arsenic sprays on foodstuffs does not cause cancer, and that such a possibility could be determined only by further studies. The use of 80,000,000 pounds of arsenicals yearly in the United States, he asserted, definitely justified such studies, and for this reason the American Cancer Society was vigorously backing additional legislation.

Another dangerous new insecticide is selenium. Animal experimentation has shown that 3 parts per 1,000,000 in the diet will produce cirrhosis of the liver and that animals may eventually develop cancer of the liver.

Many other pesticides have been used or proposed for use. Their safety has in no way been established. So far as is known no immediate deaths have resulted from their use. But there likewise is no evidence of what they will eventually do.

The above are only a few examples of groups of food in which new chemicals, introduced by irresponsible manufacturers, are playing an unknown role.

The public must be given the same sort of protection in its food that it gets in its drugs. Actually, foods are more important. Drugs are used only when someone is sick, and then generally only under a physician's direction. Foods are eaten promiscuously.

Just what legislation will be recommended to Congress as a result of the hearings now being held before the House committee is as yet undecided. And just what Congress will do about such recommended legislation is equally uncertain.

The committee feels, however, that just as no honest person worries about the penalties for burglary, no honest food processor need

worry about any changes in the food and drug laws.

All of the testimony given before the committee, of course, leads to one obvious question: What can the average housewife do to protect herself against a growing use of chemicals which eminent nutritionists have called "alarming"?

In the opinion of most, the solution is not for the housewife to become an amateur chemist but to insist that Congress give the Food and Drug Administration adequate legislation to handle the problem before the product gets on the market.

Women played a prominent part in pushing through the legislation which guaranteed the pre-testing of drugs. The General Federation of Women's Clubs was solidly behind the amendment and exerted enormous pressure. It is not too much to expect that the same thing will happen with food. Individuals, of course, can write their Congressmen, but organized groups of individuals are much more effective.

Housewives can also help by not asking for extra-soft, extra-white, extra-smooth food products. There is a temptation on the part of some manufacturers to supply them by using cheap and easy chemical additives rather than expensive shortenings and blenders. In general, housewives should demand as many enriched foods but as few preservatives as possible. They should also learn to read labels carefully, especially when buying a new product. They should demand not only complete and exact labeling, but the proportions of each ingredient. At the moment there is a proposal to fix the minimum amount of natural ingredients in various products; for example, the minimum amount of milk solids to be used in bread products. At present the average quantity is only 1½ percent.

The last time the food and drug law was amended it took 5 years to get it through. Open opposition to such legislation is rare. It's like coming out in favor of sin. But the danger is that undercover opposition might persuade Congress to let the legislation die, or at least emasculate it.

The pre-testing-of-drugs amendment was pushed through only at the last moment, when 100 people died as a result of drinking an elixir of sulfanilamide into which a solvent, previously used only in car radiators as an antifreeze, had been introduced. The drug had been thrown on the market without adequate testing.

There is no legal way—at this moment—to prevent this happening again in food.

Far from a groundless scare, this has a terrifying basis of reality. It almost happened when thiourea was put in those frozen peaches.

For the safety of all Americans, it is vital that adequate legislation be passed. Especially before we have another tragedy to pinpoint the need.

Commencement Address by Robert Ramspeck

EXTENSION OF REMARKS OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. RIVERS. Mr. Speaker, in the long and proud history of this Congress the annals of its activities are replete with examples of devotion to duty. We have seen in our time and have read in our records of our outstanding col-

leagues who served with us and with our forebears. No one in that illustrious list of contemporary and predecessor alike has made a greater contribution to his time and his generation than has our former beloved colleague, Bob Ramspeck.

Mr. Ramspeck retired from Congress to devote his talents to the ever-growing and amazing industry of aviation. Much of the progress aviation now enjoys is because of the judgment and vision possessed by this great American. Mr. Ramspeck was happy and aviation was happy with his tenure of office. He made many friends for aviation—in every walk of life. It was with great reluctance that Mr. Ramspeck was compelled to temporarily sever his relations with this indispensable industry. However, at a tremendous financial sacrifice to himself, when called upon by his Commander in Chief to take over the Civil Service Commission, Bob Ramspeck heeded the call and today serves as Chairman of the Civil Service Commission, rendering a tremendous and magnificent service to his Nation.

Mr. Speaker, all Americans respect and admire Bob Ramspeck. There is little wonder, therefore, that on Monday, June 11, 1951, Wesleyan University, Delaware, Ohio, conferred upon Mr. Ramspeck an honorary degree of doctor of laws. On the occasion above mentioned this outstanding American delivered a thought-provoking address to the graduating class of that fine institution. I want this Congress and this Nation to read the remarks then and there delivered by my friend. I, therefore, Mr. Speaker, hereby insert this splendid address that more may read, that more may learn, that more may take heed to his advice.

COMMENCEMENT ADDRESS TO THE GRADUATING CLASS AT OHIO WESLEYAN UNIVERSITY, DELAWARE, OHIO, MONDAY, JUNE 11, 1951, BY ROBERT RAMSPECK, CHAIRMAN OF THE UNITED STATES CIVIL SERVICE COMMISSION

Today marks the end of a period for those of the graduating class—but it is also the beginning of a new era in life.

The days you have spent at this great institution, one with a history of almost a 100 years, will always have a cherished spot in your memories. I have no doubt you will carry through life the imprint of the associations that you have had here. Your future life will reflect the things you have learned and the contacts you have made.

When I think of memories, I like to refer to the passage in "The Dude Wrangler," where its author, Struthers Burt, said:

"The remembrance of beauty, the beauty of a thing, or of personal relationships, or of a country, has always seemed to me the chief end of life. The present cannot be held; it slips through our grasping fingers, becomes immediately the past. The future may be neither beautiful nor worth remembering; certainly its beauty will be accompanied by ugliness and tragedy. But what has happened is ours and cannot be taken away from us; and the mind, like the gauze screen through which gold is run, transmutes in retrospect almost everything into loveliness. Remembrance is the one sure immortality we know."

Thus the memories you take from Ohio Wesleyan will in the years to come be transmuted into a heritage no one can take from you—the memories of fellow students, of the faculty and of a thousand incidents you will like to recall.

But others are better fitted to talk of these things. I want to discuss the new era which begins for you today. You will go forth to become a part of a troubled world—a world that seeks peace, but prepares for war.

What will you do with opportunity in this world? Will you be content to let others concern themselves with the fate of the world while you engage in the game of seeking material things only? I hope not.

Your country needs men and women willing to serve the cause of humanity. It needs Christian men and women who pull their fair share of the load. It needs people who feel a sense of personal responsibility—who have the courage and the willingness to serve in the public interest.

There are many opportunities for service and it is my hope that you will here and now determine to spend some part of your future in such service.

If you are a man, I do not mean belonging to a luncheon club composed of fellow businessmen, or to the chamber of commerce, or to the fraternal order of your choice. If you are a woman, I do not mean the local women's club, or a garden club, or a bridge club, or a civic association. All of those things are good and serve a fine purpose, but I mean a more personal responsibility.

This is a political world in which we live. It functions through governments. Some of these are representative of the people, others are not. We believe in a representative government. However, it can be no better than the will of the people make it. When many of our people take no part in the selection of the representatives, it is likely to suffer. Will you do your part, or will you, like so many others, take no interest in this right you have as a voter?

Will you set an example of doing things the right and legal way—because it is right? Or will you exceed the speed limit on the highway because no policeman is in sight?

Too many people in this age, it seems to me, assume that so long as they do not get caught anything is all right. Businessmen seek special privileges from officials when they must know it is wrong—they excuse themselves because their competitors do it. Public officials take favors to which they are not entitled, because they think others are doing it.

Right and wrong are personal things. No law can be enforced unless public sentiment stands behind it—unless at least two-thirds of the people voluntarily observe it. The example of those who do right, because it is right, is what we need.

We need public officials who look upon public office as a trust, who do right because that is the proper thing to do. We need businessmen who seek no special privilege and accept none because that is the proper thing to do. We need citizens who set the example of doing right and of taking an active part in the selection of competent men and women to represent us in our city, county and State governments and in our Federal Government. And above all, we need less selfishness and a greater willingness to see the public interest made paramount.

Today we are struggling with inflation. It can destroy our civilization. It can bring victory to the ruthless purposes of the men in the Kremlin, men who have no God and to whom human life has no value. Yes, it can bring them a victory—but I do not believe they can achieve it if we stay strong, both militarily and economically.

Yet we see groups having a selfish and special interest who oppose plans for the safety of our country. They seem to have forgotten their personal responsibility as citizens. They are not acting on the principle of what is right—but solely for their own selfish interest.

This is the great challenge of the day—the challenge of doing right—because it is right. It is, as I have said, a personal responsibility. If we all feel and practice personal

responsibility we can make our way safely through the present troubles. We can become so strong that no nation will dare attack us.

It was my privilege recently to attend a dinner in Washington given by members of the American Law Institute. The honor guest was that distinguished jurist, Judge Learned Hand, who is about to retire. In responding to the things said of his great work on the bench, he said, in part:

"My friends, our future is precarious. I do not know if you remember the time 11 years ago—in 1940—when we were here, just on the eve of those dreadful days when it seemed not unlikely that the whole of all that which made life precious might be overwhelmed. Today we stand in as much danger as we did then; and, although it is not from us that the heaviest sacrifices are demanded, yet we have much to answer for. I like to hope—although I agree that we can have no certainty, still I like to hope—that we have a good chance, a splendid fighting chance, and much assurance of victory, but on one condition: That we do not go to pieces internally. It is there, I think, that you and I may be able to help. Because, my friends, will you not agree that any society which begins to be doubtful of itself, in which one man looks at another, and says, 'He may be a traitor,' in which that spirit has disappeared which says: 'I will not accept that, I will not believe that—I will demand proof.' I will not say of my brother that he may be a traitor, but I will say, 'Produce what you have. I will judge it fairly, and if he is, he shall pay the penalty; but I will not take it on rumor, I will not take it on hearsay. I will remember that what has brought us up from savagery is a loyalty to truth, and truth cannot emerge unless it is subjected to the utmost scrutiny'—will you not agree that a society which has lost sight of that cannot survive?"

"And so I say to you that today we stand as we did 11 years ago, perhaps in even greater peril; and I say, too, that you and I have this which we can contribute and which may be the most important of all. On our people has fallen a responsibility greater than that of any other people; you and I, loyal custodians of our precious heritage, have our part to perform."

This inspiring message from the great jurist was directed to his fellow members of the legal profession, but it should apply to all of us. We have our responsibility to prevent internal collapse—to prevent rumor and hearsay from motivating our thinking. We should demand proof. No ugly charge should control our opinions unless the evidence is presented.

If we lose faith in our fellow citizens because of charges recklessly made and not supported with the evidence, we tend to become like those behind the iron curtain. There every man suspects his fellow and no one trusts anyone. Judge Hand, it seems to me, was warning us of this danger.

One of the foundation stones of our civilization is the right of being deemed innocent until proven guilty.

Our Government is founded upon the consent of the governed. If we lose faith in it, there will be no consent and no effective government. It is our personal responsibility to see that such a thing does not occur.

In my present position I am concerned each day with the personnel policies of the Federal Government. The Civil Service Commission is the central agency having responsibility for personnel practices in the Federal Government. We seek to bring into the Government young men and women of real ability and of strong character—men and women who will serve the public interest.

The dynamic Theodore Roosevelt, as a young man, served 6 years as a member of the Civil Service Commission. In May 1906, when he was our President, he said:

"I am now naturally brought into relationship with a great number of important offices

in different branches of the Government throughout this country and I continually have to consider the question of the efficiency with which they are handled. Practically without exception, I find that an office in which there is laxness in the administration of the civil-service law, where there is an effort to circumvent the law, where there is an effort to get around it, is an office in which poor service is rendered; the chance for fraud, for speculation, for dishonesty, is always greater in such an office than in the office where the law is well and faithfully observed.

"If the appointing officer administers the civil-service law in a spirit of hostility to it, it has been my experience that in the great majority of cases, inefficiency and corruption are sure to obtain. And while, of course, it is true that the mere observance of the civil-service law can never result in a thoroughly efficient administration of any office, yet I am inclined more and more to feel that the observance in the letter and spirit of the civil-service law is the first requisite in obtaining clean, decent, efficient Government service in any branch of the Government."

The distinguished president of this great university was for many years a member of the Commission. During World War II he was a tower of strength to the Nation in that capacity. Those of us interested in the matter regretted his leaving, but our loss was your gain. Today he is again rendering a fine service to his country in its time of need.

It is my hope that you will consider devoting some of your life to the service of your country. There are many satisfactions in such service. No doubt you can make more money in the field of business or finance or in manufacturing, but your country needs men and women of high character and of ability.

The Federal Government today is large and carries great responsibilities. It vitally affects the lives, the happiness, and the safety of all of our people. It is the recognized leader of the free people of the entire world. It has been forced by circumstances to take this position of world leadership. It seeks, in cooperation with other free nations, a world of law and order, of peace and opportunity for freemen everywhere.

We cannot attain these objectives unless the Government can command the services of young men and women like yourselves—men and women with trained minds, with good character, with a sense of personal responsibility.

We cannot lead the world to peace unless we remain strong at home—strong in military power, and, more important, strong in those things which have made the United States the greatest Nation on earth.

It seems to me that the things that made our country great are the things I have discussed here today. It is the strength that comes from a citizenship composed of men and women who do right—because it is right—who willingly assume their responsibilities in a Nation in which all power comes from the people.

As you go forth to join in the life of our country, so much depends upon you—and others like you. Are we to continue to be a great people? We will—if you and others who graduate today from similar institutions have the character and the zeal to keep us great. There is great power for better things in the young men and women of the Nation. Our Nation was founded by men of comparative youth. They knew what they wanted. They placed the power of government in the people, having faith that such action was wise. So far they have been proven right. Our heritage lies in your hands.

That heritage will not be preserved by men and women who shirk responsibility—who seek only selfish goals—who are motivated by rumor or hearsay. *

It will be preserved by men and women who do right—who serve the public interest first—who are unselfish—who assume a fair share of the responsibility for its preservation.

If young people like yourselves go forth and lend their talents, their education, their character, and their efforts to the job of preserving and strengthening our country, they will make it possible for the United States to discharge its responsibility for world leadership, and our Nation can then lead the world to a state of peace and tranquility, based upon law, with the rights of all people made safe.

As you walk forth today, won't you join in the crusade for better government, for more personal responsibility, for law and order—for things that are honest, decent, and based upon truth?

With a militant force of young men and women dedicated to such ideals, we can securely face the threat of the Kremlin to subjugate all peoples to its lust for power. We can preserve our heritage of freedom and can extend its blessings to the other nations of the world.

The fate of the future depends in large measure upon the course that you take—the course that all our people take in the coming years. May God guide us and give each of us the wisdom and the courage to do right in all things at all times.

Central Valley Water Festival

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. ENGLE. Mr. Speaker, the Governor of California has proclaimed August 1 to August 10 as Central Valley Water Festival Days. These water festival days will mark the first operation of the huge pumping plant at Tracy, Calif., and the first full operation of the several features of California's Central Valley project, which has been constructed with Federal funds under the direction of the United States Bureau of Reclamation. The Congress first appropriated funds to begin work on the project in August of 1935.

Full project operation will bring about the greatest man-made transfer of water in the world. By exchange, water supplies will be readjusted the 500-mile length of the Central Valley of California, from Shasta Dam near the city of Redding in the north, to the city of Bakersfield in the south.

I have been appointed chairman of a special congressional subcommittee to participate in the community celebrations, which begin when water will be released at Shasta Dam on August 1, and end with an observance in my native town of Bakersfield on August 10.

Only 20 years ago, the proponents of the Central Valley project, including then State Engineer Edward Hyatt and other leaders in the water field, were criticized as impractical dreamers, and it was predicted the project would never be a reality. Today their vision and their efforts are applauded by hundreds of thousands of Californians who are becoming increasingly conscious of their vital but limited water supplies.

Because this event is of national significance, and because the project has attracted worldwide interest, I am pleased to include for the RECORD an editorial entitled "The Water Dream Materializes," from the Sacramento Bee of July 9, 1951.

WATER DREAM MATERIALIZES

Gov. Earl Warren has proclaimed the period from August 1 to 10 as Central Valley Water Festival Days.

It will mark the passage of Sacramento River water through the West Side canal into the San Joaquin Valley, the first time this dream of many years' standing will be realized.

During the 10-day festival, cities and towns plan celebrations along the route the water will travel.

And they certainly have good cause.

Governor Warren aptly summed up the situation when he said in his proclamation:

"It (the project) involves the longest mass movement of water ever achieved by man

"The project is one of the greatest advances that has been made in the history of our State.

"It gives us new hope as we enter our second century of statehood, a century in which we know our continued growth will require the conservation of every drop of water that falls in our State for every useful purpose water can serve."

And he went on to say California is completely dependent upon water development. No one will question that statement.

Without water development, this State would be the barren wilderness which her discoverers found more than 100 years ago.

And her maximum growth cannot be achieved until man has made wise use of every drop of water within California's borders.

That is what the Central Valley project is seeking to accomplish.

And it is well that this milestone in the progress toward that goal should be celebrated.

The Public Library: Rampart for Freedom

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. HILL. Mr. President, the Saturday Review of Literature of July 7, 1951, contains an excellent article by Dr. Luther H. Evans, Librarian of Congress, entitled "The Public Library: Rampart for Freedom." This article contains a fine statement of the role of libraries and of the present crisis which confronts our Nation. I ask unanimous consent to have the article in full printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PUBLIC LIBRARY: RAMPART FOR FREEDOM (By Luther H. Evans)

Freedom of speech and freedom of the press we justly prize as among the inalienable rights of the individual. But it is upon the correlatives of these—freedom to hear and freedom to read—that all our other freedoms rest. For these are not only among the basic rights of society; they are among the necessary conditions of the existence of a free social order. The perpetuation of a

free society requires not only that men have the legal right to hear and read the truth, to seek information from varied sources, to explore divergent views, to be exposed to new or heretical ideas, but that they have the actual opportunity to do so. And the perpetuation of our cultural health similarly requires that men have not only the right but the means to encounter a wide variety of intellectual expression and to share with contemporary creators in the arts their fresh and emerging perceptions of the human experience. Free participation in the State exists only where there is free participation in information; the commonwealth of the human spirit is shared only so widely as the works in which it is embodied are shared.

The actual freedom to hear and read was never so important as it is today. A century ago, even in some degree a generation ago, a man could accumulate during his formal education an intellectual capital that would remain valid for the rest of his life and would provide the solid basis of knowledge against which his political and social judgments could be formed. But so rapidly does knowledge expand today and so swiftly do practical affairs conform themselves to new ideas that a man's college education is in good part obsolete before he attends his first class reunion.

The generation of men now reaching the peak of their effective participation in public life completed their formal education 25 or 30 years ago. How inadequate is the intellectual equipment of that day to meet the problems of this. The concept of relativity, though well known to physicists, had not penetrated general metaphysics; indeed, the possibility of any alternative to Aristotelian metaphysics was as yet unthought of in the general classroom. The college student of that day, unless a specialist, was graduated innocent of knowledge of nuclear physics and of the whole concept of matter or of cosmology itself as it exists today. His ideas of the state were formal and legalistic; totalitarianism had hardly penetrated his awareness. References to Asia in his academic education had probably stopped with elementary-school geography. His economics was shallow and inadequate to the comprehension of the actualities of limited competition or the potentialities of dynamic state intervention in the economic process. The biology he had learned in undergraduate courses was still largely taxonomic, the psychology still mechanically behavioristic. Unless he has reequipped himself intellectually since he left college, the graduate of the class of 1921 simply does not possess the conceptual tools to deal with the major problems that press on his generation.

At the same time that formal education has become so inadequate for the provision of an informed citizenry, the citizenry itself has been projected as never before into the detailed workings of government. Perhaps because the specific acts of government touch him more closely than before and because the newspaper and popular magazine, the radio and television now flood him with the detailed superficialities of government action the individual citizen holds more decided views on more particular issues and presses them more effectively upon his political leaders than did his father. And the issues themselves are more complex, more grave, more perilous than any that taxed his father's politics. The democratic revolution has carried far beyond the dreams of Jefferson and undertaken burdens unknown in his day; the necessity of a variously enlightened citizenry which he foresaw has become our compelling imperative.

The instruments of public information to accomplish that enlightenment are certainly abundant. No people ever spent so many hours of every week reading newspapers and popular magazines, listening to radio comment, observing television programs, and

sitting through movies. At times there seems to exist for us not merely the freedom but the compulsion to read and hear. But all these media through which we are so unremittingly approached have one disturbing characteristic; they are instruments through which one or a controllable number of views can simultaneously reach large masses of men. This characteristic lends itself to ideological monopoly. Even where totalitarian usages are not involved, we have seen in our own country the ominous aptitude of the mass media for creating and disseminating one accepted view or a single cultural pattern.

This tendency is indeed difficult to escape. The economics of the mass media are such as to require a mass market for their support. An urban newspaper, a popular magazine, a movie, network radio or television programs can sustain themselves only if regularly heard or read or seen by hundreds of thousands or even millions of people. Such media must be capable of interesting and must avoid offending the great mass of the population. Their producers can rarely afford to utilize them for the dissemination of specialized or advanced information, the presentation of divergent views, the advocacy of unpopular causes, or the introduction of novel cultural expression.

This is not to say that the mass media are inherently or usually or even often harmful. On the contrary, they are indispensably useful in purveying the great mass of information and entertainment that is of interest to most people. If the opportunities for recreation given by them were cut off this would be a drear place; and without the flow of news achieved by the mass media the functioning of our society would be impossible. However, the mass media cannot fill one of our great contemporary social needs, and it is highly important that there be other readily available sources of information and means of cultural expression as a corrective to their inherent tendency toward uniformity.

Books are almost the only medium that can fill this need. Though the always rickety economics of the book trade has tended to show a disturbingly increased reliance on mass methods of distribution, which fall into the very pattern of uniformity we need to counteract, it still permits the dissemination of a far wider range of knowledge, ideas, and cultural experiment than does the economics of any other medium. Where a movie must be seen by hundreds of thousands to break even and a national radio network may depend on an even larger number of regular listeners for its solvency, a book can be profitable on a few hundred sales a week and can sustain itself on a much smaller distribution. Even the smallest organization can still afford to publish a book or a pamphlet. Both the specialized learned institution and the small committee with a "cause" find in the book their means of expression.

Moreover, books are the only general medium of communication under the control of the recipient. A man who wants to experience "Hamlet" may have to wait months or even years before he has a chance to see it on the screen or stage or television or hear it over the radio; but he can read it when he chooses. Though the educational potentialities of the other media are enormous, it is only by rare coincidence that a man impelled to find out something about nuclear fission or cancer control will be able to tune in on a program that will answer his questions; but if he has access to a good collection of books he can get immediately what he wants. A man in the average small city has a choice on a given evening of two to six radio programs, perhaps half a dozen movies, two or three television programs, or at least a couple of newspapers. In his public library he may have his choice of tens of thousands of books.

The economics and what may be called the technology of the book hence directly contrast it to the other major media of communication. Instead of the characteristic pattern of one idea conveyed simultaneously to hundreds of thousands of minds with the selection of the idea in the hands of the sender rather than the recipient, we have the one recipient free to choose among the products of the tens of thousands of authors. The mass media have always the menace of becoming the instrument by which the user is controlled, but the book is always and inherently his servant.

Because books and those serious magazines that share their characteristics are the principal instruments by which man can extend his knowledge, correct his prejudices, enlarge and freshen his views, and broaden the range and depth of his cultural perceptions, because books are the principal means of keeping alive the sacred leaven of heresy, of opposing accepted error with unpopular truth, of giving a voice to the ignored and a forum to the oppressed; because they can intrude freshness and savor into the gelatinous uniformity of our cultural life—the means by which books are made realistically available to people are of the most profound social importance.

An indispensable means is the public library. Though individuals can assemble books that are the working tools of their profession and buy books from time to time that attract them, only the very rich can afford to create private libraries capable of placing at command any considerable portion of available intellectual resources. Even had one the means to buy, only a few bookstores in the largest cities can afford to maintain stocks from which to choose that are at all comparable to those of a reasonably good public library. It is of the essence of the book's utility that it gives the user the choice not only among ephemerally appearing products but among the organized accumulation of knowledge and recorded expression, and this only the library can do.

For an institution of such superlative social importance the public library in the United States has faltered alarmingly in support and in accomplishment. Librarians and public alike are liable to complacency about the state of the library in the United States. We are likely to cite comparative statistics which place us in a flattering position in relation to other countries, without recognizing either the greater responsibility of the library in the United States or its incomparably greater sources of potential support. We are also likely to quote figures on the proportion of the population that receives library service, without admitting that they mean little more than literacy figures.

The blunt fact is that almost no Americans living outside rather large cities—and this means most of us—have access to a library capable of giving really good service, as pointed out in Robert D. Leigh's *The Public Library in the United States*. And even those living in large cities rarely use their libraries to the extent that is socially desirable or even essential. Libraries are an underexploited resource even where they are best developed. Most Americans who have access to a library at all have access only to a small, ill-selected, and inadequately maintained collection consisting principally of popular fiction and manned by a part-time staff without professional training. The library which serves the average citizen is likely to be open only for limited hours and to be inconvenient enough of access and use so that the citizen is likely to prefer buying a paper-backed edition for a quarter and throwing it away. If he is truly an average citizen he does not use the library at all.

What is wrong? In the first place, one of the glories of the American free public library—its decentralized local support and management—has become a major weakness. With rare exceptions, good libraries now

exist only in large cities. There is no reason why a small school cannot be as good as a large one. Its teachers can be as well paid, its plant qualitatively as good, its per student budget as high. But a small library cannot be as good as a big one. The very essence of the social function of the library as contrasted with other media of communication is that it can respond to whatever need of the user. And a big collection of books can do this better than a little one. Moreover, only in a sizable library is the specialization of staff possible that is usually necessary for effective professional service. Only relatively large cities of about 100,000 and upward now support libraries of an adequate size to give good service.

But there is no reason why small-town and rural areas of comparable population and wealth cannot unite their library services to provide a central collection of books of adequate size with an effective extension service. And there is no reason why each State cannot provide a comprehensive central reservoir of books to supplement local resources and a central professional staff able to give guidance and work on major bibliographical problems or why a State cannot provide funds to assist in the equalization of service between the richer urban areas and the poorer rural areas, as in the case of schools. There is no reason, that is, except inertia and complacency, for the cost above the present unorganized services would be negligible, the return on each tax dollar would be much greater, and with thoughtful planning the full vigor of local initiative and management could be preserved.

As in the case of education generally, there is need also for Federal financial stimulus to library development (though less need for continuing Federal subsidy because of the inherently inexpensive character of library service). This need would be met by the library services bill, which barely failed of passage in the last Congress, is presently before the Congress again, and deserves the vigorous support of everyone to whom books have meaning.

In the second place, we need more and better librarians. The last decade has seen a remarkable increase in the standards and a long overdue and inadequate increase in the salaries of professional librarians. I know of no profession whose members surpass public librarians of this country in a sense of dedication to their duties. But the profession does not yet attract an adequate number of competent people. Many library schools could handle sizable increases in enrollment, and vacancies in professional library positions exist all over the country. Especially will a marked increase in the number of persons taking library training be essential if library services are to be expanded at a rate at all commensurate with the national need. To achieve this we need marked increases in salary, the increase in prestige that comes from the community's recognition of the importance of the library's task, and a permanent extirpation of the myth that librarianship is an effeminate profession for men and an old-maidish one for women, in which adventurous minds cannot find a satisfying career.

In the third place, libraries need to extend their services to include those media which, like books, are capable of inexpensive accumulation into reservoirs. Particularly I have in mind the educational film, recordings, and prints. These materials enable the library to offer a greatly enriched opportunity for intellectual and cultural enrichment especially in smaller communities affording otherwise only restricted access to serious music and art. This development is now rapidly extending itself in the major urban libraries but is as yet rarely found in those areas in which it is most needed.

In the fourth place, we need to make it much easier to use the library. An analysis of the patterns of public-library use shows

clearly, as might have been expected, that the busiest people are the least frequent users. The high-school student on summer vacation is a heavy user; the suburban husband and father rarely enters a library. This means that the library is failing to reach precisely the groups whose activity and responsibility in the community create the greatest need for ready access to information and for the stimulus of contact with a wide range of ideas. In large part this failure is due to the simple lack of time to read and is beyond the reach of the library. But I suspect that the major difficulty is not so much lack of reading time as a lack of convenient opportunity to visit the library; the wait while books are called for and charged and the nuisance of returning them are also difficulties. Libraries need to experiment imaginatively with solutions to this difficulty. What, for one example, about loans by mail of books called for by telephone—a procedure some extension services and commercial lending libraries already use?

And to make possible the carrying out of all these foregoing measures we need to spend a great deal more on libraries than we do. A great deal more in relative terms, that is, for the total amount we now spend on public libraries in the United States could be doubled with no perceptible effect on the economy. Total present expenditures for public library support are on the order of \$100,000,000 annually. This is about 65 cents a person, less than one-sixth of 1 percent of public expenditures, about one twenty-fifth of 1 percent of the national income, about one-fiftieth of our expenditures on public schools, less than one-half the subsidy given newspapers and magazines through the second-class postal rate. Viewed nationally it is a negligible figure. Even if it were doubled, which is probably about what a good library service would cost, it would still be negligible as a burden on the national income. The cost of a movie apiece would do it.

It is obviously not because the cost would be burdensome that we support libraries so inadequately. It is because we have never realistically faced the problem as we have been forced to do in the case of schools. Library appropriations slide on from year to year, an uncontroverted element in municipal budgets, arousing little opposition, and commanding little vigorous support. In this municipality or that an energetic librarian or an active board of trustees will get a sizable increase in support, especially when a new building is needed. In a few States here and there more effective State aid may be won. But little occurs from year to year to lift the national average of library support to a degree that would permit the new level of library service required by the times.

From many points of view library support is retrogressing. Though there has been a substantial dollarwise increase in library budgets since World War II, it has probably not kept pace with the dropping purchasing power of the dollar and certainly not with the combined effects of inflation and population increase. As a percentage of the national income, library support has dropped sharply. Nor is there any comfortable basis of assurance that the situation will improve. No present trend points to the rapid increase in library support that is essential for effective service. Nor can librarians themselves initiate such a trend. They are too few and their political influence is too limited. If effective library support is achieved over the next decade it will be because library trustees and citizens at large who are devoted to intellectual freedom and growth undertake a deliberate and concerted campaign of national scope to break out of present limitations and establish a new level of library service as the accepted norm in this country. We must do for libraries what we have done for education in general.

And, finally, in achieving the necessary enlargement of library support and service

we need always to preserve the finest traditions of the free American library. The whole special significance of the library in our social structure, its particular role as a medium of communication, depends upon those traditions of freedom. I do not believe there is any need to worry about the public librarians themselves. So single is their devotion to the ideal of free service to all that any restrictive concept of the library would be simply unintelligible to them. And I think it is not too much to say that, though most librarians are persons of limited means, wholly dependent on their salaries, and without personal political strength, no group in America has more steadily, quietly, and successfully resisted all pressures of obsecraturism, bigotry, and censorship.

But the tide of such pressures is rising and the strength of every free institution will be tested by their attack. As the public library grows in importance as a principal weapon against intellectual monopoly their force will be increasingly directed against it. In maintaining their freedom against it, each community will need the understanding support of every liberal element. Support can be no better given, for their freedom is an essential in the freedom of us all.

Address by Hon. Edward Martin, of Pennsylvania, at Annual Convention, Department of Pennsylvania, Veterans of Foreign Wars

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the annual convention, Department of Pennsylvania, Veterans of Foreign Wars, at the Bellevue-Stratford Hotel, Philadelphia, Pa., on July 12, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is most appropriate for a great organization of patriotic Americans to hold its convention this year in this great city of patriotic inspiration.

Here in the city of Philadelphia, 175 years ago, American independence was proclaimed, bringing into the world a new concept of human freedom.

Here in the summer of 1776, was formulated the sacred principle that Almighty God has endowed all mankind with the right to life, liberty, and the pursuit of happiness.

For the first time in the history of the world there was established a government based upon social, political, and economic freedom of the individual.

It recognized the people as the masters of the Government and not the servants of any king or ruler.

To support and preserve that priceless ideal, free Americans, imbued with the spirit of patriotic devotion, have fought and died in every generation.

Whenever the Nation has called upon them, the youth of our land has gone forth to protect and safeguard American freedom in all its greatness and glory.

The Veterans of Foreign Wars have a place of distinguished honor in the glorious procession of those who have defended America when threatened by foreign foes.

I am proud to salute you and praise your loyalty, in peace and war, to the principles that are the firm foundation of our liberty and independence.

We meet at a time when the world awaits the outcome of true negotiations in Korea.

A year has passed since I had the privilege of addressing your 1950 convention at Harrisburg. It has been a tragic year of conflict and sacrifice.

On the other side of the world, 7,000 miles from their homes and their loved ones, nearly 12,000 hero dead have been added to the honor roll of those who gave their lives in battle against tyranny and enslavement.

It is fitting at this time to recall the immortal words of Abraham Lincoln "that we here highly resolve that these dead shall not have died in vain."

Just as in Lincoln's time there remains before us today a great unfinished task to which we must dedicate ourselves with increased devotion.

The highest hope in the heart of every American is for peace in the world; peace with honor, freedom, and justice.

No group in all our land is more ardently devoted to peace than those who have experienced the horrors and the terrible hardships of war.

The desire for peace is uppermost in the heart and mind of every American soldier who served in the trenches and the fox holes of Europe or who crawled on his belly in the mud and the swamps of the Pacific Islands.

Yes, we veterans who know what war is, want peace—but we want nothing less than an honorable and just peace.

The founding fathers, in their defiance of the might and power of the British Empire, pledged not only their lives and their fortunes but also their sacred honor in the cause of liberty.

Today as the battlefield commanders in Korea meet to plan a truce, the honor of every American is in the balance, pledged to uphold the historic mission of the United States—to maintain the right of freemen to live in peace and dignity, secure in life, liberty, and the pursuit of happiness.

But this tragic fact remains—truce in Korea gives no assurance of a peaceful future. The ultimate aim of communism is still world domination. Their sole objective is to conquer and destroy freedom in every nation where human rights are respected.

With the end of the shooting in Korea the Soviet tyrants will not abandon their efforts to weaken the United States in the hope that we will become an easy prey for their evil designs.

The cease-fire arrangements will save American lives. That is good.

The terrible loss of life sustained by the Chinese Reds may be unimportant from the Communist standpoint. To us the life of every American boy is precious.

One of the most unfortunate circumstances in the present situation is that General MacArthur made the same cease fire proposal last March. At that time he announced he was ready to confer in the field with the Communist commander in chief. But the State Department cracked down on General MacArthur, repudiating his proposal.

Three months later we accepted the same proposal for cease-fire negotiations offered by the spokesman for Soviet Russia. In the meantime thousands of American boys were added to the casualty lists. What a tragic waste of precious time and precious lives.

But the fundamental conflict between the American free way of life and godless communism continues. It will not be settled merely by ending hostilities in Korea.

First and foremost we must keep in mind always that the only real threat to permanent peace in the world comes from Communist Russia. The real enemy is not Red China, nor any of the satellite nations that have been imprisoned behind the iron curtain.

There has never been any doubt that the evil influence which menaces civilization originates in Moscow—from which we heard the offer to cease hostilities in Korea.

Doesn't that warn that we must proceed with extreme caution in our negotiations?

It seems to me we should ask ourselves these questions:

"What are their real motives?"

"Do they really want peace?"

"Do they believe that in our desire for peace we will again fall into the trap of appeasement?"

"Do they hope we will again abandon principle as we did at Yalta and make concessions that will further strengthen Communist power in the world?"

These things must not happen.

A peace not based on honor and principle can only result in further aggression and ultimate war. Yalta is the best proof of that statement.

In his testimony before the Foreign Relations and Armed Services Committees of the Senate, Secretary of State Acheson revealed certain principles as part of our new policy in the Far East. He assured the committees that the State Department would not accept the Communist regime as the recognized government of China and that we would not consent to the admission of Red China to the United Nations.

He added that we would neither permit the Communists to take Formosa nor give Red China a place at the conference table to arrange a peace treaty with Japan.

The American people were cheered by this evidence of a firm policy in opposition to the Communist demands. Previously Secretary Acheson's position was that we would not use the veto power if the United Nations voted to admit Red China to membership.

In the negotiations now under way we must not be influenced by any fear of offending Russia.

We must not be influenced by fear of offending any other nation which sought to profit by shipping munitions and supplies into Red China.

Instead, it is time to adopt a policy which will make them fearful of offending the United States.

We must stop pussyfooting. We must stand up for American principles.

We must make known to the world that we will not agree to any settlement which will again betray the Nationalist Government of China by allowing the Communists to take its place in the United Nations.

We must make known to the world that we will not permit Formosa to fall into the hands of Communist China.

We must make known to Russia and every other nation that we will not permit any aggressor to shoot his way into the United Nations over the bodies of American boys.

To fail to make this position crystal clear would be a cowardly betrayal of every American youth who fought so gallantly in Korea and of all who made the supreme sacrifice.

The United States would be false to its trust, false to its ideals, and false to its great heritage if it accepted Red China into the United Nations.

Let us make that clear not only to our foes, but just as clear to our friends and allies. Our Government should notify the British, the French, and all others that we do not regard United Nations membership as a prize to be awarded for criminal aggression.

And if, despite all this, the United Nations still wants to accept Communist China in its membership, then I say there is one thing and only one thing for us to do—get out.

The United States must be firm about this. We've had enough of pussyfooting and weaseling. Our State Department has scrapped the noble eagle as our national emblem and has substituted the umbrella of appeasement.

My fellow Americans, there was a time when American citizenship was a protective shield the world over. It was an insurance policy against mistreatment in foreign countries. All the nations of the globe respected an American and the American passport. That respect was earned by a firm, straightforward, honest foreign policy, supported by a courageous State Department.

What now? Well, you all know the answer.

Weakness, vacillation and appeasement in our foreign dealings have made Americans abroad victims of injustice. In recent months, we've seen American missionaries mistreated, arrested and expelled in China.

We've seen an American businessman imprisoned, tortured, and forced to make a false confession of espionage—by an insolent, arrogant satellite of Communist Russia.

Most recently we've seen representatives of the American press also arrested and tortured into making false confessions that they were spies.

Americans are being treated thus because America has forgotten the admonition of Teddy Roosevelt to walk softly and carry a big stick. Instead, we've let a pink-tinged State Department make our foreign policy, selling out our friends to those who would kill our youth and destroy our liberties.

To you, my comrades of the Veterans of Foreign Wars, let me state my position.

I have just laid down for you certain principles which I believe are fundamental for both the honor and security of our Republic.

I pledge you that, with all the energy and strength at my command, I shall resist any attempt by the State Department or national administration to deviate from these fundamentals.

I shall speak out and vote in the Senate in defense of these principles.

Away from the halls of Congress I shall continue to speak and fight for them. I shall appeal to my comrades in arms to arouse the American people for the fight to defend Americanism against communism.

We have a long way to go before we can hope for permanent peace. While we work for that objective let us keep our guard high. Let us build American strength to its highest peak.

Strength, courage, patriotism and a clear, firm, honest policy in our dealings with the world, is the best insurance against war.

Proposed Increase in Natural-Gas Rates

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. WILEY. Mr. President, I have commented on numerous previous occasions against the negligent attitude displayed by the Federal Power Commission in its failure to protect the consumers of Wisconsin and of the Nation from being gouged by tremendous natural-gas increases.

It is incredible to me how such rate increases can be tolerated when the Nation, under administration guidance, presumably is engaged in a hard fight to control inflation wherever it raises its ugly head.

The most recent action of the FPC—its 4-to-1 decision against assertion of Federal jurisdiction over prices charged at the wellhead for natural gas—was

one of the severest blows administered by a Federal agency against the public interest in recent years. The consequences of that decision are so vast that we at present can only dimly perceive them. The inevitable train of more rate increases, price increases, cost increases all along the line, cannot help causing the inflation spiral to rise still higher.

When the Chief Executive of our Nation vetoed a bill which would have surrendered control over natural-gas rates, most of the Nation, I believe, applauded his action. I, for one, vigorously praised the President for that veto, as did the people of my State practically unanimously.

We were very much surprised, therefore, to read that the President stated that the FPC's most recent decision had "no connection" with his own previous veto of the gas-rate exemption bill. Not only did the FPC decision have a very harmful effect, but it was as directly contradictory to the President's own veto message as could possibly be conceived. This fact is borne out by a Washington Post editorial of Wednesday, July 25, which I have in my hand.

I submit this editorial, not by way of a personal criticism of the President, because actually I think that insofar as protection of the consumer is concerned, his previous position well merited the Nation's backing. But his current statement involves an inconsistency which should not, I believe, be allowed to stand uncorrected.

I have written to Chairman Wallgren, of the Federal Power Commission, asking him whether he, for one, can square the President's veto action with the President's most recent statement.

At this time I ask unanimous consent that there be printed in the Appendix of the Record:

First. The text of my letter of July 25 to the Chairman of the FPC.

Second. The Washington Post editorial.

There being no objection, the letter and editorial were ordered to be printed in the Record, as follows:

UNITED STATES SENATE,
COMMITTEE ON THE JUDICIARY,
July 25, 1951.

Re request for rehearing on Phillips Petroleum Co. case.

Hon. MON C. WALLGREN,
Chairman, Federal Power
Commission, Washington, D. C.

MY DEAR MR. CHAIRMAN: I am writing to you to respectfully urge a rehearing by the Federal Power Commission of the Phillips Petroleum Co. case.

It seems to me that unless there is such a rehearing and a reversal of the Federal Power Commission's 4-to-1 vote against assertion of Federal jurisdiction over rates charged for natural gas by Phillips, millions of America's natural gas consumers, including those of my State, will have been dealt one of the most devastating inflationary blows which has been administered to them.

I well recognize that, even if the Federal Power Commission should reject this request for a rehearing, that the FPC decision can and undoubtedly will be appealed to the highest courts of the land. However, it seems to me that in view of the long period of time that would be consumed by such appeal and in view of the fact that the FPC is presumably supposed to protect the public interest

in the first place, the obligation still rests on you and your associates to review the facts and possibly change your minds in this respect.

As I have indicated to you on previous occasions I well recognize the fact that the members of independent administrative tribunals, like the FPC, are entitled to come to their decisions on the basis of their individual consciences and analysis of the facts. I do not, of course, quarrel with your sincerity, but I do seriously question the wisdom of your mutual legal judgment.

The Commission's 4-to-1 decision is apparently based on the premise that everybody is out of step but the majority of the Federal Power Commission. The Congress is presumably out of step because it wisely refused to override the President's veto of the Kerr bill which would have exempted independent producers from regulation. The President of the United States is presumably out of step because he held to the idea that the American people were entitled to protection from being gouged by independent gas producers. The Supreme Court is presumably out of step because it clearly indicated that the Federal Government did have the power to regulate natural gas producers. The legal counsel of your own Federal Power Commission is out of step because he indicated that the Commission does have jurisdiction. Commissioner Thomas Buchanan, your able associate, is presumably out of step because he, too, refused to abandon the concept that the Commission very definitely does have the necessary authority.

And so the four-man majority on the Commission stands in isolation not only from the best legal judgment which is available, in my opinion, but it stands in isolation from the American people as a whole. Surely, the Commission is aware that the net effect of its opinion will be terrifically inflationary. Obviously, it is impossible to efficiently regulate gas rates charged by pipeline companies if those rates cannot be controlled at the original wellhead.

I cannot help but feel that those sections of the American press which have already commented in protest against the FPC's decision, are completely right in their pointing out that the FPC has in effect accomplished what all the supporters of the independent producer's exemption bill could not accomplish.

If your Commission's decision is allowed to stand, it will constitute one of the most unfortunate blows to the public welfare which has been administered in recent years by an administrative tribunal of the United States Government. I want to be completely fair to yourself and to your associates who happen to hold a different opinion from mine, but I cannot help but feel that your decision violates, as I have indicated, not only sound, legal opinion but the judgment of the Chief Executive of the United States and some of the best legal minds in America.

I know that you have a very high regard for the Chief Executive of our Nation, just as he has a high personal regard for you. One of the most bewildering aspects of the situation, insofar as the American public is concerned, is that when President Truman was recently asked to comment on the Commission's decision, he stated that it did not contradict his veto message of a year ago. The two cases, the President said, had no connection.

This is one of the most astounding observations that I have ever heard the Chief Executive make; because, as I have pointed out, what your decision does is accomplish precisely what the Kerr bill set out to do, namely, to exempt the so-called independent natural-gas producers (who control 85 percent of gas reserves) from Federal Power Commission control. Not only, therefore, does the FPC's decision have a connection

with President Truman's veto message, but it is 100 percent contrary to the letter and spirit of that veto message.

Now, I recognize that you are not responsible for the President's statements in his press conference, but it seems to me that in view of the fact that the President long ago set the policy of the executive branch of government toward the objective of protecting the consumers of natural gas, it is completely inconsistent and contradictory for the FPC to now reverse that policy. I believe that the people of this Nation, regardless of political faith, stand by the President's original view, based upon his splendid decision in vetoing the Kerr bill. However, they are astonished, as I am, by the President's latest comments.

I know that you, in particular, who have served in our National Legislature, can realize the problems faced by a legislator who is trying to represent faithfully the views of his constituents. I know, therefore, that you will recognize that I submit these views not by way of personal criticism—protection of the public—but rather on behalf of a principle from which it seems to me the FPC under your chairmanship has now sadly strayed. At any rate, the basic issue in this whole question is a matter of law and legal interpretation, and it is my earnest hope that the FPC will make a better study of the law than it apparently has thus far.

I should very much appreciate hearing from you on this matter and in particular, getting your interpretation of the relation between the FPC's decision and the letter and the spirit of the President's veto message on the Kerr bill.

Sincerely yours,

ALEXANDER WILEY.

[From the Washington Post of July 25, 1951]
NATURAL GAS

In one of the ablest veto messages he has ever sent to Congress, President Truman pointed out a little more than a year ago that the Kerr bill would have opened the door to consumer price gouging by the so-called independent producers of natural gas. The effect of the bill was to remove these producers from the jurisdiction of the Federal Power Commission—at a time when the demand for natural gas was growing rapidly. But now, ironically, the FPC has decided of its own accord that it has no jurisdiction over activities of producers and gatherers of natural gas, even though they sell the gas in interstate commerce. The door is therefore left quite as wide open to price gouging as if the Kerr bill had been enacted into law. The Presidential veto has been overridden not by Congress but by the presidentially appointed FPC itself.

The chief architect of this reconstruction is the President's good friend, Mon C Wallgren, berthed at last in the chairmanship of the FPC after Mr. Truman had vainly tried to persuade the Senate to confirm his nomination to other more honorific posts. The President makes no complaint about the reversal; he said the other day that the FPC acted or the evidence—which comes close to saying that he was mistaken when he vetoed the Kerr bill. Of course, the FPC is bound, as a quasi-judicial commission, to follow its independent judgment as to the requirements of the law rather than the wishes of the White House. But many informed persons believe that it was not necessary for the FPC thus to restrict its own jurisdiction. The experts who advised the President to veto the Kerr bill certainly held to the broader concept of the Commission's powers. Otherwise the veto would have been much ado about nothing. From the point of view of the consumer it appears that Mr. Truman was right about the Kerr bill and that the Senate was right about Mr. Wallgren.

Veterans' Administration Medical Care

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have set forth in the Appendix of the RECORD, an editorial which appeared in the Milwaukee Journal of July 17.

Dealing, as it does, with the medical care program for our veterans and with the investigation of that program recently carried on under the able direction of Senator HUMPHREY, of Minnesota, I know it will prove of interest to the Congress.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VA MEDICAL CARE WANTING

When Carl R. Gray, Jr., took over the office of Veterans' Administrator from Gen. Omar Bradley, the medical and hospital care being given veterans by the VA had earned the reputation of being the best available anywhere in the world.

The credit for this was freely given to General Bradley, his chief medical officer, Dr. Paul R. Hawley, and Dr. Hawley's deputy, Dr. Paul B. Magnuson, to whom General Bradley gave a free hand and complete support. After General Bradley and Dr. Hawley left the VA, Dr. Magnuson tried to carry on in the same way and maintain the same relationships and standards.

Friction developed, however, and Dr. Magnuson resigned rather than tolerate what he considered hampering interference by Director Gray and nonmedical officials in the VA. This and the growing rumors of deterioration and lack of confidence in the Administration of the VA medical care setup—especially criticism from medical circles—led to a quiet and thorough investigation of the whole situation by a Senate subcommittee, of which Senator HUMPHREY, Democrat, Minnesota, was chairman.

The committee's report, issued a few days ago, vindicated Dr. Magnuson. It was sharply critical of the administrative nightmare that has hampered the medical-care program since Director Gray has been in office, and said that this was putting the world's finest medical service in serious jeopardy. The committee called for changes in administrative orders of the VA and three changes in the law to correct the situation.

The reaction of Director Gray to the criticism and recommendations has been anything but reassuring. His press spokesman has brushed the report off as a lot of hokum and Director Gray himself claims now that the report was inspired by the testimony of ill advised and ignorant people. He has indicated, in about so many words, that he doesn't intend to follow the recommendations of the committee but will handle matters in his own way, which the committee so sharply criticized.

The Humphrey committee gave every indication of leaning over backward to be fair in its investigation. The committee did not jump at conclusions or try to make headlines. It called a long list of highly competent and thoroughly informed witnesses. Some of the more vehement critics of the recent trends in the VA medical set-up even called the committee report almost a whitewash.

It comes right down to the question of whether Director Gray is going to do what is necessary to restore complete confidence in the VA medical care program, and the high quality of its service to more than 100,000 patients daily at a cost of \$650,000,000 annually, or whether he isn't. If he isn't, then something more effective than a committee slap on the wrist and suggestions for remedies is plainly necessary.

Constantino Brumidi

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. HILL. Mr. President, yesterday in the Washington Star there appeared a beautiful and eloquent tribute to the great Italian artist, Constantino Brumidi, the evidences of whose artistic skill are to be seen throughout the Capitol Building, especially in the rotunda. The tribute was written by the Chaplain of the Senate, Dr. Frederick Brown Harris, and was published in his column in the Washington Sunday Star entitled "Spires of the Spirit." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIRES OF THE SPIRIT

(By Frederick Brown Harris)

AN IMMIGRANT'S IOU

Republics are notoriously ungrateful. It seems to be an unfortunate trait of a democracy to be unkind to its chief benefactors. Its most shining servants and saints often are those who are cannonaded while alive and canonized only long after death has removed them beyond the reach of praise or blame. History has witnessed countless repetition of the bitter mundane experience of one of the few, the immortal names that were not born to die, as it records—

"Seven cities vie for Homer dead

Through which the living Homer begged
for bread."

When three score and 11 years ago an Italian refugee, an outstanding artist, died, he had been denied fame and recognition by the nation which his devotion and skill immeasurably had enriched. Yet, in spite of the disdain and derision of his contemporaries, through the patient toll of a quarter of a century, by his genius he transformed the expanding Capitol of the United States into an embellished cathedral of patriotic symbolism. His tolling hands began their tryst with beauty before Lincoln entered the White House to face the heart-breaking task of saving the Union. When a tragic accident snatched him from his unfinished task, Hayes had succeeded Grant as President of the Republic. It is no exaggeration to say that this adopted son of America is worthy to be acclaimed as the Michelangelo of the monumental edifice which is the shrine of each patriot's devotion. For Constantino Brumidi breathed on bare walls the haunting beauty that burned in his poetic soul.

And so, back of the artistry of our chambers of democracy, is the tale of an exile

from the storied land of art and poetry and music, who here immortalized the epic scenes and towering personalities of this new world of freedom. His loving signature is written in heroic depictions, in human portraits, and, for good measure, in romantic landscaped etchings as well as in birds and flowers and fruit. Out of his cornucopia came varied forms and figures, clinging to the walls and ceilings in gorgeous colors and rich designs.

Perhaps the climax of all his Capitol treasures is what is known as the President's room on the Senate side. More than 6 years he toiled terribly on that jeweled ceiling, but the bequest he left there has given it the distinction of being called the most exquisitely decorated room in America.

Brumidi was no novice in the realm of art when, at almost 50, a political outcast, he left his native Rome. To him, freedom beckoned from this blessed land of room enough. For years he had steeped himself in the mural glories of the Vatican and had helped to restore the faded Raphael frescoes. Once in America, his gifted brush and soaring imagination were dedicated to sacred subjects, as he painted altar pieces of the crucifixion in New York and Philadelphia churches. During a visit south of the border, he beautified a cathedral in Mexico, while working on sketches for the proposed scenes in the Washington Capitol.

At 72, this neglected and unapplauded master of paint and fresco closed his weary and saddened eyes and was buried in an unmarked grave in the city he adored. Few there were, among his contemporaries, who sensed that there had passed from the earth a workman that needed not to be ashamed, whom remote generations belatedly would laud less than a week after death had vetoed his ardent desire to complete the vast rotunda design, where he was unfolding the scroll of American history, this prophecy was uttered on the floor of the United States Senate, "One day Brumidi will be crowned by the gratitude of succeeding generations." But alas, the long years passed and a pre-occupied Government allowed his memory to gather dust on the high shelf of oblivion.

Then at long last, her great heart shamed by such flagrant ingratitude, a determined woman, Dr. Myrtle Cheney Murdock, the cultured wife of a congressional legislator, by persistent research and the gathering of historic facts, burnished anew the annals of inspiring achievement. In her volume, which is a lovely example of the bookmaker's art, were reproduced, in glorious colors, the immortal frescoes for all to see and admire.

So it has come to pass that a woman has written Constantino Brumidi's name and fame as high as the stupendous dome he decorated with the magic of his inspired art. She and those who have shared her passion saw what Sir Edward Burne-Jones saw in the frescoes of Brumidi's native Rome, "there's a lump of greasy pigment at the end of Michelangelo's bristle brush and by the time it has been laid on the stucco, there is something there all men with eyes recognize as divine."

At the call of both Houses of Congress, on July 26, 1951, the stately Capitol of our Nation was the scene of a significant birth-day celebration. In the setting of the rotunda, crowded with Americans whose hearts were strangely moved, the official event belongs under the Spires of the Spirit, for with Brumidi the Capitol truly became an artist's sanctuary. On that July day, in a moving gesture, with his deathless contributions to the splendor of the vast dome looking down upon the throng, there was dramatically lifted up the artist's worn copy of the Holy Bible. In it, the hand that adorned the Capitol had entered the date of his arrival on the shores of this sweet land of liberty as he fled from the thralldom of the old. In the sacred book he had inscribed, "Presented

to me by the American Bible Society." It was in the inspiration of that book of books that he put upon the very walls of the Capitol his offering to the God of Liberty and of Beauty, from whom his genius was a golden gift.

The beautiful is essentially the spiritual, making itself known through the senses. When God would lead to the beauty of holiness, often he makes a stairway to it by the holiness of beauty. And now, as we give Brumidi his rightful niche in the Westminster Abbey of our faith, come darkened days when the liberty this patriot artist mirrored in grandeur is imperiled as never before, it is well to read with grateful eyes the IOU of this Italian refugee as he declares, "My daily prayer is that I may live long enough to make beautiful the Capitol of the one country in the world in which there is liberty." He still lives in that beauty. How impressive in its simple eloquence under the white dome on a mammoth mural is the opulent designation, "C. Brumidi, artist, citizen of the United States."

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD a broadcast made by me on July 30, 1951, which is program No. 46 in the series entitled "Happenings in Washington."

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows.

HAPPENINGS IN WASHINGTON— PROGRAM NO. 46

(By United States Senator EDWARD MARTIN,
of Pennsylvania)

This is ED MARTIN, speaking to you from the Nation's Capital and bringing you another discussion of Happenings in Washington.

Many thoughtful Americans have been deeply disturbed by the Truman administration's high-pressure demand for controls that would give the bureaucrats a stranglehold on the national economy.

I don't mean controls on prices, wages, or critical materials needed for defense. I don't mean controls that would protect the American people from the ruinous effects of runaway inflation.

We must have those so long as the present emergency continues. Everyone who has been feeling the pinch of high prices wants a fair and equitable system of controls. They want a price level that will keep essential commodities within the reach of people who live on fixed incomes, the wage earner, the salaried man, and all others of limited means.

But they see grave peril in the attempt by the administration to grab unlimited powers and to impose upon the Nation a program that is completely socialistic.

It is a program that would place in the hands of politically appointed and politically minded Federal officials the power of life and death over any business or industry that incurred their displeasure.

It would cut down to the vanishing point the fundamental principle of our Nation's greatness—freedom of the individual.

The tremendous propaganda machine at Washington is operating at full speed. It has the services of hundreds of press agents

on the public payroll. They are doing everything possible to convince the American people that those who oppose the socialistic schemes of the administration are sabotaging price and wage control.

Don't let them fool you.

Ever since the House and Senate began to turn down portions of the scheme, the administration propaganda machine has been mudslinging at Congress.

You know, the administration has its own definition of a "good" Congress and a "bad" Congress. A "good" Congress is one which gives the administration everything it demands. A "bad" Congress is one which thinks for itself and is not afraid to say "no" in the public interest.

In this talk I want to present the plain, hard facts about the administration's scheme to grab unlimited, centralized power. I want to tell you what it really is, what it could do and why Congress, for the most part, has rejected it.

I hope you will follow me carefully. Your basic freedoms are involved here.

First of all, let me make this clear. Congress is not opposed to a fair program of controls to check inflation. Even when President Truman saw no need for controls, Congress urged such a program and actually passed a bill giving the President full power to control prices and wages.

You will recall that in June 1950, at the outbreak of the Korean War, there was a rush of buying and hoarding. Prices shot sky high. At that time I recommended a mandatory price and wage control program, clear across the board. I warned that unless the President took immediate action, inflation would get worse and the balance between wages and prices would be lost.

Many other Members of Congress also urged action.

Prices were rising all the time and labor was becoming more and more restless—but President Truman turned thumbs down on our suggestions. He rejected them again in July and August. He insisted no compulsory price and wage controls were necessary.

Finally, last September, with the cost of food, clothing and other commodities climbing out of sight, Congress refused to wait any longer. It passed the Defense Production Act of 1950. This gave the President absolute power to control prices and wages. But he refused to use this authority. It was not until the end of January 1951, 4½ months after we passed the Defense Production Act of 1950, that the general price freeze order was issued.

I think the record plainly shows that Congress did try to protect the American people from inflation and that the administration was asleep at the switch.

Now, let's turn to President Truman's bill of this year to extend and expand the Defense Production Act of 1950.

This bill goes far beyond the grant of powers in the 1950 law. It goes far beyond the powers which President Roosevelt and President Truman had during World War II.

It goes far beyond any powers Woodrow Wilson had in World War I, that Abraham Lincoln had during the Civil War, or any other American President has ever had in wartime or peacetime.

That is the kind of extreme power President Truman is demanding—but Congress, I am proud to say, has refused to surrender to him.

I think it is most fortunate that we have men of both parties in the House and in the Senate who believe in restricting the power of the Government to control the lives of the people.

Let me enumerate a few of the things Mr. Truman demanded in his bill.

Under the guise of national defense, he asked the right to license every business in the United States and the power to revoke such licenses.

Do you realize what that means? If some petty bureaucrat decided your factory in Allentown, your steel plant in Pittsburgh, or even your corner grocery store in Altoona was out of line, he would just yank your license. You'd be out of business. Because Congress refused to grant this power, we are smeared as obstructionists.

Mr. Truman asked authority to seize private property, when deemed necessary to national defense, merely by filing a notice in court. He could take anything—a farm, a factory, an office building, a store, an automobile, and so on. The owner of such property would have no safeguards such as are provided under existing law.

Again, in the name of national defense, Mr. Truman asked the power to condemn, acquire, or operate any kind of plant, factory, or facility, and to build Government owned plants. Do you realize the implications of such boundless authority? Mr. Truman could take over an entire industry and nationalize it, the way the British Socialist Government took over the English railroads and coal mines. Mr. Truman could take over and socialize our steel mills, all our railroads, automobile plants, or any other industry, large or small.

That is pure, unadulterated socialism. Yet Mr. Truman's propaganda machine smears Congress for refusing to give the President these powers.

The President asked authority to pay subsidies at its own discretion to any producers. He could subsidize some farmers and refuse others. He could subsidize some manufacturers and refuse others. What a tremendous power that is for an administration to have with an election coming up. Even a Democratic-controlled Congress couldn't stomach that.

The President asked power to establish new Federal corporations by Executive order. He could start another Reconstruction Finance Corporation, another Commodity Credit Corporation, or anything else. And he could determine their powers without any check by Congress. He also wanted a free hand for all defense expenditures. Now, stop and think about that a moment.

Under this proposed power, Mr. Truman could absolutely prevent Congress from imposing any economy upon any civilian agency by taking the position that it was contributing to national defense.

One of the broadest and most dangerous powers asked by the administration was the right to deny Government loans, tax-amortization benefits and other Federal aids, to industrial expansion projects in areas which have not been approved by the President.

That proposal would have made possible the dispersal of defense plants from Pennsylvania and other industrial sections of the East into the South and West.

In other words, it would take industry away from the areas where it has been long established and where the skills and know-how have been developed and transplant it into newly created industrial centers at great expense to the taxpayers.

My fellow Pennsylvanians, never before in our history, no matter how grave the times, has any President sought such drastic and terrible powers.

Taken all together they add up to socialism and dictatorship.

They are a threat to our freedom and our form of government.

These powers, if granted, would mean the end of our system of free enterprise.

They would add immensely to the size, complexity, and cost of our Government.

They would require a new and heavier burden of taxation.

They would increase the pressure of inflation upon every citizen.

They would destroy initiative and all the incentives that have produced the strength of American industry and our high standard of living.

Despite the barrage of administration propaganda, despite all the smearing tactics directed against those who oppose the socialistic proposals, Congress will give the Truman administration all the authority necessary to cope with the problem of price and wage control.

Congress will give the administration all the power it needs to combat the rise of inflation and to stabilize the national economy.

The one element needed is cooperation by the administration in cutting down to the lowest possible level all spending not related to national defense.

Spending by the Government adds to the inflationary pressure just as much as spending by private citizens.

I do not subscribe to the idea that higher taxes, draining off the earnings of the people, are a cure for inflation.

The more effective remedy, in my opinion, is the strictest economy at all levels of government, sound fiscal policies, a sound currency and balanced budgets.

To make progress in that direction it might be well for Congress to consider controls on the Government rather than by the Government.

During his term of office President Truman has advocated many proposals which Congress has rejected as socialistic. If they had all been adopted, even without his latest demands, the United States today would be bankrupt, under a form of government patterned after European socialism. All political and economic control would be concentrated in an all-powerful Federal bureaucracy.

The United States has survived internal strife, two world wars, and financial depressions.

If we all work together to preserve the kind of government under which our Republic attained world leadership we can survive the dangers of national bankruptcy and socialism.

We can build a greater, stronger America without surrendering to Government the great freedoms which, under the American system, are the sacred heritage of all the people.

This is Ed MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

**Address by Hon. Robert A. Taft, of Ohio,
to the Plymouth County Republican
Club**

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. TAFT. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD the address I delivered to the Plymouth County Republican Club in Plymouth, Mass., on July 28, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Plymouth County Republican Club, fellow Americans,

it is inspiring indeed to come to this historic spot and speak to the citizens of Massachusetts, including the very descendants of the men and women who led the way in the settlement of what is now the United States. It is an honor to be associated in this ceremony with the leaders of the Republicans of Massachusetts, and with Joe Martin, former Speaker of the House, with former Governor Bradford, with your Senator, Lev Saltonstall and Cabot Lodge, who have made such an enviable record in the Senate of the United States.

We have come here to celebrate the record of the Pilgrim Fathers, and to rededicate ourselves to the ideals which inspired one of the great adventures of all time. They came to this continent 331 years ago primarily to secure religious liberty, and they did it with a courage and a sustained determination which triumphed over obstacles that we Americans of today can scarcely conceive. To these pioneers there was no concern about security, which dominates the thought of so many today. There was no complaint of the standard of living far below anything our poorest workmen would now accept. They were guided by the most rigid religious and moral principles which sustained them in adversity and inspired them to determined effort. They believed in God from the bottom of their souls. As said by Baylies, "They, in pursuit of religious freedom, established civil liberty; meaning only to found a church, gave birth to a nation; in settling a town, commenced an empire."

Two of the basic principles of the Pilgrim Fathers are badly needed in the United States today, and they are in danger of disappearance from the scene. The first is honesty and integrity. The second is a determination to acquire, protect and maintain liberty, of the individual and of the Nation. To those two principles the Republican Party does, and should, devote itself. No political party can survive unless it is based on certain principles which unite its members and lead them to a united effort in any election and in deciding policy. Its members may differ as to the application of those principles, but the essence of a two party system is that they will compromise their differences on lesser programs in order to support the basic principles. And so today we are unified even if we differ in detail or in degree. We believe in honesty and integrity in government. We believe in protecting and maintaining the liberty of our people at home and abroad, the liberty which the Pilgrim Fathers came so far to establish.

In 1951 we are nationally an opposition party, although the majority of the States are governed by Republican governors and Republican legislatures. Our proper function today is one of critical analysis, all the more important because of the disaster and dangers brought about by the policies of the present Administration. In 1952 when we appeal to the people to entrust us with the control of the Federal Government, we must then present an affirmative program, but I have little doubt that we can agree on such a program to carry out the principles of our party, for the differences that exist are minor compared to the principles on which we agree.

It is hopeless to expect honesty and integrity in the Washington Government without a complete housecleaning and the election and selection of officials with much the same uncompromising honesty as the Pilgrims brought to Massachusetts. We offer a return to honesty and integrity in government and a straightforward facing of the issues before us, Washington, Adams, Jefferson, Hamilton, and Madison said what they meant and no one questioned their unwavering integrity. There was no concealment in their make-up. Integrity to them was not merely financial honesty, but a clear

presentation of the real nature of their proposals to the people. Today the Government has reached a low point not only in direct corruption, but also in the studied practice of concealing the actual meaning of policies which may be adopted. No one can review without shame the revelations made by direct congressional investigation of the influences used in Washington to obtain favors—favors in the importation of perfume, favors in the pardoning of criminals, favors in the handling of income tax cases, favors in gambling, and favors in every other field regulated by the Government. The Look article of May 22, "The Scandalous Years", reviews many of those revelations showing that the influence of gamblers and criminals extended into the Washington offices and even besmirched the portals to the White House. The Reconstruction Finance Corporation, because of its vast funds available for loans, became a target of those who were willing to use the influence which is so effective in drawing money from the Treasury. The Department of Justice itself was influenced to drag its feet in investigations and prosecutions which might have led to inconvenient exposure. In a large organization many things may happen without the fault of those at the head of the Government, but the discouraging thing today is that no one has even been rebuked or dismissed from the Government because of these revelations. The immoral if not illegal practices are condoned by the highest authorities. Only a Republican administration can restore principles of common honesty to Washington.

So, also, in the field of issues a deliberate policy of concealing the facts, and misrepresenting the necessary effect of policies urged, has become almost universal in every field of public activity. Apparently, a Government department feels that the people are too dumb to reach a correct conclusion. So, before adopting a policy, it enlists all modern publicity techniques to sell it to the people. It fails to present many of the fundamental facts without which a reasonable conclusion cannot be reached. It engages in pure unprincipled propaganda without any suggestion that there is, or may be, an opposing view. The Government is able, and does, exercise a strong and improper influence over many channels of public opinion. When a policy is once decided upon, the air the very next morning is heavily burdened with those commentators who try to boost the party line. The Government promises high prices to the farmer and low prices to the consumer at the same time, without revealing the fact that vast subsidies are involved which would have to be paid by the taxpayer, and, after all, these same producers and consumers are the taxpayers. The socialization of medical care and many other welfare services is concealed by the euphonious name of social insurance. It is certainly not insurance, but socialism. Boiled down it is merely another tax on some of the people to furnish free services to millions of others, most of them fully able to pay.

The Republican Party offers a return to honesty and frankness in administration on the problems of the day. The time has come for a moral revival which will restore to our people the confidence in the integrity of Government and in the sincerity of the principles of their leaders.

Together with honesty we offer that other philosophy which lay at the basis of the whole Pilgrim adventure. We are united in the determination to maintain the liberty of this country, the liberty of the American people both at home and abroad. Never except perhaps in the earliest days of the Republic has this liberty been so threatened as it is today. It is threatened by the mil-

itary strength of the Russian Soviet Government from abroad. It is threatened by the advocates of totalitarian control and socialism at home.

We find an administration in power today in this country whose domestic policies would bring the United States very close to the socialism of Great Britain, and establish in this country an arbitrary control by the Federal Government of commerce, industry, labor, agriculture and all welfare services. Their whole socialist program was set back by the elections of 1950, but many of its features are now proposed on a supposedly temporary basis in connection with the mobilization program. The Government is proposing a vast expenditure for Armed Forces: foreign aid, \$70,000,000,000, \$90,000,000,000, perhaps a \$100,000,000,000 a year and such spending may be necessary. But it means that the Government would be conducting nearly a third of the total activity of the country. It means deficits and inflation and controls. With the spending also goes the power which inevitably builds up the Government to dictatorship.

What is that liberty which the Pilgrims established and which, during these more than 300 years, has gradually built this country up to be the greatest and the happiest and the most powerful country in the world today? It is not just what we hear called free enterprise. It is the liberty of the individual to think his own thoughts and to live his own life, liberty of the teacher to teach those theories which he thinks are sound, liberty of the family to choose what it will spend its money for and what it will eat for supper, liberty of the local community to determine how its children shall be educated and its various local services administered, the liberty of local self-government without which in a country the size of the United States there can be no liberty at all, liberty of men to choose their own occupation and liberty of men to establish their own businesses and run them as they think they ought to be run so long as they do not interfere with the rights of other people to do the same. And finally, the liberty to worship God which the Pilgrims sought as their first end. It is these liberties which have given dignity to the individual in this country, which have provided a vast flood of ideas competing with each other until the most effective theories and methods and principles are found, which have increased the production of the United States and the productivity of its workmen and, of course, the standard of living of its people. The more we produce per person, the more there is to consume per person.

Now we see many people in the administration and throughout our Government who believe that this whole system ought to be abandoned, that we ought to turn to a planned economy, that the Government ought to fix prices and wages and control the detailed operations of every business, that the Government ought to go into business itself if it does not like the way the industry is being operated, that the Federal Government should take over most of the functions now performed by localities and establish a vast welfare system under the euphonious name of social insurance, that the Government should control agriculture in detail and tell every farmer how to run his farm.

The Republican Party has opposed this program. It has advocated progress in education and research and a standard of living by Government advice and assistance without Government dictation, and maintaining affirmatively the greatest liberty possible under the complications of the modern world.

In the welfare field the Republican Party has advocated many measures designed to achieve the constant improvement of the condition of the people without a surrender

of their liberty. Those measures will be clearly presented in the next election when we have the responsibility of outlining a definite program.

Today, as the opposition, we have the job of analyzing critically every feature of the program now claimed to be essential to the carrying out of mobilization. We have the job of seeing that the surrenders of liberty which may be necessary in that program are only temporary and that they do not go beyond the absolute necessity of the case. That is not always a popular job. Congress has just passed an extension of the price- and wage-control law. It is said that it is watered down. Yes, it is watered down from the outrageous demands of the President. We rejected the attempt to license every business, the power of life and death over industry. We rejected the demand for the power of Government operation in any industry if the bureaucrats didn't like the way it was run by private operators. We rejected the demand for subsidies and the kind of roll-backs which would require subsidies. The bill gives ample power, perhaps too arbitrary, to fix prices and wages. Remember the administration wanted all these powers in time of peace, and we have the job of seeing that they do not use the mobilization as an excuse to put over a Socialist program which the people have rejected. The opposition to the administration bill was not politics. It was conscientious protection of the liberty of our American system. Probably the best politics would have been to give the President every power he asked, and let him enjoy the full effect of failure and resentment.

What is the real purpose of American foreign policy? It must be to protect the liberty of the American people and after that the peace of the American people. War can only be justified if it is absolutely essential to preserve our liberty, because war today defeats its own purposes and does almost as much damage to the victor as to the vanquished, and it may destroy the very liberty which it is designed to protect. Any policy which gives away billions of America's assets can only be justified if necessary to preserve our liberty. It has not seemed to me that our recent administrations have been ruled by those purposes, nor that they have been inspired with any determination to preserve the peace as long as possible. War has been treated by them as an instrument of national policy. But today, I think it is fair to say that there is a unity in this country in one great purpose—to protect our liberty against the threat of Soviet imperialism and communism.

There is no doubt that the liberty of this country is threatened at the present time, probably more seriously than at any time since the early days of the Republic. Soviet Russia is a threat because of the great extension of all air power, because of its vast army and vast manpower, because of its possession of the atom bomb and because of the aggressive fanatical spirit of communism able to weaken the opposition of its opponent. We have the problem of dealing with that threat. So far as the general strategy of our foreign policy at the moment, therefore, is concerned, there is substantial unity between the administration and the Republican Party and within the Republican Party. We agree that the threat has not really been reduced by the Korean armistice, and that this armistice gives no excuse for the relaxing of our efforts. We agree that we must check the growth of the power of communism by every possible means within our power and capacity. There is no doubt that we must tremendously increase the Armed Forces of the United States. There is no doubt that if other nations will use assistance from us in checking communism, and if such assistance can be effective, we should give it freely.

There are substantial differences on the question of the particular projects to be used to accomplish our purposes—that is, on the tactics of our cold war. And these become important because one of the limitations on our action is that it be “within our power and capacity,” and we must choose between these tactical projects. There are definite limitations on what the United States can do. We cannot undertake to engage in land warfare with Russia throughout the entire world, or meet every advance the Communists may make. No doubt the military people could recommend projects costing at least \$150,000,000,000 a year, all of which would be helpful in containing Russia. Military operation today has grown tremendously in expense. But we cannot spend that amount of money without a huge increase of debt and without an inflation which might destroy the very system of production to which we look for the backlog of success in any war that may occur. The administration itself admits that probably we cannot raise more than \$75,000,000,000 a year in taxes, and therefore any spending beyond that point means a straining of our whole economic system which must only be undertaken if it is absolutely essential. The present program is dangerous because it proposes to spend \$90,000,000,000 in fiscal 1953 and again in 1954 or perhaps even \$100,000,000,000. Already the administration seems to contemplate a total deficit spending of \$50,000,000,000 during the 2 years at the peak of our rearming. There can be no doubt that any such program must be subjected to a real critical analysis by Congress and by the Republican Party. Even then there must be a selection between many different projects which might be adopted to check Communist aggression.

I believe that control of the sea and air throughout the world is within our capacity, and that we should therefore, undertake to secure that control in cooperation with the British Empire. If we have such control, this country will be safe, and we can be of maximum assistance to those who undertake to check communism throughout the entire world. I believe that the preparation in time of peace for immediate land warfare by ourselves against Russia on any large scale on the continent of Europe or the continent of Asia is beyond our capacity. We can assist those who are defending themselves, but we cannot undertake the job ourselves, or do anything unless the bulk of the defense is furnished by the nations who are directly concerned.

This does not mean that we should not help these other nations. There has been substantial agreement on the program of giving economic assistance to those who can use it to check the growth of communism from within. Second: we have given arms to suppress Communist guerrillas and to enable nations to protect themselves against invasion. Third: we have adopted a kind of Monroe Doctrine for Europe giving warning to the Russians that if they attack certain other countries, they will find themselves at war with the United States. We have agreed to go to the defense of all of these countries if attacked, and we have the Navy and the Air Forces available for that purpose. Finally, we have undertaken to defend certain places with American soldiers such as Japan, Okinawa, and the Philippines. We have sent six divisions of American troops to Europe, and we have become involved in the Korean war.

But land warfare in Europe or Asia is the most dangerous and the most expensive. The stationing of American soldiers in foreign lands to defend them against attack is the most likely to involve us in war, and therefore should never be undertaken without congressional approval. Even under the present tremendous program we are only providing 24 Army divisions, and certainly we can-

not undertake with them to meet Russia's two hundred divisions on the Continent. Certainly, it seems clear that we should not commit any troops to any European army unless the Europeans themselves furnish the bulk of that army, and that I understand to be the position of General Eisenhower and every member of the administration. I question the wisdom of sending troops to defend one country against another country, unless the country to be defended initiates the request and is earnestly and enthusiastically determined to defend itself.

In applying this policy, I see no reason why we should favor either Asia or Europe. All that I have asked for is a consistent policy applying to both. My only quarrel is with those who demand that we go all out beyond our capacity in Europe, and at the same time refuse to apply our general program and strategy to the Far East. The defense of Formosa, for instance, was always a simple and easy action involving about one percent of the effort which we undertook in Europe. Yet, in spite of Mr. Acheson's recent testimony, the administration proposed to abandon Formosa to the Chinese Communists. In Greece we have spent several billions of dollars to support a government which has strong reactionary tendencies. In China, on the other hand, the State Department hampered the Nationalist Government and consistently favored the Chinese Communists. By arming Greece and Turkey, by encouraging the formation of a German Army, by arming nations all around Russia from Norway to Iran, we certainly take the risk of inciting the Russians to begin a third world war. But in China and Korea we refuse to employ the only means that could possibly win the Korean War—those proposed by General MacArthur because there is a remote possibility that Russia might become sufficiently concerned to send troops across Manchuria into Korea.

I believe today that Republicans can generally agree that the most important element in the building up of our defense against Russia is complete control of the air. The exact extent to which we use our Armed Forces on land can certainly be determined from time to time by the strength which we develop and the encouragement given to us by those who are directly in the path of Russian aggression.

We are constantly met by the statement that no one should question the recommendations of the military, and no one should question the foreign-policy decisions of the State Department. Anyone who ventures to do so is immediately smeared by the administration press and accused of torpedoing a bipartisan foreign policy which has certainly never existed since 1948. I suggest that the appeals for unity of this kind are an attempt to cover up the past faults and failures of the administration and to enable it to maintain the secrecy which has largely enveloped our foreign policy before and since the Second World War. There seem to be a number of individuals and editors and columnists and commentators who accept any policy proposed by the State Department or the Defense Department, even if it is the exact opposite of what that Department proposed 6 months before. Certainly, when policies have been determined, unity and execution are highly desirable. I don't think any well-informed Russian today can feel that there is any dissension among our people as to the basic policy of opposing Russian aggression at every point. But it is a fallacy, and a very dangerous fallacy threatening the very existence of the Nation, to discredit those who demand a critical examination of the details of foreign and military policy, or to smear those who criticize the results of past policy and draw from those results a conclusion as to what should now be avoided.

It certainly should be pointed out that the great power of Soviet Russia today was

built up by the policies of the Roosevelt administration at Tehran and Yalta, and of the Truman administration at Potsdam, the acceptance of the theory that communism was a form of democracy, and that Soviet Russia itself was a peace-loving and liberty-loving democracy. No such fatal delusion has ever possessed the leaders of the American Republic. Under that delusion we established the Russians in Berlin and Prague and Vienna where they dominate central Europe when American troops could certainly have occupied the first two of those strategic points. Our leaders accepted Stalin's promises when he had never kept a promise, and there was no means of enforcing them. We turned over control of Manchuria to Russia contrary to the principle of the open door in China which had dominated our far-eastern policy since the days of John Hay. We sent General Marshall to China to demand that Chiang Kai-shek put the Communists into his cabinet, and when he refused we cut off military aid which was essential for the defense of China against Communist attacks. Surely, a criticism of that policy based on the results which it has achieved—the loss of China and the threat to our whole position in the Far East—is the duty of anyone who discusses foreign policy.

We are about to enter into an armistice at the thirty-eighth parallel. We thus return to exactly the same position which we occupied some 3 years ago before we withdrew our troops from Korea. But in the meantime there have been 80,000 American boys killed or wounded, we have destroyed the very nation to whose assistance we went and it is said that there have been a million civilian casualties. Certainly a stalemate peace at the thirty-eighth parallel is better than a stalemate war at the thirty-eighth parallel. But why any war at all? If we had remained in South Korea, there would have been no war. Even if we had armed the South Koreans as General Wedemeyer in 1947 warned us that we should do before moving out there might have been no war. In January 1950, Secretary Acheson in his eagerness to make it clear that we would under no circumstances go to the assistance of the Chinese Nationalists on Formosa made it also clear to the Russians that our policy was absolutely opposed to sending any troops to Korea. Naturally the Russians saw a soft spot, and they took the Secretary of State at his word.

Could there have been a more inconsistent, a more wavering, a more disastrous policy than that which took us into the war that is now being concluded? Admitting that there was some justification for sending troops to defend South Korea to show the world that aggression would be punished, then certainly we have utterly failed in the purpose of our venture, for the Chinese have succeeded in an aggression far more dangerous than that of the North Koreans. They have marched their troops into another country and attacked the very United Nations' forces which were engaged in punishing aggression. They have pushed those forces back from the Yalu River to the thirty-eighth parallel, and now they are to receive the rewards for that aggression in a stalemate peace. As far as military aggression is concerned, the Korean War has only proved that small aggressors will be punished, but that nothing will be done to big aggressors. How can the administration escape the responsibility for the death and wounding of 80,000 American boys, and why should such criticism not be made?

The last two administrations have assumed complete authority to make in secret the most vital decisions and commit this country in secret to the most important and dangerous obligations. It has always been a part of our American system that basic elements of foreign policy shall be openly debated. It is said that such debate and the

differences that may occur give aid and comfort to our possible enemies, but the only thing that really gives aid and comfort to our enemies is the adoption of policies which play into their hands and give them victory and bring disaster to our country, as has our policy at Yalta and in Korea. Such aid and comfort to the enemy can only be prevented by frank criticism before such a policy is adopted. Unity carried to unreasonable extremes can destroy a country. Hitler achieved unity in Germany at the cost of the destruction of his country. Mussolini had achieved unity in Italy. The leaders of Japan, through a method of so-called thought control, achieved unity in Japan and disaster for the people.

Today it is just as easy for America to adopt a false policy leading to the destruction of its country as for any other nation to do so. The one danger is that we undertake to do more than we have the capacity to do. The best safeguard against fatal error lies in continuous criticism and discussion to bring out the truth and develop the best program. It is not only the right, but the duty of those in the minority to reexamine constantly and constantly discuss the foreign policy of the United States.

So, also, in the military field it is right and proper that the proposals of our military advisers be subjected to critical analysis. Our military effort must be limited by our economic capacity and the extent to which it must be limited is a question to be determined by civilian officials. Nor are the military always consistent. It was only in March 1950 that General Bradley testified that \$15,000,000,000 was ample for the defense of America, and I think General Eisenhower thought that perhaps we should spend \$500,000,000 more. General Bradley expressly said that the Chiefs of Staff had never approved the large figure of \$20,000,000,000, and that if he suggested \$30,000,000,000 he ought to be removed as Chief of Staff. Now they want \$65,000,000,000 in a single year. Last September they wanted 2,100,000 men in the Armed Forces; in December 2,700,000; by January they had boosted their sights to 3,500,000. Now the President refers to this as merely an interim goal, and suggests that we may be spending \$100,000,000,000 by the Federal Government alone in 1953, which means a total tax burden of well over 40 percent of the national income. In England a 40 percent burden has killed initiative and progress and reduced the country to complete dependence on an all-powerful government. We cannot raise the taxes for any such program, and we must recognize that it means further inflation, a great increase in the national debt, hardship and turmoil and impairment of the very production which is the backbone of our strength. Certainly it is the duty of those of us in Congress to require that the program be subject to a detailed study and examination. It is idle to say that these are military questions. Military advice is most important, but the final determination of vital questions of national policy requires a civilian decision. That decision cannot be left to the secret conclave of Truman and Acheson and Marshall. In that decision the Congress and the opposition must play a vital role.

I believe, therefore, that the policy upon which all Republicans can unite is one of all-out opposition to the spread of communism recognizing that there is a limit beyond which we cannot go without threatening our own liberty, our own welfare, and the very strength upon which we must rely to win a war if such a calamity should ever occur. We can agree that the proposals of the administration for military expenditures and for foreign aid should be subjected to critical examination; that they should only be adopted if it is determined that they

are absolutely necessary to protect the liberty of the United States; that they should not be used as a means of extending the Government controls and dictatorship which the Democratic administration sought in time of peace.

There is no reason for pessimism about the present situation. There is no reason for fear or trembling. We are by far the greatest nation in the world, and the fastest growing nation. It is only our leadership which has led us temporarily into an emergency problem. We have the means at our command. We have a people united as to our main purpose. We need only a Government inspired by the principles of the Pilgrim Fathers—a Government which is honest to the core and furnishes a moral and religious leadership to the people, a Government inspired by the dominating purpose that it will maintain at all costs the liberty of its people from foreign and domestic threat.

The Flood in Kansas, Missouri, and Oklahoma

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. SCHOEPEL. Mr. President, I am sure that all Members of the Senate and, for that matter, of the entire Congress, are aware in a general way of the havoc and ruin that have been caused in the States of Kansas and in the States of Missouri and Oklahoma, by reason of the recent disastrous floods.

I am certain that every practical consideration will be given in furthering the programs of development of projects that will prevent a recurrence of these disasters.

Recently at the flood-control meeting in Kansas City, Leo McNalley, a resident of Minneapolis, Kans., made a statement pointing out the devastation and ruin in the Solomon River Valley. His statement further points up the need for serious consideration, and I ask unanimous consent that it be printed in the Appendix of the RECORD, so that all interested might get a better picture of what is confronting the people of the communities involved.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF L. A. McNALLEY, ATTORNEY AT LAW, OF MINNEAPOLIS, KANS., ON JULY 25, 1951, IN KANSAS CITY AT THE FLOOD-CONTROL MEETING

It is my pleasure to speak to you on behalf of residents of the Solomon Valley and as a representative of the Solomon Valley Flood Control Association. This association had its inception July 6 after the June 24, 1951, flood and before the holocaust of Friday, July 13.

For geography on this matter, the Solomon River begins in Sherman County, Kans., and drains an area of 17 counties, or major part thereof. It empties into the Smoky Hill River approximately 285 miles east of its origin near Solomon, Kans., or some 40 miles below the Kanopolis Reservoir on the

Smoky Hill River. About 7,000 square miles are included in this basin. One hundred and seventy-six thousand people reside in these 17 counties.

This association has an executive committee comprised of one person from each of 24 towns and cities located below the proposed dams. The dams proposed for the Solomon River are the Kirwin, Webster, and Glen Elder. The Kirwin is high on the agenda for construction and we are informed that contracts could be let in approximately 60 days after appropriations are made for its construction. The Webster would be under construction in 1 year, and the Glen Elder in less than 2 years.

These dams will impound a total of 382,000 acre-feet of water; thus, they would have lifted 15 feet off the June flood. From June 26 to July 4 of this year, the Solomon was continuously at flood stage. This water traveled at a rate of speed so that its head would have reached Lawrence about July 10, 11, 12. These three reservoirs if they had been constructed would have diminished the damage suffered not only in the Solomon Valley, but every valley below it.

At Minneapolis, Kans. since 1941, the Solomon River has reached flood stage 18 times. We are sick of it, definitely sick, and something must be done. Seven of these floods were within one-half foot of the high 1903 mark. Three were above it. In only 3 years out of the last 11 has the Solomon failed to flood. In 1950, it flooded six times. So far in 1951 it has flooded four times. We have our fingers crossed for the rest of 1951. The old mythical Indian that predicts floods on the Solomon is now saying, "You ain't seen nothin' yet." Every time a black cloud appears in the Northwest, it chills the hopes of the people on the Solomon.

There has not been a train over the Beloit Branch since June 20. The July flood of this year maintained a mark above that of 1903 continuously for 6 days, and this water came from Beloit, Kans., at a rate of approximately five times its normal speed.

The reservoirs proposed on the Solomon will control these floods. We have seen ample proof of this in the Kanopolis and Cedar Bluffs Reservoirs. To impound the water now in the Kanopolis Reservoir in farm ponds, it would take 37,500 ponds of 10 acres each, 3 feet deep, or 3,750 ponds of 40 acres, the same depth. These farm ponds would cover 150,000 acres of land. The Kanopolis Reservoir covers 13,000 acres.

You can walk a few short blocks from here and see the utter destruction heaped upon this city from water from the Solomon and other tributaries of the Kansas basin. Dikes and dams built here without the reservoirs are not the answer, and vice versa. The people in our valley have lost valuable, fertile land, gutted with new valleys, covered with silt, covered with gravel and sand, and the topsoil gone. The silt presents a complicated problem. Can it be tilled? And if it is tilled, what will the winds do to it in the late summer when they come? Homes, machinery, livestock, furniture, and all kinds of worldly possessions and precious treasures are destroyed and gone. The financial losses will never be known in anywhere near the exact terms. Returning to the slimy ruins, in the stench, with near 100 degree weather, has brought forth a loss far greater than any ever measured in dollars—it is the loss of human initiative. Now having faced 10 floods in less than 2 years' time, the pluck, grimness and determination of the people of the Solomon Valley is diminishing fast. Their endurance is exhausted. Many are moving out. Faith can be restored in these people if we act now.

We earnestly solicit your help in solving this problem, and we earnestly pledge our help to each and every flooded area to solve this problem and solve it now.

The St. Lawrence Seaway**EXTENSION OF REMARKS**

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. AIKEN. Mr. President, we are missing an opportunity to make a profit for American taxpayers and build up our defenses at the same time. This fact has been recognized by Blair Fraser, a well-known Canadian writer, in a recent article entitled "Why Uncle Sam Has Blocked the Seaway," carried in the May 15 issue of MacLean's magazine, published in Toronto. I ask that excerpts from the article be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

If the United States Congress is ever going to ratify the 1941 St. Lawrence seaway agreement it will do so this year. If not, and chances look none too good, Canada might as well start the job alone.

It's worth doing. It will bring 2,300,000 horsepower of cheap electricity to Ontario and Quebec—the last major source of power still undeveloped in central Canada. By letting all Great Lakes shipping out and some ocean shipping in, it will cut \$48,000,000 a year off transport costs. It will add \$70,000,000 or more a year to Canada's national income, by doubling the market for Quebec-Labrador iron.

Those are the measurable advantages. More important are those that can't be measured.

With the seaway Canada and the United States could build their antisubmarine fleet in the safety of inland shipyards. With the seaway the great inland steel mills of North America would have a safe and ample supply of ore when the Mesabi Range is exhausted, as it will be before many years are gone; otherwise, ore must be imported over a long sea route, vulnerable all the way to submarines.

With the seaway a war emergency can be met without overstraining the railways as they were overstrained last time. With the seaway and its power development, heavy industry in the North American heartland could be expanded very fast to meet the demands of war or peace.

All these imponderables and some of the straight cash benefits too are worth as much to the United States as to Canada. That's why every President since Woodrow Wilson, every governor of New York since Al Smith, has been willing and anxious to make it a joint project with the United States paying most of the costs. . . .

Charles E. Wilson, Coordinator of Defense Production, testified with the zeal of a convert. Two years ago, as president of General Electric, he'd been against the seaway. Today, as the man in charge of defense production, he is for it—converted, he said, by a closer examination of the facts. He now feels, as a businessman, that he'd be glad to undertake the seaway and power development as a private venture.

By contrast, the opposing witnesses looked like a parade of nonentities. The opening witness for the opposition, who spent several days on the witness stand, was the assistant general counsel for the Association of American Railroads, chief supporter of the anti-seaway lobby. Succeeding witnesses, in the main, have been equally obscure citizens.

Why, then, isn't the seaway bill sure to go through?

It's still possible, of course, that it may go through; informal polls seem to indicate a majority of the House committee favors it. But the Senate Foreign Relations Committee must also approve and its hearings haven't even begun; the chairman, Tom CONNALLY, of Texas, has been an anti-seaway man for years. In either House the Rules Committee can bury it, keep it off the floor and away from a vote.

They can, but why should they? What explains this determined suppression, year after year, of something favored by every administration from Harding's to Truman's?

What would we have to pay per year to earn the benefits offered by the seaway?

An astonishingly small amount, really. The St. Lawrence seaway is a capital asset which will not depreciate; except for a few bits of machinery, it will always be as valuable as it is now. There's no special reason, therefore, for trying to recover the capital—we could afford to pay interest on the whole amount indefinitely. On this basis the carrying charges of all the navigation works amount to only \$15,300,000 a year. Those for the St. Lawrence canals alone would be \$12,300,000.

Even with a very moderate schedule of tolls the St. Lawrence canal would earn this much money. It would require a charge of only 20 cents a ton on raw materials and 65 cents a ton for manufactured goods to bring in \$12,300,000 a year.

There's one last point in favor of it, this year, which may not make much difference to the ordinary taxpayer but has some attraction for the Canadian Government. This year the seaway project might be rated as something less than a net out-of-pocket expenditure. This year it could be counted, in part at least, as a defense outlay.

North Atlantic Treaty nations are under no compulsion to spend any particular sum, or mobilize any particular number, in the joint effort of common defense. However, there is a good deal of pressure on each country to pull its weight.

Canada doesn't mind spending money; it does mind mobilizing forces larger than can be got by volunteer methods. Any excuse for increasing our financial contribution and decreasing our share of armed force is welcome. The seaway would be one such.

It would occupy 10,000 men for 5 or 6 years, and cost more than a quarter of a billion dollars. This outlay of men and money would be for an objective which the American Government's own spokesmen have called, repeatedly, an urgent defense requirement. Why isn't it equally so if Canada does it alone?

Looking at it this way, you might say Canada could pay for the seaway by deducting it from her income tax.

Proposed Withholding Tax on Dividends**EXTENSION OF REMARKS**

OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. SCHOEPPPEL. Mr. President, since there is some proposed legislation in the 1951 Revenue Act that requires credit unions to withhold 20 percent of any dividends paid to members, I thought it would be rather enlightening to place in the RECORD a letter which I have just received from the Sinco Credit

Union, of Independence, Kans., which speaks for itself.

I am sure this experience could be multiplied hundreds and thousands of times throughout the United States, and I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDEPENDENCE, KANS., July 17, 1951.

Hon. ANDREW F. SCHOEPPPEL,
United States Senate,

Washington, D. C.

DEAR SIR: Sinco Credit Union, whose membership is restricted to personnel employed in Sinclair Building in Independence, Kans., making possible potential membership of 400, was chartered in June 1950.

Its 2.40 percent dividend in 1950, totaling \$32.57, was distributed to 117 members holding fully paid share interests. The largest dividend was \$3.60 and the smallest 1 cent, distributed as follows:

Over \$3.....	1
\$2 to \$2.99.....	3
\$1 to \$1.99.....	7
50 cents to 99 cents.....	2
Under 50 cents.....	104

We have been informed the Ways and Means Committee of the House of Representatives is proposing the 1951 Revenue Act include a requirement that credit unions withhold 20 percent of any interest or dividends paid to members, just as employers now withhold a percentage of salaries paid to employees.

Such a regulation imposed on credit unions comparable to ours, whose operating personnel serve without pay, will cause them to question whether or not they can continue to function.

If such a regulation appears in proposed 1951 Revenue Act, we urge you to oppose it in the belief the cost of accounting for and remitting such withholding will equal or exceed the revenue to be remitted.

Yours truly,

SINCO CREDIT UNION,
By A. J. NICHOLSON, President.
By B. E. EVANS, Secretary.**The Displaced-Persons Program****EXTENSION OF REMARKS**

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an editorial which appeared in the July 14, 1951, issue of the Minneapolis Morning Tribune on the displaced-persons program be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DP PROGRAM ENTERS ITS FINAL PHASES

"Thank you, America. This is the greatest day of our lives and I am happy to speak not only for myself and my family but for all displaced persons who have been given new hope and a new home in this country. So many of us after the war thought we would never have a happy life again. . . . I am sorry that my English is not good enough to say what is in our hearts, but all of us know we have been given the greatest

gift of our lives, the chance to become citizens of America."—Volodymyr Holubiw, a Polish-Ukrainian, the two hundred and fifty thousandth displaced person to enter the United States.

Multiply these sentiments by about 800,000 and you have a rough idea of what this country will have gained in the way of appreciative, loyal citizenship when the displaced persons resettlement program is completed.

Thanks to timely action by Congress, it now seems likely that every one of the 341,000 DP's allowed under the Displaced Persons Act of 1948 will be able to reach these shores before legal barriers clank down again.

Deadline for entry under the amended law had been June 30 of this year, but a last-minute extension was rushed through both Houses of Congress setting December 31 as the new "last day" for granting of visas. Transportation difficulties may delay the arrival of the last DP's but all but the ethnic Germans, who may enter until June 30, 1952, should be able to enter by April of next year.

Congress extended the time limit in response to compelling evidence that the resettlement program, as it has worked out thus far, has been highly satisfactory and that cutting off the program June 30 would have dashed the hopes of thousands of refugees in the resettlement "pipeline." In addition, the Displaced Persons Commission had 150,000 unfilled applications from American citizens who wanted to sponsor DP's.

In Minneapolis this week Dr. C. E. Krumboltz, of the National Lutheran Welfare Council, which has taken care of more than 23,000 DP's, said he is well pleased with the over-all aspects of the resettlement program. He estimated that from 85 to 95 percent of the refugees already admitted have made satisfactory adjustments. "When you remember that these people are all individuals with individual strengths and weaknesses, the number who have failed to adjust is surprisingly small." Close to 75 percent of transportation and expense loans to Lutheran DP's have already been repaid, he added.

Similar experience has been reported by the National Catholic Welfare Conference, Church World Service, and other sponsoring agencies which help these modern pilgrims find jobs and homes in the new world.

Not all of the DP's have done well, of course. Some take longer to fit in than others. There have been misunderstandings with employers. Jobs have disappeared while the DP's were struggling with red tape in an effort to reach them. Illness and legal restrictions, too, have dimmed the once bright hopes of many refugees.

On balance, however, this country can be proud of its role in what has been called the largest peacetime-resettlement program in the world's history. In finding room for the newcomers we are acting in the best of American traditions and at the same time receiving a rich transfusion of talents, hopes, and dreams from the Old World.

able article entitled "Old-Age Security for Our Economic Areas." This was written by Prof. Seymour E. Harris, of Harvard University, and appeared in the New York Times magazine section on July 29. Professor Harris is one of the seven distinguished members of the Committee on the New England Economy of the Council of Economic Advisers. This committee recently completed an excellent report on the New England Economy, and this article is a natural a follow-up on that report and, I assume, a partial preview to his forthcoming book on the economics of older areas. Professor Harris poses an old and difficult question. How can the older economic regions of the United States, such as New England, best maintain a balanced economic position in the expanding over-all economic pattern of the United States? This is a question of interest not only to us in New England, but to the South, as Professor Harris points out, and indeed at varying times and in varying degrees to all sections of our country.

There being no objection, the article was ordered to be printed in the Record, as follows:

OLD-AGE SECURITY FOR OUR ECONOMIC AREAS—AN INDICATED THERAPY IS STRENUOUS COMPETITION WITH THE IDEAS AND ENERGY OF NEWER REGIONS

(By Seymour E. Harris)

Regions, like people, age; and in the aging process an economic arteriosclerosis tends to develop. This social disease develops as inhabitants of new industrial regions, seeking a place in industry, confront the older regions with intense competition, profiting from the freedom to manufacture, relatively unfettered by past practices and customs. Although the newer regions offer competition, they also provide new markets for the older areas. A crucial issue for the latter is: Do they gain more from the rising income associated with the opening of new economic frontiers than they lose from competition?

The economic problems of New England are typical consequences of the aging process, but all older regions face similar problems. And even the relative new industrialized areas—for example, the Southeast—are on the way to their own industrial ailments. In fact, the Southeast will encounter problems more serious than those of New England because of greater dependence on one industry. Just as the industrialization of Asia weakened the British economy in the interwar period, the continued industrialization of Latin America and Asia will threaten the South's ascendancy in textiles and, therefore, her industrial status. In short, all regions have to face up to the problems of economic geriatrics, but their adaptive capacities seem to vary.

Why do the older regions lose? Many of their relative losses are inevitable. But in part the results are of their own doing. People who have arrived are likely to become smug. Similarly with regions. Management, when in the hands of the fourth and fifth generation of one family, often has lost the fire and creativeness of the original builders. There are, of course, exceptions: Dennison's, a major producer of paper products and office supplies, is operated by a fifth-generation management and is still a highly successful firm.

But it is not merely a question of nepotism. Even in the industries largely controlled by newcomers, the older areas are remiss in management. For example, the Middle West captured the market for infant

and juvenile shoes, the growth of which anyone with imagination could have forecast from the increase of births during the war.

This lack of venturesomeness is evident in the reluctance of bankers to lend. In hearings last summer on RFC loans, for instance, Senator PAUL DOUGLAS, of Illinois, said in discussing a refusal of the Boston banks to lend to Raytheon:

"I would like to know just what has happened to the business judgment of the Boston bankers, that they will refuse a loan so that the business has to come running down here to Washington to get Government money. The people up in New England are shouting all the time; at least, the leading financiers of New England are shouting all the time, about the horrors of governmental investment; and yet here is a business which is earning \$1,500,000 a year on the average for the last 6 years and whose present orders on hand aggregate \$40,000,000, when an investment of \$1,000,000 will free it from a rental charge of \$324,000 and still the Boston banks will not lend."

Nor is it merely management that is to blame. Workers in older areas also become fixed in their working habits. They resist adapting themselves to new working conditions, to new labor-saving devices with corresponding adjustment in work loads. A textile engineering firm testified before the 1950 Massachusetts commission on textiles that a completely new 450-loom mill, producing combed broadcloth, would require under current labor-management agreements, 158 operatives in the North, but only 118, or 25 percent fewer, in the South.

New England's head start is in some ways a handicap. For example, the great New England industrial machine developed in the second half of the nineteenth century was tailored to a market perhaps one-fifth or less of the current market. The resulting industrial structure is not nearly so well adapted to a \$300,000,000,000 economy as that of newer areas. The latter can build on the assumption of a vast economy; and they can much more easily adapt their plants and equipment to the size of markets, and the advances of technology than older areas for they start fresh.

In some respects, the failure is only comparative—as against positive action by the newer regions and by the older (e. g., Southeast) regions that are seeking industry. The newer industrial regions inherit certain advantages.

First, they profit from almost inexhaustible supplies of labor from the farms. These recruits from the farm crowd the city labor markets, depress wages and, unhampered by old working habits and attracted by what seems to be remarkably high pay, ask no questions about workloads, and display an eagerness to learn and cooperate. The workers are younger and in general more enthusiastic.

Second—a factor related to the first—wage rates are likely to be lower in many of these regions. The South's emergence as a great textile center stems primarily from the availability of rich labor supplies and low wages. At the turn of the century the wage rates of the South were about 40 percent below New England; now, under the pressure of industrialization in the South and increased demand for labor, the difference is of the order of 10 percent.

Third, the newer industrial areas have the advantage of proximity to rich markets and raw materials. Obviously, New England tends to become less and less central.

Fourth, the attitude of the newer industrial areas toward Government is different from that of the older areas. Whereas New England businessmen are extremely hostile toward government, and especially toward Federal Government, and New York mildly receptive but unenthusiastic, the South and

Old-Age Security for Our Economic Areas

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, July 30, 1951

Mr. BENTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a remark-

West are more inclined to seek Government aid.

Fifth, the citizens of the newer industrial area bestir their communities and State and local governments in a manner which puts their industries at an advantage. This is evident in their tax structure, which spares business as much as possible and even discriminates in favor of factories attracted from other areas; in the manner in which all sections of the community contribute funds toward providing sites, building and subsidies for other purposes to attract new industries.

Related to the attitude toward Government is the problem of working conditions, social legislation, and the like. New York and Massachusetts have been in the vanguard of social legislation. This legislation, which limits hours of work, fixes minimum pay, provides high standards of social security, and gives collective bargaining a fair chance, is costly to a region which has to compete with other regions having much lower standards along these lines.

Testimony before the Tobey committee of the Senate in 1948 on the closing of the Nashua, N. H., mills of the Textron Corp. can serve as a concrete guide to the problems raised by newer industrial areas. It showed from the experience of the Textron Co.:

1. Take-home pay of northern workers was 10 percent more than in the South. Yet Carolina employees produced from 25 to 100 percent more yards and pounds per hour than many of the northern workers.

2. The illegality of the three-shift system in New England (at least in parts of it) raises costs there because overhead costs per unit of output are much higher where only one or two shifts are employed.

3. Power costs averaged 7.1 cents per kilowatt-hour in four mills in South and North Carolina against 12.4 cents in Nashua, N. H., and 17 cents in Manville, R. I.

4. Freight differential for raw cotton favors the South against Nashua by 62 cents per hundred pounds.

5. Property taxes on inventories, plant, buildings, and machinery average 48 cents a spindle in five Carolina plants and \$2.53 a spindle in Nashua.

It is quite obvious what happens to many industries when they see better prospects in newer areas. Capital and management move into the area where other resources are plentiful and cheap.

This migration is unfortunate only in the sense that it brings severe problems of readjustment for the areas losing plants. Our theory of international or interregional trade tells us that the losing areas will soon concentrate on other industries where high labor costs are not a serious deterrent; that is, where high wages are more than offset by high productivity.

But unfortunately the adjustment is slow. Workers out of jobs refuse to leave their home towns and abandon their acquired skills. An interim period of unemployment then depresses wages, as has happened in New England in the last generation.

There is still another important adjustment that takes place. Workers, as well as capital and labor, tend to migrate. But the migration is not from North to South; but rather from South to North and Northeast to West. The explanation of these movements is that incomes are still low in the South. As capital moves to the South and labor moves out, the net effect is for wages in the South to rise toward those of the North.

The diagnosis of relative economic decline in older areas is relatively simple. What of the therapy? Economic geriatrics, like regional economics, is an unplowed field.

Obviously the simplest maxim is that the older regions must meet the competition of

ambitious, vigorous, aggressive youth, full of new ideas and unencumbered by orthodoxy.

In adjusting wage rates and workloads, in accelerating management, in scrapping old plants and equipment, in sparing industry excessive taxloads and wasteful public spending, in seeking cheap power, in adapting factories and products to the vagaries of the markets, in demanding a fair share of Federal bounties which reduce costs and expand markets—in all of these, the older regions need to advance.

The argument is not that the older areas will thus be able to hold on to all their established industries. Far from it. New England, for example, will continue to lose in textiles; and the apparel industry, which is strong in New York, will continue to grow in other regions, and in part at the expense of New York. All that we suggest here is that protectionist devices—tariffs, subsidies, preferred buying by the public agencies—be enlisted only to lighten the transition for the towns or regions largely dependent on the declining industries.

Of greatest importance is the preparation of a census of industries for the older regions. What is needed is a priority list of industries based on the special advantage of the regions inherent in their wage rates and cost structure—and suggested by the availability of labor, by proximity to markets and raw materials, and by the changing spending pattern of the average consumer.

We can relate this analysis to the report recently released of the Committee on the New England Economy appointed by the President's Council of Economic Advisers, of which the writer was a member.

What are the economic difficulties of New England? An unfortunate dependence on industries which tend to decline in the Nation's economy and which easily migrate—e. g., shoes and textiles; serious lacks in raw materials which deprive the area of access to important new industries; inflexibility and often obtuseness on the part of large segments of labor and management; resulting high costs of labor and capital; the market disadvantage of being perched up on a corner of the Nation; decent standards of working conditions and social security not matched by the South—these are the major causes of maladjustment. The minor ones are high power costs, a less than perfect tax structure, lack of community action, hostility to Federal Government.

Yet with all of that, New England's record over the years has been remarkable. The miracle is that southern New England, with an area of 12,000 square miles and a population of 7.5 millions, with virtually no natural resources, is one of the leading manufacturing "nations" in the world, with a total output for the whole region of \$7,000,000,000 in manufactured goods and \$14,000,000,000 in all.

In summary, older regions tend to decline absolutely in periods of depression and even at times in prosperous periods; but in a growing dynamic economy the decline is likely to be relative.

These areas can soften the blow; they can accelerate movements of population from the depressed areas and industries into these areas, they can stimulate industries for which their experience and advantages fit them, particularly with a view to establishing diversified industries; but above all, they must compete with the newer areas on a cost basis. That means minimum tax rates, given social objectives, cheap power, a fair share of Federal aid, wage rates adjusted to productivity, modern capital and management, effective use of research facilities and skillful uses of subsidies to attract industries as an offset to their use by newer areas.

Inventions—Part II

EXTENSION OF REMARKS OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. JONAS. Mr. Speaker, I heard the radio address delivered by Col. Robert R. McCormick, editor and publisher of the Chicago Tribune, a few nights ago over the Mutual network. His address was entitled "Inventions, Part II." On a previous occasion I inserted into the CONGRESSIONAL RECORD an address delivered by the same speaker entitled "Inventions, Part I." The remarks that I made at that time as disclosed by the RECORD were prompted by the impressions that this important address made upon me especially with reference to its factual and historical value.

The second address is as fully enlightening and interesting as the first one delivered by Colonel McCormick. Part II on Inventions discloses a painstaking and careful study and research of the records of progress made by the people of the United States within a period of less than two centuries. No other nation on earth has ever come near or been remotely equal to what America's free thought and enterprise have accomplished in that short span of time. I congratulate Colonel McCormick on his forthright and sound position that he has taken in regard to making known to the people of America the facts about what made American great and at the same time alert the conscience of the American people to the necessity of keeping America free and unfettered by socialism and similar philosophies in order that this march of progress may continue.

Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, I include therein an address delivered by Col. Robert R. McCormick entitled "Inventions, Part II." The radio address follows.

INVENTIONS—PART II

(By Col. Robert R. McCormick)

Last week I named a great many inventions that have been made since the Revolutionary War. Tonight let us see how they were made available to the public.

Franklin did not manufacture his inventions. His bifocal spectacles were available to opticians and his lightning rods to wire makers. The former never did get into mass production; the latter, not until many years afterward.

Before Whitney, muskets and rifles and fowling pieces were largely made by individuals, just as Paul Revere made the spikes for the Constitution in his own shop. Whitney built cotton gins and afterward had a musket factory. He never became a great capitalist.

One is surprised, I think, to learn that the capitalist bankers of 100 years ago all began as clothing merchants; then, on second thought, one is not surprised, because the clothing industry had existed indefinitely before the post-Revolutionary inventions; the cotton gin and the power loom were among the first of them, and the money, of course, was there. Clothing is still a great industry,

including weaving, clothes making, wholesale and retail merchandising. Many of the great names of finance were and are merchandisers, among them Field, Macy, Gimbel, Wood, and Wanamaker.

The first great American capitalist was George Peabody, originally a merchant. He took into partnership with him Junius Morgan. They were extremely successful in getting money from London, the financial center of the world, and investing it in the United States, the growing country of the world. John Pierpont Morgan, the son of Junius Morgan, moved to New York, made a partnership with Anthony J. Drexel, and became the chief financier of the world.

Oliver, Deere, and the McCormicks had factories to manufacture their inventions. Deering acquired the Marsh factory at Plano, Ill., and moved it to Chicago and became a prime competitor, until 1902, when through the services of J. P. Morgan & Co., the International Harvester Co. was formed of the two big companies and a number of other manufacturers, some of them foreign.

The western migration called for many wagons, of which the Conestoga was the first. Immigrants reached Chicago by boat or by rail and bought wagons here made by the Weber Wagon Works, Studebaker Bros., the Schuttler Wagon Works, C. P. Kimball & Co., and others. Buggies were made by B.ewster. Broughams and landaus were largely imported from France. The Weber Wagon Works was sold to the International Harvester Co. Brewster tried to compete in the manufacture of automobile bodies but was unable to do so. The Studebaker factory turned to the manufacture of automobiles, but not under the ownership of the Studebakers.

Morse's inventions were the telegraph and the Morse code, which has been succeeded by the printer. Morse licensed different people to make the transmitters and receivers, which led first to a number of telegraph companies which, through combinations and failures, have been reduced to Western Union in this country, whose service is atrocious. There are still 3 major cable and 14 principal wireless companies, including Press Wireless, owned by six American newspapers.

Alexander Graham Bell invented the telephone. At first there were many telephone companies in the United States. They have been combined into the American Telephone & Telegraph Co., whose service is beyond praise. English and French telephones—government-operated—are wretched, but the French originated the cradle phone of today.

Marconi's invention led to the Marconi Co., with which Lloyd George was scandalously connected and was, in turn, taken over by the British post office. In this country it was operated by the Radio Corp. of America.

Lee De Forest invented radio. Radio stations sprang up all over the world. Instead of his awarding licenses, socialist influences put the awarding of wave lengths under a Government commission. Wave lengths have been allotted largely by seniority but with some political corruption. The administration shakes them down for free time at will. Radio stations have been combined in the radio networks, as have television stations. A form of radio known as FM, although giving a slightly better tone, has never become competitive in the field.

The early settlers went down the Ohio River and its tributaries in flat boats propelled by the current. Some transportation was carried in bateaux, which went down with the current and were poled and pulled up. Lincoln, as a young man, worked in one of these boats. Steamboats began on the Hudson and then were built for the Mississippi, generally at Pittsburgh.

It is to be noted that the Annapolis Convention, which led to our Constitution, originally met to build a canal up the Potomac River. The rivers and canals were public

ways; the only capital needed was for the boats themselves. They could freely pass each other in the same or opposite directions. For that reason no great steamboat companies were organized, boats being owned by individuals, by individual companies, and in small fleets. We hear of the names of individual heroes like Jim Bludso, or individual boats like the *Movastar*, the *Prairie Belle*, and the *Robert E. Lee* * * * and the same was generally true of the Great Lakes, both of sailing vessels and steamships, such as the *Walk-on-the-Water*. The big fleets of ships now in use are not common carriers but the property of manufacturing companies, such as the steel companies.

The development of iron and steel, of course, is mostly associated with Andrew Carnegie, who knew little of steel but used the knowledge of others, but his holdings were taken over by J. P. Morgan when he formed the United States Steel Co.

Among other members of the combine was the American Steel & Wire Co., of which John W. Gates was president. Morgan had been given a power of attorney to name the first board of directors. Gates read the list in the newspaper and finding his name was missing, called on Morgan in a great rage.

"Oh, Mr. Gates," said Morgan coldly, "the men who are organizing this corporation have decided to offer you and your friends a price for your interest in the American Steel & Wire Co. You may accept it or reject it, as you see fit. It will be impossible for you to enter the directorate of this corporation or to take active part in the management of the company. You have made your own reputation, Mr. Gates. We are not responsible for it."

"My reputation is as good as yours," Gates replied hotly. "I do nothing worse than you do, only you do it behind closed doors."

"That, Mr. Gates," said Morgan, "is what doors are for."

Other great steel companies, as of our day, are the Inland Steel Co., Bethlehem Steel Co., M. A. Hanna & Co., the Colorado Steel & Iron Co., and the Tennessee Coal, Iron, & Railroad Co.

The first railroad in this country was the Baltimore & Ohio. Charles Carroll of Carrollton, a signer of the Declaration of Independence, was its leading organizer.

The characteristic of railroads, the private right-of-way, created complexities in trains passing each other, which prevented more than one agency operating on the railroad. In all cases, the locomotives belong to the railroad, but some of the cars have belonged to other owners. As all our railroads soon became of standard gage, cars of one railroad could be used over others, a great convenience with the change of seasons.

The great names of railroad builders were: Vanderbilt, who started as a ferry operator, then a steamship owner, one of his descendants produced the Pacific type locomotive, A. J. Cassett, of the Pennsylvania system; James J. Hill, of Great Northern. The greatest accomplishment, of course, was building the Union Pacific to the coast. In connection with this was the Credit Mobilier scandal, which seems to have been a perfectly proper transaction, misunderstood and misrepresented at the time.

Minor magnates were Jay Gould of evil reputation, Collis P. Huntington, and Russell Sage. The last bore the reputation of a miser and became the butt of a popular song:

"Now I am the pet, you bet, of the bankers and brokers and all that set,

The idol of the little boys that sit up in the gallery,

When, in my diamonds I appear, I look like a beautiful chandelier,

And Russell Sage would fall dead if he had to pay my salary."

It is an extraordinary thing about these railroad financiers that, with one or two

exceptions, they knew little about railroads, using equipment invented and built by others and employing engineers mostly from West Point.

E. H. Harriman, father of the present-day politician, became interested in the Illinois Central with Stuyvesant Fish. There are different published accounts over the reasons for their quarrel, but the one gossiped about at the time was that Mrs. Fish, a society leader in New York, snubbed Mrs. Harriman.

Many railroads were not properly laid out. Some of them were unduly lengthened to get more Government grants. Harriman was the only one of the financiers who became a railroad expert. He shortened lines under his control, notably the Union Pacific, which he built across Salt Lake to avoid going around it.

At the time he was stricken with his fatal illness, he had announced his ambition to increase the gage of railroads from the present 4 feet 8½ inches, which was stupidly borrowed from the old stage coach, to 6 feet. After his time, partly due to the negative action of the Interstate Commerce Commission, partly due to lack of great leadership, railroads have not been able to finance such a herculean venture.

At one time, the Vanderbilt lines operated Wagner sleeping cars, but George M. Pullman designed much the best sleeping car and, operating his own cars, finally secured a monopoly in this field. Recently and foolishly, as I think, the courts have compelled the separation of manufacturing from operating. The cars are now operated by a company owned by the railroads.

During the age of steam locomotives, the Baldwin Locomotive works of Philadelphia was the dominant manufacturer.

Now that Diesel engines are driving them out, the General Motors Co. has become the leader in that field. General Motors, composed of 15 companies put together under the leadership of William Durant, is the largest manufacturer of automobiles and automobile trucks. The other truck manufacturers are Ford, Dodge, International Harvester, and Studebaker. The other great automobile manufacturers are the Ford Co., Chrysler (which absorbed Dodge), Studebaker, Packard, Nash, and Hudson. Automobile and truck manufacturing has become the greatest industry in the country, surpassing the railroads.

We learned trucking in France during World War I, where they had roads suitable for trucks. As our own network spread across the country, trucking has become a great industry here. In dollars of passengers and material carried, the railroads rank first as of 1950, with \$9,473,210,788; the trucks second, with \$4,244,274,069; the air lines third, with \$405,658,735.

At the turn of the century, windmills were very important, especially the Aermotor Co., makers of steel windmills. Electric power companies and internal combustion engines have pretty well driven them out of the field. Electric motors have taken the place of stationary internal combustion engines. The great inventor became the head of the Edison Manufacturing Co., producing all kinds of electrical equipment. Then it became the General Electric Co. It formed subsidiaries in Canada, England, and Sweden. At one time, we bought large, high-voltage motors for the Ontario Paper Co. from the Swedish General Electric Co. because no other manufacturer would attempt them. They are still running continuously after 40 years. The Westinghouse Co. is the second largest manufacturer of electric machinery, but there are a great many more companies engaged in this business.

The figure that loomed largest in the public mind, as a multimillionaire and a malefactor of great wealth, was John D. Rockefeller. He was not the pioneer in producing

oil, but he became the greatest distiller and shipper, partly by the use of railroad rebates. It is strange to think that he became a multimillionaire when the only use for oil was for lubricants and illumination. He put his accumulations into banking, steel, and shipping on the Great Lakes. The Standard Oil Co. was dissolved by court action. Rockefeller began retiring in his fifties, but lived to be 98. In his old age, he made a practice of giving dimes to almost everyone he met. But it is the face of another unscrupulous money maker that is on the modern dime.

Whereas Rockefeller once controlled all of the production of petroleum products, with the great increase in consumption for motive power, we now have 14 big oil companies in the world and over 150 fair sized oil companies in the United States.

It is interesting that the present day Rockefeller and Harriman are New Dealers. A son of Thomas Lamont, last head of J. P. Morgan & Co., and Frederick Vanderbilt Field are extreme radicals.

After the invention of the airplane, it was developed as a military weapon by the French, English, and Germans. The Americans lagged far behind. The Dutch company, Fokker, during and right after the war led the way.

Ford's efforts at airplane building were unsuccessful, but a young man, Donald Douglas, starting on a small loan indorsed by a few businessmen in Los Angeles, produced the Douglas airplane, although the Lockheed and the Boeing, after they had overcome structural defects, pointed the way to the larger ship. The DC-1 was followed by the DC-2, 3, 4, 5, 6, and 6B, while the Boeing developed into the Stratocruiser and the Lockheed into the Constellation.

Our manufacturers now make the most and best planes, military and commercial.

All these tremendous advances have come from our revolution and our Constitution. Next week, or the week following, I will tell how our future is jeopardized.

Wanted: Sponsors for Tanks

EXTENSION OF REMARKS OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES
Monday, July 30, 1951

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial under the heading "Wanted: Sponsors for tanks," which appeared in the July 26 edition of the Mount Sterling Advocate, published at Mount Sterling, Ky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: SPONSORS FOR TANKS

The following editorial was taken from the American Press and meets with our wholehearted approval. We are reproducing it in full and sending a copy of same to Senators UNDERWOOD and CLEMENTS in the hope that this injustice against the press of the Nation may be corrected.

"We wonder what the head of an automobile manufacturing concern would say if he received a letter from the Government reading:

"The United States Government would like your help in making tanks, but no funds

have been authorized for this purpose. We are enclosing specifications, and hope you will be able to produce them as a public service, or will find patriotic citizens who will sponsor their production."

"Such a request would seem ridiculous, but we wonder if there is any more logic to it than to the Government's requests for free 'emergency' advertising in newspapers.

"It costs money to print advertising, just as it does to make tanks. It requires labor. It requires materials. And the printing of free advertising cuts down on space which could otherwise be used for paid advertising.

"But for some reason, the Government departments have singled out newspaper publishers as a group which can be called upon for special contributions.

"We think it is high time that this attitude changed. During the last two wars publishers have done much more than their part to help their country. They will continue to do so in their news and editorial columns any time our Nation faces an emergency.

"But we think it is time that the expenses of war advertising, like any other war costs, be shared by all citizens.

"Publishers, the same as all Americans, are paying increased taxes to support our military expansion. But it hardly seems fair that publishers should be taxed to pay war costs of others and at the same time be asked to produce the war product they manufacture for free.

"Until something is done about this we know that publishers will go right ahead publishing necessary Government messages without grumbling. But as the need for wartime advertising increases, we hope Federal legislators will recognize the unfairness of this situation and do something to remedy it."

Interest on Defense Bonds Should Not Be Taxed

EXTENSION OF REMARKS OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HELLER. Mr. Speaker, for the past year we have been hearing reports that the American people have been redeeming more Government war and defense bonds than they are purchasing such bonds. In fact, according to Treasury Department reports, the amount of series E bonds cashed during the 12-month period ended June 30, 1951, exceeded the sales of new bonds by \$1,022,000,000. This is the first year, since these bonds were originally placed on sale to the public exactly 10 years ago, that more bonds were cashed in than sold during the year. This is a situation that should be corrected.

I do not pretend to know the exact cause for this. It could be due to the steadily rising cost of living during the past year or to the post-Korea panic buying which resulted in greater redemption than sales of defense bonds. The following figures, depicting the trend in sales and redemptions of series E bonds since January 1950, were

checked and verified with the Treasury Department:

Series E bonds
[In millions of dollars]

	Sales	Redemptions
1950		
January.....	402	320
February.....	361	224
March.....	364	300
April.....	305	275
May.....	307	313
June.....	297	334
July.....	318	368
August.....	270	304
September.....	244	348
October.....	271	360
November.....	246	318
December.....	284	350
Total.....	3,669	3,913
1951		
January.....	343	418
February.....	272	362
March.....	280	344
April.....	254	324
May.....	247	339
June.....	244	311
Total.....	1,640	2,157

Mr. Speaker, I specifically want to call attention to the figures for the first 6 months of 1950, which is the period before the outbreak of the conflict in Korea. During that period, sales amounted to \$2,036,000,000 and redemptions \$1,775,000,000, or \$261,000,000 worth of bonds more sold than redeemed.

Now, if you will examine the figures for the 6 months after Korea, you will find that the trend is in the other direction. During this period only \$1,633,000,000 of bonds were sold, while redemptions jumped to \$2,138,000,000, or \$505,000,000 worth of bonds more redeemed than sold. The same trend also has continued in the first 6 months of this year when \$1,640,000,000 were sold, as compared with \$2,157,000,000 cashed in, or a net outlay of \$517,000,000.

There is, however, an encouraging feature in this situation. In the month of May the first series E bonds, sold in 1941, reached maturity. These amounted to \$110,000,000, which the holders of these bonds could collect at face value. You will recall that the public had been urged to hold these bonds for an additional 10 years at the interest rate of 2.9 percent. The effect of this offer to the public was therefore watched with some anxiety on the part of Treasury officials.

The results were better than expected. Only \$13,600,000 worth of bonds out of the \$110,000,000 that matured in May were cashed in. In the month of June, \$89,000,000 worth of bonds matured, of which \$23,700,000 were cashed; and out of \$135,000,000 maturing in July, only \$25,200,000 had been cashed through July 26. The aggregate for the first 3 months, since maturity is in effect, is as follows: \$334,000,000 worth of bonds matured in these 3 months, but only \$62,500,000 worth were cashed—which is less than 19 percent of the total. In the months and years ahead many more millions of dollars worth of bonds sold during the war years will mature requiring huge

outlays by the Treasury to finance their redemption, unless we can find a way to persuade the public to continue to hold on to them and to purchase new bonds as an investment and as a patriotic duty in support of our national-defense program.

Besides these two reasons for holding on to defense bonds—investment and patriotic duty—there is a third and no less important reason: Its value in helping to curb inflation. Retention and the continued purchase of bonds helps to draw off excess consumer purchasing power, thereby limiting the impact of inflation on our national economy.

For these reasons, I am introducing a bill to exempt from income taxation all interest received by individuals from United States savings bonds. I believe that some inducement should be given to those who are desirous of holding on to their bonds. I believe also that we should offer a good incentive to our people to continue to buy more bonds. I think it is unfair, under the circumstances, for a tax to be paid by patriotic citizens who voluntarily supported the war effort in the past, and who are now similarly aiding the defense effort and are helping to curb inflation. Passage of this bill would unquestionably help to reverse the current trend and result in new and unprecedented sales of defense bonds.

Report of Subversive Activities by Legion of Illinois Commission

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. DOYLE. Mr. Speaker, and my colleagues, under unanimous consent heretofore granted, I submit for the information of every Member of this Congress a report of subversive activities made by the Americanism Commission of the American Legion, Department of Illinois.

Having been a member of the Select Lobby Committee of the Eighty-first Congress and a member of the Un-American Activities Committee of this Eighty-second Congress has perhaps made me more aware of some of the intolerances, prejudices, and rank injustices perpetrated against people on account of their race, creed, color, or religious beliefs.

Mr. Speaker, throughout the history of the American Legion, its membership has vigorously fought against the precepts of totalitarianism by the Communists, Fascists, or any other totalitarians.

In its national convention in Miami in 1948, the American Legion there adopted two resolutions known as Resolutions 264 and 621. Before you note the report of subversive activities by the Department of Illinois, American Legion,

1950, I wish to have you note the Resolution 621 by the national convention of the Legion at Miami in 1948. It said:

Resolution 621

Whereas it has been the policy of the American Legion, as part of its Americanism program, to condemn and oppose all forms of subversive activities, whether they be manifested by an appeal to racial hatreds and prejudices or by attempts to divide this Nation into industrial strife by agitating and fomenting trouble between capital and labor and economic group against economic group; and

Whereas communism is an ideology, a state of mind, a bundle of emotion, which has skillfully organized and developed, with many secret and conspiratorial aspects, to serve where required as a fifth column for the Government of Soviet Russia; and

Whereas many Communists, Communist sympathizers, and their fellow travelers are reliably reported to have secured employment in confidential and key positions in public office, political and labor organizations, and particularly in the teaching profession in our schools and colleges; and

Whereas subversive organizations and individuals are continuing their vicious campaigns of propaganda to disunite and divide the American people, setting class against class, race against race, and creed against creed; and

Whereas these un-American forces are disrupting national unity in these critical post-war years, when victory on the home front and peace in the world are as important as was victory on the battle front; and

Whereas some form of legitimate democratic action is necessary as a defense against Communist betrayal of our form of government and to insure the safety and security of our Nation: Now, therefore, be it

Resolved by the American Legion in national convention assembled, That we call upon the people of our Nation to oppose this threat to American unity and urge our fellow citizens of all races, colors, and creeds to demonstrate that same spirit of cooperation that was evidenced by our Armed Forces on the battle fronts in our fight against aggression, bigotry, and intolerance, and fight every attempt of these un-American forces to destroy the fundamental principles of life, liberty, justice, and freedom guaranteed by our Constitution.

Having read said Resolution 621, I call your attention to the fact that my membership on the Un-American Activities Committee in this Congress challenges not only me but every member of that committee to perform official duties under Public Law 601 of the Seventy-ninth Congress, the text of which follows:

The Committee on Un-American Activities, as a whole or by subcommittee, is authorized to make from time to time investigations of (1) the extent, character, and objects of un-American propaganda activities in the United States; (2) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution; and (3) all other questions in relation thereto that would aid Congress in any necessary remedial legislation.

Because subdivision 2, hereinabove stated, charged the committee with investigating "subversive and un-American propaganda," I was naturally interested to find out how Mr. Webster defined

the word "subvert." I quote his definition:

To overturn; overthrow; ruin utterly. To undermine the morals, allegiance, or faith of; corrupt.

You will see, therefore, that the challenge of the Un-American Activities Committee enters into the field of the very foundation of this generation, past generations, and future generations.

Recently a witness before our committee, who had been an agent of the FBI for several years, during which time he was definitely assigned to become a member of the Communist Party of America as an "undercover agent," testified before us that a Communist in America with whom he was personally familiar in the cell meeting openly discussed the matter of how and where they could obtain firearms which they would bear against the United States in time of anticipated revolt against our constitutional form of government. If this is not subversive misconduct, what is it? If this is not preparing and planning to overthrow the American Government by force of arms, then what is it?

At the Thirty-second Annual National Convention of the American Legion at Los Angeles, Calif., October 9, 10, 11, 12, 1950, Resolution No. 404, entitled "Program To Alert Our Citizens To Need for Tolerance and Unity," was adopted. Therefore, the following report of subversive activities by the Department of Illinois, American Legion, becomes very timely and appropriate. It follows:

REPORT ON SUBVERSIVE ACTIVITIES, AMERICANISM COMMISSION, DEPARTMENT OF ILLINOIS, AMERICAN LEGION, 1949-1950

In the course of the past 30 years, the Department of Illinois and the American Legion nationally have sought without surcease through their many programs, and in particular the Americanism program, to call attention to the threat and danger of communism. We have successfully alerted the American people to this peril. Also in our midst are those hatemongers who wittingly or unwittingly nullify by their preachment and actions the moral, mental and physical development of our Nation. We, as an organization, have been quick to oppose subversive forces whether coming from the extreme right or from the extreme left. During the last few years, in our National Legion monthly publication, "Trends and Developments," the Legion has undertaken vigorous efforts to counteract Communist activities in the United States, and at times has pointed out the dangers of activities of those of the extreme right. The report submitted here calls attention again specifically, to a number of the individuals and organizations which continue to create unrest in our community by using totalitarian propagandic techniques against segments of our population. We, of the Legion are very well aware that even today there are too many among us, fanatics, professional hate peddlers, and last but not least, misguided folk who make it their prime object in life to pit race against race, creed against creed, and class against class. The boys now dying in Korea have no tag mark of race, creed or class. The Protestant, Catholic, Jew or Colored are dying—are fighting, side by side. Hence, if our mandates on this subject are to be given the force and effect which we seek to create by their adoption, it becomes necessary

to wage a relentless and continuing fight against such inequities and dangers to our Nation's welfare, coming as they do from within our borders as well as from without. The 3,500,000 Legionnaires must meet in the open this growing danger which comes from those purveyors of bigotry and hate.

Hence, the purpose of this report is to keep before the Illinois membership the long-time stand against intolerance adopted first in 1939, national convention, Resolution No. 395 (Americanism report), and at the national convention in Boston, Mass., in 1940, followed subsequently in 1941 at the national convention in Milwaukee, Wis., and thereafter reaffirmed in every convention, including the national convention at Philadelphia, Pa., 1949.

Resolution No. 395, condemnation of subversive propaganda, 1939 National Convention:

"Whereas, at the present time subversive propaganda of racial, religious and class hatred, emanating from alien sources, is being circulated within the United States for the purpose of fomenting internal strife and dissension, destroying the unity and morale of our citizenry, and thereby sapping the very foundations of our Nation and with an effort to upset peacetime security and wartime national defense: Now, therefore, be it

"Resolved, That the American Legion, in its Twenty-first National Convention, does hereby condemn all propaganda disseminated by any person, publication or organization, for the purpose of fomenting hatred against any group of American citizens on account of race, class, or creed, and proclaims the same as destructive to the foundation of our Nation, as inimical to the welfare and defense of this Nation; and be it further

"Resolved, That every member of the American Legion shall endeavor, by all means within his power, in the several localities from whence they come, to foster and promote every sound measure designed to strengthen understanding, tolerance and co-operation among our citizens of various religious, racial and nationality backgrounds."

Resolution No. 559, Thirty-first National Convention of the American Legion at Philadelphia, Pa., August and September 1949:

"Whereas the fundamental law of our country guarantees to all peoples equal rights and equal opportunities and the right to worship their God as they see fit; and

"Whereas it is provided that our laws shall be made and enforced by representatives of our people chosen under the law to do so; and

"Whereas, membership of the American Legion is made up of those who served our country in time of great national stress, without distinction as to race, color, creed or class: Be it

"Resolved, that the American Legion assembled in national convention in Philadelphia, Pa., August 29, 30, 31 and September 1, 1949, consider any individual group or individuals or organizations which create or foster racial, religious, or class strife among our people, or which take into their own hands the enforcement of law, determination of guilt or infliction of punishment to be un-American, a menace to our liberties and destructive to our fundamental law; and be it further

"Resolved, That we consider such action by any individual groups or organizations to be inconsistent with the ideals and purposes of the American Legion."

If we act upon these resolutions as we must, then the problem of intolerance will be substantially cleared up and resolved.

In setting forth this report we are asking every legionnaire in Illinois to recognize the

need of doing something individually and collectively to stamp out this scourge of prejudice and intolerance.

The Department of Illinois invites you to study this report carefully and well, believing firmly that this subject is of the utmost importance to the unity and well-being of every American who believes in maintaining America American.

GERALD L. K. SMITH, ST. LOUIS, MO., CHRISTIAN NATIONALIST CRUSADE, PATRIOTIC TRACT SOCIETY

In each of our previous reports, considerable attention has been given to publishing and setting forth the un-American activities of Gerald L. K. Smith. For many years, Smith has been successful in securing substantial sums of money from gullible Americans. We again wish to alert all of our members and their families to the continued threat to American unity that Smith and his followers present. Continuing his 1950 campaign, both in his literature and public appearances, he has reached a degree of hostility unparalleled in the past. Space does not permit quotations to support our position. Nevertheless, we state without fear of contradiction that all for which Gerald L. K. Smith stands is contrary to the spirit of the preamble of the American Legion.

GEORGE W. ARMSTRONG, FORT WORTH, TEX., THE JUDGE ARMSTRONG FOUNDATION

These are the words of George W. Armstrong, published on January 30, 1950:

"I am superior by blood and inheritance to any and every man of African and Asiatic ancestry. The Anglo-Saxon race is superior to every other race. We are God's chosen people. We have created this Christian civilization which we enjoy and have created this Christian government without the help of Jews or Negroes. If that is bigotry, then I am a bigot, but I regard it as pride of blood and ancestry."

Criticized by the Legion in 1949, Armstrong gave added proof of his hate-mongering record when in October of 1949 he offered a huge grant of \$50,000,000 to Jefferson Military College in Mississippi on condition that it would teach the doctrine of white supremacy. When the American press revealed Armstrong's long and repulsive record of anti-Negro and anti-Semitic activities, Jefferson Military College refused his un-American offer.

THE KU KLUX KLAN

Many of our Southern States continue to suffer the outrageous activities of different Klan groups. Whether it be the Association of Georgia Klans, the Association of Carolina Klans, the Northern and Southern Knights of the Ku Klux Klan in Florida, or any other fancy title, these proponents of bigotry and prejudice, with their "grand dragons," "Imperial wizards," and "emperors," must be exposed and opposed by all right-thinking Americans. An alleged campaign to promote Americanism and combat communism proves to be a fraud when evil men don robes and masks, assume the duties of police officers and judges, create terror by unlawful demonstrations and cross burnings, flog and lynch innocent victims, and attempt to divide American groups with a campaign of racial and religious antagonisms.

It is a source of encouragement to note that a growing number of southern communities have attempted to cope with this problem through the passage of legislation seeking to unmask the hooded order and prohibit cross burnings. Other communities should be encouraged to take similar steps.

For years national commanders of the Legion have cried out against this organization, and numerous convention mandates have been adopted strongly opposed to the

nefarious workings of the Klan. Our Legion posts will join with other civic-minded organizations in alerting our people to the un-American character of these hooded Klan groups.

JOSEPH BEAUHARNAIS, CHICAGO, ILL., WHITE CIRCLE LEAGUE OF AMERICA, INC.

A Pied Piper has struck up a tune in Chicago. The banner he wears carries the slogan, "White Supremacy." That's what the Chicago Daily News had to say about the White Circle League of America, Inc., which boldly sprang up in Chicago in 1949. Promoted by one Joseph Beauharnais, this outfit began to circulate inflammatory and highly prejudicial literature seeking to "wake the white population of Chicago." Denounced by a municipal court judge as "a racket for financial gain," this group in Chicago sought members at a dollar a head. Although plainly a racket, a number of people have contributed to the race-baiting program of this hate organization. Brought into court in May of 1950, Beauharnais was fined \$200 for circulating defamatory literature.

Thereafter, the attorney general of Illinois filed a proceeding to dissolve this group as an Illinois corporation. On June 29, the Circuit Court of Cook County ruled that the corporate charter be revoked. Quick to act, legionnaires in Chicago and in Illinois contributed to the exposing of this organization.

MERWIN K. HART, NEW YORK CITY, NATIONAL ECONOMIC COUNCIL

Last year in our report, we presented Merwin K. Hart, of the National Economic Council, as a hate propagandist. Hart's group had been denounced earlier by "America," nationally known periodical, in the following fashion:

"Those who reason in the manner of the National Economic Council are, whether they know it or not, selling out to the Communist Party."

In February 1950, Plain Talk, well-known for its vigorous opposition to communism, saw fit to publish the following about Hart:

"The role played by Mr. Hart, founder and president of the National Economic Council, Inc., may be justly described as that of a Trojan horse . . . Mr. Hart brings to the noble cause of freedom the disease-carrying elements of hate and civil strife. He unwittingly serves the common enemy and furthers the divisive and wrecking operations of Stalin's fifth column."

Hart injects anti-Semitism into his newsletters which speak for themselves on this point by hammering against a so-called Zionist menace and a plot to destroy the Christian religion. Discussing this issue in his Economic Council Letter, of December 15, 1949, Hart states:

"For these Zionists, descendants—some of them—of David's compatriots, having enjoyed the fat of the fairest land on earth, are today conspiring to take everything into their own hands. They are pursuing a policy, nationally and internationally, that threatens the traditional religion and the way of life of all America."

"And as Americans awaken to what is happening, they will arise and say to the Zionist, 'Thou are the man.' For because of their overbearing greed and their recent and present willingness to involve this country in every kind of evil, they are the No. 1 enemy of American liberty and the Christian church. They are the outstanding cause of the dire troubles facing Americans today."

As this report is being prepared, Hart is being questioned by the Select Committee on Lobbying Activities of the United States House of Representatives as to his lobbying techniques and methods of raising funds.

JOSEPH P. KAMP, NEW YORK CITY, CONSTITUTIONAL EDUCATIONAL LEAGUE

In our report last year we expressed our views relative to Mr. Kamp and his organization. On June 15, 1950, the chairman of the Select Committee on Lobbying Activities of the House of Representatives, Representative FRANK BUCHANAN, of Pennsylvania, referred to Joseph P. Kamp, of the Constitutional Educational League, as one of the leaders of a very vicious hate lobby, and described Kamp as the author of rather scurrilous literature.

On June 16, 1950, Kamp started to serve a sentence of 4 months in jail for having refused to reveal the names of his contributors to a House committee investigating campaign expenditures in 1944.

Since 1937 Kamp has been the executive vice chairman of the Constitutional Educational League, whose main activity is pamphleteering. In his accusations of Communist infiltration, Kamp has been making irresponsible charges against responsible and respected groups and individuals.

He, too, like Merwin K. Hart, is under questioning before the Select Committee on Lobbying Activities of the House of Representatives.

GERALD B. WINROD, WICHITA, KANS.

Nazism represents life, happiness, and prosperity. The Roman Catholic Church is the scarlet woman of Babylon. Mussolini is an intellectual giant. International Jewry has always furnished the financial motivation for communism.

These have been the amazing views of Gerald B. Winrod, bigoted preacher of Wichita, Kans. In operation for many years, Winrod's propaganda venture consists of a unique dissemination of religion injected with plenty of prejudice. Winrod publishes the Defender magazine, which has a claimed circulation of 77,000 copies. This is supplemented by leaflets and pamphlets, many written by Winrod, others by figures active in the hate movement.

HARVEY H. SPRINGER, ENGLEWOOD, COLO., PROTESTANT INFORMATION BUREAU

Known as Denver's cowboy preacher, Harvey Springer is one of a small number of dissident preachers who distort Christianity, spreading a campaign of hate against the Catholics and responsible groups in the Protestant Church. Pastor of the Englewood, Colo., Baptist Tabernacle, Springer has gained a substantial following in the Colorado area enabling him to engage in widespread literature distribution, radio sermons, and periodic junkets to various parts of the country. During the past year he has concentrated his propaganda efforts in a so-called campaign to Tell the Truth About the Catholics. His publication, the Western Voice, and literature and tracts distributed by his Protestant Information Bureau have charged the Catholics with every imaginable sin, supported by unfounded facts and complete distortions of religious writings. A tract, entitled "Why I Am a Protestant," charges that:

"The greatest threat in America and the loss of our liberties will not come with the red horse (communism), but it will come through Catholicism."

An examination of some of his other anti-Catholic writings, such as The Judgment of the Great Whore and The Harlot Woman on the Scarlet Beast, illustrates the extent to which this man has violated Christian ethics and principles.

WILLIAM L. BLESSING, DENVER, COLO., HOUSE OF PRAYER FOR ALL PEOPLE

Far less successful than Harvey Springer, William L. Blessing is another example of the small band of preachers in America who

attempt to build up a following and prestige by a continuous and vitriolic attack against the Catholic Church, the Jewish people, and liberal leaders and organizations in our country. Blessing, who takes pride in his one-time membership in the Ku Klux Klan, minces no words in his sermons and writings, in lashing out indiscriminately against all the groups he opposes. In his November 18, 1949, issue of Showers of Blessing, he warned his readers to:

"Keep on the alert and guard our Republic of the United States of America against papal fascism, Jewish communism, and every other foreign ideology."

WESLEY SWIFT, LOS ANGELES, CALIF., GREAT PYRAMID CLUB, ANGLO-SAXON CHRISTIAN CONGREGATION

According to Wesley Swift, the Catholic Church does not represent "white Christian people." On June 2, 1950, Swift exclaimed before a Los Angeles gathering:

"I am going to recommend some candidates who should be elected, for they are with us 100 percent. You may say, how come a preacher is in politics. I am not in politics, but the Catholic Church and the Jew synagogue can tell you whom to vote for, so why not me, who represents the white Christian people?"

Our legionnaires will want to know just who this Wesley Swift is. Wesley Swift modestly describes himself as "reverend" and "doctor." He is not affiliated with any of the major churches. Although at one time he claimed the connection, he never was nor is he now connected with the Methodist Church.

In California in 1945, Swift prided himself in the questionable honor of being Gerald L. K. Smith's chief bodyguard. Thereafter, Swift became an organizer for the Ku Klux Klan, an organization which the American Legion has opposed for many years. Not satisfied with the financial return in these efforts, Swift formed his own enterprises, including the Great Pyramid Club and the Anglo-Saxon Christian Congregation. Unfortunately, many well-motivated people have been duped into contributing substantial financial aid to these ventures.

ROBERT H. WILLIAMS, SANTA ANA, CALIF.

We reported last year on Mr. Williams. This year at a time when harmony in our Armed Forces is so desperately needed, Robert H. Williams goes so far as to extend his professional hate activities to a former key figure in Gen. Dwight D. Eisenhower's European Command, Gen. Mark Clark. In his Williams Intelligence Summary, of September 1949, for example, an attempt is made to smear General Clark in the following manner.

"The world Jewish community had cause to be proud last week when one of its members, Gen. Mark Clark, was promoted from command of the Sixth Army to command of the entire Army Field Forces of this gentile republic."

Thereafter, in March of 1950, Williams contended:

"In case of war, America will suffer an absolute dictatorship. Armies are traditionally pro-gentile, but there is a tense power struggle going on for complete control of the United States military forces. It has not yet succeeded. If Jewish extremists get complete control, the worst will happen here, as it did in Russia. Millions of the more capable gentiles will be destroyed (as fascists, capitalists, anti-Semites, enemies of mankind.)"

FOREST C. SAMMONS, HUNTINGTON, W. VA., WEST VIRGINIA ANTI-SOVIET LEAGUE

A comparative newcomer in the field of hate mongering, Forest C. Sammons is a

follower of Gerald L. K. Smith and State director of Smith's Christian Nationalist Crusade, in West Virginia. Sammons delivered an un-American speech at the Christian Nationalist Crusade convention in St. Louis, in September 1949. Shortly afterward, he formed his own organization, the West Virginia Anti-Soviet League. Its primary function to date has been the dissemination of hate pamphlets which have been mailed to State governors, Congressmen, and a selected list of West Virginia professional men. One pamphlet is an Open Letter to Chief Justice Fred M. Vinson on the Cause and Cure of Communism and Anti-Semitism. Typical of its contents is the following false statement:

"Jewish political Zionists and the leaders of organized world Jewry are the Godfathers of Communism and Sovietism."

OTHER HATE PUBLICATIONS

In addition to a number of publications already mentioned, in order that our Legion posts throughout Illinois may be alerted to the names of the many publications and periodicals which promote prejudice and divide the American people, we now list in this report an additional number of others representing similar views. Although a few in this list are presently inactive, we feel that our Legionnaires should be fully advised of these facts.

America Speaks, Beacon Light Herald, William Kulgren, Atascadero, Calif.

The Broom, C. Leon deAryan, San Diego, Calif.

X-Ray, Court Asher, Muncie, Ind.

American Digest, Dewey Taft, Wichita, Kans.

Destiny, Howard B. Rand, Haverhill, Mass.

The Eleventh Hour, Lawrence Reilly, Detroit, Mich.

Bible News Flashes, William D. Hirstrom, Faribault, Minn.

Sunshine News, Luke Rader, Minneapolis, Minn.

Truth and Liberty, C. O. Stadskev, Minneapolis, Minn.

Common Sense, Conde McGinley, Union, N. J.

Dayton Independent, A. G. Silvey, Dayton, Ohio.

Ohio Pioneer, H. W. Binegar, Dayton, Ohio.

The Free Press, Syd Pierce, Redmond, Oreg.

American Commentator, Stephen Nenoff, Cedar City, Utah.

The Individualist, Guy C. Stephens, Danville, Va.

CONCLUSIONS

1. A proper evaluation of the subversive activities described in this report discloses the grave threats to the concept of the American Government and the American way of life. There are no greater dangers to American unity and welfare than the perversions of communism and fascism as manifested in open daylight in our country today. We must realize more than ever that vigilance only is the price of liberty. These sinister un-American forces, designed to divide and to disrupt America, must be met energetically everywhere, lest we pay the grim penalties of disunity and the loss of freedom.

2. The membership of the American Legion must stand strong and united against all un-American activities, communism, fascism, socialism, hate-mongering, discrimination, and traitorous propaganda.

3. Every Legionnaire charged to carry out Americanism activities finally should make it his duty to make the findings of the Legion's hate-mongering and un-American reports available to every member of the post for study and action.

RECOMMENDATIONS

1. Too many appointments at random of post and district Americanism chairmen are

made without consideration of the importance of this work. Our Americanism program is a live one and constantly in operation. It needs chairmen who are interested and will work.

2. Know the Americanism programs of the American Legion, National, State, and local. Our program is the source and knowledge of Americanism.

3. Do not remain silent but challenge those who attack the American system by instructing them in its principles. This means knowledge of our history, the Constitution of the United States, and Illinois, a study of present-day problems, and intelligent suggestions for their solution based on American principles and standards.

4. Keep an interest in the schools and pay them frequent visits. Service them by providing speakers, medal awards, and supporting the principal and teachers in their school activities, as well as suggesting tactfully helpful hints on their improvement.

5. Study reports on hate-mongering groups and individuals who create religious and racial issues. They create disunity and chaos in our social, political, and industrial fabric. Most of those, you will find, are individuals interested in private gain who prostitute themselves and their small abilities upon an altar of greed and avarice. Under the pretext of fighting communism or other subversive activities, they attack certain groups of our citizenry in order to give vent to their hate and their spleen, at the same time picking up a few paltry dollars, oftentimes from those whom, though they can ill afford the money, are whipped up to a state of fanaticism which blinds their reason and thinking.

The Illinois department through its Americanism Commission has made a study of these groups and individuals and has attacked their alien philosophies which they express under the guise of Americanism, but which are in truth and in fact encouraging chaos and disunity among us. They feed their hate upon the particular groups and individuals whom they dislike and seek to destroy. They are a distinct threat to the preservation of our governmental establishment and to our Republic.

Almost everyone who joins the American Legion seeks to be a good Legionnaire. There are those who carry their share of the work. However, there are those who shirk from responsibility. This number is large. Therefore, we must extend a special invitation to these comrades to take up the fight and battle for America and Americanism in relation to its fight against un-Americanisms. To those who may not know it, the American Legion has reached the pinnacles of its efforts in alerting the American people to the dangers of communism. This has taken many years, and no longer is there apathy and lethargic thinking among the American people on the dangers of communism. There were those even in our ranks who faltered, but we carried on the fight, and today, we find the Nation standing strong in its determination to rid the country of those unpatriotic and alien-minded American citizens and foreign agents who lurk in the back shadows of unrest, chaos, and treason.

Divine providence continued to be good to America by providing it with His heaping bounty. He has nurtured and guided America through its dark days. And it is He who has inspired the American Legion to carry on its Americanism work in order that an enduring peace may be obtained and that America may march forward to meet its ultimate destiny provided by His omnipotence.

ELLIODOR M. LIBONATI,

Chairman, Americanism Commission, Department of Illinois, the American Legion.

Sherman Helped Bring About Major Changes

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the Record, I include a very fine article by John G. Norris in the Washington Post of July 29, 1951:

SHERMAN HELPED BRING ABOUT MAJOR CHANGES

(By John G. Norris)

Admiral Forrest P. Sherman was Chief of Naval Operations less than 21 months, but his influence on American military and foreign policy and our security was far-reaching.

Sherman's accomplishment in rebuilding the Navy from the low it had reached in the fall of 1949 is fairly well known. He won approval for the big, flushdeck aircraft carrier that had been canceled during his predecessor's regime and had the satisfaction of placing the contract for this symbol of continuing American naval power just before his death.

The veteran naval officer also could point to the fact that the Navy had reached a greater state of readiness than ever before in peacetime. Even before Korea he had managed to restore a large part of the operating forces cut out during the economy program of the year before. These two achievements were doubly important, for the loss of the super carrier and cutbacks in ships, planes, and marine combat forces had been at the root of the dissatisfaction which broke down naval morale and brought on the so-called admiral's revolt in October 1949.

HELPED RESTORE NAVY STRENGTH

Sherman boosted Navy morale in a number of ways. Taking office at a time when many naval men felt they had little future, he built up esprit de corps to a new high. It was not easy, for at the beginning Sherman was a bit suspect.

Had not the new CNO been one of the architects of unification, which too many naval officers felt was the cause of all their troubles? Couldn't he be expected to be a stooge for Pentagon chiefs, going along with further slashes in naval power?

It didn't happen that way. Moving quietly, he began winning approval bit by bit for restoration of Navy strength. Aiding him was the fact that the cards started running his way. The House Armed Services Committee submitted a report partly aiding with the Navy rebels in the October 1949 revolt, and some of those on the other side in the Pentagon privately admitted there might have been some provocation which helped bring on the mutiny. Sherman's success was due largely to his persuasive articulateness, brilliant mind, and broad background in the over-all field of military—not just naval—affairs.

SERVICE GAINED NEW CONFIDENCE

Two other things contributed to the new confidence created in the Navy: Sherman made certain that there was no retaliation against the ranking officers who were called before the House committee and cut loose with sharp criticism of Pentagon military strategy; and he led the way to a more balanced Navy.

When an attempt was made to block the promotion to rear admiral of Arleigh Burke, one of those in the "revolt," Sherman con-

vinced President Truman and Navy Secretary Francis Matthews that this would be unwise and unfair. He left Admiral Arthur W. Radford, leader of the protesting group, as Pacific Fleet commander; and made a point of consulting him frequently. Only in the case of Capt. John G. Crommelin was action taken, and everyone admitted that he had put Sherman in a spot where he had to invoke discipline.

The new CNO moved decisively to create a more balanced Navy. Many surface officers had felt there had been too much emphasis on the "big punch" of the fleet—attack carrier aviation. Under Airman Sherman, the big carriers continued important but the other two major naval missions—antisubmarine warfare and amphibious operations—received more stress.

He also drove steadily to make the Navy more mobile, cutting down the shore establishment and expanding the fleet.

INFLUENCED FOREIGN POLICY

These contributions to American military power are better known than Sherman's influence on United States foreign policy. The latter was considerable. His extensive and detailed knowledge and understanding of grand strategy, and unusual intellect affected not only leaders in the Pentagon. It extended to the State Department and White House.

More than any other man, Sherman was responsible for the reversal of American policy toward Spain. He constantly stressed the strategic importance of the Iberian peninsula, pointing out that it controlled the entrance to the Mediterranean, sat in the middle of the NATO powers and offered excellent sites for air bases.

The Pentagon view on Formosa—that we should help the Chinese Nationalists arm to assure that the island did not fall into hostile hands—likewise has prevailed during the past year. Sherman contributed to this shift in policy.

Similarly, his knowledge of geopolitics and presence in the high military command had its effect on what the United States did in Greece and Turkey, the Middle East and Western Pacific. He was a firm believer in the importance of the Mediterranean and the Western Pacific in particular—and the whole globe in general—to the future well-being of the United States. A book, "United States Life Lines," prepared under his direction in 1947, explored and outlined adequately for perhaps the first time, America's economic and military dependence on strategic materials and shipborne overseas trade.

Sherman, more than any other top military leader in recent years, introduced politico-military considerations into Pentagon high planning. It may be that it was this recognition of the problems of the diplomat which helped win Governmental approval of many Department of Defense proposals.

Yes, the ruddy-faced Navy chief will be missed at the council table.

The Soldiers' Housing Evil—Soldiers in Stinking Hovels

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorials entitled "The Soldiers' Housing Evil" and "Soldiers in Stinkinghovels," published, respectively, in the New York Herald Tribune and the Washington Post, and reprinted as a public service by the International Latex Corp., of Dover, Del., in the New York Times on July 26, 1951.

Both editorials acknowledge that the public has long been aware of the shocking housing conditions in the vicinity of a large number of our military establishments, that investigations have been held and efforts made to change our laws to remedy the situation. However, as both editorials further point out, we have not done nearly enough to provide decent, livable homes for military personnel and their dependents at such military establishments.

In reprinting these editorials, the International Latex Corporation has called public attention to the very serious need for further broad legislation if we are to provide enough good housing construction at all military posts to assure military personnel of a decent place in which to live.

I strongly recommend that the Congress respond promptly to the public demand that those Americans who are devoting their full time to the defense of our country be given a fair chance to enjoy the same decent housing conditions that so many others enjoy at no sacrifice.

The editorials follow:

[From the New York Herald Tribune]

THE SOLDIERS' HOUSING EVIL

The squalid housing of military personnel who live on post has been fully exposed by the press both in news stories and supporting photographs, and it also has been well investigated by a committee of Congress. It is time now to do something about it. The causes of the evil condition are fairly obvious. The general housing shortage that has existed since the last war is one. The new building up of the military forces is another. The greed of a certain element of property owners in the vicinity of military establishments is still another. And loopholes in the Federal housing laws complete the background.

Under the Wherry Act, the Department of Defense is not permitted to build new housing at camps that are militarily designated as temporary. But the legal rat hole most responsible for the soldier rent-gouge racket is that which permits a property owner who converts (after February 1947) a nonhousing structure to a housing building to charge whatever rental the traffic will bear. It is by taking advantage of this defect in the law that an unscrupulous property owner can put a door on a chicken coop, call it a house, and extract an outrageous rental from a desperate serviceman who can't find a real home for his family.

The House Armed Services Preparedness Subcommittee has completed an investigation of the housing conditions around several military establishments in widely separated parts of the country, and it has come up with some sensible suggestions. First, it would have the Federal laws strengthened wherever they are weak, because offending landlords usually are able to operate within the letter of the law.

It proposes also the Department of Defense give greater consideration to off-post housing before selecting new sites for military establishments. Finally, it asks the Department of Defense to do everything possible

to alleviate the existing situation. This is a generalized recommendation, but it still has point. The Department is pushing some housing construction outside a few posts, and perhaps more can be undertaken. In the meantime, Secretary of the Army Frank Pace, Jr., announces that he has a program for meeting the situation, and he intends to submit it to the Department of Defense for action. Certainly some plan must be translated into deeds—into actual, livable homes—immediately. The present situation is intolerable.

[From the Washington Post]

SOLDIERS IN STINKING HOVELS

Senator JOHNSON's preparedness subcommittee has used some sharp language to condemn the indecent housing and rent gouging to which many servicemen and their families are being subjected. But the detailed descriptions and pictures of the ancient farmhouses, chicken coops, garages, shanties, "rat houses," barns, tool sheds, and firetraps that are being used for living quarters seem to justify the harsh words. The committee is right in saying that "structures with no water available, heating facilities so bad that bottled drinks will freeze in the same room with a large stove, no sanitary toilet facilities, primitive food storage, no sinks, cardboard windowpanes and paper walls, cannot in 1951 be regarded as 'housing'."

To permit local profiteers to charge exorbitant rents for shelter of this sort is to heap injury upon injury. "Some landlords," the subcommittee reports, "have succumbed to avarice and increased rents by 100 to 500 percent in camp areas since the influx of troops and their dependents." Many tenants living under such conditions have been afraid to protest because of threats of eviction. We are glad to note that the Army is moving rapidly to alleviate these conditions and to inform military personnel in housing shortage areas of their rights and of rent-control regulations.

But the most far-reaching solution, as the subcommittee pointed out and as Secretary Pace acknowledges, is more housing of a decent sort. Some relief can doubtless be given by setting up new trailer camps. But additional houses in the vicinity of many camps are also needed. The housing defense bill now before Congress would permit the FHA to resume the insurance of mortgages on houses built on leased land at military reservations and enable the Government itself to provide essential housing where private industry fails to do so. More important, it would authorize Federal spending for streets, sewers, and other community facilities the lack of which is holding up urgent housing projects. The bill is still in the House Banking Committee awaiting a green light. Unless it is soon taken off the shelf a large share of the blame for the inadequate housing of servicemen as well as of defense workers will have to be laid at the door of Congress.

How They Teach Americanism in All Things at Buffalo's Public School 51

EXTENSION OF REMARKS

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. RADWAN. Mr. Speaker, it was with joy and enthusiasm that I read a very complimentary article to a very patriotic citizen of my community. This article is a fair and fitting tribute, not

only to Mr. Paul Wamsley but also to the community he loves. There are no doubt many Paul Wamsleys in America. In many instances, their work may go unnoticed. America has great need of many more such individuals. This appeared in the August issue of the American Legion magazine and I include it herewith:

HOW THEY TEACH AMERICANISM IN ALL THINGS AT BUFFALO'S PUBLIC SCHOOL 51

(By Joseph C. Keeley)

A few years ago a group of Communists opened a Young Pioneers Club in an industrial section of Buffalo. By all rights it should have been a perfect location to recruit children and through them their parents. The neighborhood was made up of working people, a majority of whom were foreign born, and recreation centers such as this were not plentiful.

But somehow the club didn't catch on. Children ambled in and attended some of the gatherings, but they never returned. The Reds kept their clubhouse going for a few weeks, then they too left and didn't return.

The reason for the failure of the Communies was a significant one since it provides an answer to those who will "What have we got to counter the appeal of communism?"

The answer in this case was a school, a school that is doing a job—specifically Public School 51, at the corner of Hertel Avenue and Gurnsey Street, not far from Buffalo's busy water front.

To look at it you wouldn't think there was anything remarkable about this particular school. It's like thousands of other, elementary schools scattered around the country. The main building was put up back in the nineties, and its red brick construction is a familiar sight to all Americans. An annex built in the twenties is gradually melting into the older structure, and the two buildings together accommodate about 650 children.

What is so unusual about it? The answer can be found by visiting a few of the classrooms and talking to the principal, Paul Wamsley.

You'll soon learn that this is no ultraprogressive school where teaching methods change as often as women's clothing and have about as much substance. Public School 51 is, indeed, quite the opposite. It's a school where an amazing job has been done in restoring to elementary education a number of sound, old-fashioned principles, successfully blending them with modern teaching techniques.

You can describe it by saying that Public School 51 teaches Americanism.

There will be those who will sneeringly retort, "Flag waving." Well, the fact of the matter is that there is a good deal of flag waving at Public School 51. But the kids are flag wavers for an excellent reason. Here is one school where the teachers instill a pride in the United States, its history, its traditions, and its ideals. The result is, the children wave the flag because they've learned to love it.

It isn't just a matter of flag salutes, pledges of allegiance, and patriotic pictures—important though they be. It's a way of teaching that was suggested to Paul Wamsley by an incident that happened about 20 years ago. A kindergarten teacher came to him and told with amazement that a child in her class had stood up, raised her hand in a clenched-fist salute and in a childish treble started singing the Internationale. On investigating, the principal found that the little girl's father was out of a job and broke. In his bitterness he had turned to communism. Eventually, a job was found for the man and he broke his ties with the Communists.

The incident, however, made Paul Wamsley think. "I realized that if they could sell that stuff to a kindergarten child, we could and should sell Americanism. Now we're doing just that, from kindergarten through the eighth grade. And we teach it in every subject."

In most elementary schools history is often the only subject in which the child learns much about this country. Public school 51 does more. In addition it uses other subjects as a vehicle to give the child a broad understanding of the greatness of the United States.

Go into a music class and in any group of songs there will be at least one of a frankly patriotic nature, and you may be sure that the others will make singers and listeners better appreciate some aspect of American life. In English classes, whether reading, writing or speech, stress is laid on subjects that, while giving the child exercises in English, also teach him something about America. Even in art classes no opportunity is overlooked, and I will hazard a guess that the school uses more red, white, and blue paint and crayon than any other combination of colors.

Now all this might become tiresome to the children if it were not for the manner in which the teachers of 51 do their job. Many educators hold that education prepares for life, but Paul Wamsley has sold his staff on a different concept. "Education," he maintains, "is life." Applying this, the teaching staff draws on everything at hand to teach the boys and girls.

The policeman on traffic duty at the corner is an example of this. He does more than see that the children get safely across the street. He is brought into the teaching orbit, to train the boys selected for the safety patrol. All the children know him, and with this as a starting point the children are taught that the law, as personified by the policeman, exists to protect the individual.

Another kind of lesson is taught by means of the school banking system. Not just that thrift is a good thing, though that of course is emphasized. But rather that it is good to be industrious and earn one's way, that being the American way, as opposed to the notion that the world owes me a living. This same thought is reiterated in the school's shop class. The boys there learn of the dignity of labor as they make their bookends, towel racks, and lamp bases.

There's another lesson in Americanism that the boys and girls of public school 51 absorb from all their activities—that healthy competition makes champions. Further on you will read how these children outdistanced many others in the things they did to help win World War II, such as selling more than a million dollars' worth of War Bonds, a national record. More recently they have been showing the same aggressive spirit in other undertakings. Last year, for instance, the school won a National Valley Forge Freedoms Foundation Americanism Award. This year the school made the best record of all the Buffalo schools in the American Legion's tide of toys collection. Even the school's magazine which reports these honors, *The Broadcaster*, is imbued with the same will to win, having placed first in its class 19 times in the national competitions conducted by the Columbia University Scholastic Press Association.

These many honors have given the children an esprit de corps that is like that of the student body of a university with a winning football team. One of the major problems of the teachers is to keep the kids from coming to school when they are sick and ought to be in bed.

But probably even more important than their lessons in competition and enterprise is the way the children are taught to work together. From the stress that is laid on this, it is obvious that Paul Wamsley gives

teamwork top priority in his own thinking on the subject of Americanism.

I saw an excellent example of the way the school teaches the American way of working in harmony to accomplish something. Several grades staged a pageant in the auditorium to mark Lincoln's and Washington's birthdays. Every boy and girl in the classes represented took part. Some of the children spoke only a few lines, but for a brief moment each child was on stage and in the spotlight, and the responsibility was on that child. If he muffed his lines there was no prompting. He was strictly on his own, and he knew his companions were counting on his contribution. I might add that the quality of the performance would have done credit to children of high-school age. My personal feeling is that this can be credited to the way each child accepted the personal responsibility.

This excellent system is used in other ways. For instance, everyone in the school takes an active part in making the *Broadcaster* the prize-winning magazine it is. Following is an excerpt from an issue published in December 1945. This particular piece has been selected since it serves a dual purpose. It will give you some idea of what these very young Americans did to back up the fighting men of World War II, and it will show how an entire class works together:

"SCHOOL 51 IN WORLD WAR II

"All of us at School 51 tried to help win the war—(Helen Mack).

"We did many different things for our country—(Donald McRobb).

"There was a scrap drive in which our school gathered a great pile of metal—(Doris Hoedt).

"We had more tons of scrap than any other elementary school in Buffalo—(Donald McDonnell).

"You should have seen the great pile that was in our playground. There was a great big boiler brought from Grand Island in the heap—(Joan Kramer).

"Our school won a banner called the Minute Man for selling so many bonds and war stamps—(Dorothy Cramer).

"School 51 led all the schools of Buffalo in the sales of war stamps and bonds—(Norma Walton).

"In 1943 we had a special drive to raise money by stamp and bond sales to buy three Airacobras—(Carol Stenman).

"A contest was held to choose a name for the planes—(Donald Lester).

"Kathleen McRobb of the fifth grade gave the winning name. It was *Buffalo Belle*. Her brother, Donald is in our room—(Earl Dworak).

"Boys and girls in many rooms wrote letters to the boys in service. We wanted to help cheer them—(Elaine Braley).

"We also sent many pretty valentines to the boys—(Richard Filer).

"The first Christmas that we were at war our school sent boxes to the boys and girls who were former pupils of School 51—(Milton Erdel).

"The children brought things to help fill these boxes—(Frank Barr).

"Many children brought old paint brushes so their bristles could be used to make good brushes—(Joan Biggie).

"Old victrola records were brought in so that they could be used to obtain shellac from them—(Robert MacFee).

"We were asked to bring old silk stockings. Our school had many bundles collected—(Dorothy Kish).

"We helped other countries also during the war. Some clothing was sent to people in Europe—(Elizabeth Karpie).

"Many fine boxes were packed with useful things which the children brought. These were sent to the Russians—(Joseph Levesque).

"All of us remember bringing bars of soap which were sent to people in Europe who

had not had any soap for a long time—(Mildred Shisler).

"We have had many paper drives. We are still bringing in paper which is much needed—(Catherine Matesich).

"We have been telling some of the ways our school has been helping during the war—(Joan Mann)."

The foregoing is an eloquent testimonial to the Americanism taught at Public School 51, but there's more to it than that. The boys and girls of this school don't get themselves on any juvenile delinquency records. Even petty pilferage, "light-fingeredness," is no problem since the children are indoctrinated with the idea that they must respect the property of others. Among the alumni, the record shows how the lessons taught at 51 pay off in citizenship. By careful checking, Paul Wamsley has found that his alumni (a) have excellent voting records, (b) rarely if ever ask for jury deferment, and (c) rarely request draft deferments.

The last is evident from the record. This one school had 647 of its alumni in World War II, and there are 20 gold stars on its service flag. Already it has lost three graduates in the Korea fighting.

It is relatively easy for Paul Wamsley to find out about such things as the doings of his alumni because the great majority settle down near the school and close ties are maintained. If there is a death, a marriage, a birth, or a baptism in the neighborhood, the principal is usually invited. And he makes it a point to be present. Nor does the school neglect the amenities. Twenty-five years after graduation, an alumnus gets a certificate appropriately printed on silver paper, reaffirming the privileges of graduation. On the fiftieth anniversary a gold certificate is tendered.

"Because of such things this school is truly the center of the community," says Mr. Wamsley. "Certainly it is working constantly for the community since we have even more adults attending night classes than our enrollment of children in the regular day classes. However, it is made obvious to us in many ways that the people of this section appreciate the work of this school, and give us every possible support."

The American Legion has more than an academic interest in Public School 51 if only because Paul Wamsley has long been active in the organization. In 1943 this valued member of Tuxedo Post 175, Buffalo, was awarded the \$1,000 Lewis S. Rosentiel prize for being the Legionnaire performing the most outstanding community services during that year. This award was made at the national convention at Omaha by James F. O'Neill, then national Americanism chairman.

To win this award, which Legionnaire Wamsley characteristically turned over to local, State, and national humanitarian projects, the school principal had contributed an estimated 3,000 hours to various community service activities. Much of this time was spent in various Legion activities and in addition he made an impressive record in civil-defense work.

A Legionnaire as well as an educator, Paul Wamsley has some definite ideas as to how members of the Legion can work in greater harmony with those who teach our children.

"Whatever infiltration of our schools has been accomplished by subversive elements can be countered effectively by Legionnaires working with educators," he declared. "But there is a wrong as well as a right way to do this. Legionnaires should not look upon educators as unapproachable and sometimes antagonistic people who live in a different world, but as their neighbors whose job is to teach children. They should understand that the educator's aims are likely to be identical with their aims, and his problems are likely to be the same as theirs. By being tactful and trying to understand the schoolman's viewpoint, Legionnaires can do much

to create an atmosphere favorable to the teaching of true Americanism."

One of the educator's problems, he pointed out, is the scarcity of really fine material for teaching Americanism in the grades. This, he explained, made it necessary for his teaching staff to improvise much of the material they were using.

"Why," he asked, "aren't there a lot more motion pictures about the heroes of American history portraying our great admirals, generals, and statesmen? Hollywood persists in presenting American history in terms of cowboys doing their fighting in frontier saloons, and I dare say that more film footage has been wasted on Jesse James than on all our Presidents. When it comes to modern subjects, Hollywood gives the impression that the outstanding Americans of recent years have been certain Tin Pan Alley song writers and various people in show business. In addition there has been undue emphasis on thugs such as Dillinger. Is it any wonder that our children often grow up with a warped outlook on life?"

However, even such influences as those are no match for what boys and girls learn at Public School 51. Following is a sample, a composition from the Broadcaster, which might well be studied by all Americans, grown-ups, as well as children:

"The principles of Americanism are simple and unlike other 'isms' are fair to the individual. Every person in the United States, rich or poor, colored or white, is an important individual who has the right to speak up for himself. He has the right to live the type of life he wishes; he has the right to choose the leaders he thinks deserve office in the Government. All Americans are equal before the law. All have equal rights, privileges, and responsibilities.

"Americans have the right to assemble and discuss freely any social or political problems without intrusion by the police. Americans can attend any church they choose. They have protection against illegal search and seizure, or loss of their lives, their liberty, or their property.

"No person in America is compelled to work for any person or company against his will. Everyone has the right to petition the Government for grievances. The people run the Government; the Government does not run the people. At election time every adult citizen has the duty of voting for the candidates of his choice.

"These are the basic principles of Americanism that are the priceless heritage of every American citizen."

Little wonder that the Buffalo Courier Express, commenting editorially on Public School 51 last year, came to this conclusion:

"Principal Wamsley and the faculty of school 51 are to be commended for bringing honor to their school and to their city."

The Salem Invalid Home in the Little Town of Elk Horn

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. JENSEN. Mr. Speaker, in the little town of Elk Horn, Iowa, a genuine Christian spirit reigns supreme in the hearts of the people. For a half century or more, Elk Horn has maintained the Salem Old Peoples Home, where hundreds upon hundreds of old folks have spent their declining years among

old friends in cleanliness and contentment, under the sponsorship and management of the Lutheran Church.

In addition to the old folks who applied for admission to the home in years past, many, many invalids had made application to be taken into the home, but that was impossible due to the lack of accommodations. It was a heart-breaking task for the minister and the board members to turn down such requests. So, several years ago they did what their Christian hearts dictated.

A building fund contribution campaign was inaugurated, the funds to be used in building the Salem Invalid Home, costing in the neighborhood of \$100,000 for the building, furniture, and hospital equipment. Fund raising committees were also appointed in many of the surrounding towns, and mind you no Federal contribution was requested. Hence, the good people over a wide area contributed liberally. Plans were drawn, the contract let to a responsible contractor, and about 2 years ago the building was completed and ready for occupancy. God's works had again been exemplified in the acts of His children for suffering humanity.

There is a great need for expansion of the Salem Invalid Home, and for many such homes for unfortunate invalids in our blessed land, as stated in "The Salem Messenger," herewith quoted:

NEWS ITEMS FROM THE HOMES

We have been fortunate in securing a matron for the first floor at the old people's home. Mrs. Jens Jacobson, who was our matron 8 years ago, has come back to help us out. Needless to say we are glad to have her back. She is 8 years older than when she was here last, but she is still able to get around like she used to. We still have full house at the old people's home as well as the invalid home. We have received two new guests since we last wrote: Carl Nielsen from Missouri Valley and Mrs. Katie Christiansen from Spencer, Iowa. Our cook at the old people's home, Marie Nielson, had to submit to an operation from gall bladder. She is now back on her duties again. Mrs. Hans Juelsgaard of Elk Horn substituted during her absence.

At the invalid home there have been but few changes. There has been only one death the last 3 months. Mrs. Anna Thornberg from Underwood, Iowa, died July 7 and was buried in Underwood 2 days later. Mrs. Thornberg had been at the home the last 12 years. She was the lady that made dolls and gave most of them away. The children always liked to visit her—sometimes she had the room full of children. She had not been able to walk as long as she was with us.

We are still pressed for room in both homes, but the demand seems to be most urgent at the invalid home. As long as a person is able to take care of himself he can always find a place to stay, but if dependent upon others for care it is a different story. Those who apply at the invalid home are usually people who need care at once. We have had to turn so many down and tell them we have no room. When you see the disappointment in their faces it makes you feel sad that you have a home for invalids but are not able to do anything for them. There are so few homes that take care of such patients and still a home that is needed perhaps more than any other. We have homes for old folks who are able to take care of themselves; we have hospitals for those who are sick, but practically no homes for those in between. They are not hospital

patients nor able to care for themselves in old people's homes.

I believe this is a field that has been grossly neglected. We must do something to provide a home for those people who need this type of care. It is the aim and desire of this home to do all we possibly can to provide more space. For a long time we have been so crowded we have had to have one patient in the reception room and one in the hall. When money becomes available we propose to add another wing to the home. This would provide room for 15 or 20 more people. We have no definite plans as yet as to how to raise the money. If someone with ample means could be interested in such a project, we would start to build right away.

What a wonderful thing for someone to use his money for such a project. Such a memorial would do a lot more good than money usually does. It would do good to hundreds of people, not only in this generation, but for many generations to come. I cannot conceive of money doing more good than being used in the Master's work whether it be in the one mission or the other. God says: "Whatsoever you have done for one of these little ones of Mine you have done it unto Me." When God gives us means He also wants us to be good stewards. If someone would be interested in helping us with a substantial sum, we would like to talk it over with you.

At our last board meeting it was decided to make two rooms out of the sunporch. The porch is not being used very much by the patients; it will do more good this way.

We have now had the sale we mentioned in our last paper. The old folks had made a lot of articles and many of their relatives and friends of the home had sent in things. A large crowd came to bid—much larger than we had dared to expect. The best part of it was that they were very enthusiastic bidders. The sale and lunch brought a little over \$400.00. We had not even expected half of this amount. It was a great encouragement. Many of the old folks had been wondering if anybody would come and buy their things. When their things were brought up for sale and sold well, you could just see their faces beam. It was not only a success as far as money goes, but the psychological effect upon the old folks was worth even more than money. They are talking about trying it again some other time. Nothing like keeping busy, and that also goes for old folks. Thanks to all the bidders and all who brought articles and all who helped in other ways.

We have taken a number of movie films of the homes and surroundings as well as other interesting "shots." If organizations would like to see them, we shall be glad to receive invitations to come and show them.

For a Real Challenge

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for today:

FOR A REAL CHALLENGE

The State Department's Voice of America has challenged the Communist Czech Government to let William Oatis, imprisoned Associated Press correspondent, broadcast to the United States.

We don't think it is much of a challenge, and we wouldn't be altogether surprised if the Czech Reds went through some such hokum.

But what assurance would there be that Mr. Oatis was broadcasting with any degree of freedom? What could he say, if a couple of Communist guards stood before him with guns at his head? The broadcast wouldn't show that. Or what assurance that he was not drugged—as he may well have been at his farcical trial.

For those who could positively recognize the unfortunate man's voice, it would only prove that he was still alive. But it would give little hint as to the horrible ordeal he must be undergoing. His words would mean nothing, as the trial proved.

No, the only challenge we'd like to see from this country, and one that is consistent with United States dignity and self-respect, is that Czechoslovakia release Mr. Oatis and deliver him safely into American hands—at once. Or suffer such wrathful consequences as an outraged American public now feels. Congress is the one to do the challenging in this matter—not our wrist-slapping State Department.

Trailer-Coach Industry Aids Housing

EXTENSION OF REMARKS OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. DONDERO. Mr. Speaker, the Federal Government, the States and municipalities should take concerted action to put a stop to the deplorable housing conditions for servicemen revealed by the Johnson Preparedness Subcommittee.

The recommendations in the report should be studied closely and carried out to the greatest possible extent. In addition, other practicable steps should be taken as quickly as possible. States, counties, and municipalities in the areas where decent housing for servicemen is lacking should enact, as quickly as possible, laws and ordinances which fix minimum sanitary and other modern standards for trailer parks.

The modern trailer coach, if satisfactory trailer parks are available, is an answer to the housing problem for many servicemen and their families. The modern trailer is a mobile house and needs only water, sewerage, and electrical facilities for comfortable modern living.

An example of what can be done in this field is the enactment by the State of South Carolina of a statute setting satisfactory standards for trailer parks. This statute, enacted with the Aiken atomic-energy development in mind, resulted from cooperation between the trailer-coach industry and State authorities, and is helping to solve the housing problem in the Aiken area.

If State and local authorities will not see to it that good trailer parks are available in the areas where servicemen are being gouged and imposed upon, the Government itself can see to it that facilities for trailer coaches are provided on Government property.

I would much prefer to see the facilities provided by private capital, but I want a stop put to the conditions described in the committee report.

I fully agree that the Defense Department, in selecting military installations for reactivation or expansion, should consider as a major criterion the availability of satisfactory dependents' housing. Steps to see that modern trailer parks are available in these areas—and areas already reactivated—is one way to provide such housing.

Midwest Flood Also Burst a Political Dike

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. LARCADE. Mr. Speaker, under authority granted to extend my remarks in the Appendix of the Record, I wish to include an article by Mr. John W. Ball, published in the Washington Post of Sunday, July 29, to wit:

MIDWEST FLOOD ALSO BURST A POLITICAL DIKE
(By John W. Ball)

Weather, which affects nearly everything, from personal dispositions to next Christmas' dinner, this year has stirred up one of the hottest political rows of recent memory.

Torrential rains this spring and summer in the old Dust Bowl area of the great plains—the Kansas and Nebraska prairies—not only brought about the worst floods in midwestern history, but caused a violent eruption of the long-simmering controversy over the future of the vast Missouri River basin.

Scores of plans of varying proportions have been proposed for the Missouri River, most of them in the last 20 years. They have been so numerous, and the support of them so noisy, that the general public, especially those people outside the valley, is too confused to decide properly who and what are right.

There are three stand-out plans:

1. The Pick-Sloan plan, named for its creators, Maj. Gen. Lewis A. Pick, Chief of Army Engineers, and Glenn Sloan, now retired, but formerly regional engineer of the Interior Department's Bureau of Reclamation.

2. A Missouri Valley Authority, patterned after the Tennessee Valley Authority, which would superimpose upon the 12 States in the Missouri Basin an independent agency to carry out a nonpolitical, comprehensive, integrated program of valley development.

A bill establishing such an agency was introduced in the Senate last Monday by Senator JAMES E. MURRAY, Democrat, of Montana, and 13 other members, half of them from Basin States. They are Senators DENNIS CHAVEZ, Democrat, of New Mexico, THEODORE FRANCIS GREEN, Democrat, of Rhode Island, LISTER HILL, Democrat, of Alabama, WILLIAM LANGER, Republican, of North Dakota, ESTES KEFAUVER, Democrat, of Tennessee, GUY M. GILLETTE, Democrat, of Iowa, HUBERT H. HUMPHREY, Democrat, of Minnesota, PAUL H. DOUGLAS, Democrat, of Illinois, MILTON R. YOUNG, Republican, of North Dakota, HERBERT H. LEHMAN, Democrat, of New York, OLIN D. JOHNSTON, Democrat, of South Carolina, JOHN J. SPARKMAN, Democrat, of Alabama, and WARREN G. MAGNUSON, Democrat, of Washington. Of the six sponsors not

from the Missouri Valley, three, significantly, are from the Tennessee Valley. Only two, both from North Dakota, are Republicans.

3. The Agriculture Department plan, proposed as a complement to the Pick-Sloan plan, which contemplates a 30-year program of soil conservation, including thousands of upstream dams and millions of acres of other moisture-saving farm practices.

There are two outstanding problems in the Missouri Basin. They appear contradictory, but so does everything else in that vast area. They are (1) the problem of too much water, and (2) the problem, at other times, of too little water.

In spite of the floods that with seasonal regularity roar down the Big Muddy, one potent argument against the Pick-Sloan and Agriculture Department plans is that there is not enough water for all they promise. If the program of irrigationists is carried out, there won't be enough water for power and navigation. A 9-foot channel from Sioux City to St. Louis would require so much water at all times that it is doubtful if the power and irrigation demands could be met. In other words, the whole problem is one of such great size and complexity that critics insist that only a single, over-all planning agency, such as a valley authority, could do the job.

ONE IS WELL ALONG

Of the three, the Pick-Sloan plan is the furthest advanced. The others are barely out of the idea stage. Pick-Sloan won congressional approval in a sudden wartime maneuver in 1944. Work is progressing rapidly. Its immensity, totally unrealized by most of us, staggers the imagination. Some idea of what is involved may be gained from the following statistics:

1. The Missouri River Basin includes one-sixth of the surface area of the United States and one-fourth of all its farm land.

2. The Garrison Dam in central North Dakota, now under construction, will form a lake longer than either Lake Ontario or Lake Huron. Its shoreline of 1,600 miles will be greater than Lake Erie's. There are five more dams almost as important.

3. Pick-Sloan would build 150 multiple-purpose dams, and, its authors say, protect 5,000,000 acres of farm land from floods, irrigate 5,000,000 acres, and provide supplemental irrigation for 2,000,000 more.

4. Lakes created by the dams would force 5,000 farm families to evacuate their homes. The water would inundate towns and villages and change the way of life of up to 60,000 families, including the residents of one Indian reservation.

FIFTEEN TO TWENTY BILLION COST

The total cost? Your guess is as good as any. When Pick and Sloan first presented their plan in 1944, it carried an estimate of \$1,500,000,000. Nearly that much has already been spent. Today the cost of the 150 dams has ballooned to five and one-half billion. The Hoover Commission estimated that the river bed development alone would cost six and one-half billion. Generally, estimates are that if the scheme is completed, the cost may be anywhere from fifteen to twenty billion dollars.

The Agriculture Department plan, when presented 2 years ago, was estimated to cost \$8,500,000,000. It proposed that the Federal Government pay three billion, the States half a billion, and the farmers themselves five billion.

The Agriculture plan was tossed in after the Pick-Sloan plan was presented to a surprised country, revealing that its authors had almost completely ignored the argument that moisture conservation at the rainfall site would alleviate many flood conditions. There is a powerful school of thought that believes such a program more valuable than Pick's scheme of huge reservoirs and dikes. To such arguments, Pick retorts: "Soil conservation is all right and neces-

sary to protect the land. But it has no place in flood-control planning."

The Agriculture program is built upon the theory—a pet of moisture conservationists—of "storing the water in the soil." That means retaining the water by means of small farm ponds, forested areas, contours, terraces, etc., as near as possible to where it falls. Augmenting this would be small dams in the small headwaters—the little creeks and branches that grow into the big and raging rivers. There are striking examples of its successful application, notably in the Tennessee Valley.

A SODDEN SPONGE

General Pick disputes this theory. He likens the soil at times of floods, such as the recent Kansas and Missouri disaster, to a sponge that is filled with water and cannot hold any more. All the water-saving methods of soil conservationists, he insists, would not have been of any effect in Kansas early this month.

He proposes impounding the water in huge reservoirs behind big dams, that at normal times are kept at a low enough level to absorb all the water that nature may send along. He would supplement these with miles of levees and other flood protection installations at cities and low farming areas.

Each side claims that the recent Kansas-Missouri tragedy has proved its points.—Pick, that the great soil-conservation programs of Kansas and Nebraska had little effect; and his opponents, that all the millions so far spent by the Army engineers have been poured down a rathole.

Senator MURRAY's bill for MVA has attracted the support of an important group of engineers and others, including Morris L. Cooke, chairman of President Truman's Water Resources Board, Dewey Anderson of the Public Affairs Institute, Author Louis Bromfield, who owns the well-publicized Malabar Farm in Ohio, a showplace of soil conservation; James G. Patton, president of the Farmers Union, and many members of the Hoover Commission. Its chief editorial sponsor has been the powerful St. Louis Post-Dispatch.

In reply to the Post-Dispatch, Pick says that every other newspaper "of importance" in the Missouri Valley supports his plan, including the also potent Kansas City Star and Times and the Omaha World-Herald.

The MVA has had considerable backing among west coast, eastern and southern newspapers.

WERE BITTER FOES

Many opponents call the Pick-Sloan plan a "shotgun wedding" of the earlier plans of the Interior Department's Reclamation Bureau and the Corps of Engineers. The story of its inception fits into such a description. Until Pick returned from Burma, where he won wide fame as the builder of the famed Ledo Road into China, the two groups had bitterly opposed each other. Reclamation had time only for plans that emphasized irrigation and the opening of new land. The engineers were limited in their vision to programs of river navigation and flood control—the building of levees and channel deepening.

Reclamation had its Sloan plan. The engineers had their plan. The two conflicted at many points. In fact, the bitterest criticisms the Pick-Sloan projects meet today are repetitions of things the two agencies said about each other prior to 1944.

The two were suddenly driven into each other's arms when, in 1944, President Roosevelt asked for a Missouri Valley Authority, similar to TVA. In what is known as the new Missouri Compromise, they merged their schemes in a short 2 days, agreed never to say another nasty word about each other's projects, and launched the new program. In a remarkable job of selling, they put it over with Congress in a few months.

Proponents of a Missouri Valley Authority are at great disadvantages, compared with the Pick-Sloan boosters, because—

1. Congress already has authorized work to start on 40 percent of the Pick-Sloan plan.

2. Pick and Sloan have toured the basin from one end to the other, talking before chambers of commerce and pointing out the great future the plan holds for each community.

3. The 12 States in the basin are overwhelmingly Republican and sharply opposed to basin authorities as creations of the New and Fair Deals. Each year, a Governors' council from these States elects five of its number to a 10-man Missouri basin inter-agency committee. The other members are five Federal officials. These Governors have no vote or other authority, and the States have no power to halt the projects. The Federal agencies doing that work are supposed to clear all projects with the committee. As a general rule, apparently, the committee's chief worth is as a publicity medium for the bureaucrats running the program.

3 The Pick-Sloan group has a plan, detailed and under way. The Valley Authority group merely argues that an independent authority can do the job better, and would make the Missouri a garden spot like the Tennessee Valley. To the hard-headed Missouri Valley farmer, that seems like "buying a pig in a poke."

The Pick-Sloan program has had powerful support from the National Rivers and Harbors Congress, a creature of the Engineer Corps officered by Members of Congress whose constituencies have particular interest in the activities of the Engineers.

Lately, it has become apparent that Pick has won the support of President Truman, to whom he outlined the part of the plan that has to do with the Kansas River and its numerous branches—the Missouri tributary that was responsible for the Kansas City-Topeka-Manhattan flood.

This was evident from Pick's confidence upon his return from Kansas City recently. He threw down the gauntlet to his soil conservation opponents, and openly challenged them with the declaration that they "didn't know what they were talking about." He called upon all who "honestly wish" to control the Missouri in flood to "stand up and be counted."

A year ago, two editors of the reliable Farm Journal made a trip up the 1,000 miles of the proposed Pick-Sloan development to attempt to visualize what changes it would effect. They foresaw that "ducks navigating the Missouri Valley will have to learn their geography over again" with six multimillion dollar dams "creating another Great Lakes in the center of the United States."

PICK-SLOAN PLAN

(Forty percent authorized by Congress, with contracts already let for more than half.)

One hundred and fifty multipurpose dams, designed to (1) stop floods and (2) protect 2,000,000 acres of cities, towns, and farms.

Irrigate 5,000,000 acres, including 19,000 existing dry-land farms which would be subdivided into at least twice that number of irrigated farms. Total irrigated land estimated at 67,000 farms of 80 acres each, which, sponsors say, will support 268,000 more inhabitants in the now sparsely settled country.

Supplemental irrigation for 2,000,000 acres more.

Increase the basin's crop output 10 percent.

Generate 13,000,000,000 kilowatt-hours of electricity annually.

Deepen 750 miles of the Missouri below St. Louis City for navigation.

Build 1,500 miles of levees.

Increase city water supplies and area's recreational facilities with sites for fishing, swimming, boating, etc.

Total cost. \$5,500,000,000 to \$6,500,000,000, at present prices. Outlays to date total about \$1,250,000,000. Plans for the Kansas River and its tributaries alone would cost more than \$300,000,000.

AGRICULTURE PLAN

(A proposed plan to tie in with Pick-Sloan. To be built within the next 30 years. No action yet by Congress, and none apparently contemplated.)

Build 14,000 to 16,000 small upstream dams and 408,000 farm ponds.

Reseed 38,000,000 acres of range and cropland.

Reseed 400,000 acres of forest range.

Dig 78,200 new wells.

Contour 36,000,000 acres; strip crop 20,000,000 acres, build 2,000,000 miles of terrace and 431,000 miles of grassed waterways, fence 76,000 miles of forest for grazing; build 3,300 miles of livestock trails.

Spend \$250,000,000 on tree shelter belts and 750,000 acres in additional windbreaks around farmsteads, rural schools and churches.

Encourage improved grassland management on 117,000,000 acres. Improve irrigation and drainage plans.

Control rodents, insects, brush and weeds.

Total cost \$8,500,000,000, divided as follows: Federal Government, \$3,000,000,000; 12 States involved, \$500,000,000; farmers, \$5,000,000,000.

Confidence in Government

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an excellent and concise statement from the Nashville Banner, of Nashville, Tenn.:

The presidency of the United States was never intended to afford a screen between the American people and stupidity in judgment, error in policy, mediocrity in administration, incompetence in personnel or unwarranted usurpation of authority.

Loyalty requires no blind allegiance to such, even in time of war. The welfare of the American Republic is paramount.

Confidence in Government is founded upon and sustained by a full knowledge of the truth. Without it, neither this free Government, nor any other, can long endure.

Residents of Pennsylvania Are Thankful
for the Defeat of the St. Lawrence Sea-
wayEXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. VAN ZANDT. Mr. Speaker, the people of Pennsylvania are gratified over the action taken by the House Public Works Committee when it defeated the proposed St. Lawrence seaway which has been before Congress for over half a century.

The following article by the Associated Press, taken from the Washington Evening Star of July 26, 1951, tells the story of what happened when the House Public Works Committee met in executive session on that date and sounded the death knell over the proposed international ditch:

ST. LAWRENCE SEAWAY KILLED BY 15-TO-12 VOTE
OF HOUSE UNIT

Legislation to authorize the St. Lawrence seaway and power project was killed today by the House Public Works Committee.

The action was taken by a 15 to 12 roll-call vote of the 27-member committee on a motion by Representative PICKETT, Democrat of Texas, to table the bill.

Those voting with Mr. PICKETT to table the bill:

Representative FALLON, Democrat, of Maryland; QUINN, Democrat, of New York; DEMPSEY, Democrat, of New Mexico; WATTS, Democrat, of Kentucky; ANGELL, Republican, of Oregon; MCGREGOR, Republican, of Ohio; AUCHINCLOSS, Republican, of New Jersey; BEALL, Republican, of Maryland; VURSELL, Republican, of Illinois; SCUNNED, Republican, of California; GEORGE, Republican, of Kansas; BRAY, Republican, of Indiana; BAKER, Republican, of Tennessee; and WOOD, Republican, of Idaho.

TEN REPUBLICANS OPPOSED

Ten Republicans voted with five Democrats in turning down the bill. Those voting against tabling it were:

Representatives BUCKLEY, Democrat, of New York, chairman of the committee; LARCADE, Democrat, of Louisiana; DAVIS, Democrat, of Tennessee; TRIMBLE, Democrat, of Arkansas; BLATNIK, Democrat, of Minnesota; JONES, Democrat, of Alabama; KLUCZYNSKI, Democrat, of Illinois; MACHROWICZ, Democrat, of Michigan; SMITH, Democrat, of Mississippi; MAGEE, Democrat, of Missouri; DONDERO, Republican, of Michigan; and MACK, Republican, of Washington.

Members of the committee explained today's vote means the measure cannot again be brought before the committee unless two-

thirds of the membership so votes or unless unanimous consent is obtained.

Thus, for all practical purposes, the long-debated seaway proposal, grimly opposed by powerful industrial and power interests, again was buried by Congress, another setback for forces which have been seeking its authorization for nearly 20 years.

The project authorization, in the form of a treaty, was first beaten in the Senate in 1934. Again, in 1944, the project legislation was attached to a rivers and harbors bill in the form of a rider and lost, 56 to 25.

The next defeat came in February 1948, when the Senate, by a 57 to 30 vote, returned the measure to its Foreign Relations Committee for further study.

Today's defeat marked the first time the legislation had been voted down by a congressional committee.

Representative BLATNIK, a leading supporter of the project, said he was not dismayed by today's action.

"This," he said, "is the first battle in the whole fight. I view it as a moral victory."

Get Oatis Out

EXTENSION OF REMARKS
OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kingsport (Tenn.) News of July 23, 1951:

GET OATIS OUT

It looks as if the American public is getting fed up with the State Department's casual attitude toward Bill Oatis, the Associated Press correspondent who was jailed by the Czechs after a "confession" of spying.

Resolutions have been introduced in Congress which would—

1. Sever diplomatic relations with Czechoslovakia.

2. Ban trade with that country.

3. Evacuate all Americans from the country.

4. Bar all foreign Red newspapermen—including Russia's from the United States.

But to date, the State Department's sole reaction has been to "protest" in a Voice of America broadcast. You can just see some of those fancy Department boys stamping their feet and saying, "Goodness, what a nasty thing to do."

When Robert Vogeler was jailed by the Hungarians on a similar trumped-up charge, his loyal wife met opposition when she tried to get the State Department to do something. In fact, Department officials advised her to keep quiet.

Fortunately for her husband, she ignored this advice and raised considerable Cain until she got some action.

It is high time we all started to raise Cain and get Bill Oatis freed.

Time was in this country, when the Nation was run by men with guts, when the Constitution followed our citizens no matter where they went. When the United States was but a mere babe in the world family of nations our leaders sent Marines to avenge insults to United States citizens—and got by with it.

But what have we got today when the United States is the most powerful free nation on the globe? We've got a lily-livered Secretary of State who coddles Reds in his own Department and is afraid to offend Reds

abroad. And we've got a President who gets "tough" only with Wall Street and a few honest, outspoken Republicans and Democrats.

God forbid that the United States should sink so low.

America Betrayed at Yalta

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an article that appeared in the current issue of the *National Republic*, a magazine of fundamental Americanism:

AMERICA BETRAYED AT YALTA

(By Hon. LAWRENCE H. SMITH, Representative from Wisconsin)

The tragic Yalta Conference of February 1945 stands in historical perspective as the blackest page in American diplomatic history. In the secret agreements concluded at Yalta between Roosevelt and Stalin are found the very roots of all the world's bloody postwar history—the betrayal of Poland, Yugoslavia, Albania; the delivery of China, Manchuria, and Tibet to communism; the partition of Germany; indeed, the fateful collapse of the whole structure of world peace for a generation.

Because Yalta repudiates every tradition of American diplomacy, the secret agreements entered into there should be renounced, abrogated, and set at naught by formal congressional action. Similar action renouncing the Truman ratification agreements reached at the Potsdam Conference in July 1945 would follow logically; for Potsdam was little more than Stalin's formal blinding of the new President, Truman, to the Roosevelt commitments made at Yalta. There is much evidence in the public record to indicate that at the time of the Potsdam Conference President Truman did not have full knowledge of the secret deals concluded 5 months earlier at Yalta.

House Concurrent Resolution 102, introduced by me on May 14, 1951, would accomplish this formal renunciation of the secret agreements at both Yalta and Potsdam by simple majorities of the House and Senate. That resolution is now pending before the House Foreign Affairs Committee.

One authoritative and reputable contemporary comment fairly characterizes the Yalta agreements. Arthur Bliss Lane, the United States Ambassador to Poland, recalls his first examination of the Yalta text in the State Department at Washington:

"As I glanced over it I could not believe my eyes. To me every line speaks a complete surrender to Stalin."

In China at about the same time Ambassador Patrick J. Hurley was present when the Yalta terms were made known to Chiang Kai-shek. Of that incident Hurley wrote:

"Our diplomats surrendered the territorial integrity and the political independence of China in a secret agreement at Yalta. The Yalta secret agreement is the blueprint for the Communist conquest of China. Every step in the Communist conquest of China has been engineered by our own diplomats, in cooperation with the Chinese Communists and Russia."

In the same vein, General MacArthur told the recent Senate inquiry:

"It is my personal opinion that the greatest political mistake we made in a hundred years

in the Pacific was in allowing the Communists to grow in power in China. * * * I believe it was fundamental, and I believe we will pay for it for a century."

Two decisive legal debilities of transcendent historical significance invalidate these Yalta agreements. James A. Farley, one-time Postmaster General under Roosevelt, has stated publicly that at the time of the departure for Yalta President Roosevelt was a dying man. Two months after his return from Yalta the President died at his Warm Springs retreat. Unfortunately, Mr. Farley's frank revelation concerning the true state of Mr. Roosevelt's health during late 1944 and early 1945 was not published until March 8, 1951. But, in the meantime, Winston Churchill had observed knowingly that Mr. Roosevelt was far from buoyant health at Yalta; and Vice Adm. Ross T. McIntire, the White House physician, since has acknowledged "that by inauguration time (January 20, 1945) fatigue was again becoming a real problem. * * * He left immediately for the Yalta Conference."

Of course, no nation can be bound morally to trades and deals made in secret by a diplomatic representative admittedly in moribund health, particularly when those trades and deals transfer whole nations and entire populations to an unacknowledged and unwelcome sovereignty.

Secondly, President Roosevelt's closest adviser at Yalta was Alger Hiss, since convicted in the courts for perjury in concealing his Communist activities and connections as part of the Kremlin spy ring in wartime Washington.

Alger Hiss was at one time a ranking officer in the Far Eastern Division of the State Department, the office in which the present Korean disaster was hatched. Later he was executive secretary to the Dumbarton Oaks Conference in Washington, which set up the framework of the United Nations, the instrumentality which gave the Russian Communist barbarians their first seat at the council table of humanity. Next he was the intimate personal adviser, confidant, and drafting clerk to an ailing President at Yalta. Finally he was General Secretary of the San Francisco Conference, in April-June 1945, which drafted and approved the United Nations Charter. Hiss was apparently the real architect of the Yalta treachery.

Former Secretary of State Byrnes in his book, *Speaking Frankly*, refers several times to the poor state of Roosevelt's health at Yalta. He also illuminates the great part played at Yalta by Communist Agent Alger Hiss.

But Farley's summation on Yalta is perhaps the most penetrating:

"In our evaluation of President Roosevelt, Cordell [Hull] and I agreed that he was a sick man at Yalta, and should not have been called upon to make decisions affecting his country and the world. Physical illness, we knew, taxed the mind and left him in no shape to bargain with such hard bargainers as the Russians and such astute diplomats as the British."

"On every side I heard expressions of regret that he was not himself in the most critical days of world history. Had he not been physically and mentally tired at Tehran and Yalta, and at home, and had America had a more vigorous voice in international affairs, statesmen of the world agreed almost without exception, that many of the troubles vexing the world today would not have arisen."

This one statement fully justifies a formal renunciation of the whole Yalta operation. It is well supported by Ambassador Lane, who wrote: "Mr. Roosevelt returned to Washington from the Crimea Conference mortally fatigued."

In a word, Yalta was a conference dominated by a dying President, whose closest

and most intimate adviser, as we now know, was a Kremlin agent and spy.

I recall vividly President Roosevelt's personal report to Congress on the Yalta meeting made on March 1, 1945, before a joint session of the House and Senate. The President spoke from his wheelchair. He assured Congress and the world repeatedly that there had been no secret agreements reached. His report was broadcast to the largest radio audience of record to that date. Several years were to pass before the true picture of Yalta would be pieced together.

Since that historic occasion I have placed in the *CONGRESSIONAL RECORD* from time to time 19 different vignettes of Yalta segments. As each vignette of treachery, betrayal, surrender, moral retreat, or appeasement came to light that segment of the disaster was documented in the public record.

The first of this systematic historical series was offered in the House on March 2, 1945, the day after President Roosevelt's report to Congress, under the title "Yalta, Moral Retreat, Poland and Small Nations Crucified." The most recent item in the series appeared on June 8, 1951. Taken together, these 19 articles now form a rounded, but still developing picture of one of the most appalling tragedies in human history. The world will never forget that at the time of Yalta the Russian dominion embraced only 200,000,000 population, while 6 years later the Kremlin sphere comprised over 800,000,000 people. The black night of tyranny and godless materialism spread like a plague from Yalta, to engulf one-third of the globe. Over large areas of the earth, peace ceased to be even an honorable aspiration for enslaved and imprisoned mankind.

The background for Yalta, of course, was the Cairo conference, in November 1943. There Generalissimo Chiang Kai-shek was given a solemn promise by Roosevelt that all territories taken from China by Japanese conquest would be restored to China. This pledge included complete restoration of Manchuria, Formosa, the Pescadores, plus establishment of a free, independent, and united Korea.

The year 1944 brought the American military forces back to the Philippines in the Pacific, and to the Rhine in Europe. Both Germany and Japan were punch-drunk, ready for the knock-out blow. The atomic bomb was in actual production. Such was the triumphant military situation at the moment of the disastrous Yalta meeting in February, 1945. China, a strong and faithful ally in the war, had not even been invited to Yalta. Poland, stretched on the diplomatic rack for partition, was not even informed that her future was on the Yalta agenda.

The final plenary sessions of the Yalta Conference on February 11 brought a joint public statement of an agreement for the occupation of Germany; the partition of Poland; and the opening of the United Nations Charter Conference at San Francisco on April 25. President Roosevelt, in his own press conference, hailed Yalta as the beginning of a new era of peace in the history of the world.

About 2 years were to pass before the world learned of all the secret agreements concluded at Yalta with Stalin. The first of these secret agreements to be revealed was that covering the veto in the U. N. Stalin had demanded the veto in the Security Council. Roosevelt and Hiss had readily conceded. Russia since has used the veto 48 times to frustrate effective U. N. action against Communist aggression.

Next it leaked out that Russia had been given three votes in the U. N. No other nation had more than one.

Third, it was established that the Yalta agreement had hit upon the sum of \$20,000,000,000 to be collected in reparations from Germany—half of it to go to Russia,

the remainder to be divided among all the other allies.

But not until July, 1945—2 months after President Roosevelt's death—did the world get the first inkling of the secret agreement between Roosevelt and Stalin under which Russia was given Outer Mongolia, Port Arthur, Dairen, Manchuria, the Sakhalins, and the Kuriles. China, which had fought for 8 terrible years to regain Manchuria from Japan—always with strong United States support—was not even consulted on this deal. Indeed, it was President Roosevelt who undertook, personally, to win Chiang Kai-shek over to this gross barter of Chinese areas to Stalin—in return for Russia's participation for 6 days in the war against Japan. One significant paragraph of this secret agreement from Yalta reads:

"It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President (Roosevelt) will take measures in order to obtain this concurrence, on advice from Marshal Stalin. The heads of the three great powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan has been defeated."

The terrible significance of this secret betrayal is that the above terms were not made public by the State Department until March 24, 1947—more than 2 years after the agreement and almost 2 years after Roosevelt's death on April 11, 1945.

But long before these more shocking aspects on the Yalta agreements had been exposed to public view, President Truman had taken decisive steps to force Chiang Kai-shek to accept Communists in his own government. On December 15, 1945, Truman sent word to Chiang that United States assistance would be stopped summarily unless the Communists were admitted to the government at Nanking. The Communists in China then were called by our State Department "simple agrarian reformers." Chiang demurred. Then Gen. George C. Marshall was sent to Chiang as Truman's special ambassador to force the alliance with communism. Chiang had been waging a no-quarter war with communism in China since 1928.

How completely the Truman policy enforced the alliance with communism in China is related by General Chennault in his book, *The Way of a Fighter*. At one point north of Hankow some 200,000 Nationalist troops had about 70,000 Communists trapped. The Reds were being exterminated. The United States truce team sent up by Marshall ordered a cease-fire. The trapped Communists escaped, to return a year later as part of a gigantic Communist offensive. On another occasion near Canton, Chiang's soldiers had trapped 100,000 Communists. The Marshall truce team permitted the Communists to march unmolested to the bay, whence they sailed for Shantung. Chennault continues:

"The worst fiasco was at Kalgan Pass, a historic gateway between China and Manchuria. At the end of the war there were no organized Communists in Manchuria. Early in 1946 a Government offensive captured Kalgan and sealed off the pass, trapping nearly 1,000,000 Chinese Communists in northwest China, who were moving toward Manchuria. Marshall made strenuous efforts to open the Kalgan Pass for these Communists. Eventually the Government withdrew, and the Communist horde poured into Manchuria. The Communists then broke the truce by fortifying Kalgan Pass. It was these troops who marched under a safe conduct of the American-sponsored truce through Kalgan Pass and returned with Japanese arms, supplied by Russia, that won the decisive battles in Manchuria in 1947."

That is how China was delivered to communism, pursuant to Roosevelt's Yalta pledge to win Chinese support for the bald barter of Chinese territory to Stalin.

While the United States truce teams prolonged the cease fire, the Russian Red Army was systematically looting the industrial arsenal in Manchuria. Guns, tanks, and planes were seized, entire war plants and whole industries were stripped and dismantled. The Red army took 90 percent of the machinery in the Manchuria coal industry, 80 percent of the metal-working industry, 75 percent of the textile industry, and 50 percent or more of the chemical, cement, power, railroad, and steel industries.

The Reverend William R. Johnson, of Polo, Ill., for 36 years a Methodist missionary in south China, returned to America in 1944 from a Jap prisoner-of-war camp. He has since devoted himself to documenting the delivery of China to Stalin by our own State Department. His conclusion, published in April 1950, is worthy of note today:

"Were Secretary Acheson performing his duties as a member of the Communist sabotage group under Kremlin direction, it is difficult to discover how he could have done more, or left more undone than he has, to serve the Kremlin's purposes."

The free world is paying a staggering price for the private deals concluded at Yalta. The betrayal of China was matched on the other side of the world by the betrayal of Poland. Never in modern history were two noble principles of humanity so grossly betrayed and abandoned.

Closing of Veterans' Administration District Office at Boston

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mrs. ROGERS of Massachusetts. Mr. Speaker, the people of Massachusetts and New England protest very strongly the closing of the Veterans' Administration district office in Boston and the moving of the office to Philadelphia. Under permission, I include in my remarks news items from the Lowell Sun and the Boston Herald.

Taking the district office from Boston will be a great economic loss to that area, and give poorer service to the veterans and their families and will cause many to lose their jobs. Taking the district office to Philadelphia, the Veterans' Administration will take over the building now occupied by the United States Census Bureau. The Veterans' Administration was created to serve the veterans. This will hurt that service.

For several years Congress has been considering the advisability of decentralizing Government departments from the Washington metropolitan area. Mr. Jess Larson, Administrator of the General Services Administration, last Tuesday before the Senate Committee on Expenditures in the Executive Departments, testified in favor of Senate bill 1623 to decentralize Government departments to other parts of the United States away from Washington. The House Committee on Expenditures in Executive

Departments has been considering H. R. 4728 for the purpose of decentralizing in the next 2 years 50,000 Government employees to other parts of the United States because of the congestion in Washington and for security reasons.

The district office of the Veterans' Administration at Boston should not be moved at this time to Philadelphia which is close to Washington.

[From the Lowell Sun]

CLOSING OF HUB VA OFFICE HIT

Boston, July 27.—State veterans' organizations joined today in a loud protest over the proposed closing of the Veterans' Administration district office in Boston.

The State departments of the American Legion and the Veterans of Foreign Wars termed the move "false economy" and the Massachusetts chapter of the Disabled Veterans said that action would be taken at its annual State convention today.

Veterans Administrator Carl R. Gray, Jr., announced that the Boston office, employing 831 persons, and the offices in New York and Richmond, Va., would be consolidated at the Philadelphia office.

The move was expected to save about \$517,000 a year in Boston alone, but Commander George W. Grader of the State American Legion said that was a "mere drop in the bucket" in Federal spending and that the regional office was necessary.

[From the Boston Herald of July 28, 1951]
VETS TO PROTEST OFFICE CLOSING—DAV HEARS
HYNES PROMISE TO HELP

A rising protest from veterans in all sections of New England against the proposed closing of the Boston District Office of the Veterans' Administration is expected to be crystallized into action by delegates attending the thirtieth annual convention of the Massachusetts department, Disabled American Veterans, now in session at the Copley Plaza.

In a welcoming address to more than 700 delegates attending the opening session yesterday afternoon, Mayor Hynes promised he would formally protest the move.

READYING PROTEST

Even as the mayor spoke, officers of the DAV were readying a resolution of protest against the closing, which will be presented to the convention.

Plans for closing the Boston district office, which handles insurance and death claims for veterans throughout New England, were announced by the Veterans' Administration on Thursday. All activities of the Boston office will be merged in an enlarged district office to be located in Philadelphia.

High lighting the opening day's convention activities were the registration of delegates, a business session, and a band concert at night in Copley Square. There will be another concert in the square tonight.

Presiding at the opening session was State Commander Walter F. Morgan, of Somerville, whose term is now expiring.

NEW COMMANDER

Senior Vice Commander Timothy J. O'Neill, of Boston, is expected to be unopposed for election as the new commander.

Boston City Councilman Robert J. Ramsey is the convention chairman.

Today will be veterans' day at the convention, with hospitalized veterans of the Spanish-American War, World Wars I and II, and the present Korean action being guests of the DAV for the day. The men, from veterans' hospitals in all sections of the State, will be guests at a luncheon at the hotel and then attend the Red Sox-Detroit game at Fenway Park, as well as the convention banquet tonight in the ballroom of the hotel.

Included among the speakers at the 3-day convention will be National Commander Boniface Rallie, of Detroit, and Vice Commander Edward Fuller, of Vermont, and officials of the Veterans' Administration.

In Washington, Representative McCORMACK, Democrat, of Massachusetts, on behalf of himself and other Democratic members of the Massachusetts delegation, wrote Veterans' Administrator Carl Gray, asking that the move to close the Boston district office be suspended.

Representative EDITH NOURSE ROGERS, Republican, of Massachusetts, ranking Republican on the House Veterans' Committee, protested the action in a House speech and demanded an immediate investigation.

"It will not save a penny and actually will cost more," she told her colleagues, and asked, "Why should these three States be discriminated against?"

On Foreign Aid

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks the following editorial of July 24 that appeared in the Burlington Free Press of Burlington, Wis., relative to its position on foreign aid spending programs:

Elsewhere in the paper today you will find a news item from Congressman L. H. SMITH in which he points out that the foreign aid bill of \$8,500,000,000, which is presently being battled in Congress, would cost each taxpayer \$56.20.

It has always been SMITH's policy in regard to foreign aid to carefully scrutinize not only the amount requested but also the manner in which it was to be administered and expended. He has long been a foe of the administration's policy of literally throwing the money away. He has fought to have the expenditures controlled; to prevent the leak of the aid to Communist-dominated countries and Russia itself.

Knowing full well that much of the appropriation money either in the form of manufactured goods or some other commodity has found its way to such an end, SMITH has voted against much of the proposed aid. Because of this stand he has been misbranded an isolationist, a person who refuses help, and many other cruel names. In spite of the name calling, he has courageously led the fight to save the taxpayer's money and certainly his presence not only on the congressional floor but on the Foreign Affairs Committee has prevented even greater squandering of your tax money.

We read in the daily papers of the foreign-aid countries and how well they are recovering, but two columns over there is a story about a shipment of some vital war material being made from one of these countries to Russia or one of its dominated countries.

Judging from this sort of thing, it's apparent Congressman SMITH is doing the kind of job we want done, and it's unfortunate more of his cohorts in Washington do not agree with him.

Now the administration has asked for \$8,500,000,000 for more foreign aid—more than \$6,000,000 to come from Racine County of which the people in the city of Burlington will supply \$268,000, each resident contributing \$56.20.

Cut our share of \$56 in half and properly manage its expenditure in the foreign aid countries and we'll go along once more. But don't we need that money for our own defense? Our military leaders still cry unpreparedness.

Let's stop sacrificing our own country to build those countries whose desire for freedom and a democratic way of life is questionable.

The Iranian Tragedy

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. MORANO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from Life magazine, which points out that, despite the bungling of the State Department in the Iranian oil-fields dispute and its tragic results, our State Department might have learned a lesson which will be valuable in handling similar situations in the future. The editorial commends the efforts of Max Thornburg, whose excellent efforts at settling the tense situation were rewarded with dismissal from Iran by the State Department.

[From Life magazine of July 30, 1951]

REMEMBER IRAN—IF ITS LESSONS ARE HEEDDED, WE WILL DO BETTER ELSEWHERE

Things continue to go from bad to worse in Iran. At this writing the prospects of saving Iran from itself and of saving Iran's oil for western use are as black as the oil in question. President Truman's roving fixer, Averill Harriman, has persuaded Iranian officials to say they will talk matters over again with the British. But the Iranians have come to hate Britain so thoroughly that they would rather leave their oil in the earth and let their country go to ruin than restore British control of the Iranian oil industry. The British refuse to produce and process the oil unless they are free to run the industry which they founded, built up, and owned until the Iranians nationalized the whole business last March.

There the issue stands, deadlocked between two positions which are equally right in principle and wrong in practice. And there, too, in massive confidence on the borders of Iran, stands the Soviet Union, ready to move in and pick up the pieces when the disaster is complete.

What can the United States Government do about it now? Not much, at this stage, beyond the mediation Mr. Harriman has been trying to accomplish. But the American people can do something—not, unfortunately, to repair the damage already done in Iran, but to guard against the same sort of damage being done elsewhere. The American people can fix clearly in their minds, and never forget, the shocking failure of their Government to move and act in Iran when there were many chances to do a great deal. If there is a certainty in this era of uncertainties, it is that in 1949 and 1950 the United States Government could have prevented disaster in Iran and achieved a great triumph of enlightened leadership.

First of all, the United States Government could have made a serious effort to arouse the British Government to a fresh sense of its responsibilities in Iran. Instead the State Department succumbed to the insane

pretense that the British Government was not responsible for British oil policy in Iran—it was just a business matter between the Anglo-Iranian Oil Co. and the Iranian Government. The simple fact was and is, of course, that the British Government is the principal owner of the oil company. To hold, as the State Department did hold, that anyhow the United States Government could not be telling the sovereign British Government how to act was to make nonsense of all that Secretary Acheson is so fond of saying on other occasions about the mutual rights and responsibilities of allies.

The United States Government also had the opportunity to do some concrete and useful things on its own. The young Shah, a firm friend of the United States, was eager to cooperate. So, in the very last months when something might have been done, was America's most active friend in Iran, Premier Ali Razmara. Now the Shah is helpless and Razmara is gone, assassinated by an Iranian nationalist.

If ever there was a place for a modest, well-thought-out program of economic and technical help, it was in Iran. Ambassador John C. Wiley, who went to Tehran in 1948, and Ambassador Henry Grady, who succeeded him in June of 1950, were in turn led to believe that just such a program was coming up, and they rightly led the Iranians to expect help. About all they and the Iranians got from Washington was neglect. A small military-aid program was started and various loans and grants were discussed. But the State Department simply did not bother to push them or to work them into a sensible whole. At the eleventh hour, in late 1950, Ambassador Grady dashed home in a despairing effort to press through at least one item—a \$25,000,000 loan which had been allowed to stall on technicalities. It finally went through, so late that the Iranians no longer wanted it.

Nevertheless a brilliant plan for the salvation of Iran had been worked out—by Overseas Consultants, Inc., a private outfit of American specialists in the employ of the Iranian Government. Given a modicum of British cooperation and United States support, the plan might have been Iran's economic Magna Carta and a model of western effort in other backward countries. It got no support from either the British or United States Governments, and to the lasting shame of both it is a dead dream today. Last March the chief architect of this great plan, Oilman Max Thornburg, was actually encouraged—meaning asked—to leave Iran by his own State Department, acting at the behest of the British Government. The disgraceful ground for this disgraceful finale was the assertion that Max Thornburg was a disturbing influence in Iran. If the several lackwits who dozed in Washington while Iran went down the drain had done one-tenth of what this disturber of official peace tried to get done, the United States would not be despised as it is in Iran today. And the Soviet Communists would not be waiting in quiet triumph for the prize that has so nearly been given to them by default.

Secretary of State Acheson and his fellows in failure are welcome to take what comfort they can from the thought that the United States problem in Iran is very complex and very difficult. Of course it is complex and difficult—in Iran, in the rest of the erupting Middle East, in great areas of Asia and Africa where the fevers of human want and national aspiration are rising. With the best will, the most intelligent policy, and the strongest action possible, there can be no absolute certainty of success in any of these places. But there is one absolute certainty: it is certain that communism is going to win and freedom is going to lose in these places if the United States does no better from now on than it has done in Iran.

Thinking of it this way, any American in his senses is bound to perceive that the United States should have done better in Iran and must do better elsewhere. If enough Americans determine to make their country's best good enough for the problems and necessities that confront the United States and its allies in so much of the world, there need be no more Iranians.

A Project That Must Be Completed

EXTENSION OF REMARKS OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. DONDERO. Mr. Speaker, I include in the RECORD excerpts from an article which has appeared in the American Engineer, official publication of the National Society of Professional Engineers. The article points up the feasibility, from an engineering standpoint, of the proposed St. Lawrence seaway. Nature and man have completed 95 percent of the channel. It is necessary to make improvements in only a short stretch of the river to open a magnificent water highway, 2,347 miles long, to supplement the economic growth and the defensive strength of the United States and Canada.

[From the American Engineer of April 1951]

To the layman and even to many professionals, the thought of making a ship channel 2,650 miles long—the length of the proposed seaway from Duluth to the Atlantic Ocean—borders on the impossible. Actually such a channel exists for about 95 percent of that distance, and it is the completion of the job started by man and nature that has been a favorite debate topic for many years. Outside of simple dredging, the bulk of the work to be done is on the 120 miles of the St. Lawrence River running between Ogdensburg, N. Y., and Montreal. Along this route will be built a large dam, powerhouse, three locks in the international section of the St. Lawrence River, four locks in the Canadian section, and dredging in the various reaches. This will cost, according to Maj. Gen. Lewis A. Pick, Chief of Engineers, United States Army, around a billion dollars with the United States paying six million and the Canadians about four. Inasmuch as Canada has already spent one hundred and thirty-two million and the United States thirty-two million on existing works comprising integral parts of the project, the cost to complete the project is estimated at eight hundred million, of which this country would pay out five hundred and seventy-three million and the Canadians two hundred and thirty million.

Opponents also stress the fact that upward to 81 percent of our merchant marine could not use the 27-foot channel depth. In his statement, General Pick claims that the present Great Lakes fleet could operate over the 27-foot seaway without restriction. As for seagoing ships, certain practical considerations involved in operating seagoing vessels, the general says, tend to increase appreciably the number of vessels that could transit the seaway if a 27-foot controlling depth were provided.

The Maritime Commission has stated that under such practical operating conditions practically every type of vessel in the Ameri-

can merchant fleet with the exception of very large transoceanic ore carriers and supertankers could transit the 27-foot seaway.

What of electric power? Plans call for a 2,200,000 horsepower hydroelectric station in the international rapids section. Not only is there a huge volume of water running downhill here but the year around evenness of the flow is almost as important. This means that at no time, even during dry months, will large amounts of generating capacity stand idle. It is figured that the United States will spend about \$188,000,000 for its half of the power project and that 5,800,000 kilowatt-hours of electricity will be available each year at a cost of 2.92 mills per kilowatt hour.

It's a fact that power is so high in the northeastern United States that industries consider moving out, and new firms refuse to move in. Electric customers in New York State pay 26 percent more for electricity than the national average and use 20 percent less. This in no small way accounts for the fact that every New York Governor since Al Smith has been for the power project in spite of the fact that the port of New York is opposed to it.

The St. Lawrence seaway still has much strong and well organized opposition and, although such new arguments as national security and tolls to pay the way have been introduced, those fighting for the project still see a long hard road ahead. But, in moments of strength, they point out that the TVA and even such old developments as the Panama Canal, met with scorching opposition only to win out in the end. The opposition, on the other hand, feels it can fight a long and very effective delaying action, and anyone must admit that they have a lot of experience upon which to base their optimism.

If the go-ahead is forthcoming, very little time would be lost. The Corps of Engineers says that general plans and specifications have been prepared on the entire dual-purpose project. For all initial construction features including access facilities, transmission lines for power, and so forth, as well as initial work on the main dam, powerhouse, and navigation structures, contract plans and specifications are on hand. For the long Sault Dam for example, the general plans, specifications, and design analysis have been completed. The plans and specifications, says the Corps, are sufficiently complete to permit advertising for bids for the construction of the dam and its flanking earth dikes.

Will Congress say "Yes"?

Dam the Floods

EXTENSION OF REMARKS OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SCRIVNER. Mr. Speaker, inasmuch as only a few days have passed since the headline news was the terrific floods in Kansas, I am sure Members of the House realize the urgency of immediate action along those rivers to prevent a repetition of such devastation.

The losses of farms and factories, of homes, schools, churches, business houses, industrial plants will exceed one billion dollars.

If this Nation can rehabilitate citizens of other countries, torn by war, certainly

it can spend some of the tax money it collects to protect our own citizens from the devastation of floodwaters.

For that reason, Mr. Speaker, I have today introduced a bill calling for the authorization of flood-control projects on the Republican and Delaware Rivers, tributaries of the Kansas, on the Marais des Cygnes and its tributaries, and on the Marmaton. I trust the Public Works Committee will give this bill the immediate attention it deserves and needs.

How the Miami Valley Abolished Floods

EXTENSION OF REMARKS OF

HON. EDWARD BREEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. BREEN. Mr. Speaker, I should like to call attention to the following article which appeared in the Dayton (Ohio) Daily News of Sunday, July 22, 1951:

HOW THE MIAMI VALLEY ABOLISHED FLOODS

The people of the regions devastated by the Kansas-Oklahoma-Missouri floods, if they are smart, will start reading up on the history of the Dayton flood.

Dayton and the Miami Valley turned its flood of March 1913—the greatest disaster from water up to its time—into the last flood. The people of the Missouri-Mississippi watershed can, if they have the imagination and the grit, turn their billion-dollar flood in to the last flood.

An ounce of prevention is worth a pound of cure; but it is far harder to obtain. Failure to organize effectively to prevent war has caused two international calamities in this century. Only now, with the United Nations and its stand in Korea—products of a belatedly learned lesson—do we have a fighting chance to forge the protection that will make unnecessary the cure.

In Dayton and the Miami Valley the ounce of prevention was not brought without great struggle and cost. After the work of burying the dead, rescuing the marooned, feeding the stranded, removing debris, and rebuilding a large part of a city was completed, there remained the danger that the community would fail to rise to the challenge to avert future floods.

But the community was aroused and it was blessed with tough, aggressive, imaginative leadership. The first impetus was provided by a specially created Ohio Flood Commission. But soon Dayton citizens were meeting to raise money for a detailed survey. At this meeting, the late Adam Schantz struck the spark that ignited the conservancy project. Pointing out that property damage from this single flood ran to \$140,000,000, he proposed a subscription for the survey of \$2,000,000. He offered himself to put up \$100,000. The citizens' meeting at once lifted its sights and the trail that led to the conservancy program was broken.

The survey was organized and headed by Col. E. A. Deeds. J. A. McMahon, one of the ablest and finest men Ohio has ever sent to the House of Representatives, was engaged to draft a bill to create the Miami Conservancy District. A brilliant young engineer, who had been supervising engineer of Federal drainage investigations a few years earlier, and who also had been in charge of the design of reclamation works in the Southern States, was selected by a

committee composed of Walter S. Kidder and Gaylord Cummins. The engineer was Arthur Morgan. Many years later, largely on the basis of his brilliant design of the conservancy, Morgan was called by President Roosevelt to head the Tennessee Valley Authority.

With the personnel assembled and the grand design drawn, the battle, of course, was only beginning. There was the customary public inertia to be overcome, and there was the usual violent obstruction by persons who thought their own interests would be harmed by the project.

A fateful battle to get the legislature to pass the conservancy bill by the two-thirds majority required was won by the narrowest of margins and partly by grace of a stroke of parliamentary alertness.

The story of how the five conservancy dams were built at a cost of \$39,000,000 (about 30 percent of the cost of the flood) is familiar to all Daytonians. So is the story of how the last of the bonds was paid off, slightly before the maturity date in 1949. Equally familiar is the fact that there have been no destructive floods in the Miami Valley since 1913; the fact that the fears of the upstream counties that water would be backed up to flood their farm lands was long since proved unfounded; the fact that generous compensation was paid farmers whose lands lay on the proposed reservoir floors; the fact that the conservancy has been universally popular in its own region and that it has stood as a model before the world.

Not least among the lessons taught by the conservancy was the feasibility of creating special authorities to work across county lines. In recent years even States lines have been obliterated in the successful search for a solution to regional drainage, harbor, and other problems.

Now the peoples of the Missouri-Mississippi watershed know the cost of failing to unite to prevent disaster. As they dig out from the flood they can use the example of the Miami Valley conservancy. They can use the example of the larger Tennessee Valley Authority. Their problem is larger and more complicated than was that of either of these but at least it is not new; they have guideposts to follow. Indeed they have the minimum blueprint of the Pick-Sloan plan and the maximum blueprint of the proposed Missouri Valley Authority.

Perhaps now they will be ready to wage the kind of fight against inertia and vested interest which was fought and won, nearly 40 years ago, in Dayton.

1952 Presidential campaign, even if, as he says, he will not be a candidate himself.

But a cold analysis of the speech reveals that it is pretty well filled up with platitudes and inconsistencies. In what might be termed the preamble to his speech, he said he was speaking "with neither partisan affiliation nor political purpose," and then he went on for three-quarters of an hour with an outright political speech aimed directly at the Truman administration. Even though still a member of the Armed Forces, and therefore still subject to the authority of his Commander in Chief and fired for flouting that authority, he said, "I shall raise my voice as loud and as often as I believe it to be in the interest of the American people." For this sentiment he must be commended, but he might bear in mind that he is permitted to talk as General MacArthur only through the sufferance of his Commander in Chief.

The general speaks of corruption in high quarters and then says it is a disease "unfortunately common to all nations." He might well have also said it was common to all parties, as we learned in the early 1920's when the Tea Pot Dome scandal broke out in the Harding administration.

He would abolish war as utterly futile and always a complete failure as an arbiter of international dissensions. But in the next breath he says we must be prepared to meet the trial if war comes and then "gear our foreign and domestic policies toward the ultimate goal—the abolition of war." This we understand is the whole purpose of our defense program and the North Atlantic Pact—to build up a military power so strong that no enemy nation will dare go to war with us—"peace through strength."

He declared that the Korean war was futile, and that after millions of casualties had been suffered, nothing was settled and no issue decided. But even while he was speaking the U. N. and Red conferees on the other side of the world were reported in agreement on the subjects for discussion to bring about the cease-fire order. We may well wonder would we have been that far along now, if General MacArthur had his way in carrying the war over into Manchuria. We wonder.

While we cannot agree with all that General MacArthur says and proposes, we hail him as a great soldier, a great orator and, for his able work in Japan, a great statesman. But we believe he will continue to serve his country better if he abandons his present partisan role of political critic.

Editorial

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial that appeared in the Boston Sunday Post of July 29, 1951:

SUMMING UP THE MACARTHUR VISIT

Now that General MacArthur has "faded away" from the New England scene, a few last impressions would seem to be in order before his whirlwind visit is permanently assigned to the archives. That the event was a memorable one in Boston history goes without saying. The general left a strong imprint of his personality on all he met here, even those with whom he had the most fleeting contacts, and he climaxed his tour with

a hard-hitting address to the legislature that in many respects was the most forceful since his dismissal as Far East commander.

The enthusiasm engendered was remarkable for one who has been out of the limelight for some months and over whose recall the first flush of indignation had passed. It must rank high in the realm of welcomes to visiting dignitaries. If it lacked the hysteria of the greeting to Charles A. Lindbergh, who preceded him here by exactly 24 years—less 2 days—it was because the circumstances were different and the present age is a more sober one. Its closest parallel, perhaps, was the visit of Gen. Dwight Eisenhower on November 12, 1945, for these two Army heroes have much in common in the high regard in which they are held here as elsewhere.

MacArthur's coming served to dispel at least two false notions that are commonly held. It showed that Dame Boston is not too sedate to kick up her heels when the occasion warrants, for this reception was definitely on the exuberant side. It also showed that the general is not always the austere, grim-visaged individual he is pictured to be. He gave us another facet of his character entirely—affability, geniality and a general aura of good fellowship. It added a pleasant note, indeed, to the proceedings.

And, of course, Boston took to its heart the gracious, attractive Mrs. MacArthur. Her quiet charm endeared her to all. She seemed almost fragile until one recalled the tenacity with which she stayed at her husband's side during the difficult war years which included a precarious existence in a bomb-shaken cottage with her son on Corregidor and a perilous escape by PT boat and plane.

Her married life certainly has been an eventful and difficult one, being lived entirely on foreign soil in contrast to her earlier years. Yet there was no touch of gray in her hair. She did not in the least show her 52 years nor, for that matter, did her husband his 71. They were a truly devoted couple. The general revealed in a thousand gestures his deep solicitude for her at every stage of the journey—the anxious way he looked back toward her car when they were separated; the promptness with which he would step up to hold her arm when she showed the slightest sign of faltering before the flashbulb barrage. And she, for her part, was the typical, proud, unselfish wife, desirous only of remaining in the background so that the full spotlight could play on her husband whom she so obviously adored.

It would have been nice if this appealing family portrait could have been rounded out by the appearance of their son, but unfortunately this was not to be as he was elsewhere engaged. But we know that he is the unassuming, upstanding young boy to be expected of two such fine parents, and that he will be a credit to them and his illustrious name.

Regarding the MacArthur speech, main point of his visit, the general was at his best when he sketched the ineptitude and bewilderment of our Far East policies, and his most telling point was the vindication of his own views regarding the importance of Formosa, cease-fire procedure and the like—views, the expression of which at the time, cost him his job. But there were political overtones and inconsistencies in his remarks on the ill effects of loyalty, the importance of which he as an Army man must realize, the evils of taxation and the stress on reprisals, which he said, entirely without reason we believe, that he must endure if he talks out of turn. Some of the things he desires, like abolishing all wars and at the same time wiping out communism, while striking a popular chord, are more easily stated than achieved.

At the outset he was careful to explain that his speech had neither partisan affiliation nor political purpose. But while he was

MacArthur's Speech

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of July 27, 1951:

MACARTHUR'S SPEECH

No doubt millions of people who heard and saw General MacArthur deliver his speech at the State House were captivated by his magnetic personality and his masterful oratory. If the general retains his present extraordinary physical vigor for another year, he may well be a forceful factor in the

not an avowed candidate for office, he spoke like one. His words need to be heard, and his counsel on the Far East, on which he is an acknowledged expert, should be heeded, but he has yet to demonstrate Presidential caliber.

MacArthur Talks Politics

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Traveler of July 27, 1951:

MACARTHUR TALKS POLITICS

The people of Boston and of several other parts of Massachusetts have had their long-awaited chance to see and applaud one of this country's great military figures, General MacArthur. In his visit among us the general and his charming wife lived up to any reasonable expectation of what their appearance and behavior should have been. We doubt that many were disappointed.

The general's speech before the assembled general court is something else again. In his inimitable style of rhetoric, MacArthur lashed out at virtually every policy of the Government, domestic and foreign. He did it with a bitterness that the deposed Far East commander had not before equaled and in a tone that was strongly political.

No one would deny MacArthur his absolute right to express his views on the political course this country is taking. Loosed from the restraints of active military command, it may even, as he said, be his duty to avoid sinning by silence on the political and military developments that disturb him. But the MacArthur of the statehouse on Wednesday night was talking as a political man and he can be answered as such without withdrawing from him one bit of the respect due him for his enormous military accomplishments.

What would MacArthur substitute for the Government policies for which he expressed such biting contempt? We can assume that in domestic policy his generalities would, if translated into action, place him in the extreme right wing of the Republican Party. We can only guess how much of a roll-back of the so-called welfare state the general's views would require, but it would be considerable. The outline of his social views, then, is quite clear.

We cannot say as much for his foreign policy opinions. In this vital area of national decision MacArthur seemed to hold views that are in contradiction of each other. He was at the same time belligerent and pacific. He favored a bigger war in Asia, yet he seemed to be for fighting it, even now, with a smaller budget. He attempted to justify his own self-defeatingly belligerent offer of a cease-fire to the Chinese and at the same time attacked the U. N.'s agreement to at least talk about a truce when the offer came from the other side. He went out of his way to brand the present talks with the hate word "appeasement."

MacArthur has never been in sympathy with, nor understood, the sort of limited war we have been fighting in Korea. His hostility to it justified his retirement from command long before Mr. Truman acquired the nerve to do it.

He has failed to recognize that the free world was not prepared to fight anything but a limited war in Asia. He sees no advantage for us in the limited peace that must follow a limited war, even if it buys us immeasurably valuable time. He admits no aspect of victory in the halt put to Communist aggression and in the new strength and will with which this successful collective action has endowed America and its allies.

With the general's judgment of the worth of the sacrifice in Korea we believe the majority of Americans disagree. And his political adherents would do well to remember that the present administration is identified with the policy of stopping aggression and the spread of war at the lowest cost in men and treasure.

MacArthur made one statement which, if it remains in people's minds as the message of his speech, could do great harm to our mobilization program. He said we were so strong "that talk of imminent threat to our national security through the application of external force is pure nonsense."

We cannot believe that the general was seriously arguing for the let-down in preparedness his words appear to condone. It all depends what he meant by "imminent." We think most Americans will feel that the threat is "immediate" and "ominous" and will act accordingly, General MacArthur to the contrary notwithstanding.

James J. Hogan Junior High School: An Appropriate Tribute to a Wonderful Man

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. JOHNSON. Mr. Speaker, I am including in my remarks a very fine editorial from the Times-Herald, of Vallejo, Calif., concerning Dr. James Joseph Hogan.

In December 1929 I was in Washington, representing the city of Stockton in connection with the development of the Stockton deep-water channel project. At that time I had the good fortune to meet Speaker Longworth and to have a long conversation with him in the Speaker's office. Due to the fact that I had served in the same branch of the Army as his brother-in-law, Quentin Roosevelt, Mr. Longworth was unusually cordial.

Among other things, he asked me who represented my district in the House of Representatives. When I said Charles F. Curry, he said, "You are lucky because you really have two Congressmen. Mr. Curry is a very respected and able Member of the House, and Dr. Hogan really represents you also, and has a tremendous influence on the Members of the House."

Later, when I became a Member of the House of Representatives, I learned that this statement was literally true. The Member who told me more about Dr. Hogan than any other Member was Earl C. Michener, of Michigan. In those days the House of Representatives did not have a doctor, as it does now. Dr. Hogan would frequently be called on by

Members for medical advice. According to Mr. Michener not only did Dr. Hogan help Members with their health problems but he had a magnetic personality that soon won the confidence of the Members of the House of Representatives. Also he had a charming and talented wife who was very popular with the congressional wives. As a couple they developed tremendous good will among the Members of Congress.

Evidences frequently crop up, in my conversations with some of the older Members of the House, of the remarkable hold that Dr. Hogan had on the confidence and the friendship of the Congressmen who knew him. Hon. CARL VINSON, of Georgia, chairman of the committee on which I have the honor to serve, has told me several times, with much pride, how he "helped Charley Curry and Dr. Hogan prevent the removal of Mare Island Navy Yard to Alameda." Others have testified to the esteem in which the Hogans were held.

What appeals to me most, however, is that this fine man came to Washington to represent his adopted city of Vallejo, not for pay, but because he loved the city of his choice, because it and its people had been so good to Dr. Hogan. His was a labor of love and that plus his great personality is what made him so successful in representing Vallejo in the Nation's capital.

I never realized till I read this splendid editorial what a great success Dr. Hogan was in his chosen profession. He was really a statesman without public office and an ambassador without portfolio. Many people are happier and Vallejo is a better city because of the work of Dr. Hogan. I hope that the children who attend the high school named in his honor will learn about him and his accomplishments. It will inspire every one of them and plant in them the desire to live a useful and fruitful life.

The editorial follows:

Vallejo's third junior high school is to be named in the memory of Dr. James Joseph Hogan, who died July 15, 1942, in Cincinnati, Ohio, as the result of a chronic heart ailment. Dr. Hogan was 70 years old at the time of his death.

After 9 years, the community to which Dr. Hogan contributed so very much is belatedly giving to him, in at least some small measure, the honor he deserved throughout almost all of his lifetime.

Dr. Hogan was a Vallejoan. But actually, few Vallejoans ever realized, even many of his good friends, that his mind and his heart belonged to the world itself. Few knew, and "Dr. Jim" was not the type to tell them, that his research in the field of vaccine and blood plasma saved many thousands of lives.

For doctors the world over, Dr. Martin H. Fischer, professor of physiology at the University of Cincinnati when Dr. Hogan died, gave his friend a one-sentence eulogy of which any doctor could be incomparably proud.

Dr. Fischer at that time declared:

"He was the man responsible for the definition of what constitutes a proper infusion to overcome surgical shock."

Dr. Fischer used "definition" as a medical term. He might have used the word "discovery." Of all the thousands of researchers who preceded him, through more than a

century, Dr. Hogan was the first to make that discovery. It was a milestone in the history of medicine.

He was a graduate of Cooper Medical College in San Francisco, a member of the Royal College of Surgeons in England, and licentiate of the Royal College of Physicians. It was in England that he did his postgraduate work.

His "definition" discovery, as it related to surgical shock, was made when he was a young man.

As far back as 1915, he went to Europe at the invitation of the German Government at that time, to introduce his perfected treatment for the intravenous use of gelatin solutions in place of transfusion for shock after wounds.

In England, he conferred with medical authorities there. And in Paris, he demonstrated the treatment in the American Hospital, and the hospital at Jully, on a corner of the historic Marne battlefield.

On his return to the United States, he recalled:

"I saw plenty of the wounded, where they were brought back for secondary treatment. Berlin is full of them; London is full of them; Paris is full of them. They are everywhere."

It must have been a source of tremendous satisfaction to Dr. Hogan to realize that thousands of the wounded, in all three of those great cities, and on the battlefields of that First World War, were saved because of his discovery.

Yet somehow, through the many years that followed, in his own home town, it was not so much for his greatness in the medical world, but for his championing of Mare Island Navy Yard and Vallejo that he was best known to the general public.

Vallejo was not the sprawling metropolis then that it is today, and Mare Island more than once had to fight for its very existence.

Dr. Hogan, of course, was Vallejo's representative in Washington, D. C. He led the fight, through the years. Always, he was successful.

He had, among many other qualities, a keen sense of history.

He realized, in 1928, what America's post-war leadership never did realize, and what most Americans prior to the outbreak of World War II, and even after World War II, did not realize.

Once, in an address at Richmond, he declared that the Washington Disarmament Conference was one of the biggest farces ever fostered upon the American people.

Our national prosperity, he declared, depended upon adequate sea power. American ships had to keep open sea lanes for America's merchant marine. And yet, during those terrible months in the Atlantic in the earlier days of World War II, U-boats almost succeeded in closing those sea lanes, because our naval power had been stripped during the years of peace that followed the First World War.

Perhaps it was his training as a doctor and a researcher that enabled him to probe for and find the truth in all things.

He surely was a realist, and yet, somewhat paradoxically, he was a great humanitarian. Or maybe it was that he went further than most, and realized that the two rightfully, and always in a Christian sense, must go together.

To those thousands whom the Greater Vallejo area has welcomed from every State in the Union, and who now are employed at Mare Island, it will be difficult to realize that a job at that vital installation sometimes depended on the success of Dr. Hogan in the Nation's capital, striving to save Mare Island from its unthinking enemies.

There were few bigger news stories that could break here, back in those days, than

the stories which revealed, always in bold headlines, that there would be another submarine for Mare Island to build, or another cruiser, and more allocations for their construction, and the improvement of the yard's facilities.

The climax probably was the Battle of the Mudflats, in which Alameda sought to become the new Mare Island.

For many days—indeed, for many months—it was touch and go.

Here in Vallejo, hundreds of families—fathers and mothers and their children—waited for the news.

Finally, those who fought for Mare Island could report triumph.

"And there were many who helped us," Dr. Hogan would want it said.

He surely would not have considered his career somewhat fabulous. And yet it was.

There was his research in medicine in his youth.

There was a time, too, when he practiced medicine here. Vallejo was not so small that it could be said that Dr. Hogan was, after that great and beloved tradition we have in America, a "country doctor"—although many a call he made in the middle of the night, across muddy roads, to help those who needed medical attention.

And then there was his activity in the Nation's Capital, in behalf of Mare Island and Vallejo—in whose destiny he believed with fervor.

And again, his research in medicine. That first, great love, he cherished until the day he died.

Indeed, it was while visiting with Dr. Fischer, with the two of them planning yet more research in their field, that Dr. Hogan died.

He had, of course, friends all over Washington. A Navy man himself, he had many friends in the Navy. One was an officer named Nimitz—who was to be known to the world as Pacific Fleet Admiral Chester Nimitz. There were many others.

Dr. Hogan, as a matter of fact, had countless friends in virtually every walk of life. He was a very democratic person, who liked people very much.

Faith, honesty, courage—all the virtues were his.

In the nine seemingly brief years since Dr. Hogan died, much has happened in the world and in the Mare Island-Vallejo area for which he struggled so selflessly and so earnestly and so successfully through the years.

Such is the irony of passing time, there are thousands now living here, and working on Mare Island, who might ask: "Dr. Hogan? Who was Dr. Hogan?"

But these are the relative newcomers, themselves helping to build our community, now Vallejoans themselves.

The important thing, despite the fleeting years, is the very real fact that Dr. James Joseph Hogan, a great American in every sense, did live here, and did contribute so very much to the betterment of the community that was his home town—even though, in a sense, the whole world at times was his "home."

And what is important, too, is the fact that students who will attend the new James J. Hogan Junior High School can be proud, as youth has a right to be proud, of their school's name.

In every sense, Dr. Hogan was a great man—a modest discoverer, a wonderful humanitarian, a man of science, a courageous fighter, a savior of life on a tremendous scale, a civic-minded citizen in the very best American tradition, a human being who struggled for the rights of other human beings.

For such a man, Vallejo's newest junior high school will be named.

Acheson Speech Baffling in Ambiguity

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following article:

ACHESON SPEECH BAFFLING IN AMBIGUITY

(By David Lawrence)

When the Secretary of State makes an address, a good deal of deliberate planning lies behind his words. From his staff of policy makers come memoranda that lay down the points that must be emphasized to fit changing situations.

But the speech which Secretary Acheson made at Detroit is baffling in its ambiguity. The words at times are those of a MacArthur but the acts which are contemporaneously recorded in the news dispatches are those of a Chamberlain.

What Dean Acheson says is important because, for all practical purposes, he is President of the United States. He is virtually commander in chief of the Army, Navy and Air Force. He defines their scope of action. For Mr. Truman does what Mr. Acheson tells him to do. No man in the office of Secretary of State heretofore has had the opportunity to wield such power, first, because no President ever delegated as much authority to him and, second, because no comparable issues fell to a Secretary of State to decide. Mr. Acheson told a Senate committee recently that a cease-fire in Korea around the thirty-eighth parallel would be a "victorious" conclusion of the war there, and he emphasized that this would mean that aggression had been repelled.

Yet now, in his Detroit speech, the Secretary says the aggressor hasn't been tamed at all. He adds:

"We are in great danger, greater perhaps than many Americans now appreciate. This danger is not less than it was a month ago, although some of us seem to think so. * * * Whether or not an armistice results from the talks in Korea, the fundamental job ahead of us will not change. * * * Whether or not there is peace in Korea, whether our adversaries are cooling like doves or growling like bears, our job remains the same. The threat we face remains the same."

This would seem to imply that the sacrifices made by the U. N. forces, including casualties of 80,000 Americans, have not swerved the aggressor from his course. Then comes this curious paragraph:

"Neither war nor weakness is the way to meet the Soviet challenge. We will counter force with force, if necessary, but war does not solve problems—it multiplies them. Weakness, on the other hand, would lead to defeat, with or without war."

The foregoing—countering force with maximum force—was the main theme of General MacArthur's frequent messages to his superiors in Washington and of his Boston speech, too. It was because of his exposition of this very doctrine in his message to the enemy commander that he was summarily removed from all his commands.

But, while it is sound doctrine, whether Mr. Acheson or General MacArthur expresses it, the Secretary of State qualifies it almost immediately when he says:

"Between these two extremes lies a middle course, which seeks to block Soviet expansionism without war, by building an effective system of collective security and

by making it strong. This is the course we are following."

Then came the explanation of what that middle course is:

"We do not have to match the Soviet armies man for man, or gun for gun, since our mission is to deter, not to attack, but we have a long way to go before we reach a safe deterrent level."

What kind of gobbledygook is this for our military chiefs to digest? Is a military force built solely to be strong on the defensive? Is there no thought given to offensive strength sufficient to win a war when the enemy has begun it? Mr. Acheson amplifies his thinking thus:

"What we are building is an adequate deterrent force against military attack. We already have the means to guarantee that a general military attack against us would be costly to the aggressors. We must now achieve a force of sufficient size to make it plain that such an attack could not succeed."

Does this mean that America has adopted a policy of being willing to accept stalemates in future wars? Has victory been deleted from the vocabulary as well as the planning of our military forces? Is the enemy to be given to understand that, if an attack is made and he fails to penetrate our lines, we will agree to cease-fires and compromises of the thirty-eighth-parallel sort of stalemate? Is Korea to be a pattern for future military policy?

Plainly the Detroit speech by Secretary Acheson is a revelation of the new concept of American military policy—not to fight to win but just to keep the enemy from winning. If that is all our Army, Navy, and Air Force are to be permitted to do in the next war, then the Soviets may some day accept as a realistic though unwitting description of the morale of U. N. countries what Mr. Acheson says:

"It must be understood that weakness not only invites attack; what is even more menacing, it paralyzes the will to resist and makes for political disintegration."

Doorway to Slavery

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record an article published by the Long Island Daily Press June 11, that tells a story of teen-age drug addiction.

The Scriptures mention the unforgivable sin and I wonder if it might not be the scandalizing of children and their enslavement to this pernicious vice. The passer of dope is like a venomous snake to be crushed under foot and must be killed. Such peddlers are beyond the pale of humanities. They are the most dangerous persons alive. They kill not only the bodies and minds but the souls of the young as well.

The above-mentioned article follows:

HOW I BECAME A DOPE ADDICT BEFORE I WAS 18—A JOY SMOKE LED LUCY TO SLAVERY; A KICK?—ONLY FEAR RULED HER HEART

(By Geraldine Scott)

It was a casual "joy smoke" in a boy friend's automobile that changed the course

of Lucy's life. Lucy told about it as she sat in the pleasant white-curtained living-room of her parents' suburban house. Her mother kept glancing at Lucy with a mixture of fondness and anxiety. Later, she was to say:

"If only I had questioned Lucy more closely at the beginning. I kept noticing that her eyes had a glassy stare when she came home from dates. But she kept insisting I was wrong. I just didn't know what a glassy expression can mean."

(If your son or daughter has a glassy expression and the pupils of the eyes are distended and do not contract, even when a bright light is flashed into them, the chances are 100 to 1 the youngster's been smoking marijuana cigarettes.)

"I first heard about marijuana cigarettes in high school," Lucy recalled. "Some girl friends and I were dating an older crowd of boys and I heard rumors that most of them smoked reefers. It seemed to be an unwritten law that girls shouldn't."

After she graduated high school, Lucy tried her hand at a few office jobs, but found that she couldn't get interested in an office routine. She wasn't interested in going to college or in studying for anything special. She just wanted to go out and have fun. And her parents, proud that they didn't need to have their daughter work, encouraged her.

"She had no real purpose in life," said Lucy's mother softly. "And we were too stupid to realize that."

"I kept seeing that same fast crowd," Lucy continued. "I guess I was particularly popular with the fellows because most of the other girls were rather dowdy looking. Oh, my skin was really perfect once." She ran her hands over her face, where the skin was still splotchy from her habit of the past. "Maybe it will be again—some day."

Soon Lucy found herself seeing a lot of Hank, who was particularly desirable because he had his own car and was a "free spender" on dates. She never did find out where he got the money.

"We would go out and dance and maybe drink a little and then park somewhere and smooch," Lucy said, blushing a little in the presence of her mother. "I was having fun, but I wanted to have more fun."

One spring night Lucy and Hank went for a drive on a secluded lane in the country. After a while Hank stopped the car and pulled out a cigarette case.

"Go ahead, baby, you might as well get high," he said to Lucy. "Everybody else does."

Lucy took her first smoke of marijuana. She recalls that, en route home, everything seemed to be happening twice as fast as usual.

"Even my mind. It seemed to me I was being terribly witty and that Hank and I were having a brilliant and sharp conversation. That's the way marijuana affects you—at first."

When Lucy got home that night, her mother asked if anything was the matter and commented that her eyes looked glassy.

"I took a look in the mirror, and they didn't seem glassy to me. But they must have been. That's how you can tell if anyone's been smoking marijuana. That's how the police tell. They flash a light into your eyes, and if your pupils don't contract, he knows you're riding on cloud 7."

Lucy's first cigarette wasn't her last.

"I kept coming home glassy-eyed and my mother kept asking me what was the matter, but never dreamed I was smoking marijuana. She didn't even know I had ever smoked any kind of cigarette. But finally my father grew suspicious. Somebody told him about marijuana. He hunted through my pockets and purse, but of course he didn't find them."

"I always hid the reefers in a package under my brassiere."

Where did she get the cigarettes?

"At the beginning I didn't have to pay for any of the dope I took. Otherwise, despite the fact that my parents gave me an ample allowance, I might have gotten discouraged. I don't know the situation now, but a couple of years ago it would cost me about \$10 a day to keep myself supplied."

(Narcotics agents here say the cost of heroin or cocaine for the average addict in this area is now between \$5 and \$15 a day.)

"Hank would just give me all the reefers I needed. Then I needed more and more. I grew depressed when the spell wore off. I would chew my nails and fret until I got another cigarette."

Then her eyes clouded as she began to tell me about Ralph. It was Ralph who made her abandon marijuana for heroin and then abandon her parents for his vicious kind of life.

"I kept seeing Hank, and he kept giving me reefers. But outside of a little petting, there was nothing between us. As a matter of fact, it was Hank who introduced me to Ralph."

By that time Lucy, encouraged by her parents to remain jobless, had decided she would try something "intellectual" like writing or music.

"I decided that," she laughed softly, "every time I smoked a reefer."

She asked Hank to take her to a jazz concert in New York one night. There she met Ralph. Afterward a whole gang, including Ralph and his date for the evening, Dotty, went to an upper West Side apartment "to smoke a little pot."

"Ralph and I got to talking, and before I knew it, I was hearing the story of his life. A life, incidentally, that he was very bitter about. He had come East from Los Angeles, where he used to live with his mother. He got into some girl trouble and came to New York to live with his father. His parents had separated when he was very young. He had only contempt for his mother and hatred for his father."

He was a handsome youth of 19, when she met him, Lucy recalled, aside from a certain glassy expression.

"But then he'd been using marijuana since he was 16 and had been hooked on heroin for several months."

Lucy remembered that Ralph had fluctuated between his own date, Dotty, and herself that first evening.

"I really think he was trying to decide right there which of us he liked best. All I know is, he took me home and I fell head over heels in love with him. But now that I think back, I'm sure he figured out he could make more use of me than he could of Dotty. And that's why I was the 'icky' one."

"Ralph had learned, I discovered later, to use women to get what he wanted. In the past, older women had fallen for him and had given him money."

Lucy, who was now being badgered by her parents as her eyes grew glassier and her skin spottier from the secretly smoked reefers, decided to take Ralph home with her one evening and have her folks meet him. The first time, he came to dinner. Lucy's mother didn't like him at once because he pecked at his food, instead of gobbling it up in normal youthful fashion.

"He was the strangest boy I ever met," Lucy's mother said. "I would watch him toying with his meat and was sure he was ill. Of course, he was ill, but I didn't know why then. He was always ready to eat candy, though, or any sort of sweets. He'd go after candy as if he were starving."

(A craving for sweets goes along with dope addiction. That's one reason many dope users develop bad complexions.)

Mrs. D. said she asked Lucy not to see Ralph again after he dropped a pawn ticket

out of his coat pocket one evening and she saw it was for a gun.

"I asked him what in the world he was doing with a gun and he gave me a long story about driving a car west for some people and needing it for protection. I grew afraid for my daughter."

Lucy promised not to see Ralph. But a few weeks later she left home, and it was nearly a year before her family saw her again.

"I had no idea where she was," said Mrs. D. "I reported her to the police as a missing person, of course, but I never heard anything from her until the night she called me after she was arrested. I aged 20 years, I think, while Lucy was away."

Lucy's eyes filled with tears and she jumped up from the sofa.

"I wish I could talk to every kid who's tempted to do the things I did. I wish I could warn them what they're getting into. You don't get kicks. All you get is fear all the time. Fear of the police. Fear of getting an air bubble in an artery that would kill you. Fear of a rusty needle. Fear of running out of money and not being able to get any more stuff. Fear of getting bad stuff or of taking an overdose. Nothing but fear."

Lucy recalls she thought she could try heroin, at Ralph's insistence, without "getting hooked."

"But I found out you can't chippy around with heroin. (Chipping is what the narcotic users call those who just take a shot now and then and manage not to get hooked.) You may play in luck with it for quite a while if you keep yourself down to the minimum shot, which is about a quarter of a capsule, but sooner or later you get hooked. Don't let anybody tell you you won't. I know."

Lucy tried heroin. Within a few weeks she was using \$10 worth a day.

"How did I get the money?" Lucy settled back in the couch. "I'll tell you. It isn't a pretty story."

Air Training Command Is Heart of Air Force

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr. PRICE. Mr. Speaker, on July 7 last, a significant ceremony took place at Scott Air Force Base, Belleville, Ill., celebrating the eighth birthday of the Air Training Command, aptly described by Lt. Gen. Robert W. Harper, Commanding General ATRC, as the "heart of the Air Force."

High light of the day's observance was the dedication of "Yount Hall," ATRC's headquarters building at Scott, which has been named in honor of Lt. Gen. Barton K. Yount, one of the real pioneers of the Air Force and first commander of the training command. General Yount was commanding general from the beginning of the command in 1943 until his retirement from the service in December 1945. He died in 1949.

The present commanding general, Lieutenant General Harper, has been associated with military education throughout his career. He is ideally equipped to meet the responsibility for direction of the tremendous expansion in the Air Force training program.

General Harper paid high tribute to General Yount's advanced philosophy of training for the Air Force in the following address delivered at the dedication of Yount Hall. General Harper's address follows:

Ladies and gentlemen, we are here for a purpose which I am sure profoundly impresses you as it does me. We have gathered today to pay tribute to the memory of a great American and his accomplishments.

General Yount, as much as any man I can recall, regarded the military service as a public service. Throughout his life, which was a life of selflessness, he regarded every military assignment in the light of a trust. And as additional offices and responsibilities were assigned to him, the more keenly he followed a highly personalized program of acting for the best interests of our country.

As the first commanding general of the Air Training Command, General Yount was faced with a gigantic task of organization and administration. In those early days he demonstrated qualities of leadership which make it such an abiding honor for us all to participate in this ceremony.

It is particularly fitting that we should have this observance today. For on the day that the Air Training Command was founded 8 years ago, General Yount foresaw and properly gaged the importance of training for the Air Force of today and the Air Force of tomorrow.

I knew General Yount well and admired him greatly. Although this is personal to me, I cannot help but quote a few passages of letters he sent to me revealing his great breadth of vision, his friendliness, and his greatness.

When General Yount assumed direction of this command 8 years ago today, at Fort Worth, Tex., he fully understood the vast scope of the training responsibility. He voiced this thought to me, and I quote.

"The peace and safety of our country, and in fact of the world, may depend upon the training of our Air Force—our first line of defense."

He was a kindly, sincere man, with many warm and close friends. Recalling them, he once wrote me a memorable paragraph about our people:

"Recollections of my association with the personnel of the Air Training Command are the most treasured of my memories of the national service. I enjoyed the spirited co-operation of a group of people I shall admire always—the officers, airmen, and civilian personnel who established and maintained the proud record of the Air Force training program."

Ladies and gentlemen, as a succeeding commanding general who has been privileged to head up the Air Training Command, I am sure that General Yount voiced my deepest sentiments about our people.

And the founder of our command issued a ringing challenge to those of us who are charged with carrying on his training program. He said, in part:

"The Air Training Command is not spectacular. It does not engage in combat, but had it not been for our command there would have been no efficient combat. The training command is the very heart of the Air Force, and I hope in the years to come it will be so acknowledged."

Today, and rightly so, our combat-crew training-school program has become a reality. I believe that General Yount foresaw that some day this would be an additional responsibility in order to relieve the combat commands of this training mission so that they might concentrate on their primary mission—combat.

I am pleased to report to this audience that the cold war and the Korean situation did not find the Air Training Command unpre-

pared. The people of our command have responded nobly to the current emergency and are prepared for even greater effort according to the finest traditions of General Yount's advanced philosophy of training for the Air Force.

It is a philosophy which is the basis of our training today. We make no compromise with the quality of our product—producing the best possible officers and airmen according to the desires and needs of the using agency. These are unchanging and unchanged principles in our Air Force training program.

By virtue of the authority vested in me by the Chief of Staff of the United States Air Force and to the memory of Lt. Gen. Barton K. Yount, a great civic and military leader, I dedicate this building and direct that it shall hereafter be known as Yount Hall.

Retrospect on India Food Bill

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 18, 1951

Mr. JUDD. Mr. Speaker, the long consideration of India's request for aid in meeting its food crisis, which ended in passage of the India Emergency Food Aid Act, left a certain amount of misunderstanding as to the motives of Congress and the attitude of the American people toward India. Under leave to extend my remarks, I include an article on this subject which appeared in the *Hindustan Times*, an influential newspaper published in New Delhi, and written by Sidney Hertzberg, its special correspondent in the United States. Mr. Hertzberg analyzes the entire picture and puts its various elements in perspective. The conclusions he suggests are perhaps as valuable for Americans as for Indians. If both Indians and Americans will keep them in mind, relations between the two countries can be increasingly fruitful.

[From the *Hindustan Times*, New Delhi, of June 29 and 30, 1951]

INDIA FOOD AID BILL

(By Sidney Hertzberg)

WASHINGTON—The India Emergency Food Aid Act passed by Congress constitutes the first important piece of official bilateral business between the U. S. A. and India. It is hard to imagine how it could have come at a worse time. In the months during which India's request was under consideration, India's moral influence in the U. S. A., once greater than any other country's, virtually disappeared. When the request was first made, the Communists were on an offensive that carried them deeper into South Korea than they had been since the start of their aggression, and Americans were being faced with growing casualty lists. India, despite Peking's refusal to accept U. N. cease-fire proposals, would not join in the U. N. finding that the Chinese Communists were aggressors. The feeling here grew that India was no longer the disinterested peacemaker but the apologist for aggressors. Increasingly, too, Americans drew a sharp contrast between what they felt was Mr. Nehru's willingness to appease the Chinese Communists and what they regarded as his intransigence in his "cold war" against Pakistan over Kashmir.

All this was complicated by the MacArthur upheaval.

In this atmosphere, a test case in Indo-American relations—more specifically in the American attitude toward India—was bound to be a trial of fire. From the beginning, some observers were ready to assume that the U. S. A. could not pass the test. As early as January 26, one Indian correspondent here reported a "Senate decision" to "shelve" India's request and, after bemoaning this "decision" at length, expressed regret "that America should attempt to use food as a political weapon." At the time this dolorous dispatch was written, President Truman had not yet transmitted India's request to Congress, the necessary bills had not even been introduced and public discussion of the matter had barely begun. What the dispatch illustrated was the predisposition to assume that America would act as its sharpest critics predicted.

FUNCTIONING DEMOCRACY

It could be of the utmost importance for Indo-American relations if India had a rounded picture of how America responded to her first official request for aid. And in drawing this picture, the tendency must be avoided to accept the worst—or the best—in America as representative of America as a whole. The United States of America is a functioning democracy and, though Congress sometimes seems behind the people and sometimes ahead of them, it is fair to assume that how the United States Congress votes is the best test of what America wants. The fact is that Congress met India's request. No record votes were taken in the Senate, but the opposition there was negligible. In the House of Representatives, the final vote was 225 in favor and 82 against, a division of nearly 3 to 1. For purposes of comparison, the final vote in the House adopting the Marshall plan in 1948 was 329 to 74.

Furthermore, looking back on the whole experience now, there was never any serious reason to doubt that the request would be met. There was throughout the question whether it would be a gift or a loan. There was also a question as to whether payment in specified strategic materials would be mandatory. These were the questions on which discussion mainly revolved, and not whether or not India's request—which was for grain "on special and easy terms"—should or should not be met. The questions were resolved in favor of a loan and a provision for repayment in unspecified strategic materials "so far as practicable and possible."

As small evidences that the matter was not to be regarded entirely as a hardheaded business deal, Congress voted to pay ocean freight on relief packages to India and set aside the first \$5,000,000 of interest for educational purposes.

NO POLITICAL CONDITIONS

At no point did any one propose "political conditions" in the sense of trying to force India to change her attitude on international issues. This does not by any means mean there was a lack of outspoken denunciation of Indian attitudes, particularly on China. Nor does it mean a small minority in Congress would have been above extracting political concessions if there were some way of doing it. But they remained a small minority and they had sense enough to know that political concessions were out of the question. They contented themselves with obstruction and in the end simply with voting against the bill.

Again, it should not be assumed that all or most of the 82 Representatives who voted against the bill wanted political concessions or harbored any particular animus toward India. As I have pointed out, there were 74 votes against the Marshall plan. There is a hard core of isolationist Congressmen, hap-

pily a minority, who oppose foreign aid of any kind. Foreign aid, they feel, means high taxes and a threat to the American standard of living. They scorn wide-eyed internationalism and global thinking. Some of them just do not like foreigners, even as some Indians do not. On the other hand, a few Congressmen announced that, though they had opposed the Marshall plan because it was an impractical scheme to save the world, they would support the India bill because it was a practical measure to prevent starvation.

Nor do I think there were any devious motives behind enactment of the bill. I do not think that the primary factor was the hope of buying India's friendship. The United States of America has given away billions of dollars during the last few years and there has been barely a word of thanks from anyone. Americans have pretty much accepted the old adage that it is impossible to be both wealthy and loved. Yet, they know they cannot escape the responsibilities of wealth. Certainly the hope was expressed during the debates that Indians would think better of Americans—or at least would not think of Americans as monsters. And, of course, it was pointed out repeatedly that failure to meet the request would have a disastrous effect on the Indian's opinion of the American.

But throughout the discussion there was also an undertone that failure to meet the request would have an even more disastrous effect on the American's opinion of himself, and here lies the key to the American attitude on this matter. I believe the most important single motive behind American support of India's request was simply the feeling that those who have plenty must share it with those in need. This is not a feeling peculiar to Americans; it is a feeling shared by all civilized people. It is one of the hallmarks of a civilized people.

SPONTANEOUS RESPONSE

It is a feeling that exists in the hearts of people and its existence in the hearts of millions of Americans is what made it a foregone conclusion that India would be helped, despite Korea and Peiping and provocative remarks by Indian spokesmen and the excesses of American extremists. It is a feeling that cannot be created by propaganda and for which no one can take the credit. When India's emergency need was first made known here, spontaneous pressure for congressional action came from all parts of the country and continued until the bill was passed. In the hearings before the House Committee on Foreign Affairs, the only public hearings held, all witnesses favored a gift of grain. Indeed, not a single important American organization opposed it, though none of them support India's policy on Korea.

In addition to the spontaneous reaction, some notable special efforts were made. The State Department presented an extraordinarily effective case for India. Consistent support was voiced by America's most respected newspapers. The New York Times, that paragon of American capitalism and of sedate journalism, printed 17 vigorously worded leaders favoring a gift without conditions of any kind. Religious and labor groups were specially active in directing pressure on Congress and their work was coordinated through the American Emergency Food Committee for India. Within Congress, a small group of Senators and Representatives pushed the bill tirelessly and their work to some extent reflected the years of cultivation of Congressmen by the India League of America. The specific arguments advanced by these groups were telling but essentially irrelevant. Their activity could only help to evoke the basic feeling among Americans that hungry people must be fed. Without this feeling, no arguments would have helped.

REASON FOR DELAY

There remains the question why Congress was so long in reaching a final decision. While the delay caused anxiety all around, fortunately it has not been tragic since Indian ports apparently have been operating at capacity during the past few months handling purchase grain from the United States of America and elsewhere and the loan grain will still be in time to meet shortages in the fall. But it was excruciating to watch a handful of obstructionists in the House thwart the obvious will of the American people.

Proponents of the bill were aware of the fact that the delays would be interpreted in India as unwillingness to help. Friends of India half regretted the fact that the President did not have the power to act with totalitarian speed. However, it is undoubtedly a greater compliment to both India and the United States of America that the matter was subjected to the fullest and frankest public debate, despite the atmosphere of high emotionalism, and that it met the acid test.

Consideration of India's request spanned a full 6 months. Mrs. Vijaya Lakshmi Pandit made the first representations on December 16 last year and, with the President's signature, the bill became law. India sent a formal note to the Secretary of State on February 8. President Truman sent his special message to Congress urging a grant of grain on February 12 and bills were introduced 3 days later. The House Foreign Affairs Committee held hearings from February 20 to 23 and on March 1 voted favorably on a bill providing for a grant of 2,000,000 tons. Then followed a long deadlock which was not broken until April 24 when the House Foreign Affairs Committee, after reconsidering its action, reported out a bill providing for a loan rather than a grant.

Meanwhile on April 20, the Senate Committee on Foreign Relations reported out a bill which would make the grain available on a half-loan half-grant basis. By the end of May, both Chambers had adopted loan bills and there remained only the reconciliation of differences and the President's signature.

CUMBERSOME PROCESS

Of course it can be said that democracy is a cumbersome process, and so it is. However, it does not have to be as cumbersome as all that. The delay cannot be excused on that basis. It is also true that this Congress has been a particularly dilatory one. It is shot through with frustration and political maneuvering. The India food bill is one of the few important pieces of legislation it has passed though it has been in session for almost 6 months. This was a factor of some importance.

Having watched closely the tortuous course of the India food bill, I should give two main reasons for the delay. The first is the blind obstructionism of a small group of violently antiadministration bitter-end isolationists, both Democrat and Republican. The second is the controversy over a loan versus a grant. How these two factors operated may be seen by looking back at the timetable of action and inaction.

The first period ending in the President's message to Congress was devoted to canvassing public and congressional reaction to the request, determining how it should be met, preparing the case and briefing officials. This preliminary period proved to be time well spent because after the bills were introduced things moved quickly. The House Foreign Affairs Committee acted favorably in 2 weeks with only 4 out of 27 members opposed though opposition was expected to be stronger in the House than in the Senate. The bill had powerful bipartisan support and no effective opposition was in sight. At this point most observers felt, with good reason, that the rest was formality.

Then came the long period of almost 2 months during which the delaying factors flourished. As is done with all House bills, the India food bill was sent to the powerful House Rules Committee which controls the channeling of all legislation to the floor of the House. No bill can be considered unless granted a rule by the Rules Committee. But the membership of this committee which is only 12, includes some isolationists who oppose foreign aid. It also included a few men who preferred a loan over a grant. As a result, the House bill, which provided for a grant, simply languished in the Rules Committee.

Meantime, advocates of a loan gathered strength. Their principal argument was that India herself had not asked for a grant. They also argued, sincerely and with some cogency, that the granting of gifts was an unhealthy thing between nations. A loan, they maintained, implied a relationship of equals rather than one of giver and receiver. On the other hand, the administration, in deciding to ask Congress for a grant had argued with great cogency, that credits for foodstuffs were economically unsound because they provided no basis for the creation of income and that the piling up of such credits would weaken India's capacity to service the debts it must incur for its long-range development program which will create income. Administration supporters were loath to recede from this position.

There thus arose something like a war of attrition between defenders of a grant and advocates of a loan, a war in which the non-participating hungry of India were due to be the chief sufferers. The grant approach still seemed to command the support of most Congressmen. Sincere advocates of a loan without strings seemed to be a minority. They were abetted by a group that wanted a loan as a way of extracting war materials from India in payment. But their commanding position was due to the presence of two or three intransigents on the Rules Committee who were against both loan and grant and who were able to prevent the grant bill from reaching the floor of the House. Finally, rather than delay any further in a dispute over method, administration forces gave in. The Senate Foreign Relations Committee, hoping for a compromise, reported its 50-50 bill. The House Foreign Affairs Committee, to placate the autocrats of the Rules Committee, reversed their bill from all-grant to all-loan. This switch provided oratorical ammunition for the obstructionists who, when the loan bill was finally debated, taunted those who were supporting a loan as second best with their own arguments against a loan. However, after the grant and loan advocates joined forces behind a loan no real trouble was encountered except for the flurry of demagoguery about monasite sands.

UNHELPFUL STATEMENTS

I believe that the original bill which provided for grains to India on a grant basis would have been passed had it not been for the House Rules Committee.

This delay gave those who advocated food aid to India on a loan basis an opportunity to gather strength. It also gave the isolationists time to fish for whatever opposition they could arouse by belaboring Mr. Nehru. In spite of this delay, the grant of a 50-50 bill might have passed if it could have been out of the the Rules Committee and if Mr. Nehru had not expressed a preference for a loan. Even after Mr. Nehru's expressed preference for a loan, 32 votes, about one-third, were cast in the Senate against changing the half-loan half-grant provision to all loan.

Mr. Nehru's announcement of his preference for a loan on May 10 was a perplexing development. The grant bill would not only have relieved the current shortage, but also through the use of counterpart funds for basic agricultural improvement, would have

made a substantial contribution to India's program for self-sufficiency in food. For this reason, for the economic reasons advanced by the State Department and for the quite simple reason that the United States of America could afford it, friends of India warmly supported the grant. However, no one here would dispute Mr. Nehru's preference. What was puzzling was the fact that he waited until May 10 to express it. The alternatives must have been known to New Delhi long before then, indeed from the beginning. Had Mr. Nehru expressed his preference earlier, the grant-loan dispute would have been resolved forthwith and the bill would no doubt have passed earlier. Also the administration and the friends of India who were stoically holding the line for a grant would have been saved much unnecessary effort.

Half a dozen times while the bill was under consideration, Indian spokesmen made remarks that complicated the task of its supporters. These remarks were of the kind that added nothing to the clarification of India's position in world affairs, but did give this position special anti-American overtones. It was felt here that they could have been left unsaid without compromising in the least India's integrity.

However, while these remarks encouraged the isolationists in their thesis that India was a Soviet satellite they had no real effect on the situation. Some Congressmen said that, while they disagreed with Mr. Nehru, they admired him for standing by his beliefs. For others, India's repeated warnings to Americans that she is an independent nation are becoming somewhat tiresome, especially in view of the settled conviction here that nobody has any designs on India's sovereignty except the Soviet imperialists.

More worrisome were some of the statements dealing specifically with the food crisis. Until he cleared it up Mr. Nehru's mention of conditions that would barter away India's self-respect was a cause of concern. Mr. Nehru's radio address of May 1 caused the most trouble. It was read in full during the House debate and referred to repeatedly to support the claim that India's food crisis was not as serious as the bill's supporters had made out.

The most startling development, however, was the report from London on June 4 which attributed to Mr. Krishna Menon the happy news that "India will be able to solve her critical food problem whether or not the United States of America sends aid." It was recognized here that Mr. Nehru, in a speech directed to Indians, might have good reason for quieting fears about the food crisis. But Congressmen who know little about internal Indian politics could not understand why Mr. Menon, in London, should take the trouble to announce that the crisis was over. This report came while the bill was in conference committee. It was mentioned when the bill was up for final passage, but luckily by this time the opposition had lost its spirit. Had the report come a week earlier, its effect might have been serious. It would have been extremely embarrassing to have had to examine the political sentiments cherished by India's High Commissioner to the United Kingdom, which made him so anxious to prevent the United States of America from getting any credit for helping India.

UNITED STATES ATTITUDE

The full record of the congressional debates on the food bill, particularly in the House of Representatives, amounts to a handbook of American attitudes toward India. It reveals the broadest possible range, from Gandhi worship to the belief that Indians are a special breed of Communists who believe that the emancipation of cows and monkeys are more important than the welfare of human beings.

Mr. Nehru and his position on the Korean crisis were constantly attacked. Some sound explanations of Mr. Nehru's position were made, but not a single Congressman tried to defend it. Almost every Congressman who spoke for the bill specified that he supported it despite Mr. Nehru. However, this particular attitude by no means implies a settled hostility to India and the Indian people as a whole. The most important generalization that can be made on the basis of these debates is that the United States Congress earnestly, almost pathetically, wants to sustain friendly relations with India.

Of course, "friendly relations" is a phrase that can be utterly meaningless or it can be a euphemism meaning that Mr. B. N. Rau must always vote with Mr. Warren Austin in the U. N. I am sure Americans would not object to such a development after they recovered from the initial shock. But I also suspect they would be a little disappointed in India. What the basis of friendly relations would be was probably best expressed by Representative WALTER H. JUMP, a Republican, whose views on foreign affairs are widely respected. Dr. JUMP was decrying the notion that the United States of America could "buy friendship" through its aid to other countries. He said he was sure India would appreciate whatever the United States of America could do. But that he felt, was not too important. "The real return and recompense to the United States of America is not that the Indians come to us and say 'Thank you, thank you.' The real return to us is that they stay independent. Our American objective is not to secure a quid pro quo in the sense of making India in the least subservient to our country. We are not trying to make satellites as the Kremlin does."

Some of what was said during the House debates will surprise and amuse Indians. Some opponents of the bill roundly denounced the administration for appeasing Mao and declared that Mr. Truman was now trying to appease Mr. Nehru. General MacArthur's speech before Congress, which included an excellent exposition of the rise of an Asian nationalism, was quoted by several Congressmen in support of the bill. The message to Congress from a group of Indian Parliament members was mentioned in support.

MR. COX'S OPPOSITION

The most active participant in the debate was Representative E. E. Cox, of Georgia, an anti-Acheson southern Democrat, of the Rules Committee, who probably bore the major share of responsibility for delaying passage of the bill. Mr. Cox was on his feet constantly, peppering other speakers with questions. Someone had persuaded him that Mr. Nehru was a Communist, and during the first day of the debate Mr. Cox challenged almost every speaker to deny this.

LOAN REPAYMENT

One of the recurring points made throughout the debate was that, on the basis of America's past experience with loans, there was small ground for hope that the loan to India would be repaid. This argument was used mainly by Congressmen who were also opposed to a gift. Senator HERBERT H. LEHMAN of New York, former director-general of UNRRA, made a stirring reply to these fears. He recalled that India had contributed \$30,000,000 to UNRRA though no UNRRA relief was ever sent to India despite her great need. "I conclude by again saying that I know of no people who have a higher regard for their commitments, who are more honorable, who are more sincere, who have a deeper sense of pride and of conscience, than the people of India," Senator LEHMAN said.

Another theme that was repeated throughout the debates was India's need for self-sufficiency in food. It was often mentioned

in a context that implied congressional willingness to give substantial help to a program designed to achieve this end. In the report of the House conferees on the final version of the bill, the following statement appears: "The committee of conference was aware of the needs of India for a program in the field of agriculture that would prevent a recurrence of famines. It also considered India's development programs. Further consideration of India's long- and short-term programs will be studied later this year under the technical assistance program. Similarly a well-balanced mutual aid program for this region will be the subject of intensive congressional interest."

Certainly there is no commitment here, but it establishes Congress' continuing concern with the problem. During the past 6 months of public discussion of the food bill, many Americans have learned a great deal about India's food problems, including the knowledge that the long-term food problem should and can be solved. Now may be the time to get American help to achieve that one basic objective.

Control of Our Rivers a Complex United States Problem—Two Agencies Are Already at Work on It, but the Progress Is Slow

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the Appendix to the RECORD, I am including an article by Mr. Luther Huston, published in the New York Times, of Sunday, July 29, 1951, as follows:

CONTROL OF OUR RIVERS A COMPLEX UNITED STATES PROBLEM—TWO AGENCIES ARE ALREADY AT WORK ON IT, BUT THE PROGRESS IS SLOW

(By Luther Huston)

WASHINGTON, July 28.—When rampaging rivers pour over cities, towns, and farm lands, Congress is inundated promptly by new demands for comprehensive programs and fat appropriations to prevent destructive floods.

The high waters that swept through the Missouri River Basin are ebbing as this week ends, but pressures for a stepped-up flood-control program are mounting in Washington.

The problem of flood control is a complex one, linked with many other phases of the national economy. It is controversial because it touches so intimately the interests of so many regions and so many people.

A COMPLICATED PROBLEM

In all programs of river development there are four basic elements that must be woven into an integrated project. They are navigation, flood control, irrigation, and hydroelectric power. Corollary elements that enter almost every program include such things as atomic-energy installations, stream pollution, drainage, recreation, conservation of water for municipal and industrial uses, preservation of fish and wildlife, reforestation and conservation of timber resources, protection and preservation of industrial

sites and food producing resources and many others.

Flood control and navigation are the responsibility of the Army Corps of Engineers. The river and harbor improvement program dates to 1824 and since then it has been carried on by the Army engineers. In 1936 Congress added flood control to the activities for which the Federal Government assumed responsibility and gave charge of it to the corps.

The Interior Department's Bureau of Reclamation is entrusted with the development and execution of irrigation and hydroelectric programs.

The opportunities for friction and jealousies, for overlapping of projects and for waste in planning and construction where two powerful agencies operate in fields that must be integrated to be effective, are obvious. There is no doubt that such conditions have existed, and situations that appeared to the layman to be unsound, if not ridiculous, have developed. Officials of the engineers and the Reclamation Bureau maintain, however, that considering the scope of the operations the agencies must share, friction and waste are at a minimum.

Congress has authorized about 1,000 flood-control programs and has appropriated, to be expended under the direction of the Army engineers, something like \$2,500,000,000. According to the latest statistics, 275 projects have been completed, some 225 are under construction, and more than 500 of those authorized have not been started.

The Engineer Corps estimates that existing projects are preventing annual damage averaging \$343,000,000 against an average annual loss of \$466,000,000 that still is occurring.

The Reclamation Bureau has completed vast projects in the West and is engaged in building and planning others. These are intended primarily for power and irrigation but virtually all also provide for flood control. The cost of the flood-control installations comes out of the Army engineers' appropriations.

TVA, NO MORE

Congress has set the programs under which the engineers and the Reclamation Bureau carry on their work. It has steadfastly refused, however, to sanction the expanded program of "valley authorities" that is a cherished policy of the Truman administration. Years ago Congress authorized the Tennessee Valley Authority, which has now virtually completed and is operating the most broad-scale project for integrated development of an entire river basin attempted in this country.

President Truman would apply the TVA formula to the Missouri River Valley, the Columbia River Valley and other great river basins, but Congress has refused to go along with him.

The Missouri Valley, scene of the latest flood disasters, turned from the President's valley-authority scheme to the Missouri River Basin Project, known as the Pick-Sloan plan, and developments now under way and contemplated in that area conform to that plan.

THE PICK-SLOAN PLAN

The Pick-Sloan plan consists of a series of proposed engineering works in the ten States of the Missouri Basin designed to curb the destructiveness of the river and develop its productive capacities. The Army and Reclamation Bureau are carrying on the work in cooperation with the Departments of Agriculture and Commerce, the Federal Power Commission and the governments of the ten basin States. These activities are correlated through the Missouri Basin Inter-Agency Committee.

The opposition to the valley-authority program uses various arguments, not the

least of which is that such a system gives the Federal Government vast powers that should belong to states and communities. Valley authorities are administered by Federal appointees and some opponents contend that this constitutes a distasteful relinquishment of State sovereignty.

There is no opposition to flood control and river developments as such and it is generally recognized that such works are properly the function of the Federal Government. Broad-scale flood control would not be possible by any private means and even State governments would find their resources inadequate to carry out the works that would be required. Anyway, Congress has laid down the policy that flood control and related activities pertaining to the Nation's rivers are the function of the Federal Government.

Admittedly some of the projects smack of the grandiose, but in all cases the Reclamation Bureau counters with claims that the benefits far outweigh the costs and points out that all its projects are self-liquidating. The Army will not recommend a project unless its costs can be liquidated in 50 years.

Despite what has been done, Federal officials say the work hardly has started and that new projects and proposals will be forthcoming for years, if not for generations.

The pace of the program will depend upon how generously Congress appropriates funds for the agencies involved.

State Department Propaganda and Publicity Program Shock American People

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Fulton Lewis, Jr., which appeared in the Washington Times-Herald. It points out just what has been going on in the State Department in this matter of publicity and propaganda. When the State Department appropriation bill was before the House last week, I offered an amendment which would have cut the amount allowed for publicity purposes 25 percent. It was a small enough cut, and on a tie vote my amendment was rejected. It is quite likely that the Senate committee considering that appropriation bill will insert the sense of my amendment for the funds used for publicity purposes should be drastically curtailed.

WASHINGTON REPORT

(By Fulton Lewis, Jr.)

It may come as a surprise to you, but as taxpayers you have been investing millions of dollars in an organization that breaks laws, violates all the basic principles of good business operation and is bossed by individuals with no previous experience in handling large numbers of people or huge sums of money.

Edward W. Barrett, assistant secretary of state, and his aide, C. M. Hulten, appeared before the House appropriations committee recently and presented a picture of ineptness, mismanagement and disregard of con-

gressional instructions. They run the Voice of America, successor to Elmer Davis' wartime information.

Barrett and Hulten are angling for something like \$115,000,000 so they can convince the rest of the world that the United States is kindly toward it.

In private business both would be cashed in six months if they wasted stockholders' money the way they toss our tax dollars around.

For instance, despite explicit orders from Congress, they hired 116 additional employees for the management branch of the Voice at a time when an efficiency report labeled the office overstaffed. They wasted \$70,000.

In August the Voice started production on a film, a two-reeler called "U. N. Aids the Republic of Korea." Seven months later the film was still incomplete, despite the expenditure of thousands of dollars and the use of hundreds of people who apparently just shuffled the film from department to department. By the time the so-called propaganda "experts," Barrett and Hulten got through with the war in Korea and moved so fast the two-reeler was obsolete.

The Voice is supposed to "sell" the United States to Russian and iron-curtain country citizens. There is no positive evidence that the Voice ever actually reaches any of these individuals, although there are schemes afoot to put radio propaganda transmitters aboard merchant ships and on remote mountain peaks. The main trouble seems to be that the Russian peasants not only lack radios, but also lack electricity to run them if they were made available.

Actually, broadcasts to iron-curtain citizens are secondary to the Voice. Most of the talking has been to Americans. This baffled House Members, and they quizzed Barrett and Hulten in detail.

They found out that from July 1, 1949, to January 30, 1951, a total of 364 speeches were made in 29 States, including Washington, D. C., by Voice people.

This led Representative JOHN J. ROONEY, New York Democrat, to remark to Barrett: "So far as your problem is concerned, I had no idea that you were in the speech-making business to Americans at a time when there should be a lot of speeches and broadcasting directed to those outside the country and behind the iron curtain."

In all, 114 people took part in propagandizing the United States about the Voice, some speaking more than once. Of course, those on the Federal payroll got paid for their gabbling and most, although Barrett was vague about it, got travel pay while touring the United States to convince citizens that peace is impossible unless we fill the foreign airwaves with gabble.

Besides diverting funds to pay unauthorized help, the Voice managers diverted cash for building projects. Such activities are violations of authorized Government procedures, to say nothing of being contrary to sensible business practices.

Both Barrett and Hulten are full of imaginative plans for the Voice. Yet neither one, according to their own admissions, has any idea what is going on in their agency. They set up regulations and issue orders calling for progress reports on multimillion-dollar construction projects, but field managers simply ignore them. This failed to trouble either Barrett or Hulten.

On the basis of their own testimony, a conservative estimate is that in private business practice Barrett and Hulten would shove a normal corporation into bankruptcy in 6 months. If we really want to fix the Russians, we ought to lend Barrett and Hulten to them. In 6 months the Kremlin propaganda machine would be off the air, and we'd all enjoy the silence.

MacArthur Firing Has Killed Japan's Belief in America

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arnold Burnett, managing editor of the Peoria Journal, appearing in the Journal on Wednesday, July 18, 1951, entitled "MacArthur Firing Has Killed Japan's Belief in America":

MACARTHUR FIRING HAS KILLED JAPAN'S
BELIEF IN AMERICA
(By Arnold Burnett)

TOKYO—The Japanese have different standards, different reactions, from those we occidentals have. They judge things differently.

Douglas MacArthur came very close to being a god to the Japanese. Certainly from their viewpoint he was a man of god-like character and actions.

Because of their tremendous admiration—near-worship—of General MacArthur, American prestige in Japan took a crushing blow when he was summarily removed from his job as supreme commander here by President Truman.

This may seem an out-of-date story, about an event that happened so many months ago that it has nearly faded from people's minds, and certainly has faded from the news picture.

CRUSHING MEMORY

But it has not faded from the minds of the Japanese. It is still the No. 1 topic of conversation here in Japan. It is the absolute evidence, to them, of the tremendous gulf between the West and the East, and of the different standards and ways of life. It is proof of the old Kipling quotation: "East is East, and West is West; and never the twain shall meet."

Americans who lived in Japan before the war, and who returned as soon as the war ended, tell of the tremendous impression the MacArthur discharge had upon the Japanese. And Japanese to whom I have talked ask me how such an unbelievable thing could happen.

Japan—particularly Tokyo—was badly smashed after the war. American pin-point bombing had kept intact the buildings we planned to take over for the occupation, and such places as the Imperial Palace. But the rest of the city was rubble.

IN THE RUINS

There were no street lights. No water. No homes. The Japanese people were starving. They were living in ruins. Disease was rampant. This was a badly beaten nation.

Douglas MacArthur sat in the Dai Ichi Building, aloof, austere. He seldom smiled; he never stopped. He strode grimly along the sidewalk from his car to his office; to his home. He worked day and night. He saw no one except those who could help Japan rebuild itself.

Gradually life returned to the city, and to the nation. The Japanese themselves, under the MacArthur plan, built their new homes; their stores. They produced goods, started factories, tilled the soil. Street lights returned. Streetcars and busses moved along the streets. Automobiles made an appear-

ance. Slowly Japan overcame her terrible problems, and today Tokyo is a modern metropolis, busy, bustling, prosperous.

OF THEMSELVES

The Japanese ran the country. There were military police, of course, but the Japanese police controlled the Japanese people. The Japanese Diet made the laws that governed the Japanese people. The Japanese businesses and factories were owned and operated by Japanese people, with Japanese capital.

And the man under whose wise guidance all this came about, still sat in the Dai Ichi building, as if in an impenetrable fortress; unreachable. The Japanese crowded around the Dai Ichi each day hoping to see him as he strode rapidly from his car to his office, without glancing to right or left.

It wasn't long before the stern, aloof supreme commander took on the aspects of a stern, aloof god in the minds of the Japanese. The kind of god they understand; a god of wisdom and might; a god who helps humans, and punishes humans, but is above human emotions himself.

WALL OF SORROW

I am told that when the Japanese heard that General MacArthur was discharged they were stunned. They gathered around Dai Ichi in a solid wall, and they were very quiet when he left the building and drove away.

In the pre-dawn darkness of the day MacArthur left Japan, there were several million Japanese lining the miles from his home to Haneda airport. There were thousands on the field itself. And when the MacArthurs drove along the streets to the airport, there were tears streaming from the eyes of the people; tears from men as well as women; sobs of sorrow from youngsters.

And when MacArthur turned at the plane door and waved a last goodbye, the Japanese people cried aloud in the grief and fear.

NEVER THE TWAIN

And never again will there be a perfect understanding between the West and East. Never again will the Japanese people let themselves have great faith in a man from the Western World. Never again will they set up a western god, for never again do they want to see a god cast down.

We westerners cannot possibly understand how deeply we have been damaged with the Japanese by the summary dismissal of MacArthur—the unbelievable firing of him like the firing of an insolent clerk—but we can be sure of one thing:

The Japanese are never going to wholly trust us again.

General MacArthur's Boston Speech

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the editorial comment by the Christian Science Monitor on the recent address delivered before the Massachusetts Legislature by General of the Army Douglas MacArthur:

AN AMERICAN SYMBOL

New Englanders have had their opportunity to pay tribute to General MacArthur, and

they understand better than ever why he constitutes a stimulating even revivifying, symbol to great numbers of Americans.

The dignity of his appearance before the Massachusetts Legislature, the restraint of his voice yet the deep earnestness of his utterance—these, combined with his appeals to integrity, individualism, and self-reliance, all struck notes which find a particular echo in New England and have also evoked response from the country at large.

It is as if millions of Americans have missed from public life a quality they instinctively seek in public figures. Here it is epitomized in a man who has worn with singular distinction and achievement the uniform of his country for more than half a century, who exalts the concept of devotion to duty as he sees it, and who extols virtues long associated with American military tradition.

Mayor Hynes could well congratulate the general on "the strong moral and spiritual tone" of his speech. Undoubtedly General MacArthur would agree that citizens individually must form their own judgments as to the wisest, most effective application of their country's resources to the Christian and patriotic purposes he described.

Leaving strictly military themes, his address was a broad exposition of his own political philosophy, a viewpoint which has for some time awaited so eloquent a spokesman. However, they may analyze the content of the address, those who have seen and heard General MacArthur during his visit to Boston sense the feeling of having entertained a great American.

Abelman Hails DA's Crusade To Curb Paid Charity Solicitors

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. HEFFERNAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein an article from the Brooklyn Eagle of July 15, 1951, entitled "Abelman Hails DA's Crusade To Curb Paid Charity Solicitors":

ABELMAN HAILS DA'S CRUSADE TO CURB PAID CHARITY SOLICITORS

District Attorney Miles F. McDonald's recent recommendation that the city investigate the activities of paid charity solicitors was applauded yesterday by Max Abelman, one-time head of the Brooklyn Federation of Jewish Charities.

Abelman pointed to a magazine article, written by him 25 years ago, in which he urged creation of Board of Charity Control.

In the American Hebrew, dated July 30, 1926, Abelman condemned "the evil of new and unnecessary charitable societies," and urged formation of a board, "the duty of which would be to approve the charity and inform the State board of charities and public whether or not the organization is worthy."

"The sooner legislation is adopted to create such a body, the sooner the public will be safeguarded from unscrupulous solicitations," he wrote.

"We cannot be criticized for having too much charity, but we can be and are criticized for having too many self-duplicating charitable organizations."

"Today, even more than in 1926," Abelman, director of public relations at Jewish Hospital, said yesterday, "there is a crying need for a central body."

"McDonald should be firmly upheld in his attempt to combat the nuisance of unnecessary and fraudulent solicitation. The public is to blame in great measure for its failure to donate intelligently. Nation-wide legislation should be passed to meet a situation that is by no means confined to New York City."

Jane Lawrence Makes Bow at Salzburg Fete

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. MANSFIELD. Mr. Speaker, I am happy to call to the attention of the House of Representatives a news story by Howard Taubman in the New York Times of Sunday, July 29, 1951.

In his story, Mr. Taubman brings out the fact that Miss Jane Lawrence, of Bozeman, Mont., made her operatic debut on the opening night of Salzburg's annual and world-famous festival. It is with a sense of personal pleasure that I note that this great event in the life of Miss Lawrence has taken place. It is my hope that from the springboard of the Salzburg festival, Miss Lawrence will continue up the ladder of fame and success and that eventually her abilities will be made use of by the Metropolitan Opera Co. We of Montana are extremely proud of the great success which Miss Lawrence has achieved.

The above-mentioned follows:

AMERICAN IN BOW AT SALZBURG FETE—JANE LAWRENCE, OF BOZEMAN, MONT., MAKES OPERA DEBUT AT FAMOUS MUSIC FESTIVAL

(By Howard Taubman)

SALZBURG, AUSTRIA, July 28—A girl from Bozeman, Mont., made her operatic debut last night in no less glamorous a forum than the opening night of Salzburg's annual and world-famous festival. She was Jane Lawrence, whose previous experience has been in the American musical theater, including Broadway appearances in Oklahoma, Inside U. S. A., and Where's Charley?

Miss Lawrence got the chance to sing at Salzburg when an American friend introduced her to Georg Solti, conductor of Mozart's Idomeneo, which was chosen to open this year's festival here.

Mr. Solti listened to the young woman and took her on despite her inexperience in opera. He was rewarded tonight by promising singing, which, once Miss Lawrence learns poise and repose in this new field, should develop into the work of an artist.

Miss Lawrence had in her favor her stage know-how. She is attractive and knows how to move on the stage. Her good looks would decorate any stage. Her voice has good natural quality. Her trouble tonight was that she was forcing because of tension, and in the difficult arias Mozart allotted to Electra, her role, she tended to be a bit short of breath in crucial moments. If this using up of her resources ahead of time can be corrected, she will amply justify Mr. Solti's and Salzburg's faith in her.

The opening, which took place in the riding school, where Max Reinhardt used to put on his sweeping productions of Goethe's Faust in prewar festivals, assumed gala proportions of the days of a decade and a half ago when Salzburg was the dominant festival

in the world. In spite of topcoat weather, many women in the audience wore summer finery. There were diplomatic and military figures of importance, including many Americans, in the international audience.

It took this city, Mozart's birthplace, a long time to get around to Idomeneo. In fact, it has taken a long time for this opera to get any attention, but this season it also ushered in the Glyndebourne Mozart Festival.

Salzburg's production was on a tremendous scale. Using three levels and the vast breadth of the riding school stage, it employed a huge chorus, ballet, and many extras, and it spread over tremendous areas. No human eye could follow all that was happening on the stage at times, and there were moments when one felt that Josef Gielen, stage director, had been too lavish for the good of the production.

However, Idomeneo needs a lot of help to hold interest on the stage, even though it contains music of singular breadth and nobility. If Salzburg's production erred on the side of being too pretentious, at least it never gave the eye much rest. Musically the performance was first rate. In the role of Itha, there was Hilde Gueden, a soprano, who sings with purity, security, and elegant style. It is said that she has been engaged for next season at the Metropolitan Opera and she should make a big impression on America, for she adds a handsome appearance to her vocal gifts.

The title role was taken by Rudolph Schock, a tenor, who sings with the understanding and feeling of a musician. Richard Foltz, as Idamantes, was the conventional operatic tenor. Kurt Boehme, reported to be a new basso of importance, seemed to be troubled by a cold.

Mr. Solti, an immensely talented young conductor from Hungary, distinguished himself in the pit and it was a joy to hear the Vienna Philharmonic once again.

Caspar Neher designed an impressive set, but his costumes seemed to get out of hand and for ballet in this subject of ancient Greece he provided in one scene silver wigs and long white gloves, making it appear as if the court of Louis XIV had somehow wandered into antique Crete.

Mississippi River Has Many Mysteries

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. LARCADE. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to submit an article from the Scientific American which was published in the New Orleans Item on July 26, 1951, as follows:

RIVER HAS MANY MYSTERIES

Ol' Man River, the Mississippi, is renowned as our biggest and best-known river. Actually it is our most misunderstood river.

No stream in the United States has been the subject of so many persistent misconceptions. Schoolbooks and encyclopedias alike contain a strange mixture of conflicting information about the Mississippi.

It is said to be very muddy. The great load of sediments it carries is supposed to be building up its bed and banks and so require the raising of levees to ever-greater heights.

There is a firmly rooted belief that the Mississippi is steadily building its delta mouths farther and farther out into the

Gulf. Not one of these beliefs, however, is correct.

The colossal proportions of the Mississippi—its 1,244,000 square miles of watershed, equal to 41 percent of the whole United States area; its enormous floods which discharge as much as 2,000,000 cubic feet of water per second and make the river a mile wide and up to 200 feet deep—have ever furnished food for the imagination and for theorizing.

The prime mystery has always been that the Mississippi, an alluvial (soil-washing) river, does not behave at all like other alluvial streams, such as the Yellow River, the Nile, the Euphrates. The sediments carried by those rivers have built their beds and valley lands to ever-higher elevations.

RIVER TOTES A LOAD

Now the Mississippi carries a huge load of sediments. Each year it transports 400,000,000 tons of silt and gravel downstream, about 90 percent of it in the form of fine particles suspended in the water, the rest heavier material that is rolled along the bottom.

Yet, despite that immense wash of soil, the Mississippi has shown no appreciable build-up of its bed or valley lands for thousands of years. Why?

Part of the answer is that the Mississippi's volume of water is so huge that its sediment load is actually relatively light—about one-tenth the amount in the Missouri and the lower Colorado (before the building of the Hoover Dam).

The Yellow River in China carries a vastly heavier load, the weight of the solids suspended in it often exceeds the weight of the water itself.

Thus the Mississippi is a comparatively clear stream. In late September 1936 during a low stage, it flowed water as blue as that of the Danube (which also is blue only during low-water periods).

SOFT, CLEAR WATER

The normal turbidity of the Mississippi is due not to mud, but to minute fragments of mineral matter, mostly sparkling silica grains. A glass of water dipped from the river clears itself quickly. The water is soft and pleasant to drink.

It is popularly supposed that the mouths of the Mississippi are continuously building a delta as other great alluvial rivers do. But the Mississippi is not building out its delta at all. Jetties constructed at its mouths in 1875 have not had to be extended, and the Gulf of Mexico has not become more shallow.

What, then, has become of the billions of tons of sand and silt the river has dumped into the Gulf?

Borings in the Gulf revealed that the earth's crust there has sunk under the weight of the accumulated sediment. The subsidence of the crust began 30,000 to 40,000 years ago when the last glacier started its retreat.

The rivers then flowing into the Gulf unloaded enormous quantities of coarse gravel. Under the weight of this gravel the earth crust in the Gulf has been pressed down and its subsidence accompanied by an uplifting of adjacent coastal lands in the State of Mississippi.

Anyone seeing the Mississippi soon after a flood has subsided cannot fail to notice the new layer of sand that the overflowing river has deposited on the tops of its banks.

The net effect of the deposits has been to create a ridge 12 to 15 feet high along the river on each bank. These natural levees help to account for the fact that the Mississippi's valley lands have experienced no appreciable build-up through the long course of time.

IT IS DEEP, NOT SHALLOW

The presence of the natural levees has misled many people to believe that the river flows on a ridge built up from its own deposits. Actually the Mississippi is a very

deep river. In many places its bottom is below sea level, even as far upstream as 470 miles, where the land is 100 feet above sea level.

Throughout the entire 850 miles between Cairo and Baton Rouge the river's low-water level is all of 30 feet below the adjacent land surface. Consequently, the river must rise at least 30 feet before its water level equals the elevation of the land, not taking into account the additional height of the natural levee.

The fact that flood levels in the Mississippi have risen with time is due solely to the high levees that man has built to keep the river confined during flood. In the course of a century the high-water mark mounted 6 feet at New Orleans, 13 feet at Memphis.

Since 1932 the flood stages have been lowered by artificial cut-offs that have eliminated some of the worst bends and shortened the river about 170 miles. This operation has reduced flood stages three feet at Natchez, 10 feet at Vicksburg, 15 feet at Arkansas City.

Common conception pictures the crest of a great flood as rushing with raging speed down the river. It is true that during a great flood the surface water attains a velocity of nine to 13 feet per second—from three to five times the speed of normal currents. But the crest of the flood as a whole actually moves only half as fast as a small rise in water level during the low-water season.

The explanation is that during the rising stages of a major flood a large volume of water is continually being subtracted from the advance floodwave to fill that part of the channel ahead of it where the water surface still is low.

That's just another way of saying that the Mississippi is a ponderous giant of a river—almost as full of paradoxes as it is of water.

Admiral Behrens, A-Bomb Medical Expert

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. HELLER. Mr. Speaker, the Brooklyn Eagle recently published a most interesting article on Rear Adm. Charles F. Behrens, who is a resident of my district. Admiral Behrens is a radiological expert. Before assuming his present post with the Eastern Sea Frontier, he was director of the Atomic Defense Division of the Navy's Bureau of Medicine and Surgery. He has also edited and contributed to two books on atomic medicine, a field which is of great significance at this time. I commend to the attention of my colleagues this highly interesting article, which reads:

BROOKLYN'S MAN OF THE WEEK—ADMIRAL BEHRENS AN EXPERT ON A-BOMB MEDICAL EFFECTS

(By Leslie Hanscom)

Rear Adm. Charles F. Behrens' quiet estimate of the recent atom bomb tests at Eniwetok contrasts rather pallidly with the frenzied rhetoric of the press reports on the big blast. To the gray-haired medical officer the bomb show was simply "quite impressive."

Observing the spectacle as the Navy's radiological expert, Admiral Behrens was less bowled over than the Congressman who felt himself "at the gates of Hell looking into eternity," thanks to the fact that he knew what was going on. He is as familiar with

the hectic behavior of electrons and neutrons as he is with the gripes of ailing sailors.

An incorrigible researcher, the admiral, who could fill the tweeds of a university professor with the same dignity he now gives to a two-starred naval uniform, learned in the laboratory long before the bomb was invented that atomic energy and radioactivity are exciting stuff to handle.

He still remembers the kick to his imagination delivered by a teacher in Philadelphia's Central High School back in 1910 or 1911 when the teacher suggested that the sun's light and heat might be a result of some kind of radioactivity. Later he was further intrigued by reading another authority's visionary conjecture that "in every breath we draw there is enough energy to run the workshops of the world."

EXPERT ON ATOMIC MEDICINE

Decades of study since then have taught the admiral not to sell the powers of radioactivity short. Today, however, as a recognized expert on atomic medicine, he has some soothing words for those who have taken too seriously the nightmare reports on the lingeringly lethal effects of an atomic explosion.

"The idea that every citizen should go around with a Geiger counter to check on radiation after a bomb burst is something to get away from," he says. "Since radiation was the new and strange element in the bomb's effect, much of the emphasis has been placed there. At times it has been highly overrated."

"The truth about radiation is that you should neither exaggerate it nor forget about it. The chances are that fatalities from radiation would probably add up to only about 15 percent of the total deaths if a bomb should fall on New York City. On the other hand, this would, of course, in a city of this size mean quite a large number of people."

NO PERIL TO RESCUE WORKERS

"The important thing to remember is that there would be virtually no radiological perils for rescue workers. In a fairly high level bomb burst, which is the kind most likely to occur, the really dangerous radioactive effects come at the time of explosion."

"After the burst takes place and the fire ball has formed, a swelling cloud carries the radioactivity some forty or fifty thousand feet upward. The only kind of explosion which can leave behind any important residual effects is the underwater burst such as the one with which the Navy experimented at Bikini. Needless to say, this type of explosion would be extremely difficult for an enemy to duplicate."

The admiral, who lives with his wife, Emma, at 420 Clinton Avenue, was sworn in to his present rank by Vice Adm. Oscar C. Badger, commander of the Eastern Sea Frontier, when he was assigned to duty with this command early in the month. It was a climax to 31 years of service with the Navy.

Admiral Behrens joined the service in 1920 as a medical officer. A fourth-year specialist in radiology at the Medical School of the University of Pennsylvania, the admiral carried his specialty into the service with him. Radiologist in those days, however, meant X-ray man. And, even at that, the young officer discovered that the Navy's demands upon its doctors converted any specialty to a virtual sideline.

JOINED IN MEDICAL RESEARCH

Serving aboard the U. S. S. *Henderson* and the U. S. S. *Relief* and doctoring Uncle Sam's marines on foreign-shore duty in Haiti made life interesting but left little time for the research toward which his scholarly instincts inclined him. Scientific investigation was placed on "a pretty desultory and personal basis."

"Like Westinghouse and du Pont, however," the admiral says, "the Navy has learned that research pays off." From dealing out aspirin to ailing leathernecks the medical officer progressed to the command of the Naval Medical Research Institute. Before he reported here to take up his duties in an office at 90 Church Street he was director of the Atomic Defense Division of the Navy's Bureau of Medicine and Surgery.

He points out that in his particular field of radiology the Army and Navy did much of the pioneer spade-work. As confirmation he displays a book dating from near the turn of the century which treats of the United States Army's use of the X-ray during the Spanish-American War.

TWO BOOKS BY THE ADMIRAL

Two books of the admiral's own for which he has acted as both editor and contributor are *Atomic Medicine and After the A-Bomb*. The works deal, as the titles indicate, with the care of victims injured by radioactive rays and also with the treatment of casualties whose ordinary injuries are complicated by radiation.

His present duty with the Eastern Sea Frontier is the admiral's fourth assignment to the New York area. In 1938 and 1939 he served at the Brooklyn Navy Yard hospital and from 1945 to 1947 he was executive officer at St. Albans Naval Hospital.

Tidelands Oil Bill

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SABATH. Mr. Speaker, last Friday when I called up the rule for the consideration of the so-called "tidelands oil bill," which is a misnomer, I expressed my views upon the bill, calling attention to the fact that it was against the best interest of our national defense and the future of our Nation, and that on three different occasions the Supreme Court has ruled against the claims of individual States as to their rights to these under-the-ocean resources, namely in the cases involving the States of Louisiana, California, and Texas.

I also called attention in my remarks to extracts from the very able presentation on this subject by our former colleague, the Honorable Sam Hobbs, of Alabama, in the Seventy-ninth and Eighty-first Congresses, who was probably more thoroughly posted on this subject than any Member of this House.

In view of the importance of this legislation and my earnest desire to bring home the grave importance of the entire matter, under leave to extend my remarks, I insert a further statement just prepared by our former colleague, Mr. Hobbs, after extremely careful thought and study, and upon his personal request to have it brought to the attention of the membership. The statement follows:

THE FALSE LABEL: "TIDELANDS"

An old crooked lawyer, well versed in what he called "tricks of the trade," was asked by a neophyte what secret had enabled him

to win so many of his cases? The older replied:

"If you have a good case, you don't need a secret; but if you have no case, stay as far away from it as you can, make up a good lie and ride it hard."

We may laugh at the old crook, but is not a great deal of legislation put over by following his rule?

The Communists have certainly been most successful in using his technique by majoring and emphasizing the word "peace" as the bait in every booby trap they have set for the unwary among us.

And many competent legislators who would know better if they stopped to think, have been sucked in by the oft repeated falsehood that the fight that has been raging, at least since 1936, over subocean oil, involves "tidelands."

Tidelands are, of course, those lands laved by the tides as they ebb and flow. They are sometimes under water, sometimes not. The bed of the ocean begins where tidelands end. Mesne low-water mark has fixed the extreme outer edge of anything that could properly be called tidelands.

The Solicitor General of the United States testifying before the House Judiciary Committee on August 29, 1949, made this statement, fully approved by the Attorney General:

"The widespread dissemination of that false assumption has been facilitated by the use of the word 'tidelands.' That term is a verbal trap. Strictly speaking, tidelands constitute the area that is alternately covered and uncovered by the tides—the lands between the high-water mark and the low-water mark. The Supreme Court has often indicated that the individual States own the beds of their inland navigable waters as well as the tidelands. The United States has never challenged that finding. The decision of the Supreme Court in the California case does not cast any doubt upon it. The facts and the law have been misrepresented and grossly misrepresented.

The important thing to bear in mind is that the lands in controversy are not tidelands. They are the submerged coastal lands seaward of the tidelands. They begin at the low-water mark where the tidelands end, and there has never been any decision of the Supreme Court dealing with such submerged coastal lands that held that they belong to the adjacent State.

The States contended otherwise and cited numerous decisions in support of their position. But in the California case it was found, upon examination, that no one of them so held. That was one of the issues before the Supreme Court.

Six times the Supreme Court of our Nation has held that paramount rights in everything relating to national defense, maintenance of armies and navies, navigation, and the general external sovereignty as defined in the *Curtiss-Wright Case* (299 U. S. 304, 315, 317) are vested in the National Government, and that the rights of the constituent States are subject to those rights that the constituent States granted their National Government, both before and in the Constitution of the United States.

Those six cases are: (1) *Pollard's Lessee v. Hagan* (3 Howard 212, 230 (1845)); (2) *The Mariana Flora Case* (11 Wheat. 1, 41); (3) *United States v. California* (332 U. S. 18, 37 (1947)); (4) *Toomer v. Witsell* (334 U. S. 385, 402); (5) *U. S. v. Louisiana* (339 U. S. 699); (6) *U. S. v. Texas* (339 U. S. 707)

JUDGE COMBS' SPEECH

Yet, in spite of all this, the gentleman from Texas [Mr. COMBS] took the floor of the House on June 26, 1950, and made the speech of the year from the standpoint of Texas.

The subject under which his speech appears in the *CONGRESSIONAL RECORD*, volume

96, part 7, page 9209, is the Tidelands decision of the Supreme Court in the Texas case.

He stuck to his subject. More than a dozen times he uses the word "tidelands" to indicate what he claimed to be talking about, and the cases from which he read deal with "tidelands," "beds of all tidewaters," or "soils under tidewaters."

He mentions "land" and "title" just as though he thought the bed of an ocean, sea or gulf was "land," and that there could be no recognized legal right in the absence of "title."

But one of his standing as lawyer and jurist must certainly know that the decision which was his subject, had nothing to do with tidelands, that in the Texas case there was no dispute as to tidelands, and that while no one has title to the air he breathes, nor a grant of the right to use any of it, yet so fixed and well recognized is that right that when one deprives another of that right the law calls it murder!

However, in that speech Judge COMBS has raised other embarrassing questions that clamor for his answer.

In that speech of June 26, 1950, why did Judge COMBS read to his colleagues of the House what he said was a brief excerpt from *Mumford v. Wardwell* in which a comma had been changed to a period, and the closing phrase of the sentence had been entirely left out? Of course, Judge COMBS didn't do it, or know it had been done. Who was his ghost writer?

Who made those vital changes? Why do they still appear in the final bound volume of the *RECORD* a year later, just as he read that alleged quotation to us on June 26, 1950?

Judge COMBS, in the *CONGRESSIONAL RECORD*, volume 96, part 7, page 9210, is quoted as having said:

"I will read brief excerpts from three decisions of the Supreme Court of the United States to illustrate the uniform holding

"In one early case, *Mumford v. Wardwell* (6 Wall. 423, 436), handed down in 1867, it was held: 'The settled rule of law in this Court is that the shores of navigable waters and the soils under the same in the Original States were not granted by the Constitution to the United States, but were reserved to the several States, and that the new States since admitted have the same rights sovereignty, and jurisdiction in that behalf as the Original States possess within their respective borders. When the Revolution took place the people of each State became themselves sovereign, and in that character hold the absolute right to all their navigable waters and the soils under them.'"

That purports to be a verbatim quotation. But the period there shown is not in the decision, nor in the reports thereof, which quote it correctly; but in the speech of the gentleman from Texas, before the middle of the line had been reached, that awful period appears: Where the unanimous decision had a comma, followed by the phrase the Judges wrote to finish their sentence before they put a period at the end of the finished sentence, the Judges' comma and concluding phrase has been completely deleted, and that awful, tell-tale period substituted. And what was the concluding phrase that someone was so anxious to get rid of that misrepresentation was committed for the nefarious purpose? It was just this: "Subject only to the rights since surrendered by the Constitution."

So we see, the forgery converted the usual and undisputed statement of sound law into the kind of bunk needed to give color of support to an utterly unsound and untenable contention.

Who was the ghost writer?

Who misled Judge COMBS by concealing from him the misrepresentation?

Can he mislead you?

Look! No Brakes on Price Control**EXTENSION OF REMARKS
OF****HON. WILLIAM J. GREEN, JR.**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of July 30, 1951:

LOOK! NO BRAKES ON PRICE CONTROL

The new 1951 model price-control bill is on display in Washington, D. C.

It neither shines nor gleams. For a new model, it is a shabby affair indeed. But it has passed the Senate, is scheduled to glide through the House of Representatives today. With the present control law expiring Tuesday midnight, President Truman is expected to sign the measure, since he is left no other real choice.

So, this price-control bill is it. As turned out by the Senate-House conference committee, it is a slightly better measure than either of the separate bills produced by the two branches of Congress, which the conference committee had to reconcile. Senator SPARKMAN says it can be lived with.

In our opinion, however, this bill will not even hold the line on prices, let alone roll any prices back. By its very terms it means higher prices on many things, and that can only mean more inflation.

As it stands, the new measure bans all roll-backs on beef (two more were planned); it kills the administration plan for livestock slaughter quotas; it relaxes credit restrictions on many items; it permits another increase in rents, to 20 percent over the figure of June 30, 1947, which means at least another 5-percent rise across the board. Worst of all, it provides a loophole for boosting nonfarm prices which Economic Stabilizer Eric Johnston calls a piece of built-in inflation.

Thus this 1951-model price control bill might be compared to a 1951-model automobile which was equipped with obsolete and faulty brakes.

A day of reckoning is coming. The consumers of America are going to render their verdict on this legislation.

First test will be coming up on Labor Day. That is the day when the Treasury opens up its new campaigns to sell defense bonds. That campaign will run for several months, and before it is over the effects of this new price-control legislation will be felt by the general public.

That will be the day of reckoning.

Today most defense bonds are being bought by the small savers, people with modest incomes. An estimated 85,000,000 Americans hold E-bonds. The Wall Street Journal reports that "Treasury officials say big money men are putting their money into things like real estate and stocks, which are supposed to go up in value as inflation gnaws away at the dollar."

A lot of the "little money men"—the consumers who will be hardest hit if this new price-control bill doesn't work—are going to raise a lot of questions.

The cartoon on this page today tells the story of the decline in the purchasing power of the dollar.

That decline is felt in the pocketbook of every housewife in America. It is measured by the fact that food which cost \$5 in 1939 today costs nearly \$12. It is measured in the hardship visited upon the many Americans with fixed incomes.

So, if the new price-control bill kicks prices still higher, leaves people with less income than ever, so that they buy fewer defense bonds than before—Congress will have to shoulder the blame.

As the American people have proved over and over, they will buy defense bonds, both for investment and for patriotism. They will buy plenty more—if this price-control bill doesn't wipe out their money for savings.

In drafting this bill, from start to finish, Congress remembered the special interests, and forgot the consumers. The consumers are not going to forget Congress.

**Termination of the State of War With
Germany****EXTENSION OF REMARKS
OF****HON. SIDNEY A. FINE**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. FINE. Mr. Speaker, the joint resolution before us today seeking to terminate the state of war between the United States and the Government of Germany does not disturb the supreme authority of the allied governments in Germany. We are assured that our action today in no way affects our status in Germany or any of the rights of the United States and its citizens. Our vote is thus limited to a termination of the legal state of war with Germany.

With my affirmative vote goes my prayer that this may be the end of an era of wanton destruction of human beings. Nazism, in my opinion, is just as great a menace to world peace and to our democratic institutions as communism. I abhor them both. In waging our campaign against communism we must not fail to stamp out once and for all every shred of both nazism and fascism wherever it rears its ugly head, whether it be in Germany or any other nation we are now befriending.

The atrocities of Buchenwald, Belsen, Dauchau, and other murder camps must always be a reminder of the danger still lurking unless the proper steps are taken to keep those really guilty from the control of the German Government. I am in full accord with High Commissioner McCloy's statement of the United States policy in this regard published last April:

It is the policy of the United States to support the development of a democratic Germany and to aid all democratic elements in Germany to safeguard against the revival of nazism or the imposition of communism. * * *

Equally sinister is the threat from other totalitarian groups composed in large part of former Nazi activists. In certain areas of Germany, small groups are again trying to spread the evil doctrines, the old slogans and tactics, which brought Germany to ruin and will do so again if they should ever prevail. The German people, through their democratic governments, must be aware of these developments and be prepared to deal effectively with them. The German people cannot ever again permit such forces to gain control in their country, nor will the democratic world permit it.

Mr. Speaker, but for the fact that Russia's expansion policies have become a major threat to our civilization we might have dealt differently with the German problem. However, with its full realization we must take the risk of reestablishing Germany, while at the same time maintaining the necessary safeguards against the resurgence of nazism. With this in mind, I am going to support the resolution.

Hon. Ed Gossett, of Texas**EXTENSION OF REMARKS
OF****HON. LOUIS E. GRAHAM**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. GRAHAM. Mr. Speaker, tomorrow our colleague, the Honorable Ed Gossett, of the Thirteenth District of Texas, will depart from our midst, having resigned as a Member.

Mr. Gossett and I entered Congress on the same day, January 3, 1939, and our courses have run parallel almost since that date.

As a member of the Subcommittee No. 1 of the Committee on the Judiciary having to do with much of the legislation on immigration and naturalization, Mr. Gossett and I have sat side by side at the hearing tables and during those years I have come to value his worth not only to the people of his district but to the country at large.

Few men, in my judgment, have gained a wider knowledge of the immigration laws and problems attendant thereto, than has Mr. Gossett. On a number of occasions he has gone abroad and studied, at first hand, the conditions that there exist and at other times he has visited the ports of entry at almost all the large cities in the United States, and from all these visits and study he has been able to give to the committee the full fruition of his wisdom and experience.

Truthfully, he will be sorely missed and his place will be exceedingly hard to fill. He has frankly stated that he has been compelled to leave the Congress in order that he might acquire sufficient financial means to educate his family. In this we wish him every success.

In conclusion, may I say that as one of the opposite political faith, and coming from a widely separated area, I know of no man in my experience who has given a greater and a more unselfish and devoted service to his country than Ed Gossett. He is a genuine American, ever alert to uphold and sustain the principles of our Government and fearless and outspoken in the defense of America and its institutions.

In departing from public life, this Congress and this Nation have lost a valued, true, and experienced public servant. I am sure that the good wishes of every Member of the Congress goes with him as he enters upon his new duties.

NATO Needs a Supreme Political Authority

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anne O'Hare McCormick in the New York Times:

NATO NEEDS A SUPREME POLITICAL AUTHORITY
(By Anne O'Hare McCormick)

The five-nation agreement on plans for a European army is rightly regarded as a political event of the highest importance. Militarily, the proposed international force is only framework; all the vital details have to be filled in. So many other decisions have to be made to turn this revolutionary concept into reality—on the sharply controversial question of the size of the basic units, for instance—that it looks at this point rather like "the airy fabric of a dream." As Hanson Baldwin observed in this newspaper yesterday, the attempt to organize such an army in the present period of emergency might interpose another echelon of command in the already complicated apparatus of NATO and thus delay and even obstruct the development of military strength in Western Europe.

The arguments in favor of the enterprise are predominantly political. The European army is the military counterpart of the Schuman plan, and the obstacles to be overcome in merging national contingents into a single permanent army under a European defense commissioner are even more staggering than the difficulties of pooling iron and steel under a supranational authority.

Nevertheless the French and the Germans have doggedly persevered in both efforts. That they have succeeded in reaching accord in principle on the military as well as the economic plan proves that they are moved less by a dream than by very practical compulsions. If the day's news were not so crowded with excursions and alarms, we should recognize the signs of Europe's obstinate push toward unity as the extraordinary phenomenon that it is.

PROGRESS DESPITE THE SNAGS

It is extraordinary because it keeps on in spite of snags at every turn. The facts of life and the nature of nations would seem to make either a Schuman plan or a European army impossible of achievement. A Franco-German partnership in the crucial fields covered by these projects appears especially fantastic. Perhaps it is impossible; no one can be sure that these bold schemes will ever be worked out. Yet to the French, judging by the current political crisis, getting the Germans into a European system is apparently more important than getting their own party leaders to form a national government. And West Germany, at least under the present leadership, is driven by the same forces to go along with the French.

The United States, not long ago pressing for a German army, has switched to the French idea of a European army in which German troops are incorporated. This is one reason why the Germans switched in turn from indifference to interest and participation in the French plan. But it does not wholly account for General Eisenhower's approval of the project. He must be more aware than anybody else of the complications likely to arise if another organization

were formed within the wider frame of NATO. As outlined, the European army would be part of NATO and under his over-all command; but it is clear, as Mr. Baldwin suggested, that organizing a defense force on a new basis at this time might further slow up the pace of rearmament, already dangerously retarded by a confusion of councils and squabbles over the allocation of authority.

However, it is just because General Eisenhower has learned by experience the difficulties on the other side that he came out so strongly for European unification in his Fourth of July speech in London. Dealing separately with 12 different nations is harassing enough to lend attractiveness to the idea of negotiating with one authority even for five nations. If such an authority could be set up, it would save rather than waste time.

THE POWER OF DECISION

The need for a unified political authority over the military high command is not filled by the Atlantic Council, which can do no more than recommend—and unanimously at that—to each of the 12 governments it represents. In the Second World War Roosevelt and Churchill had the supreme power of decision which no one exercises now and which must somehow be recreated if all political as well as military responsibility is not to devolve on the military commander. Eisenhower's plea was for political unification. He favors the Schuman plan, the European army, the OEEG, and every other scheme for integration because they lead toward political unity.

The Defense Minister of the Netherlands, Cornelius Staf, in an interview this week, went so far as to say that NATO was dying for lack of a governmental body that would meet at frequent intervals with the supreme commander to coordinate plans, exchange information, and agree on common policies. The reason the Dutch are unwilling to join the five nations which have agreed on a European army is that it does not include Britain. Foreign Minister Dirk Stikker, who is also president of the Council of Europe, declared in a recent speech that a European union without Britain is not viable. It is becoming increasingly doubtful, when it comes to that, if the Atlantic defense system can be as effective as it must be unless there is closer coordination of policy not only within Europe and between Britain and the continent, but between Europe and the United States. The mutual security program is not enough unless it is directed by and to common purposes, clearly understood and supported by the participants. If Europe is forced toward unity almost against its will, so is the whole free world.

Seaway Opposition Takes Narrow View

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. BLATNIK. Mr. Speaker, under leave granted me, I wish to include in the RECORD the following editorial from the Escanaba Press, Escanaba, Mich., which appeared July 19 during the debate on the St. Lawrence seaway bill in executive sessions of the House Public Works Committee. The committee's action on Thursday, July 26, in tabling this bill makes this editorial most timely.

OPPOSITION TO SEAWAY STILL POWERFUL, TEST VOTE REVEALS

Indicative of the opposition still prevailing in Congress to the St. Lawrence seaway project is the result of a vote by the House Public Works Committee Tuesday on a motion to table the power and navigation project bill. The committee voted 14 to 13 against tabling the bill.

The proponents of the seaway concede that powerful opposition is coming from areas not directly served by the proposed project. These forces have effectively bottled up the St. Lawrence seaway project year after year and it appears now that they may be successful again, despite the urgent pleas of straight-thinking Americans who recognize the importance of this project.

The bill was kept alive in the initial vote in committee by the narrowest margin. Congressmen from areas not directly served by the seaway project have consistently taken a narrow and selfish view, without realizing the value of this project from a standpoint of national defense.

Middle western Congressmen, unfortunately, may have to adopt new tactics to force a change in the voting habits of many of their colleagues from other areas on the seaway issue. They may have to refuse support for any local projects and governmental programs in areas now opposing the seaway. It may take some pressures of this kind to break the congressional jam that perennially balks action on the St. Lawrence water development project.

Neglected Pilot Knob Battle Site Suggested as National Monument

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an article taken from the St. Louis Post-Dispatch on July 23, which is entitled "Neglected Pilot Knob Battle Site Suggested as National Monument".

NEGLECTED PILOT KNOB BATTLE SITE SUGGESTED AS NATIONAL MONUMENT—NOW UNDER FOREST SERVICE WHICH HAS NO FUNDS FOR MAINTENANCE—HISTORICAL IMPORTANCE OF AREA

(By J. Loyd Huett)

IRONTON, Mo.—Fifteen hundred unknown Civil War heroes lie buried in one weed-choked field at Old Fort Davidson, near here.

They were killed within a few hours in the battle of Pilot Knob September 27, 1864, were dumped without ceremony into the rifle pits surrounding the fort, and covered with the dirt from the embankments behind which many of them fought and died.

Though these men fought under different flags, and wore different uniforms, they were all true Americans fighting in the defense of their personal ideals of democratic government of a free people. In death those men were united in a common grave, as the Nation was more firmly united by the Civil War in which they fought.

Yet, despite the importance of the battle of Pilot Knob to the course of the Civil War in Missouri, not even a simple gravestone marks their burial place in the weed-choked field just outside the earthen fortification of the old fort.

It has been proposed that Fort Davidson be named a national monument and transferred to the National Park Service for proper care.

BATTLE OF PILOT KNOB

In the battle of Pilot Knob, Brig. Gen. Thomas Ewing, Jr., commanded about 1,500 Union soldiers, based in Fort Davidson.

Maj. Gen. Sterling Price, of the Confederate Army, with a force of approximately 12,000 men, succeeded in cutting off all reinforcements from the fort and launched an attack on the Union forces.

The Confederates attacked from Shepherd Mountain, just across the valley to the south, intent on overrunning and capturing Fort Davidson and the Union forces within it by sheer weight of superior numbers.

The Confederates were stopped, however, at the deep moat or ditch which completely surrounded the earthen embankments of the fort. They had light ladders to be thrown across the moat as bridges. But the ladders were found to be too short, and under the rifle fire from the fort the Confederates were forced to retire, leaving almost half of their attacking force dead or wounded.

General Ewing later estimated that approximately one-fourth of his Union force were casualties in the battle.

The Confederates, confident of being able to take the fort the following day, rested and reorganized during the night. General Ewing, who realized that his small force could not possibly repel another heavy charge by the Confederates, decided to abandon the fort during the night.

The Union forces muffled the hooves of their horses and the wheels of their vehicles by wrapping them with burlap sacks and blankets. They piled all equipment which they were unable to take with them on and around the powder magazine within the fort. Then, lighting a long fuse to the magazine, timed to explode the ammunition several hours after their retreat, they abandoned the fort and escaped over the road leading to Potosi.

On the following morning when General Price's Confederates approached the fort, nothing remained for them to do except bury the hundreds of Union and Confederate dead.

The fate of Missouri in the Civil War was probably determined in this battle. Though the Union forces lost the battle, the Confederates were never able to regain the initiative and were soon forced to retire, except for scattered bands of guerrillas.

Yet those brave men who fought so savagely on both sides at Fort Davidson lie in wholly unmarked common graves, unhonored and almost forgotten.

The exact location of the mass graves is not now known, though the locations of the rifle pit graves could probably be determined from Government maps of the Fort Davidson establishment of that time.

The fields around Fort Davidson, where the rifle pit graves are believed to be, were for many years under cultivation. They are now so overgrown with weeds and coarse grass that walking through them is difficult.

The earthen embankments of the fort proper have undergone surprisingly little change since their final abandonment as a military post following the Civil War. The entire area is overgrown with brush and weeds, and a grove of trees has sprung up within the fort and along the embankments and the moat surrounding it.

Yet erosion has brought little damage to the earthen embankments and the moats just outside. Even the crater caused by the explosion of the powder magazine is still plainly visible.

On a recent week-day visit to Fort Davidson, during which I spent about an hour at the fort, a total of five automobiles stopped and their occupants walked over the site, taking pictures and discussing the battle of Pilot Knob.

Nearby residents said hundreds of automobiles visit Fort Davidson each week, despite its neglected state.

This historic site is now the property of the United States Forest Service, and a part of Clark National Forest.

It is not set apart by law as a historic shrine, but is simply a part of the forest cropland.

As a matter of administrative policy, however, largely on responsibility of the forest supervisor who administers the Clark National Forest, a two-strand barbed wire fence encloses the earthworks and the adjoining fields.

Cooperating with the Forest Service, the Missouri State Highway Department has erected a board sign at the entrance to the fort near Highway 21, giving brief comment on the battle.

The Missouri Conservation Commission has quite recently planted a multiflora rose hedge to succeed the barbed-wire fence. The hedge is still quite small and will not become an effective fence for several years. The Missouri Highway Department also soded the eroding parts of the embankments with grass several years ago.

Forest Supervisor Byron Groesbeck, who is in charge of the Clark National Forest, says there is no appropriation for maintenance and improvement of such sites as Fort Davidson.

Groesbeck stated that as a part of the national forest, this historic site cannot be given the care and attention it deserves.

The tract of land on which Fort Davidson is situated in the early part of this century fell into the hands of Col. Thomas Ewing, son of General Ewing. In 1938 Colonel Ewing gave the 40 acres to the Forest Service with stipulations that the tract should never pass from Government ownership and reserving the right to erect a monument at the site.

Transfer to the National Park Service would apparently fall within these stipulations. Some Missouri conservation leaders have expressed doubts as to the Park Service being willing to accept the responsibility. However, there is a general consensus among those interested that transfer to the Park Service would be the best solution.

One of these persons, August P. Bellmann, manager of the arboretum at Gray Summit, writes:

"I am heartily in agreement with [the] proposal to make Fort Davidson a national monument."

Terminating the State of War Between the United States and the Government of Germany

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 27, 1951

Mr. VURSELL. Mr. Speaker, I am glad to support this resolution which ends the state of war declared in December 1941 against all of Germany, not a part of it. This resolution passed at this particular time, you will note, embodies all of Germany which will be helpful to the West German Government and the other free nations who pursue the hope that Russia can eventually be pushed out of East Germany uniting the German Government.

Russia, in fact, signed the Potsdam agreement which provided for the unification of Germany through a peace treaty later to be agreed upon. From that date to the present time, Russia has made it plain that she has had no intention of living up to such a treaty agreement and that she intends to keep the vast German territory she now occupies as a western extension of Russian power.

This move on the part of Congress in its declaration that we are no longer technically at war with the German Government will strengthen German ties with the western Atlantic states, will give her greater freedom of trade with the other nations of the world, greater responsibility in Western Europe, and should increase her industrial and economic rehabilitation and development.

Mr. Speaker, this move will aid the economic and military recovery of all Europe, because Germany with its vast deposits of coal and iron, and because of the inventive genius, the skill and craftsmanship of its people is the hub of the industrial development and recovery of all of Western Europe. Western Germany is absolutely necessary to the defense of Western Europe.

This resolution will seek to undo the great mistake made by President Roosevelt and Secretary of the Treasury Morgenthau when they decided on the unconditional surrender of Germany. Decided that Germany should not be allowed in the future to develop her industries, but be transformed into an agricultural state.

This decision meant the absolute destruction of nearly all of the industries of Germany before we would consider making peace with that nation. You will recall Morgenthau sold the idea to President Truman that in the future Germany should be confined to an agricultural state, his determination for its industrial destruction was so great. Had it not been for that policy, we could have made peace with Germany months earlier and would not have destroyed her country to the point where it has cost the American taxpayers many billions of dollars necessary to furnish food to prevent her people from starving, and billions to rebuild her industrial plants.

We now find Russia so threatens Western Europe that we need a strong Germany today, and a Germany that is willing to join with the Atlantic Pact nations and the United States in fighting against any attack on Western Europe in the future.

Mr. Speaker, it is a sad commentary, but I think it should be noted that due largely to the Russian propaganda during the war when she was supposed to be our ally at the treaties of Yalta and Potsdam our representatives went as far as they possibly could for the ultimate and continued destruction of Germany and on the other hand through appeasement helped to build Russia up in Eastern Europe and in Asia, making it possible for her today to threaten Western Europe, make war on Korea, engulf China, and threaten the world.

It is to be hoped that as the German people become more powerful, as they

will, that they will align their economic and military strength with the people of Western Europe and the United States, and that ultimately the Russian power will be driven out of East Germany unifying finally the German Nation.

Mr. Speaker, for several years past, many of us in the Congress have urged this administration and the United Nations to admit Spain into the western defense orbit. The Communists and left wingers in this country, England, France, and Italy have steadfastly opposed it. It is encouraging to note that the officials of our Government have recently been taking steps toward seeking the cooperation of Spain in the plan now being developed for the defense of Western Europe. Such action should have been taken years ago, for both Spain and Germany can make a great contribution to the defense of Western Europe.

This resolution ending the state of war with Germany should, in my opinion, receive the unanimous vote of the Members of the House. Let us give the German people a chance to help themselves, Western Europe, and the world in its fight against communism.

Road to Recovery Rugged for Kansas City Flood Victims

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. LARCADE. Mr. Speaker, an article published in the Sunday Washington Star of July 29, 1951, was of special interest to me, and the description given by the author, Mr. W. H. Shippen, of the great destruction and suffering and agony of rehabilitation after a major flood reminds me of the great catastrophes that recur in Louisiana from time to time.

Mr. Speaker, thinking this article would be of interest to Members of the Congress I am, under unanimous consent, including it in the Appendix of the RECORD. The article follows:

ROAD TO RECOVERY IS RUGGED FOR (KANSAS CITY) FLOOD VICTIMS
(By W. H. Shippen)

KANSAS CITY, KANS., July 28.—The people of the flood-stricken lowlands have tackled the long road back, but the grade is too steep for many to make without prompt and effective assistance.

The overwhelming nature of the tragedy becomes more apparent daily as farmers and river-bank dwellers straggle back to their former homes through debris and the all-pervading muck now turning to dust.

A breath of this dust is difficult to forget. It carries a suggestion of pestilence. But thousands here today were breathing the tainted air and drinking water from questionable sources while they toil under a blazing sun to salvage what they can.

Federal officials at the recent emergency conference in Kansas City, Mo., gave assurances that no epidemic will develop. Those working in the flooded sections, however, are

far less optimistic. Efforts to get clean drinking water to thousands of people scattered through the mud-blighted regions are only partly effective.

HOG SLAIN IN STREET

The destitute are loath inclined to be fussy about sanitation facilities. Only one man looked up from his work today as a huge, muddy hog staggered across the street in front of our police car and fell into the gutter. The thirst-crazed animal began to choke down the slime.

A young Negro ran over and poured some water from his canteen on the pig's nose. Then he found an ax and put the animal out of its misery. The pig was one of thousands of animals which had escaped from the stock yards or drowned there.

The colossal destruction of food is everywhere apparent along the Kansas River in the factory towns of Armourdale and Argentine.

Grain and meat ruined in storage is matched by fields now deep in mud or sand. Stands of corn, sorghum and wheat are turning yellow in areas better drained than those which took the brunt of the wild currents.

Another problem with grave implications to the national economy is that faced by the railroads. The Kansas City's are served by a dozen rail lines, several with transcontinental connections.

RAIL LINES SLOWED

Washed-out bridges, inundated roadbeds and damage to more than 87,000 pieces of rolling stock have stalled some lines and slowed others to a fraction of normal capacities.

The billion-dollar flood is just too big for the average man. You can see it in his face. The flooded areas of the cities' housed laborers and others in the low-income brackets.

The residents have big families and debts bigger still.

Red Cross workers estimate the average head of a household can raise about \$150 in a pinch. There is virtually no insurance for flood damage in the valleys.

During early stages of the flood, even those who were losing everything shared the excitement and a sense of mutual helpfulness with their neighbors. Those whose homes were spared opened their doors to the less fortunate.

It was not unusual to see 25 or 30 children under one small roof, mothered by volunteers who bathed and fed them and told them bedtime stories. But as the days slipped by these tasks became too heavy for persons with other responsibilities.

The result has been that the Red Cross today is receiving as many new requests for help as it did in the first days of the flood.

The Red Cross moved in immediately with grocery orders, emergency shelter, and medical aid.

Assistance is coming much slower from the various Federal departments concerned with the area. They have to make detailed surveys, reports, and follow procedures which seem incredibly slow to those who are hungry and destitute.

People here are usually stubbornly reluctant to ask for help from any source. Rescue workers find them digging away at the mud and climbing through their wrecked homes and places of business despite the red "condemned" placards.

Many structures are still collapsing because of undermined foundations, broken walls and the heavy deposits of silt reaching up to third stories in the lowest sections. The fact that the water system is still out of commission along the rivers hampers rehabilitation.

SICKENING ODOR OF DECAY

One focal point of damage lies in Armourdale, where the rampaging Kansas sent 26 to 30 feet of water down the length of Kan-

sas Avenue. Crushed buildings and tangled debris in the wake of the torrent appear to have been swept by a hurricane.

A nauseating odor of decay clings to the river valley. World War II veterans find it harder to take than the sweetish scent which permeated bombed-out cities like Berlin, Tokyo, or Manila.

Yet the work goes on around the clock. Bulldozers nudge through the muck, manned by operators who breathe through moist handkerchiefs.

Rescue workers here deplore the fact that no road blocks were established in the early stages. Trucks and automobiles, many driven by sightseers, jammed the streets to such an extent that ambulances and emergency vehicles were held up for hours.

Aid came first from the Red Cross, which mobilized a small army of volunteers under direction of trained disaster relief personnel drawn from many cities.

Typical of the leadership was that supplied by chairman John Ziegelmeyer of the Wyandotte County chapter of the Red Cross. The 33-year-old attorney worked for the first 4 days with only a few hours of sleep snatched in automobiles and motor boats.

When the main channel of the Kansas topped the levees and raced through Armourdale, Mr. Ziegelmeyer and a fellow volunteer, Ed Haren, a florist, embarked in a motor boat and cut trolley wires which were damming the debris along the street.

The volunteers remained on the alert beside radios to get news of impending levee breaks and spread an alarm ahead of the advancing waters. The police department supplied Mr. Ziegelmeyer with a radio-patrol car and an emergency badge.

Neither man had any way of knowing, until they cut the first wire, if the current was still on. They chopped through the roof of a three-story building and hoisted a cripple to safety with the aid of ropes.

He and his fellow workers are known by their first names to thousands of flood sufferers in the area. Traffic officers make a special effort to speed the emergency vehicles through streets still clogged with debris or partly blocked by oil-storage tanks unseated by the flood.

In the untouched uplands of Kansas City, Kans., many public schools have been turned over to the Red Cross.

The morale problem is building up. Thousands of displaced persons have returned to their former homes only in recent days. The full extent of the disaster has been impressed upon them.

OTHER FOLKS HARD HIT

Many elderly persons obviously are overwhelmed. They lack the money, energy, and inclination to make a fresh start under the threat of the rivers. Many farmers in the outlying districts are talking about pulling out for good.

The long-range plans of a score of Federal agencies are slow in getting under way. In the distressed sections people have answered so many questions and filled out so many reports they are beginning to say that they can't eat a Federal survey, or find shelter beneath one.

One of the first aims of the Government is to get the transportation system back in operation, through the extension of credit and the release of scarce materials. Measures also are being taken, through inoculations and the distribution of fresh water, to head off the possibility of an epidemic.

There are relatively few mosquitoes in the area. Too, the water supply on the high ground remains uncontaminated, and the residents of these sections are in a good position to help less fortunate neighbors.

SIXTY DAYS NEEDED FOR YARDS

Federal experts said the stockyards probably can be put back in operation in the next 60 days. It probably will take much

longer however, to restore normal rail service through the key cities here.

The over-all task of controlling the rebellious Missouri throughout its 530,000,000 square miles of watershed is now one-fourth complete. The major responsibility rests with the Army Corps of Engineers, who are building reservoirs, levees and flood walls, while the Reclamation Bureau of the Interior Department constructs small dams primarily for irrigation purposes.

Sentiment in the 10 States lying partly or wholly in the Missouri Valley favors the plan worked out by the Engineers and the Interior Department.

STORAGE RESERVOIRS EFFECTIVE

The storage reservoirs already built performed according to plan. All of them held back flood waters, but the difficulty was that the heaviest rains fell below the dams.

In some quarters, including CIO unions and small farm groups, there is the belief that the joint plan is wasteful because authority is divided. They continue to insist on some independent Federal agency like the Tennessee Valley Authority.

It seemed likely, however, that the Nation's costliest flood will override conflicting opinions and speed measures for the conservation of a river valley embracing one-sixth of the land area of the United States.

People hardest hit were unanimous in this opinion.

"We've got to do something—even if it's wrong."

Italian Peace Treaty of 1947

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. ADDONIZIO. Mr. Speaker, there is growing realization of the need for reconsideration or abrogation of the whole unwise Italian Peace Treaty of 1947, which violated every principle of the Atlantic Charter and is a contradiction of the North Atlantic Treaty and the organization which has been brought into existence for the defense of Western Europe. I introduced earlier in this session House Joint Resolution 224, which calls for the necessary action to relieve Italy of her liabilities of 1947 and thereby allow her to take an effective part in the defense of the liberties of Western Europe and of the other democratic nations of the world. I am pleased that the Board of Commissioners of Newark in the following stirring resolution has endorsed this movement, and I trust the House Foreign Affairs Committee will recognize the strong public sentiment in favor thereof by scheduling House Joint Resolution 224 and similar measures for early hearings. The resolution reads as follows:

Whereas the Italian Peace Treaty is not consistent with the international position assumed by Italy and with the readiness with which the people of Italy have embraced the cause of liberty and democracy; and

Whereas the moral significance of the said treaty places the Republic of Italy in a position of inferiority to other free democracies and peoples of Europe; and

Whereas the clauses of the treaty impede Italy in the full performance of the defensive

and economical potentialities of which it is capable under the North Atlantic Pact, to which Italy eagerly, freely and sincerely subscribed, without seeking privileged conditions for itself: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Newark, N. J., That they hereby request the Congress of the United States to revise the aforesaid treaty of peace with Italy to the end that said clauses be eliminated; and be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Senate, to the Speaker of the Congress and to Members of Congress whose districts embrace this city, and the Senators from New Jersey.

The Truth and Nothing But the Truth

EXTENSION OF REMARKS

OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. JONAS. Mr. Speaker, an inspiring address delivered over the air on July 28, 1951, by Col. Robert R. McCormick, entitled "More About the United Nations," puts us in possession of facts that have long been denied to the people or deliberately hidden from them by those who control the propaganda mills of our Government. In Colonel McCormick's address you are not beguiled with half-truths and misleading statements. On the contrary, his address is an overall exposé of the diplomatic jockeying and intrigue to which the people of the United States for some time last past have been subjected. The address is also revealing in that it points out where the United States is giving its substance to an organization that presently is bent on building up a group who would subordinate the Constitution of the United States to that of a one-world charter. Colonel McCormick's address contains material that should cause all reasonable minds to pause and hesitate about doing anything that may extend added power to the United Nations Organization.

Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the Record, I include herein the address referred to in my remarks and entitled "More About the United Nations," which address was delivered by Col. Robert R. McCormick over the Mutual network on July 28, 1951. The address follows:

When President Truman denounced the conviction of Associated Press correspondent Oatis by Czechoslovakia, he omitted to say that Czechoslovakia is an original member of the United Nations. A great deal has been said of the conviction of the Catholic prelates in Czechoslovakia and Yugoslavia, secured by torture-induced confessions, and the oppression of religion in Poland, and again the fact that these countries were members in good standing in the United Nations has been avoided.

The prevailing habit of misstatement, half truth, and no statement has pretty well persuaded the ignorant that the United Nations is an enlightened, beneficial, even holy organization. The worst the well informed thought of it was that its highfaluting lan-

guage was a fraud to cover the sinister acts that got us into the Korean war.

When the organization was formed under the leadership of Alger Hiss, his treason was undreamed of; nor was the decision of the Appellate Court of California that it is the supreme law of the land contemplated, which partly but not entirely excuses the Senators who, under pressure of propaganda and political coercion, voted for its ratification.

The 60 countries which compose the United Nations are not similar in history, race, religion, language, and law, as were the 13 original States, and as are the 48 present States. They can be divided into classifications: primitive, dictatorial, iron curtain, countries with ineffective or no constitutions, subject states, aggressor states, states with religious political parties, polygamous states, and Socialist states.

Among the primitive states, I find Afghanistan, Iran, Iraq, Saudi Arabia, Syria, Israel, Lebanon, Thailand, India, and Pakistan, all of them polygamous.

The dictator states. Argentina, Dominica, Paraguay.

Iron curtain states: Czechoslovakia, Yugoslavia, Poland, Russian Soviet, Byelorussian Soviet, and Red China, which the State Department is conspiring to recognize.

States with undesirable or no constitutions: Egypt and New Zealand; Canada has no constitution, but proximity, history, and close intercourse have implanted our principles on all but the professional hatchet men and Rhodes scholars.

Aggressor states: England, which not only oppresses Egypt and Burma, but also Scotland and Wales; France, which oppresses north Africa and Indochina; the Netherlands, which oppresses Indonesia, Australia, which oppresses Borneo, and New Zealand, which oppresses several peoples in the Pacific.

The avowed purpose of the United Nations was mutual assistance against aggression by anyone. It is to be noted that no effort has been made to stop the aggression of Britain in Egypt and Malaya; of Holland in Indonesia; of France in Morocco and Indochina, of Belgium and the Union of South Africa in Africa.

Within the last few weeks, Britain, France, and India have stated that they would join the United Nations in protecting their own possessions, but would consider whether to aid any other countries that are attacked when such a situation should arise. Of the 60 members, only 16 have sent forces to Korea, and these only token forces, except for the United States.

States with religious parties, thus violating our principle of the separation of church and state: Belgium, the Netherlands, Luxembourg, Italy, and France.

Socialist states: England, Denmark, and Sweden.

States with constitutional governments are Australia, Belgium, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Greece, Guatemala, Haiti, Honduras, Iceland, Luxembourg, Mexico, Norway, Panama, Peru, the Philippines, and Sweden. Some of these constitutions are obviously shaky.

The three solid republics in the world are the United States, Turkey, and Uruguay. As I have said before, a large majority of useful inventions have been made in the United States. Of the other United Nations, only Britain, France, and Italy have made any at all.

I am not considering the countries of central and south Africa, which I have not visited.

France and Great Britain, so long the dominant nations of the world, have fallen on hard times. Britain, for lack of a constitution, has become a socialized state, tyrannized over by the party in power in the House of Commons and far nearer in theory and practice to Russia than to us.

The peripatetic gyrations of France in the last 12 years are too well known to need comment. Its strongest party is the Communist Party. Both England and France have treaties of alliance with Soviet Russia.

The Appellate Court of California has held that the United Nations Charter, as the supreme law of the land, repealed the California law forbidding Japanese to own real estate in California, on the ground that the charter was promoting and encouraging respect for human rights and for fundamental freedoms for all, without distinction as to race, sex, language, or religion.

By the same theory, it would hold that the laws forbidding polygamy in this country discriminated against people practicing that custom. Ladies supporting the United Nations, bear this in mind.

The United Nations is proposing a declaration of human rights and a companion piece, a convention on freedom of information, which would replace the first amendment to our Constitution, providing for freedom of speech and of the press, with a very dangerous code to suppress freedom of religion, speech, and the press.

The genocide convention adopted by the United Nations and sent to the Senate by President Truman would render illegal a great deal of standard literature, including the New Testament.

Between the dictator states, iron curtain states, Socialist states, and primitive states, we might get a statute providing for communism and socialism in this country. That may well be the administration's object.

As well put by the Columbus (Ga.) Ledger: "The Supreme Court has never expressly declared any treaty ratified by the Senate invalid.

"This Supreme Court has upheld a law enacted to place teeth in a treaty after it had declared the same law unconstitutional before a treaty was ratified.

"This instance of the Supreme Court ruling that the treaty-making power could be used successfully where the Constitution forbade the Congress to act is pointed to by Frank E. Holman, of Seattle, a former president of the American Bar Association, in an article in the September issue of the ABA Journal, entitled, 'Treaty Law-Making: A Blank Check for Writing a New Constitution.'

"Here's how it came about: In 1913, Congress enacted a Federal migratory bird act. After its approval by the President, its constitutionality was questioned on the grounds that it invaded the reserved powers of the States, and the statute was declared unconstitutional in 1914 by the Supreme Court in *United States v. Shauver*. The Court held:

"That the National Constitution is an enabling instrument and, therefore, Congress possesses only such powers as are expressly by necessary implication granted by that instrument is not questioned. Unless, therefore, there is some provision in the National Constitution granting to Congress either expressly or by necessary implication the power to legislate on this subject, the act cannot be sustained."

"Supporters of the regulations governing the taking of migratory birds then sought the treaty route. The President concluded a treaty with Great Britain, and the Senate ratified it.

"A second migratory bird act was then enacted. It was practically identical with the first, and it was attacked as unconstitutional also.

"This time, the Supreme Court, in *Missouri v. Holland*, upheld the law as valid, since it was implementation of a valid treaty.

"This decision," Mr. Holman writes, "in effect, and really for the first time, opened the way for amending the Constitution of the United States by and through a treaty, because it proclaims that an otherwise un-

constitutional law may become constitutional when, as, and if the President negotiates a treaty on the subject and obtains approval of the Senate."

"This is nothing more nor less than government by treaty.

"We can lose such right as freedom of worship, freedom of speech, freedom of peaceful assembly if our Senate by 34 of its 96 votes ratified as a treaty the covenant on human rights."

It is plain that 40 of the 60 United Nations countries do not subscribe to our ideas of constitutional government, and many more are uncertain, and that any agreements that they can reach will be utterly destructive of our way of life.

It is equally plain that all informed people who support the United Nations plan just that.

International Treaties and United Nations Charter Threaten United States Domestic Laws

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including a news article that appeared in the Washington Times-Herald on Sunday, July 29, written by Mr. Chesly Manly of the Chicago Tribune Press Service, in which he refers to an article by Oscar Schachter, Deputy Director of the United Nations Legal Department, which declares in effect that United States domestic laws are subject to treaties entered into by the United States with foreign governments.

Mr. Speaker, this is a dangerous move on the part of those who believe in world government for it deprives the citizens of this country of protection under our basic laws. I commend this article to all who are interested in this highly controversial question.

UNITED STATES LAWS MUST YIELD TO CHARTER, SAYS UN AIDE

(By Chesly Manly)

NEW YORK, July 26.—The revolutionary theory that American courts are obliged to give effect to the human rights provisions of the United Nations Charter as the supreme law of the land, notwithstanding any conflicting domestic laws is upheld by Oscar Schachter, deputy director of the U. N. legal department.

Schachter's views are expressed in an article in the Vanderbilt Law Review in which he defends a California appellate court decision declaring the State's alien land ownership law invalid because it discriminated against Japanese and violated the U. N. Charter.

The U. N. lawyer, an American, emphasizes that the views expressed in the Law Review article are his own and do not necessarily reflect the official opinion of the U. N.

SOCIALISTIC STATE FEARED

Although Schachter does not share the fears of American Bar Association leaders regarding the dangers of law making by treaty, he fully agrees with their contention that this can and is being done in the name of the external obligations already assumed by

the United States or now under consideration in the U. N.

Frank E. Holman, of Seattle, former president of the ABA, maintains that the proposed U. N. covenant of human rights would transform the United States into a socialistic state. Carl B. Fix, of Milwaukee, another former president of the ABA and more recently chairman of its committee on peace and law through the U. N., declares in a discussion of the proposed covenant that, the road to Federal absolutism is being made very, very easy.

Article 33 of the U. N. Charter declares that the organization shall promote "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Article 56 declares that all U. N. members "pledged themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in article 55."

Many authorities have maintained that these provisions impose no legal obligations upon U. N. members. These authorities have characterized the human-rights provision as guiding principles or general purposes to be observed by U. N. members. The General Assembly and the Economic and Social Council, which are the U. N. organs principally concerned with human rights, have no compulsory powers; they make recommendations which have no obligatory effect. Moreover, article 2 (7) of the Charter expressly forbids the U. N. to intervene in matters which are essentially within the domestic jurisdiction of any member.

Schachter makes short shrift of these arguments. He maintains that the pledge made by U. N. members in article 56 was intended to constitute a legal commitment on their part.

"It is after all a commonplace in international law that states assume duties of a legal character which are not enforceable by international organs," he writes. Having satisfied himself that article 56 imposes a legal duty upon member states in regard to human rights, Schachter considers the question whether that obligation, under the American Constitution, is a direct source of law for American courts. He concludes that it is.

SUPREMACY CLAUSE CITED

The supremacy clauses of the Constitution is "not rendered nugatory because the treaty provision does not specify the type of action which the courts may take in carrying out the obligation," he asserts.

The supremacy clause is contained in article VI (2) of the Constitution, which provides that "all treaties made, or which shall be made under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding."

Schachter cites the California appellate court decision as an illustration of practical judicial action to give effect to the charter provisions. Under the supremacy clause, he declares, the statute denying persons the right to own land because of race would have to yield to the treaty and hence be declared invalid.

COVENANT RULING CITED

"Another compelling example would be presented where a court is requested to enforce a private agreement which it clearly considers contrary to recognized rights and freedoms; in that case the charter provision would reasonably include the duty to withhold the judicial action requested," Schachter writes. In a footnote he recalls that the United States Supreme court, in *Shelley against Kraemer*, decided in 1948, denied enforcement of restrictive real estate cove-

nants based on racial discrimination as being contrary to constitutional guaranties. Schachter writes that it would be "most difficult to conclude that the charter provisions on human rights cannot legitimately be given effects by the courts in appropriate cases."

"As United States Air Force Planes Continue To Fly 10 Miles and More Above the Surface of Our Earth, at Randolph Air Force Base a Small Group of Aero-Medical Scientists at the School of Aviation Medicine Are Striving To Match Medical Developments With Mechanical Genius"—Robert McCormick, Battle Report, Washington

**EXTENSION OF REMARKS
OF**

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. BOYKIN. Mr. Speaker, again Dr. John R. Steelman, the Assistant to the President, has brought to the American people, through Battle Report, Washington, several guest speakers to make personal report with respect to their work in national affairs.

More and more each week Battle Report, Washington, is becoming the National Broadcasting Co.'s most popular teledocumentary emanating from the Nation's Capital. By this means, more than 40,000,000 Americans are personally advised by high officials of their Government concerning matters of current interest.

First on Dr. Steelman's list of this week's guests was Mr. Bennett Wolfe, of the Associated Press, a close and intimate friend of Mr. William N. Oatis, recently sentenced to 10 years' imprisonment by a Czechoslovakian court on a trumped-up charge of espionage. In his talk with Dr. Steelman, Mr. Wolfe told of how he personally hired young Bill Oatis back in Indianapolis, Ind., 14 years ago.

Today—

Mr. Wolfe says—

Bill Oatis languishes in a foreign prison simply because he tried to be a good reporter. He tried to report and interpret events behind the iron curtain just as he once had done in Indiana. Even the Czechoslovakian prosecutor in his kangaroo trial paid Oatis a high compliment in this connection when he said, "Oatis was an especially dangerous agent because of his discretion and his insistence on obtaining only accurate, verified information."

In the course of his interview, Mr. Wolfe told of what the managing editor of the Lincoln (Nebr.) Journal, Raymond A. McConnell, Jr., wrote in a news editorial in which he said, in part:

Mr. Oatis' only crime is against a tyranny that enslaves man by trying to hide from the world the ugly truth about itself.

Mr. Wolfe also went on to say that, in a telegram to the Voice of America, Mr. McConnell "confessed"—that is the

word he used—"to being one of Mr. Oatis' thousands of accomplices on free newspapers," and concluded his interview by stating:

I am sure that all newsmen throughout the free world will be proud to join Mr. McConnell in his "confession."

Of deepest interest to the people in general and to the Members of Congress in particular was the report by Mr. C. Stribling Snodgrass, Assistant Deputy Petroleum Administrator in charge of foreign operations. His report on the Iranian oil situation warrants the deepest study by all concerned with happenings in the Middle East.

The narration of Robert McCormick, commenting on the pictures of the happenings in Yugoslavia, was equaled by the brilliant paper read by one of the chief Air Force surgeons, Brig. Gen. Edward J. Kendrick. General Kendrick told the millions of his audience of the tremendous task that confronts the Surgeon General with respect to the altogether new science of aerial medicine—the problem of making it possible for the men of our Air Force to perform even more daring feats with some measurable degree of ease, comfort, and safety to their physical bodies, with retention of mental capacity.

The next guest presented was Col. J. L. Throckmorton, who landed in Korea but a few days after the outbreak of war and was placed in command of the Fifth Infantry Regimental Combat Team. Mr. Speaker, the report of the commander of our foot soldiers on hand through all the campaigns fighting up to the Yalu River and his stories of the hardship of wading through bitterly cold mountain streams and of men who spent sleepless, freezing nights in lonely fox holes searching for enemy movement in fighting for their lives, merit reading by every Member of this Congress.

It is because of these and other reasons that, under unanimous consent of my colleagues to extend my remarks, I include therein as part of the extension, the forty-fifth Battle Report, Washington, as it was telecast over the National Broadcasting Co.'s network and coaxials.

The producer-director of this program is Ted Ayers; the technical director, L. A. McClelland; commentary, Robert McCormick. Script by Lou Hazam; the film editor is Bill Brooks; floor manager, John Johnson; Art by Joseph Ferrier; music adviser, Fritz Balzer; sound by Bob Haines; and the production assistant is Jean Montgomery.

Battle Report, Washington, follows:

Mr. McCormick. The greatest threat to world peace; the tremendous armed power of the Soviet Union, will still remain, even if the Korean fighting stops.

Giving voice again to the President's Independence Day warning on the eve of the cease-fire negotiations in Korea, NBC television news calls its cameras into play for its forty-fifth battle report.

Washington—where Defense Mobilizer Charles Wilson, in his quarterly report, urged the Nation to keep its guard up, whatever happens in Korea, and Korea, where action such as you see here, is slowly grinding to a halt in anticipation of Sunday's peace talks.

Tonight on Battle Report a rare look at the Yugoslav Army; and from the Washing-

ton bureau of the Associated Press, the man who hired William N. Oatis, the American correspondent the Czechs jailed on fake charges of spying; a report on the Iranian oil crisis from a top Government-petroleum official; a regimental commander's eye view of the Korean battlefield; and the first time on television the film story of the Air Force's unique School of Aviation Medicine.

But first, the Assistant to the President, Dr. John R. Steelman.

Dr. STEELMAN. Good evening, ladies and gentlemen. This week, free men all over the world have been hoping and praying that the present negotiations with the Communists will restore peace to the long-suffering Koreans. Each report that has reached us seemed like a ray of sunshine piercing through the fog.

In addition to Mr. Bennett Wolfe, of the Associated Press, we shall have with us tonight Mr. C. Stribling Snodgrass, Assistant Deputy Petroleum Administrator, who will bring to you by way of Battle Report, Washington, some first-hand information with respect to the problems that are facing the free world in Iran, Brig. Gen. Edward J. Kendrick, of the United States Air Force who will inform you with respect to but a few of the problems that are presented to your Air Force in caring for its flyers who fly frequently to heights 9 miles and even more above the earth's surface; Col. J. L. Throckmorton, former commander of the Fifth Regimental Combat Team, who is here to tell you of the wonderful spirit exhibited by the American soldiers and the splendid feats they are performing in carrying on that battle now raging under Korean skies.

On the other side of the world from Korea, an American newspaperman, Mr. William N. Oatis, has been sentenced to 10 years' imprisonment by a Czechoslovakian court. He was accused of espionage. Tonight we have a man in the studio who knows him well, a fellow newspaperman, Mr. Bennett Wolfe, a close and intimate friend of Mr. Bill Oatis.

Mr. Wolfe, won't you tell us something about Mr. Oatis—what kind of a fellow he is—and what do you know about these accusations?

Mr. WOLFE. Back in 1937, and when chief of the bureau of the Associated Press at Indianapolis, I received at letter from a young man at Marion, Ind. He said he would like to go to work for the AP. He was working on the Marion Leader-Tribune at the time and hadn't been long out of DePauw University.

That young man was Bill Oatis, now under a 10-year prison sentence in Czechoslovakia on trumped-up charges of being a spy.

I was impressed with the letter. Oatis had some excellent ideas about news writing and he said he thought that the average reporter wasn't thorough enough, that the average reporter didn't dig deeply enough for facts.

That was the kind of a man I wanted, so Bill Oatis got the next job I had to offer.

Oatis, a gangling young man with a studious look, was only 22 or 23 at the time. He progressed rapidly, then came the war and off to the Army he went in 1943.

After the war, he returned to the AP and was transferred to the cable desk in New York. From there he went to London and from London on his ill-fated assignment to Czechoslovakia.

Today Bill Oatis languishes in a foreign prison simply because he tried to be a good reporter. He tried to report and interpret events behind the iron curtain just as he once had done in Indiana.

Even the prosecutor in his kangaroo trial paid Oatis a high compliment in this connection. He said, and I quote, that Oatis was "an especially dangerous agent because of his discretion and his insistence on obtaining only accurate, verified information."

"What was Oatis' crime?" you ask. Raymond A. McConnell, Jr., managing editor of

the Lincoln (Nebr.) Journal, puts it this way:

"Mr. Oatis' only crime is against a tyranny that enslaves man by trying to hide from the world the ugly truth about itself.

"In a telegram to the Voice of America Mr. McConnell 'confessed'—that's his word—to being one of Mr. Oatis' thousands of accomplices on free newspapers."

I am sure that all newsmen throughout the free world will be proud to join Mr. McConnell in his confession.

Dr. STEELMAN. Thank you, Mr. Wolfe. I believe all of us now feel we really know Mr. Oatis. We also must realize that there is no such thing as a free press under the hammer and sickle. It is one of the great tragedies of our time. The entire Communist dictatorship is based upon the premise that a small self-appointed group is qualified to do the thinking for an entire nation. Without freedom of the press there cannot be freedom of thought. And without the freedom to think, men are mere robots. Now, back to Robert McCormick and our guests.

Mr. McCORMICK. Iran—where crowds demonstrate as the great British oil refinery at Abadan, the largest in the world, is nationalized by the Government. With Britain's largest overseas investment threatened, the anxious free world hurries to add up its oil reserves; a world that has had brought home to it again the fact that the center of gravity of the world's oil supply has been shifting slowly eastward from the Western Hemisphere to the Persian Gulf. Stopping from a plane only a few hours ago, returning him from a trip designed to bring our Government and the oil industry together in the face of this emergency, comes our next guest. Familiar with the Middle East, where he served as a petroleum expert during the last war, he is back at work for Uncle Sam as the Nation's Assistant Deputy Petroleum Administrator in charge of foreign operations. For a report on the world-wide problem raised by the Iranian crisis, here is C. S. Snodgrass.

Mr. SNODGRASS. Petroleum is as important to the defense effort of the United States and the other free nations of the world as gunpowder or any of the other vital weapons of war.

Within the last few days, the flow of oil from Iran to dozens of countries throughout the world has been halted.

Several scores of empty tankers which had been on the way to Iran to load oil are now riding at anchor in the Persian Gulf or are tied up at docks in ports from London to Calcutta, awaiting sailing orders.

The world's largest refinery—at Abadan, in Iran, on the Persian Gulf—is gradually shutting down because its storage tanks are nearly full and there is no way of transporting gasoline, fuel oil, and other refined products to consuming countries all over the world.

The refinery at Abadan is twice the size of the largest refinery in the United States. It employs some 40,000 people. Of the free world's total supply of refined products, more than 5 percent are normally produced at this single source.

Iran's total output—including both crude oil and refined products—amounts to about 750,000 barrels a day. This is almost as much as the total oil production of the countries behind the iron curtain.

The closing down of operations in the oil fields—Masjid-Sulaiman, Haft Kel, Ahwaz, and others, and even more serious, of operations at the Abadan refinery—creates a gap in the world's oil supply. It will require the most energetic efforts to fill this gap.

This is not only because of the amount of oil involved but because of its strategic location. Iran is the ancient bridge between eastern and western civilizations.

A complete interruption of supplies from this source would create distress and hardship in the Eastern Hemisphere. The replacement of these supplies from other sources will involve American companies operating abroad.

While a British company, the Anglo-Iranian Oil Co., is directly involved, the oil itself has been supplied to and would be missed by many countries, for example, India, Pakistan, Malaya, southeast Africa, the Antipodes, as well as to the fueling of Europe's reconstruction and rearmament program. At this time, by virtue of the shortage of petroleum products the problem is not only a British or an Anglo-American Oil Co. problem, but also it becomes an international problem.

Because of the possible loss of Iranian oil to the free world, the Government is taking steps, in cooperation with the petroleum industry, to make up as far as possible for these losses.

Secretary of the Interior Oscar L. Chapman, the Petroleum Administrator for Defense, recommended to Charles E. Wilson, Director of the Office of Defense Mobilization, and other agencies of Government concur, that American companies doing business abroad should be brought together to advise our Government on steps that can be taken to assure a continued full supply of oil to the free world.

Secretary Chapman early this week appointed 19 companies to membership on a foreign petroleum supply committee, which held its first meeting in New York City yesterday.

I have just returned from New York where a subcommittee has been working all day today devising a plan of action to alleviate shortages. We expect the Committee to recommend to the Government a plan of action which will call for such steps as exchanges of products between areas, stepped-up crude oil production in certain countries, adjustments in refinery operations, and joint use of tankers and storage facilities overseas, without regard to ownership.

By these means, and all others that ingenuity can devise we hope to lessen the impact of the loss of Iranian oil.

Mr. McCORMACK. Only a few days ago, here in Washington, Yugoslav Ambassador Vladimir Popovic formally submitted to our Secretary of State an urgent request that we rush arms to Yugoslavia as soon as possible. The pressing reason, according to the Ambassador, there has been "no let up of pressure" on anti-Soviet Yugoslavia, although Communist, by Russia and her satellites, and the war of nerves is getting hotter every minute in the Balkans. We've already sent some equipment to Yugoslavia, America, and to show you what they can do with it, we bring you not a rare view of the Yugoslav Army on maneuvers.

The Marshal provided with binoculars, the signal is given and all hell breaks loose.

The order to charge, and out into no man's land pour the pride of the Yugoslav Army, seemingly, tough as nails. This army you can see is the outgrowth of what was Tito's guerrilla army during the war. It is made up largely of men who distinguished themselves as individuals in dangerous hit-and-run action—action that called for hard resourceful troops. When the war ended, and Tito became the head of the government, these self-made soldiers became Tito's formal armed force. Tough as they are, however, they have not yet been tested as a unified army in large-scale warfare. One thing they do prove—even in Yugoslavia, an army travels on its stomach.

Now the tanks join the fray. We're informed that main problem of the Yugoslav Army is not morale, but equipment like this.

They've virtually received no heavy equipment since they broke off from the Russians. Their main equipment is what they captured from Germany and Italy during World War II.

Suddenly the skies fill with Yugoslav planes which roar in to add their 2 cents' worth. It is a limited air force composed of what they captured and what they got since the war from the Russians. Yugoslavia itself has no aircraft industry.

Camouflaged artillery—such as these the Yugoslav Ambassador would like to see more of—chatter a greeting at the planes. The planes may be old, but I'd say the Yugoslav pilots act like they know their business.

Tito seems to be pleased with what he sees through his glasses. In addition to over \$100,000,000 worth of economic aid, he's received from us in the past year, since May, we're told, the Yugoslavs have been sent several million dollars worth of machine guns, other light arms, ammunition, and signal equipment. Possibly here's some of that signal equipment now.

Now the whole field seems to explode as all units unite in the action that climaxes the maneuvers. The planes again. And now dropping from them Yugoslav paratroopers, making a white pattern against the grey sky.

The Yugoslav Army—a question mark, but just the same, a force to be seriously weighed in the "hot spot" that is the Balkans of Europe.

And so Marshal Tito ends a day with his army pleased with their performance, here in mock battle, but perhaps, like the rest of the world, wondering how they'll do, should a real attack come.

As United States Air Force planes continue to fly at heights of ten miles and more above the surface of our earth, what is being done to provide our men with the latest in equipment and technique to maintain their physical well-being? Here at Randolph Air Force Base a small group of aero-medical scientists at the School of Aviation Medicine are striving to match medical developments with mechanical genius. Reason—in order that our airmen will be given every opportunity to perform at top peak in aircraft of the future. Here is veteran Air Force Surgeon Brig. Gen. Edward J. Kendrick, director of staffing and education for the Surgeon General.

Brigadier General KENDRICKS. We begin in a biochemistry laboratory. The function of this laboratory is to determine the various chemicals of which living matter is composed.

Only by doing that and by comparing the chemical makeup of various types of tissues and living matter can we determine the chemical changes which affect the lives of our air crew members. Once we find significant chemical changes caused by varying conditions of flight, it may be possible to prevent or at least to reduce the effects of a wound, disease, or physical stress. Research in regard to the comfort of our wounded being evacuated from the battlefronts by means of air transportation is given careful thought.

Here, a new type respirator is being given extensive testing. This small compact unit can be used aboard any type aircraft—thus the cumbersome old type iron lung may be eliminated.

Equipment needed by research projects quite often is not obtainable and it becomes necessary for the school to design and build its own. This micro-camera, for instance, is used to photograph interior parts of the body cavities such as the eye, ear, nose, mouth and throat of men just coming out of the high altitude pressure chamber.

Aboard this bomber is a crew who are participating in a human fatigue-testing program. One of the most pressing projects

facing the Air Force is the question of what causes fatigue. What makes a B-29 crew come back from a long flight looking haggard and irritable? Is it muscular weariness—nervous fatigue—or is some inner anxiety the cause? The project of testing human fatigue begins in the laboratory with a treadmill in operation and various tests being made on an airman who walks endlessly without going anywhere. At an operations hangar on the flight line we see four men working on a position-plotting board. These four men, a pilot, an instructor pilot, a navigator, and an engineer, are part of this testing project. They will remain awake and active while the in-flight crew goes about its long training mission.

Then when the crew returns to land at Randolph, the mission finished, they taxi into their parking position on the ramp tired and weary after the long hours in the air. The plane is met on the ramp by men from the fatigue-testing project. These men wait to take the crew for comparative testing with the men who remained on the ground during this flight. Here in a small office, now turned into a laboratory, all eight crew members are given identical tests to determine the degree of fatigue which each has sustained during flight and during the long waiting on the ground.

But wait, that's not all; the two pilots must now go through a coordination test—pilot at left is one who actually flew the mission, while the one at right stayed on the ground.

With the knowledge obtained from this testing project aeromedical science may be able to alleviate some of the discomforts of strenuous missions.

A special project here concerns optics. This is a motion parallax testing machine. The pilot is being shown how to adjust the small steel rod so that it rotates on the same plane as the larger rod. This test proves that man may have depth perception in only one eye thus refuting a long-standing conception that to fly man must have the sight of both eyes.

So, behind the health and well-being of the manpower of the Air Force lies the continuing research of the School of Aviation Medicine. This school symbolized by this pilot and flight surgeon stands today as a living example of the ever-thirsting desire of our men of vision to provide for more and better things for the airmen who fly the limitless skies of tomorrow.

Mr. McCORMICK. All along the front, the reports are only of light enemy contact. Long-range, small-arms fire from enemy forces of platoon and company size, and a sharp decrease in enemy and artillery fire. No significant attacks are being reported, and it looks as if the enemy has ceased aggressive tactics and begun an orderly withdrawal, a withdrawal from positions they had been holding stubbornly and at great cost during the past week. Our next guest remembers when things were quite different. Landing in Korea just a few days after the outbreak of war there, he soon took command of the Fifth Infantry Regimental Combat Team, and fought with it during the break-out from the Pusan perimeter to the Yalu River, and later in the campaign against the Chinese. Awarded the Silver Star and Distinguished Service Cross for his extraordinary heroism and lately returned from Korea to be senior aide to the Army's Chief of Staff, we bring into camera range now Col. John L. Throckmorton.

Colonel THROCKMORTON. The Fifth Regimental Combat Team received its baptism of fire by the North Koreans early in August of last year. Since that time the regiment, together with its supporting Five Hundred and Fifty-fifth Field Artillery Battalion, has performed every type of mission in the book of

war with distinction and success. They fought through the heat and dust of the South Korean summer to hold the southern end of the Pusan perimeter. They destroyed the Red defenses west of Taegu to spearhead the break-out last fall. They then plunged north through Pyongyang to within a few miles of the Yalu River only to be called back to hold a vital bridgehead for our withdrawal after the Chinese struck. During the long cold winter they pushed doggedly forward to regain the line of the thirty-eighth parallel.

I welcome this opportunity to tell you more about the riflemen, gunners, tankers, and medics of this fine combat team of the United States Army, for it is the courage, determination, and spirit of these men that has given the Fifth RCT its enviable reputation. The Fifth RCT is probably one of the most composite units in the Army. Included in our rosters were many Hawaiians, naturalized Japanese, Filipinos, Koreans, and Chinese. In spite of their different backgrounds, however, the men learned well the teamwork and cooperation so necessary for success on the battlefield.

Our prewar training in Hawaii established strong ties and developed mutual confidence between the Infantry and the Artillery, the tankers and the doughboys, and the officers and the men. The doughs soon came to believe that the gunners of the Triple Nickel could shoot faster and more accurately than any other artillery battalion. The artillerymen, on the other hand, always felt secure in position behind the Fifth. The same healthy attitude existed between the rifleman and the tankers. Our regimental tank company was always in there giving maximum fire support to the rifle companies in their job of digging the fanatical North Koreans or Chinese out of their foxholes.

Our doctors and medical aid men quickly gained the wholesome respect and admiration of every GI. It was their job to move over exposed ground under heavy fire to give first aid to the wounded. Many a brave doughboy owes an arm or a leg or even his life to the outstanding work of these men. In battle or during rest periods the medics worked tirelessly to relieve the suffering of the wounded or to improve our sanitary conditions and preserve the health of the regiment.

In the final analysis, however, the greatest share of the fighting and the dirty, disagreeable jobs were borne by the rifleman. His was the job of climbing endless, rugged mountains in the face of enemy fire, of wading through bitter cold streams, of spending sleepless freezing nights in a lonely foxhole searching for enemy movement and of fighting for his life against a ruthless, charging enemy in the darkness.

Every effort was made to clothe and feed the men properly. During the winter we had excellent protective clothing together with warm down-filled sleeping bags. Every officer knew it was part of his job to see that his men received hot food as often as possible. It was exceptional when these men did not eat at least two hot meals a day.

The men in Korea today know they are doing a man's job in a man's way. They have demonstrated their superiority in the face of tremendous odds. Those of you with sons or relatives there should be very proud of their record of achievement and every American should honor those who are preserving our way of life on the grim battlefield of Korea.

Mr. McCORMICK. So, until we turn our cameras upon the Nation's Capital again next Friday to report on the battle of democracy against world communism, this is Robert McCormick putting a period on the forty-fifth Battle Report, Washington.

Your Post Office Is a Business—If We Are Not Going To Operate It as Such, We Might as Well Close It Up and Get a Flock of Carrier Pigeons

EXTENSION OF REMARKS OF

HON. FRAZIER REAMS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. REAMS. Mr. Speaker, the biggest operating business in the world is the United States Post Office. Last year it did a business that cost \$2,224,000,000. But it only received as income \$1,667,000,000. That left an excess of expenditures over income of \$546,832,000. The Post Office Department calls it "excess of expenditures over income." The Congress refers to it as the post office deficit.

This is a big business of which you are a stockholder. It is a very vital part of your daily life. I want you to have some facts before you so that you may decide for yourself whether this difference is a deficit or an excess of expenditures over income. By whatever name it may be called it is an additional half billion dollar load for the taxpayer and a headache for the Congress and particularly for the Postal Committees. But, before I leave the subject and leave you the people too depressed over this let me give you some small comfort in the fact that in the past 100 years the post office has failed to pay its way 83 years. Only in 17 years has the excess of income over revenue existed—and they were mostly in war years.

But to a lot of citizens the breaking down of the postal service is worse than the "deficit" to the taxpayer. Congressmen almos daily receive letters telling of delays, missent mail, and curtailment of service. Letters not addressed with the greatest exactitude often bound back to the sender, the one-a-day delivery service in residential districts came last year; there has been a noticeable lack of the cheerful service at the postal windows to which we have been accustomed; and in many other ways it is obvious that the postal service has deteriorated. But let us not assess the blame too quickly. You might fail to include some of the guilty parties. It might come as close home as it did to the new Congressman who was annoyed at some minor irritation caused by lack of the good postal service which he felt he was entitled to. So, he reached for pen and paper to write his Congressman—then it suddenly dawned on him that he was the man upon whom he was about to pour out his complaint. In searching for the causes of the present plight of the Post Office Department and the bases of correcting them, let us look at a little history of this gigantic business which comes so close to the lives of so many Americans.

The first post office in America was established by the General Court of the Colony of Massachusetts 312 years ago in

1639. The court placed an order on the records as follows:

Richard Fairbanks, his house in Boston is the place appointed for all letters which are brought from beyond the seas or are to be sent thither.

Thus was the first post office in Colonial America established.

In July 1775, the Continental Congress established a post-office system with Benjamin Franklin, the printer and publisher of Philadelphia, as the first Postmaster General. A line of post offices was established from Massachusetts to Georgia. In 1789, under the new Constitution, President Washington appointed Samuel Osgood, of Massachusetts, the first Postmaster General. From that time until this day the Post Office has continued to grow and to serve the people of the country. A well-known tribute to the postal service is the inscription which has for many, many years been on the main post office in New York. It is, "Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds." There are forces, however, which apparently are more effective than snow or rain or heat or the gloom of the night which are now staying these couriers from giving the service that has characterized the Post Office Department through the years.

Let us analyze some of them. In the first place, it is an error to consider all excess of expenditures over revenue as a deficit. Users of the mails should pay a large but a reasonable part of the costs of this service. Every member of the Post Office Committee of the House believes that a considerable part of the half billion dollars which the taxpayers had to make up for the cost of operating the Post Office Department in 1950 should be paid by the users of the mail, but we likewise believe that there is a large part of that which should not be called deficit—that it should be called service or subsidy, just exactly as it is in any other department. Nowhere else in the Government do we find a department charged with a deficit in operation. Many of the departments spend more than the two and a quarter billion dollars which it takes to operate the Post Office Department, and yet there is no reference to a deficit.

According to the Cost Ascertainment Report of 1950, as prepared by the Post Office Department, the only part of the mail which in that year paid its way was the first-class letter mail. In addition to that, the Insurance Division of the Post Office Department showed approximately \$700,000 on the black side of the ledger, and unassignable profits accounted for \$25,000,000 more. Second-class mail, being newspapers and periodicals, showed a loss of \$180,000,000. Third-class mail, which is advertising matter, lost \$130,000,000; and fourth-class mail, which is parcel post, \$77,000,000. Domestic and foreign air mail, which included sizable subsidies to airlines, lost \$85,000,000; the Registry Department, \$12,000,000; money orders, \$23,000,000; and collect on delivery, postal notes, and postal savings added

another \$20,000,000. Added to these nonprofitable items are the franking mail by the Congressmen, which cost a million and a half dollars. The penalty mail, which means mail by the various governmental departments, thirty-seven and a quarter million; free for the blind, \$382,000; and nonpostal service, \$21,000,000.

The question now is how much of this \$546,832,000 can the users of the postal service be reasonably expected to pay and how much should be charged against the taxpayer in the interest of keeping this great postal system going?

My suggestions, as a member of the Post Office and Civil Service Committee, are with reference to putting this United States postal service back to its former position of service and efficiency. In 1893, Marshall Cushing, the historian of the Post Office Department, made the statement:

The United States Post Office is the greatest Government department, in all of its phases.

That statement was never challenged at that time, but it would be challenged today. Here are my suggestions for restoring it to that position:

First. Submit to Congress a realistic budget which recognizes that approximately one-fourth of the cost of operating the post-office system is for the service of all the people and that this amount will be appropriated for that purpose and not as a deficiency appropriation to make up for a deficit.

Second. That postage rates be raised on a graduated scale by as much as can be paid without preventing the people from getting the full measure of information and enlightenment from literature, periodicals, newspapers, and books. That, if necessary, in order to pay the remaining three-fourths of the cost of operation that even first-class mail be raised. However, since first-class letter mail seems to be paying its way now I would be loathe to raise it unless good postal service could not be given without it.

Third. Money orders, registry, insurance, special delivery, and collect on delivery should all pay their own way or be abolished. There does not seem to be any demand for the Government to operate postal savings at this time when banks and insured savings are available in every community. This is costing the post office a lot of money and is taking business away from regular financial institutions. This is a three-and-one-quarter-billion-dollar banking business.

Fourth. We must make the operation of the Post Office Department as efficient as any Government business can be made. I know that where the funds to operate a business are voted by the Congress; where the board of directors is a Committee of Congress; where the head of the business is appointed by the President of the United States; and where the customers are the American people that it is difficult to get the highest efficiency. That is for the same reason that any dictatorship is more efficient than a democracy but it does not

mean that it is better or more satisfactory.

The Hoover Commission analyzed the situation in its report to Congress under the caption, "What is wrong with the Post Office?" It made valuable recommendations:

1. The administrative structure is obsolete and overcentralized.

2. A maze of outmoded laws, regulations, and traditions freezes progress and stifles proper administration.

3. Although the Post Office is a business-type establishment, it lacks the freedom and flexibility essential to good business operation.

4. Rates have not kept pace with wages and other costs, and rate-making machinery is inadequate.

5. The service is used to hide subsidies.

6. Political appointment of first-, second-, and third-class postmasters and certain other officials produces inefficiency and militates against the incentives of promotion.

7. Accounts are kept by the General Accounting Office outside the Department and are available to the Post Office for management purposes only after months of delay. Methods of budgeting and appropriation are entirely unsuited to a business of the size and character of the Post Office. The pressure of these forces in a rapidly growing business accumulates to make impossible the most economical and efficient conduct of the service.

Most of these Hoover report recommendations have been put into effect in the post office. They have not been in operation long enough to get the full benefit of these reforms. One that has not been put into effect is the decentralization of authority. Every matter of discretion or judgment from 42,000 post offices must clear through the Postmaster General's office in Washington. That means that in order to get a dipper and water bucket for the postmaster in a village in Michigan permission must be had from the Postmaster General in Washington.

Fifth. The post office needs every possible program of mechanization that it can get. There has not been a great deal of mechanical change in the handling of mail since Benjamin Franklin started putting mail into sacks prior to the Declaration of Independence. Every other industry realizing that manpower was the greatest expense of business has made the arm of man more efficient as his hours have decreased and his pay become greater. Just as the Post Office Committee needs a trained staff to continuously study the question of postal rates, the operations department of the post office needs an experimental staff working on methods and instruments to make the handling of the mail more efficient. It may be necessary to cut down the size and weight of parcel post. It was started out with a 5-pound limitation, then it went to 11 pounds, later to 50, and it is now 70 pounds. There is a bill now before the House to cut down the size and weight of all packages designated for towns where there are express facilities.

Sixth. The question of adequate pay for post office employees is constantly before the Congress. These increases should be granted by a humanitarian standard but it must be granted on the basis of need. A report for 1925 shows that there was a great demand for an increase in salary at that time, but the figures showed that the percentage of resignations for carriers then ran 1.61 to 2.10 percent from the years 1920 to 1923 while among clerks it ran 5.55 to 6.56 percent. Today the turn-over among clerks and carriers is reported for the past 12 months to be approximately 50 percent. In the Detroit, Mich., post office alone, 1,100 postal employees have left the service during the past 12 months and a majority of those left in the lower grades have had to secure outside employment in order to supplement their income.

Government can never pay salaries quite comparable to outside industry in the manufacturing communities yet there was a time when the post office service had an attractiveness about it which drew excellent men. Without continuous employment there can be no efficiency in this organization. From the Postmaster General who acts as the president of the biggest operating business in the world at a salary of \$22,500 down to the clerks and carriers with beginning salaries of \$2,670 a year we are trying to run the greatest business in the world at the lowest pay scale for comparable work in the country. There will always be able men who are willing to be Postmaster Generals for that salary but to have an organization that will operate efficiently the carriers, clerks and other postal employees must have a salary which they can support a family on along with the honor of being in the postal service.

Your post office is a business. If we are not going to operate it as such, we might as well close it up and get a flock of carrier pigeons.

Mankind's Battle for Decency and Right

EXTENSION OF REMARKS OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. HAYS of Ohio. Mr. Speaker, in 1949, I had the great privilege and opportunity, as the guest of Gen. James Van Fleet, our present commander in Korea, to visit the scene of civilization's unending battle with the obscenity that is communism. In 1949, the locale was northern Greece, near the borders of Albania and Yugoslavia. At that time and place, I saw the magnificent spirit and valor of the Greek Army and Greek people.

Since then, Mr. Speaker, the Greek nation, although ravaged by 11 years of invasion, has sent a battalion to fight for human decency in Korea. Their bravery and exploits have become legendary. I

would like to insert here a letter which appeared in an article in the July 7, 1951, issue of the Saturday Evening Post. The title of the article by Harold H. Martin was the Greeks Know How to Die. The letter in question came from tiny Kollandra, in Macedonia, by Joan Nyktas, mother of George. Written in wavering script, it reads:

SIR COMMANDER: With deep sorrow I received your letter telling me of the death of my dear son. It would be a lie if I told you that anything in the world would make us forget that he will never come back to his village, to his wife, his babies, and to me. But I am proud of him, for he died fighting against tyranny, against crime, and for the peace of the world. Sir Commander, I beg of you, because he sleeps so far away, when you come near the place where he is buried, will you kiss the cross upon his grave, and tell him that the kiss comes from his father and his mother, from his wife and his two little girls who will forever honor him. My eyes are full of tears. I have not the courage to write more. May God bless you and all your gallant men.

Mr. Speaker, could any of the greatest men of letters, Homer, or Virgil, or Shakespeare, have said this more poignantly and more effectively?

Timely Advice to the Voice of America

EXTENSION OF REMARKS OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 30, 1951

Mr. DONOHUE. Mr. Speaker, I wish to include a very thought-provoking article by that eminent writer, George Sokolsky, which appeared in the Washington Times-Herald issue of today, July 30, 1951.

In his uniquely clear style, Mr. Sokolsky presents a constructive analysis of one of the most, so far, baffling problems with which this country is engaged, namely, how to convincingly get across to the other people in the world an understanding of the good things of life in America; Lord knows they are well acquainted with the bad through the medium of Russian propaganda.

As Mr. Sokolsky so well implies, it would undoubtedly be a vast improvement in our own propaganda technique, and insure return value on some of the haphazard spending of the taxpayers' money, if the authorities in the Voice of America program would concentrate attention on the world publication of the fundamental principles of our democracy and leave off some of the fantastic embellishments that just evaporate into the thin air.

As has been so aptly said:

Truths oft repeated will, sooner or later, find acceptance.

I understand a new life and new policy is being injected into the Voice of America, and I can think of no better way for the people in charge to start off than with the adoption of the story set

forth by Mr. Sokolsky. I recommend his editorial to these officials and also to the reading of my colleagues.

His article follows:

THESE DAYS

(By George Sokolsky)

It is, indeed, tragic that the rest of the world so completely misunderstands the United States. The question arises as to whether we understand ourselves. If we do, we have not been able to convey to the rest of the world what it is that we believe.

During World War II, our main propaganda agencies were, of course, the State Department and the OWI, managed by Elmer Davis and Joseph Barnes. Nelson Rockefeller operated a unit that was supposed to produce a good-neighbor policy for Central and South America.

Then along came the Voice of America which is a very expensive organization but somehow it makes no impression on the rest of the world.

Prof. Saul K. Padover makes the point: "Unlike the Soviet Union, the United States has taken no steps to train political propagandists or people to wage psychological warfare. * * * There should be in Washington a high-level staff to set up and supervise a political and operational training center.

"Such an institution should, after severe screening and testing, recruit the ablest and most imaginative candidates regardless of age or sex, and train them both politically and technically.

"This is especially important because all world-political signs indicate that we are in for a long conflict on ideological grounds, and one that will continue whether there is shooting or not. * * *

Our tendency has been to turn this job over to advertising and public relations men. Their training unsuits them for the work. An advertising man does not need to believe in the product he sells. He may be a cigar smoker who despises cigarettes; yet he will write brilliant copy to promote cigarettes. He thinks in slogans rather than ideas.

The current American type of public relations man is a far cry from Lemuel Eli Guigg or Ivy Lee who were idealists. They served not their client as much as the ideas in which they believed and advised their clients accordingly.

Too many American businessmen hire and fire public relations counsel as they do foremen and are served accordingly.

In the battle over ideas, the techniques developed to sell body odors or to write dull speeches for halting industrialists will not serve. There must be faith, sincerity, conviction. Every agent must be fervid, even fanatical in his acceptance of a view.

Let us see what we want to say to the world. It can be stated simply:

1. The United States believes that every individual on the face of the earth possesses inalienable rights, among them life, liberty, and the pursuit of happiness, and the ownership of property protected by law.

2. The United States believes that these rights are not a product of legislation or administration, but that they are manifestations of God's will; that they come from nature's God and nature's law.

3. The United States has no aspirations to increase its territory or to take over any people.

4. The United States believes that every people, great or small, is entitled to a government of its own choice, selected as the people themselves determine without interference by any other government by any means, by war, by propaganda, by infiltration, by intrigue.

5. The United States is committed to an association of nations in which any nation

may be a member if its people so desire. No such association may be regarded as satisfactory as long as independent and sovereign nations are excluded from membership.

Few people in any country believe that the United States has not been using its billions of give-away dollars for some ulterior purpose.

The belief that the United States seeks something selfish and materialistic is so generally held that it can only be the product of our own activities.

Soviet Russia has been magnificently successful in painting America as a selfish, materialistic, imperialistic country that hates all people who are not white.

Professor Padover tells this story:

"This writer heard Asian students say that it is a well-known fact that during World War II the United States dropped the atom bomb on the Japanese because the latter were a yellow race and did not drop it on the Germans because they were white. 'Everybody in Asia,' the students added, 'knows that to be true.'"

It is terrifying how such an utterly false idea can be accepted and spread. Yet, ideas such as these are being circulated and believed throughout the world.

The Philosophy of a Controlled Economy in Our Nation

EXTENSION OF REMARKS
or

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HÉBERT. Mr. Speaker, Mr. Ben J. Williams, former president of the New Orleans Chamber of Commerce, and now a member of its board of directors, recently delivered an address on the philosophy of a controlled economy in our Nation.

The address caused such widespread comment and interest that I have deemed it of sufficient importance to direct it to the attention of this body.

Following is Mr. Williams' address which was delivered over radio station WSMB in the city of New Orleans on July 13:

Inflation means money losing its purchasing power. As inflation goes forward a dollar buys less and less. A dollar today buys a little more than half of what it did in 1939. This has meant hardship and disappointed hopes for all who depend on what pay checks and savings will buy. Yet our inflation has been mild compared with that experienced in some countries where money has become almost worthless. The consequences have been written out for us in lessons of experience.

Runaway inflation would wreck our country as it has wrecked others. The personal injury we would each sustain in the loss of purchasing power is just the beginning of the story.

There are only two forces that can hold an economy together and keep it working. One is an iron-fisted dictatorship which forces people to work and tells them what they can have in return. The other is a system of supply-and-demand pricing based on people's free choice as to what they will produce and what they will buy. In this land of liberty, freedom of enterprise is the guiding star for it measures the result of

our plans and our work, and determines what we may get tomorrow for what we do today. If prices start leaping forward in the worldwide pattern of inflation, our price system will lose its power to hold us together and keep us working for the good of all. Confusion and frustration will take over and incentive will disappear. Production will drift downward. Our present trend in Government which has not enough regard for principle and ultimate consequence will reach its final low level and destroy capitalism—the production-through-incentive system which functions best when there is a minimum of Government restraint and when the value of money is established by competition for different goods and different services. The alternative is a decay of our military and productive power to withstand Communist aggression, the loss of freedom and human dignity, without which everything worth while is lost.

The Communists in their campaign of world conquest may count heavily on inflation to reduce our strength. The time to face the danger is now. There is a sure way for free and intelligent people to prevent disaster.

First, we must put emphasis on production. People must work longer and harder so as to produce enough to supply military needs and at the same time provide for civilian living requirements.

This Nation's world preeminence is founded on its genius for production. We must not shackle it; we must use it.

Second, we must have economy in Government. The nondefense expenditures of Federal, State, and local governments use up an excessive and constantly increasing share of our national income. Public spending bids prices up, just as private spending does. This is the wrong time for governments to venture into new nondefense activities, it is the right time for them to save money in the programs already existing.

Third, we in the greatest degree possible must pay for our defense program with taxes, not with borrowed money. Suppose the Government borrowed billions of dollars from the banks and paid those dollars to people for building guns and tanks and planes. People would take that money and spend it on food, clothing, and other consumer goods. Of course, that would bid prices up which means that the dollar would have less value.

Contemplate this fact regarding a billion. Since the year 50, more than 1900 years have elapsed whereas 1,000,000,000 minutes have not yet elapsed.

How silly it is to reason that billions of dollars may be added to the supply of money without lessening the value of the dollar.

When we as a Nation decide to put more of our productive effort into a defense program, we accept for ourselves some inevitable sacrifice in the things we can buy for our individual use. The right way to take that sacrifice is in the form of taxes assessed against all the people so as to soak up as much purchasing power as the new government spending creates. If we take that sacrifice in the form of taxes, we will be far better off than if we take it in the higher prices that otherwise are inevitable.

Fourth, Government spending for defense must be done with careful regard for the limits of our national capacity. Military officials must avoid the great temptation to be reckless and wasteful in the quantity and quality of their purchases.

Fifth, the expansion of credit to private firms and individuals must be curtailed. Otherwise new borrowed funds would be thrown into the spending stream to bid prices up.

Sixth, people must save money and keep it in fixed-dollar investments such as bonds, deposits and life-insurance policies. The

more we save the less we spend, and the harder it will for prices to go up. It is reasonable and honest to ask people to save if the other essential things are done to justify confidence in the long-range buying power of the dollar.

And, finally, we must recognize that our country is in great danger, and we must dedicate ourselves to its survival as the citadel of freedom. This means we must think less of our immediate personal rewards and more of what we can contribute to the building of our national strength.

If we can put this seven-point program into effect, we can save our country from the dreadful consequences of inflation. The difficulty is that the people are being cheated by the illusion of an easier remedy—one that works on the symptoms of the inflation but only aggravates the real disease. This false remedy is price ceilings. There are three things about price ceilings that the people must understand.

First, they do not stop inflation. If people have money they wish to spend, and there are not enough goods to go around, prices always go up—one way or another. Black markets are only one way. There are many others. Instead of paying more for the same thing, you often pay the same amount for something poorer—that is inflation, too. Goods get shoddier; the good quality lines disappear from the shelves; price-cut sales diminish; you have to buy something you do not want to get something you do want; service grows poorer; you have to stand in line for things; the scarce items come from under the counter; what you can buy depends on how much "pull" you have. Finally, the things you want to buy just aren't for sale. Instead of meat, you have ration coupons for dinner. The people are forced to hold back money they want to spend, so that later, when the ceilings collapse, they can spend it all at once and send prices skyrocketing.

Second, price ceilings cripple production and thereby increase inflation. Under ceilings, no one can afford to produce anything unless he first finds means to determine what constantly changing Governmental regulations will allow him to get for it and whether that is enough to cover his costs and a reasonable profit. Very often, the answer is "No," and production stalls. Often a firm must make the wrong article because price ceilings prohibit making the right one. How can it be otherwise when a group of bureaucrats must make the decisions on business problems they cannot possibly understand? At best, a whole army of people are taken out of productive jobs and converted into price policemen at Government expense. The mere job of keeping up with price regulations is a costly, time-consuming burden. Less goods and higher costs mean more inflation in the end.

And third, the worst of all, price ceilings make it hard for a government to fight inflation because it must deceive people into believing that the hard, sound remedy is unnecessary. They make people think that the Government can stop inflation by saying it must stop, rather than doing the fundamental things that will make it stop. If prices are rising, a law is passed against it—how stupid. Value by force for paper money has never succeeded, not even when the penalty for violating price ceilings has been death. And let us not overlook the fact that bureaucracy is government by men instead of by law, and what is tyranny but the exercise of discretionary power over the life and property of the citizen?

It is deceitful and unjust to encourage housewives and others to sign telegrams and petitions relating to intricate economic matters.

We all wish money to merit increased value in terms of goods, but it is an obvious fact to those who reason soundly that the dollar

is worth not more than it will purchase in a free and open competitive market.

Price ceilings may make sense for the politician who banks upon an ignorant electorate. It makes no sense for a nation of informed people, who take their citizenship seriously, and who mean to keep their freedom alive now and in the years ahead.

For them, the only answer is one that goes to the cause of the disease and cures it. The answer is not simple; it is not easy; it is not compounded of false hopes. It consists of: (1) Production; (2) Government economy; (3) increased taxes from everyone so as not to destroy production incentives; (4) wise military spending; (5) curtailed credit; (6) individual savings; and (7) real dedication to the cause of freedom.

Appreciation for the Home-Town Doctor

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. CURTIS of Nebraska. Mr. Speaker, we, as Americans, owe so much to the medical profession. The family doctors, the surgeons, and the specialists have an unparalleled record in relieving human suffering and prolonging human life. Many of them have rendered great sacrificial service for their fellow man.

Because of our deep appreciation for the doctors we are always pleased to read accounts that are written when a community honors their local doctor. Such was the case with reference to Dr. W. E. Shook who lives in the town of Shubert, a town of about 500 population which is located in Richardson County, Nebr.

In connection with the news accounts concerning Dr. Shook, the Lincoln Star of Lincoln, Nebr., published an editorial entitled "End of a Perfect Day." I wish to insert that in the RECORD. It is as follows:

END OF A PERFECT DAY

The news accounts of that community picnic which Shubert tendered to its beloved, faithful country doctor, Dr. W. E. Shook, overlooked the benediction to a perfect day which only Dr. Shook himself could supply.

The crowds were melting away. The program had ended. In one of the speeches, reference was made to the muddy roads over which those present had traveled to express to Dr. Shook the affection a Nebraska community had for him in all his years of loyalty to its people. It had rained a few hours before the picnic.

"These are the kind of roads," one of the speakers said, "over which he has traveled innumerable times in order to be with you when you were sick."

The telephone rang.

A farmer had mangled his hand badly and was in need of medical care.

The good doctor, 78 years young, the center of attention throughout the afternoon, shaking hands, talking with scores of old friends, mingling with the crowds and loving every minute of it, was on his way.

There was the same mud and the same miles to be traveled. Duty was calling, and when duty calls Dr. Shook all other voices are unheard.

To Continue the Marshall Plan

EXTENSION OF REMARKS

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greenfield (Ind.) Daily Reporter, issue of July 28, 1951:

TO CONTINUE THE MARSHALL PLAN

The Marshall plan (the Economic Cooperation Organization or ECA) is scheduled to die a natural death in 1952. This is the emergency pump devised in 1946 to transfuse money, assistance, and industrial vitality into the veins of war-torn European countries, and was named after then Chief of Staff, now Secretary of Defense, George C. Marshall, because he made the first public presentation of the idea in a speech, although he did not originate the idea.

Congress went for the idea because it was generally recognized that some assistance would have to be given France, Italy, Britain, and the rest to prime their economic pumps, and because there was a definite length of time suggested—expiration in 1952—which kept the venture in the emergency class.

Since that time a lot more billions have been spent, bartered, and given away in the name of the Marshall plan than were originally contemplated, and for purposes which were quite different from the original intentions. Critics of the plan, objectors to its prostitution, were aware of this, but largely bided their time in the feeling that in 1952 this phase would pass.

Since its original establishment, the Communist menace has loomed higher on the horizon. The "Good Old Joe" attitude has changed as our blind eyes have been opened and those who refused to listen to the early warnings of "wolf, wolf," have now become acutely conscious of the menace which quite a lot of us have seen for nearly 20 years.

So the objectives of ECA have gradually undergone a change. Instead of merely helping those who were down to get back up on their feet, it is now being pointed to as the great weapon in the fight against the spread of communism.

Leaders of ECA, supporters of the theory, have insisted all along that its success and accomplishments have far exceeded their fondest dreams and have produced figures to support this statement.

That being the case, if it is really true, this should then mean that by 1952, the ECA should be allowed to follow the original intent of its creators and die a natural death, its purposes well accomplished.

But in the last year, another phase of international help has come forth, largely the result of the Korean fracas, and the sudden hysterical fear of communism's spread. That is military aid in the building of an international force under the North Atlantic Pact designed to be strong enough to first discourage but, if necessary, to resist, military invasion of Western Europe from Russia. We are now spending, and in the future plan a lot more, billions in direct military aid.

But the lovers of ECA, reluctant to see it die as planned, are now attempting to get it in fact, become transmorgified, by tying it onto the military aid plan.

Currently President Truman and also General Marshall as his spokesman, are trying to sell Congress on a total bill of \$8,500,000,-

000 a year for 3 years, or a total of \$25,500,-000,000 for the dual purpose, which would, incidentally, allow ECA to continue to live past 1952, and, still more incidentally, allow the tens of thousands of public office holders connected with it to still fill their jobs and draw their pay, some of it lush indeed.

No wonder Senator DIRKSEN, of Illinois, wonders "what they will use for money about the third year."

There is no doubt we will have to help Europe rearm; nor that we will carry a considerable portion of the cost. That will take money. But this business has all the earmarks of the old "tax and tax, spend and spend" political theory which has put us in such a precarious fiscal position in this country, has caused our present inflation, and is at present taking about 30 percent out of every worker's pay envelope. It has all the characteristics of tying everything all together in such a hodgepodge that no one can tell anything about anything, overlapping authorities, purposes, and organizations so that no one will have to be laid off and letting the American people pay the bill again.

Oil Output Boosted in Five Nations To Match Supply Lost in Iran

EXTENSION OF REMARKS

OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. D'EWART. Mr. Speaker, recently we have heard thinly veiled threats of gasoline and fuel oil rationing from various of the administration officials who are concerned with petroleum production. Some of these statements imply that rationing will be necessary if the oil output of Iran is lost to the western nations. One cannot help but recall that gasoline rationing has been seriously proposed by some officials not because it is necessary but as a measure to make the public realize what is termed the seriousness of the emergency.

The following article in doubly interesting in the light of these conditions:

OIL OUTPUT BOOSTED IN FIVE NATIONS TO MATCH SUPPLY LOST IN IRAN

(By Ernie Hill)

UNITED NATIONS, N. Y., July 28—British and American oil companies have amazingly stepped up production in five countries to take over completely Iran's world petroleum markets.

The companies are furnishing all of Iran's old customers with all the petroleum they need. Officials say the new production levels can be maintained indefinitely.

This situation, it is disclosed, was made clear to Premier Mohammed Mossadeq in Tehran by President Truman's special envoy, W. Averell Harriman.

Iran, it is pointed out, faces economic collapse without markets for its oil unless it reaches some agreement with Britain on terms of nationalization and marketing.

UNITED STATES AND CANADA AID

The oil fields in Kuwait, Saudi Arabia, the United States, Canada and Venezuela are producing 668,000 more barrels of oil daily now than they were March 20 when the nationalization decree was adopted.

At that time, Iran was producing 700,000 barrels daily, 600,000 of which were exported. It ranked as the world's fourth oil producer behind the United States, Venezuela, and Russia.

Today the oil world is more concerned about an oversupply of petroleum and by-products than it is about a shortage.

Should the war in Korea end and should Iran continue production with British assistance, drastic cut-backs would be needed to prevent the market from glutting.

PERSIAN OUTPUT BOOSTED

The largest increases in production have been made in Kuwait on the Persian Gulf. The Kuwait Oil Co. is owned by the Anglo-Iranian Oil Co. and half by Gulf Oil of the United States.

Kuwait production has been increased from 375,000 barrels daily to 641,000, a gain of 266,000 barrels.

The second largest gain has been registered in Saudi Arabia by the Aranco Co., a subsidiary of Standard Oil of New Jersey.

Saudi Arabian production is up from 639,000 barrels daily to 803,000 barrels, a gain of 164,000. On the basis of this increase, Saudi Arabia displaces Iran as the world's fourth largest producer.

Kuwait and Saudi Arabia have absorbed 70 percent of the Iranian market.

Canada has doubled her production in the last 4 months. The increase was from 80,000 barrels daily to 168,000 in July.

The political implications of these production shifts are considered extremely significant.

It places the United States and Britain, as represented by their oil companies, in the position of waging a full-scale campaign to break the back of the Iranian Government.

Iranians here have estimated that they could maintain themselves economically if they could sell 20 percent of the oil previously marketed by Anglo-Iranian. At the present time, their sales are only about 2 percent.

President Truman Insults the People of Wisconsin

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a radio broadcast by Mr. David Lawrence, editor of the United States News and World Report, over the National Broadcasting network on Sunday, July 29. Mr. Lawrence calls attention to lack of judgment on the part of President Truman in his speech at Detroit on last Saturday. It is evidence that presidential advisers and special writers have no idea as to progressive thinking in Wisconsin.

The broadcast follows:

There's really one over-all subject today—the speech the President delivered at Detroit yesterday. For it has in it a variety of questions that all of us are concerned about.

But, before I take that up, I want to call your attention to something significant that happened last week. Congress worked out a compromise on the economic controls legislation which in my judgment will make it possible for the new law to accomplish what people want—a restraint on higher prices

without destroying our economic system and its proper practices.

Speaking of prices, the Department of Agriculture has just announced that the general level of prices received by the farmers of this country tumbled again for the fifth consecutive month. The drop as of July 15 was 2.3 percent below the price level on June 15. Yet the prices the farmer has to pay for the things he buys are unchanged. As a result, the figure for the parity ratio—the official formula for measuring the farmer's position—has dropped sharply. This parity is now at 104, which is 15 percent below what it was at the high point of the postwar period—namely, in October 1946.

Now let me take up the questions growing out of the President's speech at Detroit yesterday.

I'll give you what I think are the constructive points and also some of the negative impressions that flow from that address.

Mr. Truman was right in saying that aggression in Korea was aimed at the whole idea of the United Nations and that the United Nations was justified in resisting that aggression. He pointed out that we could have given up in face of attack, but that we didn't. That is a decision for which our Government and its leadership must be commended.

But the question is "Have we really frustrated aggression and taught the aggressor a lesson?"

The President says: "We do not yet know whether the Communists really desire peace in Korea or whether they simply are trying to gain by negotiations what they have not been able to gain by conquest. We intend to find that out. The talks can be successful if the Communists are in fact ready to give up aggression in Korea."

So in a nutshell we don't know as yet what effect our resistance to aggression has created on the Communists. The President says they are building up armies in Europe and Asia. So are we.

The President thinks the answer is for us to build up our armed strength and that this could prove a deterrent to further aggression, and he expresses the hope that we will not have to use our armed strength.

With this and the other sections of the President's speech dealing with our policy of rearmament and resistance to aggression, all of us can agree. But there was one part of the speech which I think was very unfortunate.

Since that speech was delivered over most all of the radio and television stations of the Nation yesterday, it is most regrettable that Mr. Truman broadcast the mistake that he did. Now let me read you exactly what the President said:

"Never, not even in the bitterest political campaigns, and I have been through many a one, have I seen such a flood of lies and slander as is now pouring forth over the country."

"Now listen to this one. This malicious propaganda has gone so far that on the Fourth of July, over in Madison, Wis., people were afraid to say they believed in the Declaration of Independence. A hundred and twelve people were asked to sign a petition that contained nothing except quotations from the Declaration of Independence and the Bill of Rights. One hundred and eleven of these people refused to sign that paper—many of them because they were afraid that it was some kind of subversive document and that they would lose their jobs or be called Communists. Can you imagine finding 111 people in the capital of Wisconsin that didn't know what the Declaration of Independence and the Bill of Rights provided? I can't imagine it."

"Think of it, in the capital of the State of Wisconsin, on the fourth of July this year, 1951, good Americans were afraid to sign their names to the language of the Declara-

tion of Independence. Think of that in the home State of two of America's greatest liberal and progressive Senators, Robert M. La Follette and Robert, Jr."

"Now that's what comes of all these lies, smears, and fear campaigns. That's what comes when people are told they can't trust their own Government."

After I heard that I telephoned to Don Anderson, publisher of the leading newspaper in Madison, Wis., the Wisconsin State Journal, to get details as to what actually did happen on July 4, last. He said his newspaper was printing a reply to the President in the form of an editorial which will be published tomorrow morning, but he gave me permission to read it to you now. The people of any city, when characterized before the entire Nation in that way by the President of the United States, have the right to present their side, so I will read that editorial to you now:

"President Truman must be in a sorry state of nervous jitters. Either that or he failed to clear his most recent speech with the stylists and researchers who ordinarily read copy on the Presidential pronouncements."

"In Detroit Saturday, the President fell for one of the oldest gags in a city editor's repertoire—the phony petition."

"Because the gag was staged in Madison, the city received some dubious notoriety in the President's address. He cited a feature article in the Capital Times which told of the failure of a reporter to get signatures to a petition which was nothing but sections from the Declaration of Independence and the Bill of Rights."

"Now any city editor worth his salt knows that a smart reporter can get many worthy people to sign the most damaging of petitions. By staging the act properly, the same reporter can get blanket refusals for the most proper or innocuous ones."

"Having seen the Capital Times city editor and this particular reporter in action on the liberal front and amidst the peace crusades over the years, the State Journal hasn't the slightest doubt the July 4 act was carefully staged."

"Consider the background."

"Many Madison people were badly misled last year when they signed the harmless-sounding Stockholm peace petition—a Communist propaganda device."

"On the same day the Times worked its feature stunt (namely, July 4 last) the Madison chapter of the American Peace Crusade circulated a pamphlet calling for the withdrawal of troops from Korea and asking for no more laws taxing the workingman to pay for the rich man's war."

"Put these facts against the setting of a family picnic day. Then take a look at the reporter asking signatures for a long and rhetorical document."

"What sensible person would sign? We wouldn't. Not even today. And knowing and approving the content of the petition."

"Years ago, on a dull news day, we sent a cub reporter out to try to sell a bright new silver dollar for 65 cents. He tried 40 or 50 people on Capital Square before finding a buyer. President Truman would have thought that a reflection on United States monetary values. If it happened now, he'd probably be right."

"Under the proper stimulus, people will sign things. They'll also not sign them."

"We have no quarrel with the Times for working its gag down its particular party line. The July 4 stunt was quite in character."

"For the President of the United States to fall into the trap and use the incident in a major address is an unhappy commentary on the state of his nervous and emotional balance."

Now that's the end of the quotation from the editorial in the Wisconsin State Journal.

of Madison, Wis., in reply to the President's accusations about the people of Madison.

I leave it to you to judge whether Mr. Truman was fair in broadcasting over the major networks and television stations such a loose charge. I leave it to you to decide whether, if any stranger came along with a petition, you would sign it especially if it seemed to favor revolution and the overthrow of government. Even though you knew it was a quotation from the Declaration of Independence, you would wonder just what was behind such a move now and whether someone wanted you to line up behind the Communists who are always taking innocent-looking phrases and putting them into petitions of various kinds. The Truman administration itself has denounced the famous peace petition which the Communists started at Stockholm last year and circulated around the world, getting millions of signatures before innocent people realized it was a phony.

In my opinion, the President owes an apology to the people of the city of Madison, Wis., and to the people of the State of Wisconsin, and to the American people for having given credence to what on its face was a phony petition and a trick. President Truman, through his staff, could easily have verified what was back of that incident. It has been referred to in print many times since July 4 last and should have been investigated thoroughly. It could encourage more phony petitions.

No wonder we are sometimes confused by the speeches we hear from Washington, and were it not for a free press and a free radio, you wouldn't ever learn the other side. The "big lies" will never get anywhere in America if we preserve freedom of speech for all sides.

I am also including, Mr. Speaker, as part of my remarks, the following editorial which appeared in the Washington Star on last evening, which is also a reply to the intemperate remarks of the President:

THE RIGHT TO BE LET ALONE

A Fourth of July enterprise by the Madison (Wis.) Capital Times gave Mr. Truman the text for a sort of gee-whiz sermon during his Detroit speech on Saturday. "Think of it," he exclaimed, "in the capital of the State of Wisconsin, on the Fourth of July in this year 1951, good Americans were afraid to sign their names to the language of the Declaration of Independence. That's what comes of all these lies and smears and fear campaigns. That's what comes when people are told they can't trust their own Government."

The Capital Times reporter who made this test explains that he took a copy of a petition containing excerpts from the Declaration of Independence and the Bill of Rights to a public park on Independence Day and asked people to sign it. Only 1 out of 112 people approached was willing to do so. At the same time, a petition was being circulated in the same crowd by the American Peace Crusade, asking for removal of American troops from Korea. Some of the people asked by the reporter to sign his petition thought it was the American Peace Crusade petition.

Well, if there is any moral to this story, the Star is inclined to think it is a good one, not a bad one. For it is downright encouraging to note that there are many people left in this country who are unwilling to sign something. The tendency, in recent years, seems to have run the other way. There have been so many joiners of organizations, so many signers of petitions and telegrams to your Congressmen, so many appeals for this and that, so many movements to put pressure on the individual in favor of something or against something, that we are, perhaps,

becoming tardily skeptical. And if this is the case, it is a good thing.

If a newspaper reporter went out on the street and asked passers-by to stop and sign a statement to the effect that they believed in the Ten Commandments, the probabilities are that most of his customers would turn him down. But the results of this experiment would not be convincing evidence that people are against virtue. The more reasonable conclusion would be that people want, more than anything else, the right to be let alone, and the right to mind their own business.

And this, in the Star's opinion, is a worthy aspiration.

John Davies and the Loyalty Board

EXTENSION OF REMARKS OF

HON. SAMUEL W. YORTY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. YORTY. Mr. Speaker, this morning's press carried news stories stating that the State Department has reinstated Mr. John Davies, who suffered a suspension as a result of charges made against him, which charges were investigated by the Loyalty Board. I do not know Mr. Davies, but I do know he will need fortitude and a philosophical outlook on life to avoid loss of self-confidence and official usefulness as a result of the experience of having his suspension so widely publicized without full disclosure of the charges which brought it about. His difficulties were recently made the subject of a column by Mr. Joseph Alsop. The column is a singular one and worthy of careful attention. Under permission, I include it in our RECORD:

[From the Washington Post of July 25, 1951]

MATTER OF FACT

(By Joseph Alsop)

BEFORE THE LOYALTY BOARD

Every so often a reporter has a personal experience interesting enough to call for breaking the good rule of impersonality, and telling what happened to him. One such has just come to this reporter, in the form of an appearance before the State Department Loyalty Board in the case of John Paton Davies, Jr.

To be sure, there was nothing very stirring about the hour or so at the hearing. The three-man board, headed by a shrewd, dry-spoken New Englander, Conrad E. Snow, clothes itself in no special majesty. The setting is an ordinary State Department office borrowed for the occasion. After the oath, the routine of question and answer goes forward in an informal but businesslike way. The board seems both sensible and patient. When it is over, your first reaction is, "Well, I thought there would be more to it than that."

On reflection, however, it seems to me that there is more to it than that, which is the reason why the first person singular is being used in this sphere for the first time in 6 years. Here was Davies, after all, formerly a senior member of the State Department Planning Staff, now publicly charged with doubtful loyalty, and publicly suspended from duty on the eve of a most important assignment as political adviser in Germany. Here was his name blackened, his career perhaps permanently damaged, his fortune

already hard hit by all the horrible complications of a sudden change of family plan after the sale of the family house. And all for what? To make a burnt offering with a sweet savor in the peculiar nostrils of Senator McCARTHY and Senator MCCARRAN.

Certainly, if anyone can testify competently as to the sense or nonsense of this proceeding against Davies, it is this reporter; for in the wartime years in Chungking we were, so to speak, competing backroom boys.

Davies was the political adviser of Gen. Joseph W. Stilwell; I was the adviser of Dr. T. V. Soong and Maj. Gen. C. L. Chennault. I fought for airpower and a policy of strengthening the Chinese National Government, and he defended General Stilwell's views and advocated American military aid to the Chinese Communists. Davies was finally defeated when General Stilwell was dismissed. But it was a bitter battle while it lasted, and on the principle that no one knows you as your enemy knows you I think I know John Davies pretty well.

As to his loyalty, no doubts ever occurred to me, even in the most squalid moments of the long, squalid struggle in Chungking. Indeed, the thought that I could not escape as I sat before the loyalty board was the thought that Davies' judgment of the Chinese scene had stood the test of time rather better than my own.

The difference between the two views was simple enough. By the end of 1943 and the beginning of 1944 it was already clear that the regime of Generalissimo Chiang Kai-shek would succumb to the Chinese Communists after the war, unless something pretty drastic was done. My view was that a Communist triumph could be prevented by replacing General Stilwell with a wiser man, increasing the scale of American aid, and intervening very actively to reform the rotting Nationalist Government.

Given the satisfaction of all these difficult conditions, particularly the indispensable third, I still think I might have been proven right.

Davies held the view, on the other hand, and with many excellent reasons, that the Generalissimo's government was already past saving. If this was the case, the question was not how to prevent a Chinese Communist victory, but how to come to terms with it. Davies also knew certain things that very few people in America seem to know even today—that Mao Tse-tung and his Communists had developed their party and their policy in isolation from and sometimes in defiance of the Kremlin, for example, and that throughout the course of the China war, the only recipient of Soviet aid had been the Generalissimo.

With this special knowledge, Davies made what must now be accounted an extremely brilliant deduction—that Titolsm was possible, before Titolsm had been heard of. Believing Chiang Kai-shek was past saving, believing also in the possibility of Chinese Titolsm, Davies therefore recommended moderate American aid for the Chinese Communists. His avowed aim was to promote their Chinese Communist confidence in America, and thus to achieve a division between them and the Kremlin. And if Davies' recommendations had been followed, I now believe he would have been proven right.

In short, there were two perfectly logical and defensible American policies in China, and you could take your choice between them. What actually happened—what I for one had certainly never foreseen—was that after the dismissal of General Stilwell, we ceased to have any China policy at all. Even when Gen. Albert C. Wedemeyer was performing so admirably as military commander, his hands were politically tied; after that, there was total vacuum.

Having no policy led, inevitably, to the present disaster. For this outcome, John Davies, the man being sacrificed to Senator McCARRAN and Senator MCCARTHY, had no more visible responsibility than I. As I thus reviewed the past, it struck me we would be much wiser to start loyalty investigations of the politicians who are now working all-out to destroy the last vestiges of decency and fair play in our public life, than to waste time picking over the bygone views of such men as John Davies.

Boy, Are We Confused

EXTENSION OF REMARKS OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of July 30, 1951:

BOY, ARE WE CONFUSED

At Detroit Saturday President Truman charged that administration critics are "trying to stir up trouble and suspicion between the people and their Government."

There is no doubt that many people are suspicious of the administration's motives and skeptical of its ability and integrity. But critics of Mr. Truman's government are not responsible for that situation. The Government itself has brought it about.

Take the case of the troops-to-Europe controversy. Last February Defense Secretary Marshall told Senators that the administration planned to send only four additional divisions to Europe, a total of 72,000 men if the divisions were at full strength, plus 20,000 or 25,000 supporting troops, which, with the 97,000 men already there, would make a total ground force of 189,000 to 194,000. Air and naval forces, it was estimated, would make the combined total approximately 250,000.

Marshall's estimates took much of the steam out of the opposition to the proposal to assign United States forces to a European army in peacetime. Consequently the Senate passed a resolution which, however, had no legal effect, approving the assignment of the four additional divisions to the European command and expressing the pious hope that the approval of the Senate would be sought for any additional overseas assignments.

Friday, out of a clear sky, General Marshall told the Senate foreign relations committee that the United States expected to have 340,000 ground troops and 60,000 Air Force troops in Europe in 1952, a total of 400,000.

This not only confused Senators and newspapermen but the Pentagon as well. To quote from an Associated Press dispatch, "highest defense authorities at the Pentagon told newsmen after hours of frantic checking and double checking that they were unable to explain or clarify the basis for Marshall's statement."

But Saturday Marshall confirmed his 400,000 total, explaining that he meant supply and supporting troops as well as combat units.

Thus, according to Marshall's own testimony, the number of supply and supporting troops necessary to maintain 169,000 combat troops has risen from an estimated 20,000 to 25,000 in February to a total of 171,000 in July.

Marshall's estimates may be right today, but if so he was being somewhat less than frank with the Senate last February. Or was the administration planning all along to send more troops to Europe than the number given in the February estimate, and did Marshall let the cat out of the bag?

Then there was the strange case of the Pentagon spokesman who issued a statement Friday saying that, while the U. N. forces have halted their offensive in Korea, the Communists have taken advantage of the cease-fire talks to make a tremendous build-up of their strength.

Friday evening the Defense Department announced that this statement did not reflect official policy or views.

But Saturday in Detroit President Truman said the North Koreans and Chinese Communists were getting a steady flow of new equipment from the Soviet Union for ground and air use and that there were heavy concentrations of Soviet air, land, and sea forces along the Manchurian border and opposite Japan and Alaska.

So who was telling the truth—the original Pentagon spokesmen, the Defense Department which repudiated his views or the President, who restated what the Pentagon spokesman had said?

Is it a case of the administration simply being confused, do responsible officials fear that war with Russia is imminent or are they simply trying to scare the hell out of us in order to get more authority from Congress to control the lives of American citizens?

We note also that Manly Fleischmann, Defense Production Administrator, said Friday that consumers have no reason to worry because of cut-backs in the use of metals for civilian goods.

"Even with our defense production program, we will generally maintain a level of civilian production approximately equal to that of 1949, which certainly wasn't a year of hardship," he said.

If this is true, it knocks the props out from under the arguments of those who say we've got to have more and tougher controls. It supports the position of those who say the only powers the Government needs are credit controls and authority to allocate materials.

These are some of the examples of the confusion, emanating from the Government itself, which has produced a widespread lack of confidence in the Truman administration. The remedy for that unhappy situation is a new administration.

Ambassador Cowen's Message

EXTENSION OF REMARKS OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message of Ambassador Myron M. Cowen to the Filipino people on the occasion of the fifth anniversary of Philippine independence:

AMBASSADOR COWEN'S MESSAGE

Our two peoples are celebrating again today an event of tremendous importance in the history of the Philippines and of the United States: our national independence day. In both countries this day gains added significance with each passing year. Americans are no less proud than Filipinos that on July 4, 1946, the United States fulfilled its

promise and the Filipino people assumed the responsibilities of full and complete sovereignty. On that date, the United States reaffirmed a cardinal principle of its relations with all nations: that every people has the right to be governed in accordance with its freely expressed wishes and to promote its national development in its own way.

On this, the fifth anniversary of Philippine independence, I especially feel that both our nations should soberly review the obligations which we have undertaken with all other free nations of the world and renew our common efforts to improve the conditions of security and freedom for peoples everywhere.

Today, the Philippines and the United States are working together in a free partnership in order to promote and protect the interests common to both. Today, brave Filipino soldiers with their brothers of many nations are fighting magnificently on the battlefields of Korea in order to help a sister nation drive out cruel blood-thirsty aggressors. At home, the Filipino people are making earnest efforts to raise their national living standards and improve their general welfare. The United States, for its part, recognizes these endeavors and is adding its resources to those of the Philippine nation in a joint effort to provide a better and safer life for the Filipino people.

There are some unfriendly voices which are trying to create doubts and fears about our promises to cooperate with the Philippines and safeguard its security. These small voices cannot alter our purpose, deter our efforts, nor mar our friendship. Filipinos and Americans, by continuing to work together in mutual confidence and respect, can proudly show the whole world what cooperation among free democratic nations can achieve.

Down From Olympus

EXTENSION OF REMARKS OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HOWELL. Mr. Speaker, I believe the following editorial from the Trenton Evening Times will be of interest to the Members:

DOWN FROM OLYMPUS

General MacArthur made a stirring and effective political speech before the Massachusetts Legislature Wednesday night. If the Republican National Convention were being held this week instead of next year, this is the address the delegates would cheer to the echo as a keynote utterance. It rang all of the charges with fervor and eloquence. It has everything demanded by the more conservative leaders of the Republican Party.

General MacArthur again stressed the familiar charge, somewhat demagogic, that our foreign policy, or what there is of it, is being "dictated from abroad." In support, he cites his own experience in being relieved of his command for his expressed readiness to meet the enemy commander to discuss a cease-fire while an identical proposal was received so enthusiastically "when made by the Soviet Government."

As has been his custom in his more recent speeches, General MacArthur broadened the scope of his discussion to include matters other than his own problems, military and foreign policies. Excessive taxation, governmental waste and incompetency and the plight of the worker gave added political

overtone to his address. He said he had been warned that his course would "bring down upon my head ruthless retaliation." It is doubtful if these fears are well founded.

The General repeats his argument that we must "outlaw" war. What does he think the United States and other free nations have been trying to do? The Charter of the United Nations opens with the statement that the members are determined "to save succeeding generations from the scourge of war," and pledges them to "unite our strength to maintain international peace and security." However, the General has testified that he has "only the barest knowledge of what has transpired in the United Nations" and it may be that he is not aware of this purpose.

Undoubtedly, General MacArthur has descended from his five-star Olympus to the sweat and dirt of the political battlefields. He must be prepared to accept what happens even to the most exalted when one is in the forefront of the political firing line.

Teddy (Bully Bully) Roosevelt and the Big Stick: In the Light of History, Perhaps Not So Bully Nor So Big

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. SIEMINSKI. Mr. Speaker, history seems to slide people and events into perspective.

One of my home-town papers recently said that were Teddy—Bully Bully—Roosevelt around today with his big stick, the Korean situation would be solved in jig time as it was in 1905 when Teddy awarded Korea to Japan in recognition for her defeat of Russia. The people of Korea were shut out, denied their own government.

You will recall Russia moved in on Korea, started to develop timber and mineral concessions which she black-jacked from the King of Korea. Japan slapped her down. The plum, Korea, was awarded to Japan by Teddy who, history tells us, acted as front man for the interests of the four horsemen of the Orient, Muraviev, of Russia, Ito, of Japan, Landsdowne and MacLeavey Brown, of Great Britain.

We were thanked for our gallant gesture, in 1941, by the Japanese with the slaughter of our boys at Pearl Harbor. Had Teddy had more vision at the time of the 1905 settlement, provisions might have been made for the use of Korean facilities in the event hostilities again flared up in the Far East. Thus check-mated, Japan would not have struck at Pearl Harbor.

I trust the U. N. negotiators at Kaesong today will keep an eye peeled on the future. The past aggressors in Korea—Russia, China, and Japan must be check-mated. The people of Korea should not be denied their own government. Korean facilities should be provided for the United Nations in the event hostilities again flare up in the Far East. Such is the lesson of history.

XCVII—App.—303

Graduated Leave

EXTENSION OF REMARKS OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I desire to include here a comparison showing savings to the Federal Government that would be affected by the graduated-leave plan as compared to the Douglas amendment. I believe this comparison is worthy of the study of Members of the House:

ESTIMATED SAVINGS FROM CHANGE OF LEAVE FOR FEDERAL GOVERNMENT EMPLOYEES

The estimate of saving effected by the graduated-leave plan stated in the accompanying table, totaling \$190,000,000, is based on an average annual salary of \$3,278, or \$12.6069, which is the over-all average of leave costs indicated in the Senate Post Office and Civil Service Committee's report on S. 832. On the same basis, the saving effected

by the Douglas amendment is \$140. The net saving on this basis is \$50,000,000.

The total saving effected by the graduated-leave plan has been estimated by the Senate committee \$178,000,000. This is based on an average annual salary of \$2,860 or \$11 per day for employees having less than 2 years of service, and an average annual salary of \$3,385, or \$13.02 per day, for employees having 2 to 15 years of service.

The cost of placing postal employees under the graduated-leave plan has been estimated at \$13,700,000. The cost if the Douglas amendment were applied would be \$24,200,000.

Additional leave for postal employees would reduce the saving under the graduated system from \$190,000,000 to \$177,000,000, and from \$140,000,000 to \$116,000,000 for the Douglas amendment. The net saving then would be \$61,000,000.

If the committee figures are used, the net saving for the graduated plan would be \$165,000,000, and \$116,000,000 for the Douglas amendment.

The net saving would be \$49,000,000 even if the committee figures are used.

The daily salary average of \$12.6069 used above is believed to be more realistic of conditions prevailing during the expansion for defense. A daily average of \$11 per day for newcomers would be representative of normal recruiting in more nearly normal times.

Savings represented by graduated and Douglas rider leave plans

Length of service	Number of employees	Days saved	Total days saved	Value of days saved over present system (at average of \$12.6069 per day)
Graduated—				
Less than 2 years.....	713, 273	13	9, 272, 549	\$116, 898, 098
2 years and under 15 years.....	978, 831	6	5, 872, 986	74, 040, 147
15 years and over.....	166, 896	0	0	0
Total saving.....	1, 859, 000		15, 145, 535	190, 938, 245
Douglas rider:				
Less than 2 years.....	713, 273	6	4, 279, 628	53, 952, 812
2 years and under 15 years.....	978, 831	6	5, 872, 986	74, 040, 273
15 years and over.....	166, 896	0	1, 001, 370	12, 624, 247
Total saving.....	1, 859, 000	6	11, 154, 000	140, 617, 362
Net saving.....				50, 320, 883

Estimated cost of postal leave changes

Length of service	Graduated-leave proposal			Douglas proposal	
	Estimated number of employees	Days added	Value of days added ¹	Days added	Value of days added ¹
Less than 2 years.....	138, 400	—2	\$3, 489, 590	5	\$9, 283, 180
2 years and under 15 years.....	189, 910	+5	12, 738, 213	5	12, 738, 213
15 years and over.....	32, 390	+11	4, 491, 710	5	2, 172, 559
Total.....	360, 700		13, 740, 333		24, 193, 952

¹ Average annual salary of \$3,488, or \$13.415 per day.

General MacArthur's Boston Speech

EXTENSION OF REMARKS OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to call to the attention of all Members of Congress an editorial entitled "Off the Reservation,"

which appeared in the Trentonian, which serves my district, the Fourth Congressional District of New Jersey.

The editorial follows:

OFF THE RESERVATION

Gen. Douglas MacArthur's speech at Boston could hardly have been classified as an exclusive discourse on military matters. His criticism of administration leaders, his condemnation of "socialization and slavery," his reference to the "covert manipulation of the civil power," his challenge of the concept that the military owes allegiance and loyalty "to those temporarily in executive office"—these and other remarks credited to

him in Boston do not jibe well with his previous assurances that he was an old soldier with no political axes to grind.

The right of General MacArthur to voice his opinions on affairs of public interest should not be questioned.

It should be borne in mind, however, that his long professional background as a great soldier places him in a position where his advice on military problems would carry far more weight than any ideas he might have on subjects with which he has been almost completely out of touch for almost 15 years.

General MacArthur himself must have recognized this in his address before Congress, at which time he made it clear to Members of the House and Senate that he would not be swayed by political considerations in shaping his own future course of action.

Now it looks like he has tossed all five of his military stars into the political arena.

Belt Tightening—Where?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 15, 1951

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial which appeared in the June 22 issue of the Ithaca (N. Y.) Journal. This editorial points out that while the reductions that Congress has been able to make in the President's "tight" budget have been substantial, they are nevertheless inadequate to check the mounting inflation which confronts us. The editors conclude that the only practical method is the one which I have advanced in legislative form; namely, to reactivate the Hoover Commission to study our entire Government structure and make recommendations to eliminate nonessential activities.

The editorial from the Ithaca (N. Y.) Journal follows:

BELT TIGHTENING—WHERE?

The House in considering a new tax bill which would bring the tax increases voted within the last 12 months to more than \$17,000,000,000, more than the cost of all the 48 State governments together.

A tax increase is one of the steps necessary to offset inflation and most people are reconciled to its need.

Yet it would be more palatable and carry more promise of being effective as an inflation check if the spending side of the ledger underwent equal treatment. The root of inflation is Government spending.

When everybody works 2 days a week to support the Federal Government, most people expect that any further belt-tightening required by the Government will be matched by tightening the Government's belt.

Some tentative pulls have been made at the Government's belt. A combination of a Democratic and a Republican Senator are laboring diligently, if not mightily, on the appropriation bills as they come up. Senator FERGUSON, Republican, Michigan, shoots at the frills and Senator DOUGLAS, Democrat, Illinois, takes deadly aim at mounting civilian employment in Government.

FERGUSON says if chauffeurs were refused for official cars, 7,000 full-time employees could be released for productive jobs. Dou-

glas thinks there are too many official cars anyway. So FERGUSON knocks out the chauffeurs and DOUGLAS tears up the car-purchase orders, and both win Senate support on cutting appropriations bills.

Senator DOUGLAS argues that the average Government employee works 1,650 hours a year, as against 1,900 to 2,000 hours for an employee in private industry. He estimates that if Government hours of work equaled those in private industry, the taxpayers would be saved \$200,000,000 a year.

Stanley High recalls in the July Reader's Digest, a House committee that found one copy of a 50-cent magazine cost the taxpayers \$13.89 when procurement charges were added. Drinking cups worth \$2.45 cost \$17.35 for administrative costs.

This is not belt tightening. President Truman describes his budget as a tight budget and dared Congress to find places for real cuts. Congress is finding cuts and making them. It should be applauded.

But significant reductions will not be made by simply paring here and there. Cuts of the size necessary to check inflation require deflation of Government—discontinuing nonessential activities that have been authorized in the past.

The best way yet suggested to do this is contained in a bill by Representative KENNETH KEATING to reactivate the Hoover Commission and instruct it to designate what activities can be discontinued as nonessential. This is the only kind of belt tightening that will match the belt tightening required by citizens by the tax increases.

Economic Pressure Can Force End of Oatis-Type False Trials

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the York (Nebr.) Daily News-Times of July 27, 1951. As the protests against the imprisonment of William Oatis rise in fervor, this editorial takes a calm and sensible approach to the problem of what course of action our Nation can take.

ECONOMIC PRESSURE CAN FORCE END OF OATIS-TYPE FAKE TRIALS

How can we prevent Russia and its satellites from continuing to seize innocent Americans on false spy charges?

Nobody but a few irresponsible Senators has suggested we should use or even threaten force. Force may evoke more force, with war the end result. Destruction and the death of possibly millions are a steep price to pay for the freedom of a few men. Especially as there is evidence we can effect their release by other means.

We can't be sure we shall not have war some day with the Communist world. But we are not likely to let it commence over the trial of a William Oatis or a Robert Vogeler on fake grounds of espionage. Or over the prospect of more such trials.

A more common proposal is that we should sever diplomatic relations with any country which thus mistreats or threatens to mistreat our citizens. Presumably no one seriously intends we should do this while an American is actually being held, since this

action would isolate him completely from contact with the United States Government.

Suppose, though, that we decided now to cut ties with Hungary, which held Vogeler but later let him go. Hungary's diplomats in America would, of course, have to go home. We know all satellite embassies and legations are spy centers, so to that extent we would gain.

But we would also lose a listening post in Hungary, where we have a sizable staff and can observe—one way or another—what the Communists are doing. The kind of information diplomatic attachés gather is not made public, but it would be risky to assume it is unimportant to us.

With western reporters behind the iron curtain down to a handful, we're getting a scanty enough portrait of life there. Perhaps they would like nothing better than to have us shut up shop and go home, even at cost of one diplomatic spy headquarters.

Like them, we have spies, too. But it's a lot easier for theirs to operate in a free country like America than for ours to get information in a police state under strict censorship. They might well see themselves the gainers in any break-off.

What about economic sanctions? We've already imposed many trade restrictions. We can do more to strangle satellite trade with us, and influence other western powers to follow suit.

Reports filtering out from behind the curtain indicate that these trade limits really do hurt. Despite all efforts at self-containment, the Communist world needs materials and products the West has. The Reds suffer when the flow is reduced or stopped.

Economic sanctions seem the most promising field to work. Where, as with Hungary, we may fear further arrests of Americans, we can perhaps gradually tighten a clamp on trade with the Reds. Moving step by step would permit us to gage closely the effect the restrictions we're having, and also would leave us something in reserve. An immediate blanket ban would not give us this flexibility, would not keep the Reds guessing as to what was coming next.

This certainly does not exhaust the possibilities. But economic measures definitely can strike a painful blow, and we ought to look to them hopefully if the need arises.

Turns Deaf Ear to the Farmer

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVINGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. CLEVINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John C. Davis from the Cleveland Plain Dealer for July 30, 1951:

Turns Deaf Ear to the Farmer—AGRICULTURAL DEPARTMENT GIVES NO HEED TO GRASS ROOTS DESIRES

(By John C. Davis)

Theoretically the United States Department of Agriculture is a representative of the American farmer in the halls of the Government. As a representative it should mirror the opinion of farmers. There may have been a time when it did just that but not now.

Today the Department is an unadulterated bureaucracy in which policy is established by the Secretary, a lawyer who has never known any productive work save service in

the public welfare branches of the bureau, and a few similarly trained executives.

Instead of consulting leaders of the major farm organizations, the Secretary and a half dozen socialistically-minded associates decide what they think is good for the farmer and attempt to cram it down the collective throats of the folks who produce our food. Thus was the Brannan plan born. So was it foisted upon the Nation. Today a new plan, equally socialistic, is in the making.

ANOTHER THEORY

The new plan, as announced, will lift the level of production of substandard and marginal farmers—at public expense and at the cost to farmers of controlling their own production.

When the Department is accused of disregarding farmer opinion, and the charge is made every day by farm leaders in and out of Washington, the defense is that the opinion cannot be learned quickly enough; that it is too difficult to consult all of the Nation's 5,640,000 farmers, that if any action is to be taken, it must be done by Washington because American agriculture is too diverse and sectional ever to agree upon any single proposal.

When pushed these agricultural bureaucrats claim that through the PMA, successor to the old AAA, they do sound grass roots opinion. The truth is that State, county, and township PMA representatives only get the right to vote upon a suggested policy formulated in Washington—and Washington counts the votes.

Considering that no PMA policy, even the Brannan plan has ever been turned down by this captive membership, despite the fact that farmers generally do not support the programs, is pretty good proof that the so-called free elections are rigged as are those of Russia.

A pretty good insight into how closely the Department represents the farmers is disclosed by the results of a poll recently completed here in Ohio by the State Farm Bureau. The Farm Bureau polled its membership, by mail, on a number of current questions, all of which have the support of the Department.

PRICES AND WAGES

The first question in the poll dealt with a continuance of price and wage controls. The farmers voted 78 percent against continuing either. The second had to do with the Brannan proposal of letting food prices seek a supply and demand level in the market and then paying the farmer from the Federal Treasury any difference between this level and his cost of production. The farmers voted 94 percent against this method of subsidizing consumers and controlling farm production.

In the field of parity guaranties, the farmers voted 97 percent for full parity if there is any control, but they are against control. They wanted a fluctuating parity level and not the rigid support level advocated by the Department. The votes on the latter two issues were 83 percent for fluctuating parity levels and 87 percent against a fixed, marketing season control.

As a means of controlling inflation, the farmers favored more credit controls, by 68 percent, more production by 91 percent, and turned down higher income taxes by 87 percent, although most of them indicated they would favor tax increases if Government would cut down spending.

A preliminary report reflecting the results of this poll was submitted to the Agricultural Department and Secretary Brannan more than 2 months ago. Did the Department change its policy? It did not. It went right ahead with its socialistic goose-killing and to hell with what the farmer thinks.

Tax on Education

EXTENSION OF REMARKS

OF

HON. FRANK FELLOWS

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor (Maine) Daily News of Wednesday, July 25, 1951, entitled "Tax on Education":

TAX ON EDUCATION

While Congress plays around with a revision of the income-tax law which, if present barometric readings prevail, will mean an inequitable 12½-percent increase across the board, its Members could do worse than give serious attention to the rock bottom of inequities established by their predecessors.

We have heard argument that the income tax is bad because it hits those hardest who can least afford it.

We have heard arguments that the sales tax is bad because it hits those hardest who can least afford it.

We have heard arguments that any tax is bad because it hits those, hardest who can least afford it.

And so it goes. We will not go into detailed arguments here on the relative merits of any of the contentions. But under the income-tax law there exists a penalty which Congress, in its right mind, could never have intended. It works great hardship on the taxpayer and profits the Government less than peanuts.

The victim is the average student struggling to gain a degree in an American college or university which must, because of deflated incomes, increase its tuition year by year and jack up other fees in keeping with mid-twentieth-century prices.

Economists tell us that 84 percent of the national income is concentrated in the hands of those earning \$5,000 or less. It then follows that from this great preponderance comes a majority of our college students. This is axiomatic inasmuch as there are vastly more earning \$5,000 or less than there are earning more.

As a result, the student from this income bracket cannot possibly tap the family for the \$1,600 minimum necessary for a year's study and leave the folks back home solvent. If he is lucky enough to pick up a few hundred dollars in scholarship aid, he is still several hundred dollars short.

Hence there are two courses open.

He must and does bank every cent possible from his summer earnings. But he cannot exceed \$500, otherwise the family will lose more than it will gain. The breadwinner will lose him as an exemption. But even with this \$500 limit he is still far short of the minimum.

With his board he might make it. In such anticipation he gets a job waiting on table in the college commons—or whatever name the particular college calls it. In return for this work the college, under the old barter system, gives him his board. There is no exchange of money.

Of course, on the \$500 summer earnings his employer deducted the withholding tax and turned it in to the collector of internal revenue. Being under \$600, the entire levy would normally be returnable after the first of the year.

But that's where Two-Gun Sam, formerly and affectionately known as Uncle Sam, comes into the picture, and for keeps. Here's

a guy, Sam figures, who by dint of his own labors and initiative is getting so he can see his way out of the woods. That doesn't fit into the modern scheme of things. Such independence was good for the Nation's youth 20 or more years ago. Indeed, it was worthy of commendation. But that was 20 years ago.

So Sam hauls out one of his guns, holds it to the head of the teen-ager, makes him place a fair and reasonable worth on the board (it averages about \$20 a week) and cuts himself in on it by way of tax. It isn't so bad the first year, although his family stands to lose him as a dependent. Then, the final tax is on about \$140 (his earnings of \$500, plus \$240 for the 12 weeks board up to January 31, minus a \$100 personal exemption).

But the second year really shows up Two-Gun's racket. Then, with the \$500 a constant figure, board earnings for the winter and spring terms combined with the 12 weeks of the following fall, will amount to \$720. So, of the total earnings of \$1,220, \$620 will be taxable—\$85 under current rates.

Considering the fact that the \$1,220 was still some \$380 short, isn't this rubbing it in a bit too much? Some colleges could find the difference in scholarship aid, but a majority just do not have that kind of folding money to dish out to every needy student—and needy students are now in the majority.

In enacting the income-tax law, did Congress ever intend to penalize initiative in a teen-age youngster? Did they intend to tax education?

If not, cannot this phase of the law very properly come in for attention by the revisionists?

How Much Longer Can America Survive a Policy of Deceit, Retreat, and Defeat?

EXTENSION OF REMARKS

OF

HON. DONALD W. NICHOLSON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. NICHOLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH W. MARTIN, Jr., Republican leader of the House, at the annual clambake of the Plymouth County, Mass., Republican Club on Sunday, July 29, 1951. The address was broadcast and televised by the National Broadcasting Co.:

These are momentous days for America. We have reached a point where there is growing fear that this great Nation may not survive as a land of free people. We are threatened with many perils, both at home and abroad.

The great needs in America today are hope, confidence, and spiritual security. We have surrounded ourselves with the greatest collection of material comforts ever achieved by man, but our souls are not at peace. A feeling of uneasiness pervades our everyday lives. No one knows what tomorrow will bring.

We are gathered here at Plymouth Rock determined to rededicate ourselves to the courage it symbolizes. This venerated Rock is a token of the determination and strength of the founding fathers who made this land of ours possible. They had the fortitude necessary to meet their problems foursquare.

We today must do no less, or we will fail where they succeeded.

Let us face the facts. In the comfort of our material blessings, let us consider our problems, both foreign and domestic.

In the realm of world affairs we are threatened with Communist domination from abroad.

In the realm of domestic affairs we are threatened with socialist domination from within.

The American people are burdened deep in their souls by fear—fear that if our freedoms are not destroyed from without, they most certainly will be from within.

The truth is that we are cursed with a "milquetoast" Government operating under "milquetoast" policies. Fear has become a national policy.

Every time a breeze wafts from the Kremlin our "milquetoast" leaders in Washington tremble anew. Seeking a peace that is impossible to obtain because of their own blunders, they advocate appeasement and more appeasement. While they appease the Soviet Union grows stronger in armaments and in prestige.

Where in 1945 the awful yoke of communism embraced only 180,000,000 people, today it strangles 800,000,000 people—just six short years later.

What a picture. What a future. Contrast this picture of today with our position of 6 years ago, when we were the mightiest nation of all time.

Can any man—can any party—entrusted with power during this decline of American fortunes say this administration has been successful?

At home we find ourselves gripped by runaway inflation, high cost of living, and unbelievable taxes. A government already vested with more authority than it should have keeps asking for more and more power over the everyday lives of every single American. Spending is heaped upon spending and tax is heaped upon tax to cover up blunder upon blunder and failure upon failure.

Colossal sums are spent on armament, and yet we are told that we are defenseless. A General Vandenberg is forced to testify, after an investment of billions upon billions, that we have only a "shoestring air force."

After investment of billions upon billions in all kinds of socialistic schemes, we are told by the President of the United States that our economy will collapse unless drastic controls are imposed.

After the American people have been milked of billions upon billions in taxes, the President tells us that we are headed for disaster unless more billions upon billions of taxes are imposed.

Can any man—can any party—entrusted with power while we have reached this state of affairs say that the administration has been successful?

Let me go on. Suppose that you owned a grocery store that 6 years ago was the best store and made the most money of any in your community. And suppose that today you found the store broke and faced with an uncertain future.

Would you say that the management responsible for such a change in the fortunes of this grocery store was successful? Of course you wouldn't.

And if you owned stock in that grocery store, you'd know what to do—fire the management.

Let me tell you this: The 150,000,000 stockholders in America weren't all born yesterday. They're going to fire the management in 1952, and make no mistake about it.

From coast to coast the people of America are looking to the Republican Party for deliverance. Our task has been assigned us. Every one of us must bend every effort to justify the faith that is being placed in us. It is up to us to make the Republican Party the dynamic vehicle it should be for the landslide victory that is only a year away.

Yes; we have a role, and we have a message. It is a thrilling message—thrilling because it promises that the generations to come shall walk free and unfettered by the chains of communism and socialism.

Our message is simple: Be strong. Be courageous. And fear only God.

The Republican Party is going to restore to the English language a word which has all but been forgotten. That word is "opportunity." Opportunity to choose your own way of life; opportunity to improve your economic status. Fear is the greatest enemy opportunity has ever known. Strength is essential to freedom.

Our forefathers and their sons and daughters did not migrate to America because America offered fear, but because America offered opportunity.

Here in America a machinist could rise to head a great industry. Here in America an itinerant peddler could some day own a giant department store. Here in America a rail splitter could become a great statesman, and yes, here in America a Missouri farm boy could become President.

The Old Worlds might have their dynasties, their dictatorships, their defeatist philosophies of nazism, fascism, communism, and socialism, but in America a man held his head up and walked free—fearing no one.

I say to you that it is time to abolish Milquetoast government and to fire the bunglers, the defeatists, and the appeasers who are running it.

Imagine our plight in Korea today. What kind of leadership have we anyway?

We sacrificed 150,000 casualties in a treadmill war, and then what do we do? We ask for a truce while our Milquetoast leaders attempt to tell the American people and the world that we will have achieved a victory by ending up exactly where we started.

Maybe some people in the world can be sold such a phony bill of goods, but never the American people.

How much longer can America survive a policy of deceit, retreat, and defeat?

No wonder the American people have risen almost unanimously in their acclaim of that great soldier-statesman, that magnificent man of courage, Gen. Douglas MacArthur.

MacArthur wanted peace, but he wanted peace on our terms, not those of the Chinese Communists. MacArthur wanted a peace that would stick, a peace that would raise the prestige of America to a new high in the eyes of the world.

Can a single person within the range of my voice declare that such a peace is in prospect today? The answer is no—a hundred times no.

The humiliations suffered by our negotiators in Korea are only symbolic of the humiliations that America is suffering the world over because we have no leadership in Washington today. Never was the need for strength and courage and moral fiber so great; never have we had so little when so much was needed.

For 18 long years, our Government in Washington has operated on the theory that give-away programs will solve anything. The solution for every ailment, be it domestic or international, is to spend more money, to offer more booty, to spread the loot. In the mad whirlwind of spending schemes and give-away programs, our master planners have professed surprise that inflation has accompanied their blue-sky operations. From the beginning, these planners have had only one plan, and it called for spending the American people into the strait-jacket of socialism.

It takes no public accountant or college-trained economist to know that the less an individual keeps of what he earns, the less he has to spend and the less he is self-reliant. Any housewife can tell you that.

Yet, we only have to take a look at our financial picture today to realize that the

Federal Government is spending and taxing us into socialism.

Let me give you some figures.

Ten years ago the cost of government—Federal, State, and local—took approximately 14 percent of all our income.

When the war ended in 1945, taxation was taking 27 percent of all our income.

This year the best available figures indicate that taxation will take approximately 29 percent of all our income.

And next year, on the basis of the administration tax bill which was recently passed by the House, over the opposition of myself and an overwhelming majority of my Republican colleagues, taxes will take 31 percent of all our income.

The proposition is as simple as it is evil. When Government separates a citizen from one-third of his income, the citizen is no longer free and independent. He must look to Government for help, because Government has one-third of all he makes. He, along with 150,000,000 other Americans, has become exactly what the Socialists want—an incipient ward of the state.

Just as 14 percent became 29 percent, and 29 percent will become 31 percent, the 31 percent will soon become 35 percent, then 40 percent as it is in Socialist Britain today, then 50 percent, then 60 percent as it is in Communist Russia today. The Socialists will have their socialism, but Americans will have lost their freedom completely. Government, which should be the servant of the people, will become the master.

Yes, the Republican Party has its job cut out for it.

The only way we are going to stop this endless inflation and this ever-growing pattern of controls is to stop this Government spending. And the way to stop Government spending is to stop excessive taxation and stop borrowing.

What this administration wants is uncontrolled Government and a controlled people. What the Republican Party is going to give America is a free people and a controlled Government.

We think it is about time somebody slapped a few controls on Government and took a few off the American people.

The task ahead of us is not an easy one. We must meet the issues head-on, and we must rally to our side those who are convinced that America must be kept strong.

In what we do, let strength, integrity, confidence, and courage be our watchwords.

The future for America is unlimited. Our resources and our resourcefulness are unmatched, if we use both to the best advantage.

What we need are new pioneers, men of vision, men of character, who can look across the horizon and see the wonders of the new atomic age unfolding. Above all else, we must regain and revitalize the moral principles which have made our country great.

Courage must be our badge, and faith—faith in the essential dignity of man and faith in God—must guide us. We can and will triumph.

Porter on Controls

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article

by Philip W. Porter from the Cleveland Plain Dealer for July 30, 1951:

PORTER ON CONTROLS—NEATEST LEGISLATIVE COMPROMISE OF THE YEAR SHAPES UP AS AN INCREDIBLE LAW

(By Philip W. Porter)

Congress has achieved the incredible and impossible in its final draft of the renewed controls bill. It has put a little to satisfy everybody, yet completely satisfies nobody; it pretends to block further inflation, yet opens the door a few inches for more inflation. It was the neatest legislative compromise of the year; and a lousy law.

The net result is that for the next 11 months we're going to have a situation like we had in the last stages of prohibition—a law on the books for the legislators to point to, scads of enforcement jobs for politicians to pass out, and ample liquor (bootleg).

The majority of Congressmen knew all along that they were going to pass a weak renewal of controls. Some cynics figured they had to have a phony law on the books on the off chance that there might be some more inflation next year and they wouldn't be blamed. Some actually don't know enough economics to understand that retail price controls don't and can't regulate prices and never have since the dawn of history. Some wanted just what they finally produced—a law which waters down the previous controls, yet keeps the horde of OPS jobholders on the payroll doing the equivalent of cutting out paper dolls—creating their own confusion, then trying to explain it, with no effect whatever on prices.

STRAIGHT OFF THE COB

And the next time the bleeding hearts and self-appointed friends of the people begin the old moan about lobbying by special interests, someone ought to sock them in the face with the finest example of persistent lobbying in a long time—by the bureaucrats themselves, Mike DiSalle, Eric Johnston, et al. They were at it night and day, full of scares, "bunk," and exaggeration.

Maybe I'm a little dumb in such matters, but I can't swallow the theory that when Government officials lobby it's O. K.—even holy, but when representatives of business, the professions, labor, etc., lobby it's evil. Who cloaked these officials in their righteousness and gave them the right to claim they alone speak the truth? They're just ordinary blokes who put on their pants one leg at a time.

And as for the figures they quoted about the alleged dangers ahead, those were for the birds. They got them from their own offices, and judging from the bungling performance of these offices in other matters the figures were straight off the cob.

There was also considerable bunk in some newspapers that supported the controls bill, which tried to make it appear that anyone who opposed the extension was an enemy of the consumer.

They chose to ignore the main political purpose (not the ostensible one) of the act, which is to perpetuate thousands of newly appointed bureaucrats in office. I was amused when one of the newspaper chains which supported the extension of OPS, carefully skipping this matter of jobs, came out with a ringing plea to abolish further ECA foreign aid on the ground that it is now just something to perpetuate jobs. Sure it is; so is OPS.

Meanwhile, the big laugh is that wholesale prices are still going down, inventories are still piling up and a small recession is under way. Consumers are smarter than politicians. They've produced their own price control—they just quit buying and prices began to waver, then fall.

That's the only way it can ever happen. A quick look through just one issue of a recent business paper reveals the following

items, each indicating high production or a drop in prices:

Average wholesale prices dropped for the eighth straight week. The Dow-Jones index of commodity futures and spot commodities continues down like a ski slide. Sugar shipments are only half the rate of 1949.

STOCKS ARE HIGHER

Leather makers have bought some hides for as much as 10 percent under ceiling prices. Raw cotton has come down from 46 cents a pound to 39 cents in 3 weeks; fiber for October delivery sells for 35 cents. Gasoline stocks in mid-July are 11 percent higher than in 1950. Turpentine has slid from 92 cents a gallon to 65 cents. Stocks of frozen vegetables are 23 percent higher than a year ago.

Mohawk Carpet Co. killed a 15-percent price boost of last winter and is back to December 1950, prices. Cotton, rayon and wool cloth has slipped in price. Shortening oils are down. The soybean crop is up.

Last week a combination TV-radio-phonograph was advertised for \$199. Business is worsening all over. Even the trained seal Government economists, whose stock in trade is predicting inflation, are now hedging. Keep your eye on it.

Speaking of Dangers

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I am including an editorial from the Washington Post of July 28, 1951:

SPEAKING OF DANGERS

In warning of many dangers in his speech before the Massachusetts Legislature General MacArthur came out for a proposition that every democratic people recognizes as being fraught with peril. The principle that he condemned was "that members of our Armed Forces owe primary allegiance and loyalty to those who temporarily exercise the authority of the executive branch of Government." What he advocated was that the Armed Forces owe their allegiance "to the country and its Constitution which they are sworn to defend." While General MacArthur said he had never questioned the authority of the President to relieve him from his far eastern command, this comes close to saying that the President should not have final control over the military.

Of course, the soldier owes his primary allegiance to the country. But how is that allegiance to be manifested? He can serve his country only by strict and full compliance with the orders of the Commander in Chief. The military is responsible to the Commander in Chief and the Commander in Chief is responsible to the people. That is the essence of a democratic system of defense. Take the Commander in Chief out of the equation and we should have chaos or military dictatorship such as that which existed in Japan before the Second World War. There is no more basic principle in the American system than that the military shall be subordinate to civilian command. To throw down that principle while decrying the dangers that beset our civilization certainly does no credit to General MacArthur's sense of proportion.

Considering his high praise for truthful speaking, General MacArthur also discussed the reasons for his dismissal with astound-

ing looseness. He assumed that he was fired for pointing out the strategic relation of Formosa to American defense, for offering to discuss a cease-fire with the enemy, and for answering Congressman MARTIN's questions. Actually, as the Senate hearings made clear, he was relieved of his command because the President came to feel that the general could not be trusted to carry out the policies to which the United Nations and the United States were committed.

Especially disingenuous was General MacArthur's claim that the administration rejected his cease-fire plan and then enthusiastically received "the identical proposal when made by the Soviet Government." The MacArthur gesture was frowned upon because it cut across similar efforts that were being made at a higher level. The confusion resulting from his failure to consult his superiors on so important a matter simply has nothing to do with the fact that cease-fire negotiations were later undertaken with full agreement of the State Department and the United Nations. On the whole General MacArthur's speech was the sort of partisan ranting that one expects from some candidates for elective office. If he is to continue this sort of speech-making, he ought to be in mufti and not in uniform.

Too Dumb To Understand

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the *Nebragh* (Nebr.) Leader of July 25, 1951. There is no doubt that it points an accurate finger at the anomaly in the present administration, which pleads for economy—for everyone else.

The editorial follows:

TOO DUMB TO UNDERSTAND

In a series of statements and speeches since the outbreak of the police action in Korea, President Truman has told us what we must all do working together to avert the danger of inflation during this crucial time when defense production must have first call on our economic resources.

He told consumers to buy only what they need. He told businessmen to cut down and hold down inventories, to increase the efficiency of their operations as much as possible, and to conserve manpower. He asked everyone to work harder and longer and to forget about increased wages or profits.

The President said his proposals call for patriotism and self restraint, and added, "If we all work together as a team, if everyone does his part, we can beat inflation, we can secure the defenses of this Nation and keep down the cost for the average family."

No one can quarrel with the President's suggestions, but it seems to me that he, as the head of the executive branch of our Government, should see to it that every department, bureau, and agency of the Government puts his suggestions into effect. It seems to me further that since he is Commander in Chief of our Armed Forces that he should also insist that the Department of Defense follow his recommendations. So let's look at the record.

All departments, bureaus, and agencies of the executive branch of our Federal Government are spending more money today than a

year ago and almost without exception have more people on their payrolls than they had when the shooting started in Korea. Some of these nondefense departments spent more than 1,400 times as much in 1950 as they spent in 1940.

During the past year an average of 6,073 new employees per week were added to the Federal pay roll in the executive branch of our Government. It costs you and me and the other taxpayers \$8,300,000,000 per year to pay the salaries of these bureaucrats.

Does this indicate that the President is following the advice he gave the American people on combating inflation, on conserving manpower, on increasing efficiency, on working harder and working longer hours? Or is it a case of "You do as I say, not as I do"? Or is it a continuing application of the Hopkins formula, "The people are too dumb to understand, anyway, so we'll tax and tax, spend and spend, elect and elect"?

The Department of Defense doesn't seem to have taken the President's advice very seriously. Here are a few examples which will show why I make that statement.

Since the start of the Korean campaign, with less than 2,000,000 men under arms, the Army has purchased 68,000,000 can openers.

During the 9 months ended March 31, 1951, the Quartermaster Corps bought 1,917,000 pounds of black pepper. Maybe this is a new weapon which is used by sneaking up on the Reds and throwing it in their eyes.

The Army set up requirements of 4,636,000 web belts for 1951. This is approximately three belts per man although only one belt is issued per man per year.

On combat boots the Army requirements for 1951 was set at 11,753,000 pairs, of which it expected to use 4,800,000 pairs during the year.

Last January while the quartermaster was buying 5,000,000 pounds of oleomargarine at 25½ cents per pound, the Department of Agriculture was selling 5,500,000 pounds of surplus butter to Italy at 15 cents per pound.

What effect did this large scale "scare" buying have on prices? Since June 1950 the price of Army blankets has risen from \$7.82 to \$16 each. Combat boots went up from \$6.03 to \$11.63 per pair, Army mattresses from \$7.83 to \$13.52 each, and so on and on throughout a list longer than your arm.

Another Star—It Is Lt. Gen. Lewis A. Pick Now

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, July 26, 1951

Mr. LARCADE. Mr. Speaker, I call to the attention of my colleagues and the country a well-deserved honor which was conferred upon the distinguished Chief of the Corps of Engineers, United States Army, Gen. Lewis A. Pick. On yesterday, after confirmation by the Senate of the United States, General Pick was awarded an additional star indicating that he had been elevated to the high rank of lieutenant general in the Army of the United States.

Mr. Speaker, it gives me great pleasure to join with the other friends and associates of General Pick in extending our congratulations upon this signal honor,

earned and due a great soldier, engineer, statesman, and patriotic American.

Mr. Speaker, only a few weeks ago it was my privilege to make an address on the floor of the House calling to the attention of my colleagues the magnificent accomplishments of General Pick in his career in the Corps of Engineers of the United States Army, and even since that short time another chapter has been written in the life of General Pick.

Without warning the skies opened in the Kansas River and Missouri River Valleys and over-night mountains of floodwaters were sweeping the valleys, countryside, and cities of one of the richest sections of the United States, topping the levees of the rivers and destroying lives and property in one of the greatest floods in the history of that section of the United States.

To add to the devastation caused by the terrible flood, the horror and terror of fires caused by the exploding oil in the refineries and tanks and cars and other storage places in the area.

It is not necessary for me to recount this terrible tragedy for it is all too well known.

Who was the first on the scene with the President of the United States?

Gen. Lewis A. Pick, the Chief of the Corps of Engineers of the United States Army. Under the experienced supervision of General Pick rescue work was immediately begun and the fight of saving the cities and country from complete destruction was under way.

The part taken in this great flood by General Pick again demonstrates his great ability, leadership, and devotion to the cause that he has given as his life's work. General Pick says that if we had appropriated \$300,000,000 to protect the area flooded it would have saved over a hundred lives and \$1,000,000,000.

No extra star can shine more brightly, nor be more deserved than on the shoulder of Gen. Lewis A. Pick.

Serious Charges Contained in Representations of High Chiefs of American Samoa to Congress—Investigation Should Be Undertaken To Determine Truth of Allegations

EXTENSION OF REMARKS OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 31, 1951

Mr. FARRINGTON. Mr. Speaker, close to 350 natives of Samoa, representing themselves as high chiefs, orators, and duly representatives of American Samoa, on May 2, 1951, addressed to the President of the United States, the Congress of the United States, the Secretary of the Interior, and the Secretary of the Navy representations commending the service of Fred I. Simon as attorney general of Samoa and containing charges involving the administration of Samoa that I believe should be brought

to the attention of the Members of Congress. The envelope containing the protest came from High Chief Tuitete and orators of American Samoa.

I ask, therefore, unanimous consent that a copy of this document that has been brought to my attention be incorporated in the CONGRESSIONAL RECORD at the conclusion of my remarks.

The administration of American Samoa passed from the Department of the Navy to the Department of the Interior and to civil authority on July 1, 1951. A few months prior to this transfer the administration was placed in the hands of civilians by the Department of the Navy.

Although changes of this kind are often accompanied by disturbances of one character or another and a certain amount of uneasiness and disappointment, the allegations to which this large group of Samoans have affixed their signatures are so serious that they demand in my opinion, the immediate attention of the committees of Congress charged with the responsibility of legislation involving the government of American Samoa.

Action by Congress to provide an organic act for Samoa is long overdue. The organic law for the government of Guam by civilian authorities has been enacted and is now operating with a reasonable degree of success. The administration of Samoa should not be allowed to continue any longer than is absolutely necessary without the enactment of organic law for Samoa.

I bring this protest to the attention of Members of the House because the Samoans are without any direct representation in Congress and because I have among the residents of Hawaii, whom I represent, some 2,000 Samoans who feel a very deep concern about the welfare of their native land. I feel it is my duty to them, as well as to their relatives in Samoa, to ask that the appropriate committees of Congress undertake immediately an investigation of these charges and consideration of the question of providing organic law for Samoa.

I am not informed of the basis of the allegations contained in the representations of the Samoan chiefs and am unable to say whether or not they are true, but I do know that they are supported by a group of men of sufficient number and importance to demand that they receive the most careful attention.

The document of the Samoan chiefs is as follows:

AMERICAN SAMOA, May 2, 1951.

From: High chiefs, orators, and duly representatives of American Samoa.

To: The President of the United States, Congress of the United States, the Secretary of the Interior, the Secretary of the Navy.

Subject: Commendation and petition for the Honorable Fred I. Simon, attorney general of American Samoa.

1. We, the undersigned, whose names appear below, are the highest ranking chiefs, leaders, and heads of various families herewith, extending and conveying the following commendation for our great first civilian attorney general, the Honorable Fred I. Simon, and also request permanently the continuance of his service here in American Samoa

2 We wish you to know that we have conferred the greatest honor within our power to a Palagi (white man), the Honorable Fred I. Simon, the first civilian attorney general of American Samoa. He has succeeded to the title formerly held by A. F. Judd Lalofa, the title of "Warrior Hero Who Conquered the Fort."

3. Our reason is that he, and he alone, has acted the words from your mouth at the Governor's inaugural speech here on February 23, 1951. Also, he, and he alone, has acted the words from the mouth of the Secretary of the Interior in the same speech. Perhaps our skins are brown, but we Polynesians are proud of our brown skins and ancient culture and customs. The Honorable Fred I. Simon has only seen our white hearts, and broken bread with us and called us friend and brother and son. Not so His Excellency, Governor Phelps Phelps, who keeps his fence in his Palagi American Club.

4. We now have been informed that dishonest and evil tricksters have prevailed upon the Secretary of the Navy to recall this first honest and upright American Government official. Why? Is it because he has rid the Samoan people of a dirty moral leper, * * * who has poisoned our young Samoan boys? Why? Is it because he proved that * * * is blinded in the bush with criminals? Why? Is it because he brought courage and peace to our Samoan people? We cannot find out why, but we place our high hopes upon you, and we humbly beseech you to help us find our way.

5. To better acquaint Your Excellency and people interested in the affairs of American Samoa, pertinent information needful to a full understanding of the situation herewith submitted. If we fail to make ourselves clear, investigation is solicited if it deems proper and convenient to Your Excellency, and also the Congress of the United States. You are our altar of hope and confidence, and we pray to you.

6. The operation of the new beginning of our government is in a bad state when wrong legislation or move is attempted not because of right but because of pressure, and when criminal influence counts more than righteousness. The very step we feared of is now taken without consulting us, because, we are the people to make happy or desolate in such government as so concerned. Any immediate change without consulting the Samoan people would only put them in awe and amazement. We fear that wrong advice would only function unsound and unhealthy government. We do not expect to take the wrong direction and reach the right goal. In the light of the circumstances, we feel that communistic policy is on the way and would only lead us to our doom. We should have peace not terror. We have warned His Excellency, Governor Phelps, on his official malaga to us April 24, 1951, but he heeds not.

7. In the meeting of Samoan district governors and county chiefs, Government officials, leaders of the islands, and the attorney general on April 11, 1951, certain questions were brought forward and were discussed in the Fono. Before the closing of the Fono, a secret ballot was taken, and each member cast his vote willingly.

8. On the night of the following day, April 12, 1951, two Samoan chiefs as the governor's alter-ego were sent around on Naval Officer Bewick's car (I. G. No. 2) driven by a Fita in a sailor's full uniform hunting the two district governors, Letuli and Lefti at the dead of night and threatening them of losing their positions unless certain documents signed to nullify all resolutions passed and adopted by the Fono on the previous day. Furthermore, several attempts were made by the governor to confiscate the cards on which our vote was recorded. Why? Will the organic act bring us more gangsters or less? In such mistreatment for Samoans only, or

do palagis (white men) get the same Stalin Gestapo medicines?

9. We who have hope and fought for the Interior Department looked forward to this transfer with hope and keen interest and alertness to avert any obstacles that might hinder the progress of our Government. We have also noticed that Governor Phelps and Attorney General Fred I. Simon were of one body and spirit when first arrived in Samoa, the spirit of good cooperation. Now, unfortunately, these ties of that fine spirit is now broken. Why? We feel our governor takes heed of the advice from bad tricky Navy personnel and ignore that of his legal adviser, the attorney general. We fear the Biblical phrase might come to pass, "A house that is divided amongst itself shall not stand."

10. The promise by the Interior Secretary for an appointment of Chief Justice Arthur A. Morrow to continue his service with the civilian government is completely contrary to the wish of the Fono of American Samoa. The understanding of the Fono is, the committee appointed shall prepare only commendations but not requesting the continuance of their services. So, whoever changed the resolution is responsible for the fooling of Washington and betrayal of his people. We want justice, and we demand it. The wish of the Samoan people must be carried out, not the wish of one man, our two-toned, cunning M. T. Tuaisosopo, speaker of the house.

11. Our Flag Day celebration was canceled and superseded due to the advice of the last naval governor which act was only disparaging the prestige of the first civilian governor. Why? The people of Samoa honored this day highly as a significant event, and also as a sacred function to remind us always of the wise move of our forebears in ceding our respective island Tutuila to the United States of America. Unfortunately, our Flag Day celebration was substituted by the most fearful rape case in the history of American Samoa. We feel that bad navy people here in Samoa summoned all their efforts to run down the beginning of the civilian administration in order to create ill feelings in the hearts of the Samoans toward the Interior Department, as a matter of fact, American Samoa is a paradise to them and they hate to leave.

12. And, to our deep sorrow, His Excellency Phelps Phelps speaks the good words but makes the bad actions.

13. During the short time the Honorable Fred I. Simon was here in Samoa it sure proves success and beneficial to the Samoans. He treated the Samoan people with genuine love and kindness. Everything he did for the Samoan people proves unique and unmeasurable.

14. We, therefore, respectfully request the continuance of his services with full authority in American Samoa, but not to chop him up of his prestige as proposed by the Interior green policy book which was explained to us by the naval Lt. Gov. J. Bewick.

We hope that our commendation and petition will find favor with your benevolent attention.

May God grant you wisdom.

A Nebraska Sunset

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint of an editorial by the late Edgar Howard which appeared in the Columbus (Nebr.) Daily Telegram. Mr. Howard was the dean of Nebraska editors and had been my predecessor in Congress. This editorial entitled "A Nebraska Sunset" was read during the funeral services for Mr. Howard on July 28. It follows:

A NEBRASKA SUNSET

I have never seen an Italian sunset, but last evening I witnessed a Nebraska sunset beyond compare. It was more beautiful than an artist's dream. Peering through the haze-clouds of uncertain hue the great orb

of day flooded the landscape with a radiance of unspeakable beauty.

I do not know what visions an artist beholds when he views an Italian sunset, but when I gazed last evening upon that marvelous Nebraska sunset I saw visions of every sweet picture in my own memory mirror. I saw the peach-blush bloom on the cheek of my boyhood sweetheart—the golden gleam of a true chum's friendship—the carmine tint of holy mother love.

How many colors does God hang in the sky when He paints a Nebraska sunset more beautiful than any other clime has known? I could not count the colors. It was enough for me to know that they were in number to represent every fragrant flower from my conservatory of memory—enough for me to know that they brought me face to face with every rapture of the years now dead—enough to know that they appealed to me more eloquently than orator's words or author's lines to struggle along the upward way, with promise sure that at the end of the journey I may be privileged to behold upon the horizon of paradise another sunset, and in the radiance of it to count the colors of a welcome smile.

Defense of the Dollar

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a letter entitled "Defense of the Dollar."

This letter is a reprint of one put out by the Whaley-Eaton Service on July 7, 1951, from Washington, D. C., and is sent out by the Empire Trust Co., of New York City.

I call your attention to the importance of the thesis that is developed in this letter and of the very real danger we are in if we do not restore a sound dollar to our country.

The letter follows:

JULY 7, 1951.

DEFENSE OF THE DOLLAR

1 Defense of the dollar is the paramount problem. The critical front is on the Potomac, not the Yalu or the Elbe. Stalin is as keenly aware of this fact as is the President, and the latter goes the limit when he says: "If inflation got away from us and wrecked our savings and ruined our economy, that would be the easiest victory the Kremlin could ask for. Communist Russia could win the whole world to totalitarianism without firing a shot."

2. What does he mean? Not merely that the vested capital of the country will be wiped out, including the worth of pensions, of life insurance policies and of mortgages. He means the destruction of the American system, in terms of politics as well as economics. He means just what he says, namely, that the alternative to a sound dollar is the acceptance of Stalinism.

3 History cannot be mocked. The traditional recourse of the dictator in his quest of power is seizure of the public purse. All other authority follows that. On this account the founding fathers gave the control of money to the Congress and kept it from the Executive. Solvency for years past,

prior to 1933, had been anchored to a natural standard—gold—a rock against which the waves of extravagance could make no headway.

4. That control has been lost. It is no longer a barrier to the whims of the Executive and Congress. Nothing other than a temporary agreement among a few officials restrains the Government from printing money in whatever amount it wishes. It need not go to the public for funds, for it can pour its promises-to-pay into the banking system whenever these officials, or others to follow them, decide again to have the Federal Reserve System "support the bond market."

5 Such dollars have a backing so long as they are receivable for taxes, but they are fiat money just the same. They produce the inflationary gap. They are the lifeblood of extravagance.

6 They are fiat for this reason: Just as they are created by decree of the Government, just so their value can be utterly destroyed by another decree. It is only common sense to realize that a single election can, directly or indirectly, repudiate the public debt in its entirety. It can do so by electing a Congress pledged to appropriate no funds for interest payments. It can do so by boosting expenditures higher and higher to the point where paper money will be of value only to museums. After that, the concentration camps.

7. The States are in imminent danger. They cannot print money. They must use whatever currency the Federal Government foists upon them. Already their tax sources have been invaded. Malignant inflation can deprive them entirely of usable funds. More and more they look now to Washington for what is called, with the illusion of language, Federal aid. They get but a part of what has been taken from them. They cannot, even now, sustain their normal and historic functions without begging from the Federal Capital the means to keep alive. Inflation hastens attenuation of the idea of federation. Tomorrow there may be provinces instead of States, ruled by satraps dispatched from Washington. Constitutions cannot prevail against the power of the purse.

8. All of the foregoing the present Government, directly and by implication, admits. So it cries, "Inflation must be stopped." But who creates inflation and at what paps does it nurse? They who cry "wolf" are the wolves. The theory seems to be that it takes a thief to catch a thief; and what cure is offered? Give us more money. The taxes, already confiscatory, are not enough. The ideal position, says the Government, in effect, is when virtually all profits flow into its coffers; when the people cannot pay high prices because they have not the means to buy more than a modicum even of essentials.

9 Nationalization of profits is the worst form of socialism. When a government nationalizes industries it must at least manage them and be concerned with profits or losses. When it seizes the profits of private industry it absolves itself of risk. Call it cowardice or identify it as a subtle method of accomplishing by indirection what Stalin at least has the nerve to do openly and violently.

10. "How long," asks a Senator, "can American business go on paying from 60 to 70 percent of its income in taxes and survive?" The answer of an official is that, barring a general war, reductions may be permissible after 1955. But taxes then will inevitably be higher, not lower, if inflation has not been stopped in its tracks; and how much longer can the middle classes—the salaried people and the annuitants—survive under present and proposed taxation? The kulaks need not be liquidated, as was the Russian method, by cutting off their heads. "You take my life when you do take the means whereby I live."

11. Confiscatory taxation is inflation. To put \$17,000,000,000 of additional taxes on the economy is to add even more billions to the cost of doing business. Taxes, like wages, are a cost figure. Somewhere, somehow, the high rates that are prescribed to stop inflation actually bring it about. Listen to the President on that point. He says (not with entire correctness) that the entire \$4,000,000,000 of new taxes levied last fall paid for not a single gun because the inflation meantime had raised the cost of Defense purchases by \$7,000,000,000. Consider that—\$4,000,000,000 added to the tax load at a net loss of \$3,000,000,000 to the Treasury. Stalin laughs; we cry.

12. In the shadows of that picture, it is maintained that there is only one answer, namely, to give the Government more power. It wants to put ceilings on prices and to license business. To fortify its demand, officials with one accord, from the President down, keep telling the country that an even more devastating inflation is just ahead. It is an invitation to everybody to rush into the marts and buy at any price. It is a repetition of the warning from the White House itself, last summer, to use dollars quickly because they were certain to depreciate.

13. "We propose," say officials, in effect, "so to expand the facilities of the country that, within a year or two, production will be in such huge volume as to assure competition in the marketplace; we can and will have butter and guns." There is considerable merit in that argument. The American economy, in all truth, is an economy of surpluses. That was true before Korea, and the potentiality grows with the days.

14. But political error can be the snake even in such a promised paradise. Will the private economy expand under the burden of confiscatory taxation, combined with price and allocation controls? Already, there are signs that management is becoming cautious. Who is going to buy a production so vast that it would swamp domestic markets? It may not be practicable to subsidize exports interminably. It may be that point 4, whatever its merits, will not be a powerful force in the world economy until decades hence.

15. An expanding economy is a desirable economy, but not if the expansion is at an explosive rate. Not if the assets of the generations to come are sequestered in advance, not moderately but extravagantly. Ours is a mansion already filled with good things. We have, as Charles Kettering has noted, with 6 percent of the world's land area and 7 percent of its population, 58 percent of the telephones, 76 percent of its automobiles, and 34 percent of its radio and television sets. That is an establishment worth looting—and the doors are left unlocked for any demagog to enter when Federal expenditure is unlimited.

16. This enormous accomplishment has been achieved under our American system of free enterprise, which is quite a different thing from the feudal capitalism which in other places is under attack and we are called on to protect. The Nation can live a long time on its fat unless that fat be squandered.

17. The authorities, with support from both political parties, offer only one solution—higher taxes and more controls. Every proposal from the White House is for heavier expenditure. There must be, its propaganda insists, no slow-down of its welfare projects. It wants to increase them and it uses the necessity of defense as justification for projects that would be of debatable propriety even in normal times. But the more revenue Washington gets the more it is certain to spend. It refuses to recognize that the barrel has a bottom.

18. There has been built up an opinion that it is reasonable to question the practicability of a White House program. Experts

in public relations are summoned to Washington to advise the Office of Defense Mobilization how to coordinate the activities of all the multiple public relations officers of the Government to carry a single message to the public, and sell the idea that not only is the policy of the Government perfect and unassailable but also that its methods of mobilization are beyond criticism.

19 How close are we even now to the one-party system in our Government? It is wise to have partisanship end at the border and to present a united front abroad. But that is quite a different thing from outlawing debate in the formulation of the policy, whatever it may be. Therein lies the fallacy of a bipartisan foreign policy. It is sheer madness to foreclose on discussion. A country under parliamentary forms is in a sorry status if it lacks a loyal opposition. Diplomacy ought not to be deceptive of our own people.

20 The peril is far too great to permit major decisions to be made in secret chambers, even though members of both political parties participate. It is known now that the present danger is largely the consequence of fatal errors made at Yalta and at Potsdam. In the first case, a Chief Executive sick unto death, with his principal consultant in a similar condition, made concessions that poured strength into Stalin's veins. He did this as Commander in Chief, without consultation with Congress and without reference to the people. That was embezzlement of power. Who can assure that it would not happen again, or that another victory in another war might not be bartered away by a well-meaning but incompetent authority? It is the abuse of our own institutions that makes necessary a defense of the dollar.

21 The people are confused because the danger to the country has not been explained to them with vivid clearness. They have been bombarded with a series of generalities, some of which would tax the credulity of infants. "The only thing we have to fear is fear itself," said Roosevelt, but the Washington bureaucracy, including the generals, has again and again, in public testimony, indicated a dread lest a gesture here or an action there annoy the Politburo.

22 It might be supposed that Russia was the giant and this country the pigmy. It may be doubted if the Politburo is more cunning than America in its programing. It is altogether unlikely that its production equals America's in volume or parallels it in quality, over-all.

23 Extravagance in Government can be moderated, and without impairment of defense. The so-called Marshall shield calls for mobilization of our collective production facilities and an arrangement whereby they may move into maximum output by pressing a button. Most of this capacity already exists. After the last war the Government retained 440 of its War II plants as a reserve of industrial capacity. More than half of these—278—are now producing defense items, and another 66 are being reactivated. Defense has already arranged for \$6,000,000,000 additional in plant expansion and tooling, mostly for the production of aircraft. Private capacities have enormously expanded since War II. Atomic warheads, artillery shells and guided missiles are well advanced, as is the use of atomic power for submarines. Together there exists already, with rapidly increasing potentiality, a Marshall shield.

24. Defense is the one great area in which economy can be practiced. Let it confine its actual production to usable hardware. Let there be no such overproduction, say, of tanks, as to overwhelm our storage facilities. This would serve a double purpose,

since it would also tend to minimize obsolescence.

25. Let it be observed, too, that possibly the very hugeness of the appropriations is intended to frighten Stalin, with no present idea of actual use of the amounts in full. Yet Defense will always be tempted to spend whatever is authorized. The "watchdog committee" of the Senate can be of incalculable service to the Nation by keeping its tender fingers in touch with this situation.

26 Inflation has already gone so far that possibly some form of price control is essential, but to be used only if necessary and with great caution. Let there be denial of appropriations for projects that safely can be postponed. Let the Congress wait, at least until fall, before imposing any new taxes whatever. Let aided foreign nations also show restraint in spending their and our money on welfare and postponable projects. Let a spirit of devotion to the public weal be substituted for the extravagant atmosphere that prevails in Washington. In a word, let the bureaucracy become patriotic.

27 The thing that is inflated is the Government. Big government costs big money. Inflation is conceived and born in Washington. Only the Federal Government can spend in unlimited amounts. It alone determines the value of money and the extent of credit because it alone is legally empowered so to do. The administration already has controls adequate to stop the inflation dead in its tracks. It can stabilize the whole economy by utilizing its present powers. It can do so by putting ceilings on expenditures. It can barricade the American system against disaster by itself practicing that economy which it so belligerently calls on the mass public to endure. Congress should insist that it do so.

Paul O'Dwyer's Speech for an Undivided Ireland

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. BENDER. Mr. Speaker, there was recently held in the city of Cleveland a regional conference of the American League for an Undivided Ireland. Present at this conference were over 200 delegates from the seven States comprising this region. All were most enthusiastic and eager to work out a solution to the 30-year-old partitioning of Ireland.

Similar conferences have been held in other parts of the Nation and will continue to be held, until the objective has been attained, namely, the complete reunification of Ireland as it has been through all the ages of its long history. Americans of Irish descent are daily becoming more aroused over this enforced division of their ancient homeland and are becoming more insistent that we in Congress do our part in an effort to wipe out this unwanted border.

During the deliberations in Cleveland, Mr. Paul O'Dwyer, of New York, gave the principal address during the afternoon gathering of the delegates. I desire to

include as a part of these remarks the speech of Mr. O'Dwyer, which was as follows:

Fifteen months have passed since it became necessary for our forces under the flag of the United Nations to join our brethren to halt aggression in Korea in an attempt to correct a great wrong perpetrated on the people of Korea who, like the Irish, have fought so long and so valiantly for their independence. No one can gainsay that the Korean war had its beginning when great powers, including America, failed to take into account the lawful aspirations of the Korean people, and so strangers drew a thirty-eighth parallel, virtually dividing citizens of one country into two factions. Left to themselves, I am sure the Koreans would have worked out their own salvation and it would not have been necessary for anyone to intervene.

If we have learned anything from the lesson of Korea, it is that we cannot afford to repeat the error twice in the same generation. An arbitrary partition can only lead finally to bloodshed. Let us not permit the British to inveigle us into the same mistake in Ireland.

Frankly, we are quite confused by the military strategists these days. We have thousands of pages of testimony pro and con on the value of Formosa to us, but Formosa is at the other end of the world, while scant attention is being paid to an island than can, by reason of its geographically strategic position, be the greatest threat to our safety.

It is the nearest part of Europe to our shores and in these days of jet planes and atom and hydrogen bombs, not even the most unreconstructed isolationist would venture to deny that it could be used by an enemy to our great disadvantage, and we, being aware of the danger, have a sacred obligation to call it to the attention of our fellow citizens. Does our Government have knowledge of this? Do our military experts recognize it? Why should it be permitted to continue? I believe the answer is that our Government knows the facts. No matter how our military experts may disagree about Formosa, they are in accord on the strategic position of Ireland. Winston Churchill said so, and the responsibility for continuing the dangerous evil of partition lies squarely on the shoulders of the leaders of the Republican and Democratic Parties in their blind acceptance of British diplomatic decisions on matters European.

It was necessary for America, in order to control the Communist threat in Europe, to spend huge sums of money to rearm the western nations. We found it necessary to call all nations into one conference for joint protection against Communist aggression, and one nation, Ireland, refused to join. Why did she refuse to join the Atlantic Pact? Was it because she preferred the Communist way of life? Even her greatest critic would deny that. Then what was it? It was because of British insistence that the participating nations should guarantee the territorial integrity of each other for 20 years. This would amount to giving England a 20-year lease on the northeast portion of Irish soil. The British concept of rights and obligations is archaic, backward, and outmoded, and if we follow it, it can only lead us to disaster. Let us leave Ireland for a moment and see what it has done for us in other places.

We almost sacrificed our national honor in 1947 by listening to their advice on the question of Israel and we are now being dragged into the Iranian oil question which should never have occurred if British oil interests and the British Foreign Office had made some attempt to be fair with the Iranian people,

and had not treated those people so shamelessly that they increased the threat of Soviet intervention in that country. It is quite obvious that as far as British foreign policy is concerned, it makes no difference whether Labor or Tory has control. For instance, how could it be good to nationalize steel and coal in England and bad for the Iranians to nationalize oil in Iran. What was the British reaction to this move in the Iranian Parliament? The Iranians must remember that Jews who sought their liberty were publicly flogged in Palestine 5 years ago, and so when British paratroopers were sent to Cyprus with full fanfare, it must have seemed a very ominous move to the Iranians.

I merely mention these events to show the British pattern of performance outside its own nation so that its treatment of Ireland today may be the better understood. A little study of the situation in Ireland would work out to American advantage. The approach of England to Ireland today is as vicious as it ever was during the 700 years it forcibly occupied that island, that from our standpoint, the continuance of that policy while threat of Communist aggression exists is downright stupid.

Why don't they remove their armed forces from northeast Ireland? Why do they not disband their murderous secret police? Why do they propose through their puppet, oppressive laws to make civil and religious rights a complete mockery? Whatever wisdom or cunning there was in British diplomacy in days gone by died with the last generation. What we now behold is a Foreign Office stupidly following a formula that might work in less-enlightened times, not realizing that a new era and new threats have made it as archaic as Elizabeth's galleons, the spears of Cromwell's soldiers, the horsemen of the Earl of Essex, or the mercenaries of Cornwallis.

At this point, I suppose, it may occur to the mind of one of my listeners to inquire as to what period of time in Ireland I am referring, and my answer is now, right at this minute, and I suppose this is as good a time as any to tell about the present plight of Ireland. I shall not attempt to give you a discourse on the hardships the Irish people endured during the 700 years they suffered under British rule. Those were dark days throughout the world. I will confine my remarks to what we regard as enlightened times, nor shall I go beyond events within my own memory.

In 1914, small nations were promised freedom, and in 1918 the Irish electorate voted to establish a free and independent Republic. When they attempted to put the will of the people into effect a cruel war was waged on the people, and the Black and Tans were let loose to inflict their savage reprisals. With the few resources at their command and with the help of friends in the United States of America, the people fought back. When the liberals of the world and the Quakers of the United States of America took a hand to expose these conditions a truce was called, and in 1921 the British Parliament decided to divide the country in two, giving partial freedom to three-fourths of the country and setting up a gerrymandered, puppet government in the northeast sector, now known far and wide by the significant name of the Stormont Government. This existing Government, with its police and army, is financed by you through Marshall plan money. It is a costly operation, and the deficit is made up by the American taxpayer through Marshall plan aid. This division of Ireland can be eliminated by the British Parliament—the same body that gave it life at an hour's notice.

Ireland, like many a European nation, is divided into an agricultural and an industrial area, and to divide these two areas is like ringing a death knell to the economy of the country. Yet, that is precisely what

was done to Ireland and it is such a division that has since that time been maintained.

Some months ago, when I spoke to you, I reported how the rights of about half a million Irishmen living in this area were being shamelessly violated. I can report today that their reign of terror has been greatly intensified. Under the terms of a bill now introduced by the Stormont government, this little British occupied area will be literally a police state. It seeks to prevent every gathering of people who might peacefully seek to protest their unfortunate plight.

Ten days ago we celebrated the glorious Fourth of July, but few were reminded of the events which brought forth that great declaration or the conditions which made it necessary. Suffice it to say that every human right that was violated by the British in the Colonies in 1775 is now being violated in northeast Ireland except that the technique has been improved and the program is executed with greater precision. It might surprise our listeners to know that Irishmen in possession of literature which advocates the complete freedom of their country may be jailed for 14 years, and a man who sings a patriotic song in public may receive an equal term. When a Tyrone jurist, within the past few months, questioned the validity of some of these laws, the reaction of the British-rigged Parliament was spontaneous. The previous measures suppressed freedom of speech in any form. A new measure was immediately introduced which effectively prohibits freedom of assembly. These were the very things our founding fathers fought to destroy and, yet, these are the very things that are being denied to the people of northeast Ireland, and it is a sad commentary that our money is financing the project. The people of Ireland have been patient, but how long they shall continue to suffer under the lash remains only to be seen. Those who know the history of Ireland realize that it will not be too long. Each previous generation of Irishmen was forced to physically resist this type of tyranny. Is it to be expected that this generation will react differently from their forebears? But where does that leave us? We have been duped into supporting an arrangement that threatens to make our position as leaders in a free world completely ridiculous.

We are in partnership with Great Britain and do supply the money to keep her going. And this money of ours is being used by our partner to crush the soul of this great and noble nation. We will not be able to escape the responsibility for these acts of ours. We who know these things must not permit them to happen. We must inform our fellow Americans, knowing as we do that if the American people know the facts, they will not permit this condition long to remain. We speak in defense of a small nation of people who have never sought to conquer another race or group of people, who put the poet ahead of the warrior in its hall of fame, a nation fashioned by the Creator and provided with natural boundaries—the blue sea and a rocky coastline. All the chicanery of little men cannot alter or change it. It was designed by the Almighty to be one nation—the north, the south, the east, and the west.

The poet, Thomas Davis, put it thus a generation ago:

"That chainless wave and lovely land
Freedom and nationhood demand
Be sure the great God never planned
For slumbering slaves a home so grand."

And a free nation it must be, for, in the words of a more modern Irish patriot, Cahir Healy:

"Victory comes, not to those who can inflict the most punishment, but to those who can endure the most suffering."

Opinions of Albanian-Americans on Communism

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. VELDE. Mr. Speaker, I should like to call special attention to the report on majority opinions held by Albanian-Americans in Massachusetts concerning communism prepared for Gov. Paul Dever, of Massachusetts, by Mr. Glenn A. McLain, 45 Chase Street, Quincy, Mass. Following is the first part of the report, and I hope to have the second part inserted in tomorrow's RECORD. I would commend the reading of both parts of this report to all Members of Congress and those interested in combating communism here in the United States:

Since the end of World War II and the gradual deterioration of relations between the United States and Russia the actions of a certain group of Albanians in Massachusetts have greatly shocked and offended the majority of the Albanian community. These actions have been viewed with increasing alarm because of Albania's traditional spirit of friendship with America and because Albanian-Americans realized that their reputation as liberty-loving, honest American citizens was being challenged by false propaganda. In some quarters all Albanians were being classified as pro-Communists for three reasons:

1. Albanian leadership in the homeland was communistic.
2. A good portion of the Albanian foreign-language press in this country was not only pro-Communist but violently anti-American.
3. The constant pulpit and public denunciations of America, its form of government, its officials, and its foreign policy by Bishop Fan S. Noll, who is a leader of a section of the Albanian community in Massachusetts.

It seemed especially important in light of the Massachusetts Report of the Committee To Curb Communism, March 30, 1951 (H. Doc. No. 2823, pp. 36-39) that no Albanians were mentioned as being members of the Communist Party or Communist-front groups. Important because minority groups are special targets for Communist organizers. (Ibid., p. 29.) The minority group of Albanians in Massachusetts was no exception to this general statement of fact as an editorial of Zeri Popullit, Tirana, November 18, 1950, No. 246, attests:

"American imperialism is without example in history for its barbarism and its brutality toward humanity. During World War II the name of Hitler stood for that of the most feared man of all time. Everyone wished for his demise. In the year 1950 a man by the name of Truman is taking Hitler's place. The people see in the face of Truman the characteristics of Hitler. Humanity fought and defeated Hitler. So will Truman be defeated in the twentieth century for the good of mankind stands the Soviet giant for the hope and salvation of mankind."

This propaganda, although not printed in the Albanian American press, was distributed at the "Free Albanian Organizations Ball" under the sponsorship of Fan S. Noll. Noll's views in regard to such hate spewing propaganda are well known as a religious sermon delivered by him to his congregation and reprinted in Liria, December 23, 1949, so will explain:

"The Albanians in the United States must regard it as their duty to support the present democratic (Communist) Government of Albania, which is the surest guaranty of its national independence, its territorial integrity, and of the peoples freedom. All Albanians must be united in this patriotic stand in the present crisis."

Such were the words of an important leader of the Albanian community. It was hardly strange that many uninformed people in Massachusetts considered all Albanians in the light of Noll's pro-Communist advocations. The Albanians as a minority group were being "smeared" by the desultory tactics of a few Albanians.

III SUMMARY BACKGROUND HISTORY OF ALBANIANS IN AMERICA, 1900-1951

a. Albanians as American citizens

In order to fully understand the point of view held by the majority of Albanians concerning communism it is necessary to briefly trace Albanian-American developments in this country.

The major portion of Albanians in America came to this country after 1900 (C. A. Chezeze, *Albania, Past and Present* 1919, p. 227). There are approximately 40,000 Albanians in America, with the Massachusetts colony, 10,000 plus, being the largest group at the present time (Ibid., p. 227). The Albanian immigrant in America at the turn of the century was beset by many emotions. He had come to America as the land of opportunity and at first found little of that opportunity. In forsaking a country where "primitive lawlessness was both tradition and fact" (Federal Writers Project, *The Albanian Struggle in the Old World and the New*, 1939, p. 26), he found law and order at the price of losing much of his traditional freedom. "In his far greater dread of the bewildering new life * * * in America, the immigrant almost forgot the old dread under which he had lived in Albania" (Ibid., p. 28). The machine-age civilization in America frightened him and for a while he lost the sense of security in the land that was his cherished right in Albania. The Albanian that worked in the iron foundries, the shoe factories, or the restaurants in Massachusetts and other areas was faced with a life of grinding poverty. Poor housing conditions and arduous toil at low wages were not seemingly conducive to the development of good American citizens. Despite these adverse conditions present in the early 1900's the Albanians of 1951 in Massachusetts are now loyal citizens worthy of the name American. Prosperous fruit marts, ice-cream factories, furniture stores, up-to-date variety shops, coal and wood concerns, tire shops, and restaurants dot the Massachusetts economic map (Ibid., p. 93). Although the professional group of Albanians in Massachusetts is not a large one it promises "to be considerably expanded by recruits from the present generation of students" (Ibid., p. 94). The industry of the average Albanian over the years is a proven economic fact in Massachusetts and other areas in America. As one American writer explains "Rarely * * * does the name of an Albanian appear on the relief rolls" (Ibid., p. 96). The old indifference of the average Albanian in regard to the American customs, American vocational opportunities, and the American spirit of free enterprise has virtually vanished. Albanians have come to realize that a new culture is in the making in America. They are willing to join other minority groups in America to help to build that culture. It is especially significant in view of their inauspicious beginnings in America that no taint of communism has ever been applied to the Albanian minority in Massachusetts or America. (Report of Committee To Curb Communism, op. cit., pp. 36-38.)

b. Albanians as homeland supporters

1. In the Period Before the Communists

The general administrative and political breakdown of the Ottoman Empire in the 1870's first poised the problem of Albanian independence at European council tables. (Writers, *Albanian Struggle*, p. 34.) After the Russo-Turkish War (1877-78), the Albanians petitioned the Congress of Berlin to fully recognize Albanian nationality and autonomy. (M. D. A. E. Von Redlich, *The Unconquered Albania*, Cincinnati, 1935, p. 26.) "The period between the Congress of Berlin to the Balkan wars witness two new phases of the history of Albania. First, the growth of Albanian nationalism, and, secondly, the increasingly complex rivalry of European powers in this region (Edith P. Stickney, *Southern Albania or Northern Epirus in European International Affairs*, California, 1926, p. 13.) After the formation of the Albanian League for the Defense of the Rights of the Albanian Nationality in 1878, nationalism was placed on a solid political footing in Albania. The dormant nationalistic feeling of the Albanians now began to be nurtured by the militant actions of the League, the use of the Albanian language in schools previously prohibited by the Moslems, and the publication of numerous schoolbooks and newspapers in the native language. (Chezeze, *Albania Past and Present*, pp. 213-215.) The winds of nationalism were tugging hard at the Moslem political structure. The storm of fury which was to blow in Albanian independence in 1912 had to blow from Europe to America and back again. The Albanians in America were to provide the financial strength, journalistic talent, and political leaders so necessary for Albania to take her place in the family of nations.

Always generous toward their homeland the Albanians of America have never supported the two great enemies of democracy—fascism or communism. When Bishop F. S. Noll as Premier of Albania "showed his true attachments and inclinations toward communism by entering into diplomatic relations with Soviet Russia and according recognition to a Soviet Russian minister with a large staff who were to use the Albanian capital, Tirana, as a center for Soviet propaganda in Europe," Albanian-Americans failed to support him in his policies. (Von Redlich, op. cit., p. 35.)

The enmity of the Albanian-Americans was further incurred by Noll when Noll founded an Albanian Communist newspaper in Geneva (Liria Kombetare, subsidized by Russia), and when he signed a Bolshevik manifesto in 1927 which was intended to bring about a revolution in Albania and all Balkan states with the purpose of uniting them into a federation of Soviet Socialist republics. (Ibid., p. 35.)

The embracing of communism by the premier scholar and American-educated Bishop Noll led the Albanian American minister Konitz to protest bitterly against Noll's final entry into America in 1930. (Writers, *Albanian Struggle*, p. 19.)

For reasons best known to the United States Government Noll was finally permitted to enter this country permanently, eventually becoming an American citizen. He has failed to change his political spots and his nationalism today is not the patriotic brand of nationalism practiced by Albanian-Americans since the turn of the century. It is the same internationalism of the Communist revolution preaching hate and destruction for the liberties of Albania. Such aspirations are not in any way representative of the Albanian-Americans in Massachusetts or anywhere in the world.

2. In the Period Since the Communists

Any discussion of communism among the Albanian minority group must necessarily touch upon the relationship between Ameri-

can Albanians and their homeland. When the Moscow puppet, Enver Hoxa, took over the Albanian Government in 1945 all the world knew that the Kremlin-sponsored government did not represent the true wishes of the Albanian people. (Sholperia, vol. I, New York, N. Y., May 1, 1951, No. 15.)

The obvious historical facts prove to the most casual spectator of Albanian affairs that dictatorship is anathema to Albanians; however, many unthinking people have confused the facts and syllogistically said, "Albania is Communist, my friend is Albanian—therefore, my friend is a Communist." No statement could be further from the truth. Perhaps the many speeches of Fan S. Noll have convinced many unknowing listeners that the Albanian-American minority group is pro-Communist. Noll's sermon, as reported in Liria, opere citato, December 23, 1949, and the constant anti-American, pro-Communist diatribe in editorials, would be sufficient to smear the Albanian community as a body. The position of the Albanian-Americans in regard to their Communist-controlled homeland is therefore clear.

The Albanian nation is one of those who have written their history with blood. They must continue their warfare for the liberation of their divine land, for the reholing of their historic flag, for the reestablishment of the Albanian race.

With the help of God and the forces of western civilization (not Russia, as Noll suggests), the hour of success will come surely.

"Long live Albania, liberty, and democracy" (Sholperia, vol. I, New York, N. Y., June 15, 1951, No. 18.)

The above expression of Albanian-American friendship as shown by a responsible organ of the Albanian press is quite in contrast with the antiwestern denunciations by Noll. (Op. cit., p. 3.)

c. The importance of Albanian leaders in America

1. The Role of Leadership in the Albanian American Communism, 1900-1951

The great English historian Toynbee has said that every culture and civilization must have a creative minority to lead the social group into true creativity. This law of history is certainly true in the light of the role played by Albanian-American leaders in this country. As the early Albanian immigrant in the 1900's was inarticulate educationally speaking, his leaders were truly a "creative minority."

The work of Christo Dako is the formation of reading clubs for the use of the newly created Albanian newspaper Kombi in 1905. As Albanian literacy grew other clubs of a like nature were formed in local areas of Massachusetts. Fan S. Noll became a leader of the Albanians in America after 1908 when he was ordained a priest by the Russian Orthodox Archbishop Raton. His militancy soon established him as a leader (Writers, *Albanian Struggle*, p. 46), although it was rather curious that he could gain so much prestige so easily. (Loc. cit.) He was born outside of Albania, he lacked the normal ties of village and family which made for successful politicians in the Albanian-American community, and he was not well known in Europe at the time. From the first he used his pulpit for political preaching and he has continued to do so ever since. His scholarly achievements have been many in the years since he received his first degree from Harvard in 1912. (Cf. H. N. Marquis Co., *Who's Who in the East*, Chicago, 1948, pp. 1264-1265, and A. N. Marquis Co., *Who's Who in America*, Chicago, 1949, p. 1836, for a full account of his scholastic activities.) This perhaps accounts in part for his tremendous power and hold over his supporters in the Albanian community today. The facade of learning often covers the hard core of communism or fascism as the actions of Russian and German "intellectuals" have so

often proven in recent years. Others such as Fuchs in Britain, Coplon, and Hiss in the United States, are only a few selected examples of "liberalism" gone astray.

A full list of Albanian leaders would not be within the scope of this report but men such as Konitza, Dako, Chezrezi, and others have effectively led the uncertain, illiterate Albanian peasant of the early 1930's onto the constructive road to American citizenship.

2 The Religious Elements in Leadership

Religion and politics have been often mutual bedfellows in the Balkans. The Balkan countries of Yugoslavia, Romania, Bulgaria, and Albania have been the scene of mass "conversions" when one of the three important religions in the area allied itself with political factions. Such liaisons between religion and politics are not traditional in America. It is to the credit of the Albanian Americans as a group that such central European folk ways and mores have not been allowed to continue in the face of the cherished American constitutional separation of church and state.

A Bishop Noli and his supporters

As the religious leaders among the early Albanian American immigrants were among the best educated it was natural that they should become outstanding leaders in the Albanian communities. Fan S. Noli was one of the first of this type of leader. In view of his later behavior and opinions concerning communism it seemed strange that his church community would tolerate him over a long period of time. His reputation as the "father" of the Albanian Orthodox Church of America, his deeds and title to the property of the St. George's Church in South Boston, his age and great reputation as a scholar, all have seemingly made his position an impregnable one in the Albanian community. Some members of his congregation claim that as religion and politics are not one in America as they are in Albania, Noli's pro-communistic pulpit exhortations are harmless. As communism is an atheistic philosophy, based on world revolution and class hatred the facts would seem to belie the excuses given for Noli. The basic nature of communism is religious as the scholarly historically trained Bishop Noli surely must understand. Communism has its own bible in the works of Marx, Lenin, and Stalin, its god in the person of the deified Lenin and Stalin; heaven and hell (Communist "freedom" versus capitalistic exploitation). Infinite comparisons could be made and the proof of these comparisons can be found by even a cursory reading of the authorities on the subject. Philosophers, theologians, sociologists, and historians (Russell, Graham, Sorokin, Toynbee, Spengler, Shub, Pares, Vernadsky, and many others).

At the present time a schism exists in the Albanian Orthodox Church of America. This schism has not been effected as Noli suggests because of political or religious differences between Bishops Noli and Lepa. It exists solely because Noli's pro-Communist political sympathies have forced him to receive with disdain any suggestion that his spiritual authority can come from any place but Moscow.

The Albanian Autocephalous Church of America as formed by Bishop Noli in 1938 had as its spiritual head the Patriarch in Istanbul. The Patriarch of Istanbul in the Eastern World occupies a position roughly analogous to that of the Vatican and the Pope in the Western World. His connection with the church in America is one of a spiritual nature and is similar to those of the Pope and in no way conflicts with the freedom of the American independent church.

Almost as soon as the Communists seized power in Albania, Bishop Noli made overtures to the Red leaders for recognition of his American Episcopacy. His behavior was

consistent with his long-cherished Communist principles. Negating the very principles of decency which should characterize men of the cloth (if no others) he repudiated Archbishop Kissi who was his former theological associate. Archbishop Kissi had been greatly responsible for the founding of the Albanian Autocephalous Church of America and had ordained Noli. Kissi became the Cardinal Mindszenty, of Albania. In their brutally efficient way the Reds forced a new archbishop of the Albanian church, Pashko Voca, who immediately issued the following statement:

"The Congress unanimously denounces the unfriendly and harmful behavior of its former primate against the church, the people and the country." (Liria, March 3, 1950, vol IX, p. 1)

The usual trumped-up charges were then presented to a Communist court of justice, Archbishop Kissi "confessed," and he was imprisoned. What has happened to him since the trial remains a matter of conjecture.

At the meeting of the so-called congress, the following statements were mentioned as the collective sentiments of the assembled delegation:

"The church must be the center that stimulates the feeling of patriotism, of brotherly love, of unity for the fatherland . . .

"The synod must direct all its activities toward the camp of peace and universal friendship among all peoples, like all progressive churches do under the inspired leadership of the great Russian church" (Liria, ibid, p. 1)

Noli, unconcerned about the unjust repudiation of his theological compatriot, Archbishop Kissi, hastened to mend his political fences. Apparently he was well aware of the protests of Albanian Americans to the patriarch of Istanbul against his pro-Communist activities. As he could never criticize communism because he had advocated it, only one step remained to make his rapprochement with communism complete. That was formal recognition of his episcopacy by Moscow and its stooge in Albania. The semiofficial organ of the Communist government in Tirana (Bashkimi, February 25, 1950) published the following telegram from Noli:

"We are very much pleased with the favorable resolution that was adopted by the third congress of the Albanian Orthodox Church in regards to our petition to come under the jurisdiction of our mother church. We are impatiently awaiting notification by the holy synod.

"Bishop F. S. NOLI."

The holy synod was naturally overjoyed to ratify the petition of Noli's. The acceptance of Noli resulted in twin victories for communism: a propaganda victory, fully exploited by the Communist press; and a religio-political victory for Noli, who was now secure in his episcopacy.

A Great Patriot, Thomas Paine, Nailed the Fatal Defect in Price-Control Schemes

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 23, 1951

Mr. BUFFETT. Mr. Speaker, the patriots who fought the Revolution tried price controls in an effort to stabilize the value of their printing-press money,

It did not work then, and it will not work now, unless we can repeal some natural laws, which we cannot do.

Such American heroes as George Washington and Thomas Paine condemned price controls in the strongest possible language.

Today their wise testimony on this subject is discarded.

However, I will make this prediction confidently: That, if the present attempt to fool the people while the value of our currency is destroyed is not soon abandoned, Congress will learn the hard way of the truth of Paine's and Washington's judgment of price controls.

A part of a letter from Thomas Paine to Danton on price controls follows:

I see also another embarrassing circumstance arising in Paris of which we have had full experience in America.

I mean that of fixing the price of provisions. But if this measure is to be attempted it ought to be done by the municipality. The convention has nothing to do with regulations of this kind, neither can they be carried into practice.

The people of Paris may say they will not give more than a certain price for provisions, but as they cannot compel the country people to bring provisions to market the consequence will be directly contrary to their expectations, and they will find dearth and famine instead of plenty and cheapness.

They may force the price down upon the stock in hand, but after that the market will be empty.

I will give you an example. In Philadelphia we undertook, among other regulations of this kind, to regulate the price of salt; the consequence was that no salt was brought to market, and the price rose to 36 shillings sterling per bushel.

The price before the war was only one shilling and sixpence per bushel; and we regulated the price of flour (farina) till there was none in the market, and the people were glad to procure it at any price.

There is also a circumstance to be taken into the account which is not much attended to. The assignats are not of the same value they were a year ago, and as the quantity increases the value of them will diminish.

This gives the appearance of things being dear when they are not so in fact, for in the same proportion that any kind of money falls in value articles rise in price. If it were not for this, the quantity of assignats would be too great to be circulated.

Paper money in America fell so much in value from this excessive quantity of it that in the year 1781 I gave 300 paper dollars for one pair of worsted stockings. What I write you upon the subject is experience, and not merely opinion. I have no personal interest in any of these matters, nor in any party disputes. I attend only to general principles. (From The Essays of Thomas Paine, pp. 58-59.)

Civilian Defense: Uneven Preparations Still Dangerous

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. BENDER. Mr. Speaker, it is always better to be safe than to be sorry. In our civilian defense programing, most

of our largest communities, having gotten over their first fright, are now sinking blissfully in a state of absolute somnolence.

Here and there, as in Utica, N. Y., splendid demonstrations of preparedness have been furnished by an alert city administration in cooperation with all the surrounding towns and villages. The Air Defense Command has gone about its task of recruiting civilian volunteers for large-scale alert practices, but the whole effort has been spotty, poorly publicized, and lacking in over-all results.

With the Korean cease-fire, the danger of being caught napping is rendered all the more apparent. Our people were lulled into unsuspecting sleep at Pearl Harbor by "negotiations." There is good reason to believe that we may be similarly off guard now. The serpent always strikes when the victim is least aware of his presence.

Civilian defense is not a luxury today. It is an expensive necessity. American cities seem to be incredibly blind to the lessons of current history.

State Department Cabal Planned American Domestic and Foreign Policy

EXTENSION OF REMARKS OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 24, 1951

Mr WOOD of Idaho. Mr Speaker, under leave to extend my remarks I include Information Bulletin No. 151 of July 30, 1951.

If you are wondering how such an insane project from the American standpoint could originate, consider the appended list of names of the planners, which includes Alger Hiss, branded as a traitor and convicted as a perjurer; Harry Dexter White, who escaped conviction only by dying suddenly and mysteriously a few days after appearing before the House Un-American Activities Committee; Julian H. Wadleigh, a self-confessed Communist who admitted passing top State secrets to Russian Communists; Mortimer Snerd Wallace; the Old Curmudgeon himself; and the present Secretary of State—one-worlders all who would reduce America to a mere province in a world superstate in which we would be hopelessly outnumbered and outvoted.

Show me an internationalist and I will show you a potential traitor to the United States.

The bulletin follows:

EXPENDITURES BY THE DEPARTMENT OF STATE FOR THE FISCAL YEARS 1940 THROUGH 1951 INDICATE INCREASING OVERHEAD COST OF NEW DEAL-FAIR DEAL INTERNATIONAL POLICIES

The annual reports of the Secretary of the Treasury, submitted to the Congress for the fiscal years from 1940 through 1950, and the reported expenditures by the State Department for the fiscal year 1951, reveals a growing and costly trend in the foreign policies of the administration whereby the State De-

partment is given public funds and authority never contemplated by the framers of our Constitution.

The reported expenditures, together with the budget request by the State Department for fiscal 1952, totaling nearly \$2,750,000,000 were:

Fiscal year:	Reported expenditures
1940.....	\$24,292,914
1941.....	25,121,083
1942.....	28,912,144
1943.....	33,492,741
1944.....	38,101,003
1945.....	52,289,102
1946.....	¹ 178,291,582
1947.....	² 311,488,859
1948.....	³ 665,769,674
1949.....	⁴ 334,296,767
1950.....	⁵ 361,226,113
1951.....	⁶ 305,375,133
1952 (budget request).....	283,566,476
Total.....	2,742,223,591

¹ Included for foreign economic functions,

\$127,291,582

² U. N. relief and rehabilitation costing \$178,177,135

³ Foreign-aid programs administered by State Department, \$339,162,749

⁴ Foreign aid and U. N. loan accounted for \$66,618,474.

⁵ Foreign aid, loan to U. N., and Children's Fund, \$39,511,586.

⁶ Reported in Daily Treasury Statement, June 29, 1951

NOTE—Details may be found by consulting the annual reports of the Secretary of the Treasury

NEW DOLLAR DIPLOMACY FAILS IN CRISIS

The very fact that our Nation has had to face one emergency after another, notwithstanding the fact that we have poured out nearly \$117,000,000,000 over the past 10 years in outright grants, loans, and credits, and now have perhaps a greater number of potential enemies than we had in 1939, indicates that dollar diplomacy as practiced over the past 10 years is no panacea for the world's ills, economic or social.

Everything considered, it is manifest that the ultimate object of the Department of State's internationalists, one-worlders, up-lifters, and do-gooders is to accomplish the following

1 To raise the standards of living of the rest of the world to those of the United States, although everyone knows that is quite impossible without lowering our standard of living to a lower level.

2 To take the United States into international foreign alliances of the very kind against which President George Washington warned in his famous farewell address, and against which Warren G. Harding, in an address in the Senate in 1921, said

"It is better to be the free and disinterested agents of international justice and advancing civilization, with the covenant of conscience, than be shackled by a written compact which surrenders our freedom of action and gives to a military alliance, the right to proclaim America's duty to the world"

3. To sacrifice and surrender the sovereign, inherent, and unalienable powers of this Republic to the domination and control of foreign nations and foreign-controlled international bodies functioning under the so-called United Nations, several of whom are presently disunited.

4. To establish the welfare state on a semi-world-wide basis.

Proof of these objects and purposes seems to be in the following, among still other things hidden and disclosed:

As far back as February 12, 1942, the Advisory Committee on Postwar Foreign Policy was convened in the State Department. Discussion quickly arose as to whether the

public should be told of the existence and work of that committee. State Department Bulletin 3580, a 726-page cloth-bound book, released in February 1950, entitled "Postwar Foreign Policy Preparation" at page 79 contains the following significant statement:

"The committee agreed that its work should be approached from the general standpoint of the kind of world that the United States desired after the war. It also took the position that the President, in view of his executive responsibilities, would need to have recommendations for action as well as information on all problems on which a national position would have to be taken or an attitude expressed.

"Thought was given to the possibility of informing the public immediately of the establishment and work of the committee. It was felt that circumstances at the moment, when the United States was being driven back in the Pacific and the United Nations' cause was suffering on every front, rendered secrecy imperative until a favorable turn in the war * * * Accordingly the committee's work and existence were kept secret."

Membership of the committee included Henry A. Wallace, Paul H. Appleby, Warren R. Austin, William A. Batt, Alger Hiss, Philip C. Jessup, Nelson A. Rockefeller, Harry D. White, David Niles, Leland Olds, Harry Hopkins, Julian H. Wadleigh, Harold L. Ickes, Wayne Coy, Charles E. Wilson, Eric A. Johnston, Dean G. Acheson, and many others.

Do you wonder what is wrong with our foreign policy?

PAUL O. PETERS.

Diplomatic Blunders

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr SHAFER. Mr. Speaker, under permission to extend my remarks I include an article by Rev. James M. Gillis, C. S. P., in his column, What's Right With the World:

SURSUM CORDA OR WHAT'S RIGHT WITH THE WORLD?

(By Rev. James M. Gillis, C. S. P.)

DIPLOMATIC BLUNDERS

A few weeks ago in this column there was a bit of comment on the mistakes of those who have our destiny in their keeping. Soon after that in a newspaper I came upon a favorite quotation of mine. It is the admonition of the Scandinavian diplomat of three centuries ago, Oxenstiern: "My son, see with how little wisdom this big world is governed." That little wisdom may ruin us.

If western civilization is to succumb to the Oriental despotism of the Soviets, it will perish because of the blunders of presidents, premiers, politicians, diplomats, statesmen. They all make mistakes but they seldom confess it. However, Paul Hoffman, who formerly dispensed billions of public money as ECA Administrator, in his recent book, Peace Can Be Won, says: "We should all admit our common error and concede that the weakness of our present situation is the result of our miscalculations as to Russia's post-war attitude. Most of us thought that after World War II she would join us in seeking peace. I certainly did and have no apologies for so thinking."

Not "our miscalculations"

Thanks to Mr Hoffman for his candor, but why does he say "our miscalculations"?

"Our error"? "Most of us"? "All of us"? The fact is that few ordinary American citizens gave Russia credit for being peace loving. Those who did so, or pretended to do so, were at the top and they were blinded by their political prepossessions.

Those who followed Roosevelt did so because of his New Deal, not because of his pro-Russian foreign policy. After Pearl Harbor they accepted the inevitable but they never for a moment trusted Russia. We had before our eyes the fate of Poland, Estonia, Latvia, Lithuania. Also there was the infamous Molotov-Ribbentrop pact. Those who, like Mr. Hoffman, thought that Russia would join us in seeking peace blundered inexcusably. If they now feel no compunction, they must be singularly insensitive.

It used to be alleged by those who approved or condoned the shameful doings at Yalta, Tehran, and Potsdam that the gift of China to Russia (that's what it amounted to) was necessary because we needed Russia's help to defeat Japan. That excuse was false. In 1939 when Russia and Germany ganged up on Poland we—to our shame—helped Russia with lend-lease. We were not yet in the war—officially. But our top men were pro-Russian. They "put it over" on the rest of us.

So, too, for Yalta. In 1945 we had driven Japan off the seas and out of the skies. We needed no Russian help. The atom bomb was already an assured success. Evidence of that fact hitherto concealed from the people was revealed during the MacArthur investigation by Lt Gen Leslie G. Groves, former head of the Manhattan District which built the bomb. We had the Japs on their knees and the bomb was at hand. Those who at that juncture bribed Russia to come in (and what bribe it was) did so for reasons of their own. Now we see that the bribery was a catastrophic blunder.

F D R. responsible

Of course, the fount and origin of all our pro-Russian blunders was the megalomania of President Roosevelt. In a letter to Winston Churchill in 1942 he wrote: "I know you will not mind my being brutally frank when I tell you that I think I can personally handle Stalin better than either your Foreign Office or my State Department." In fact, Stalin played rings around Roosevelt. The President who thought himself so deucedly clever never gained one diplomatic victory over his "dear Joe."

Ignoring the letter to Churchill, the expression "my State Department" (a dead give-away of the deceased President's egotism), let us remark merely that it was not Roosevelt who took Stalin for a ride, it was Stalin who played Roosevelt for a sucker. Such uncouth slang may offend "nice" people, but it is the most appropriate language I can think of to express what happened.

To come to a more recent example of the ineptitude of our diplomats. On June 27, Dean Acheson denounced what he called Iran's tactics of "threat and fear." But on the same day he told the House Foreign Affairs Committee that the United States has "no thought" of intervening in Iran. When is intervention not intervention?

The Iranian blunder

Add a second question. If we hope to be arbiters of peace between Iran and Britain, is it good diplomacy to start by insulting one of the parties to the dispute? Furthermore, we blundered needlessly into the Iranian mess. We encouraged Iran to adopt a strong nationalism as an obstacle to Russian infiltration. When the Nationalists got out of hand and nationalism developed into nationalization, we found ourselves once more in a diplomatic predicament. We cannot exculpate ourselves by accusing Iran and exculpating Britain.

The Iranians declare that Britain doesn't know that the world has changed and that

one of the changes concerns the old system of colonization and exploitation. So much for Britain. But why did we plunge into the dispute, and why do we find ourselves on the side of an outdated imperialism? And since we have gone into it, how can we say we have "no thought" of intervening?

When Jacob Malik made his cease-fire suggestion, Secretary Acheson said that an armistice at the thirty-eighth parallel would be a victory for America. Let's see: We fight for a year, spend \$12,000,000,000, lose 76,000 killed, wounded, and missing, to say nothing of the slaughter of several hundred thousands of Koreans (North and South), and just where we began, and that is victory.

So we continue to stumble and blunder along. If such is our diplomacy we had better pull out of the game. We don't know how to play it.

Open Welfare Rolls to Public View

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an editorial from the Atlanta Journal, as reprinted on July 31 in the Richmond Times-Dispatch, concerning a bill introduced by me and now pending in the Committee on Ways and Means:

OPEN WELFARE ROLLS TO PUBLIC VIEW

Pending in Congress is legislation which would permit States to open their welfare rolls to public inspection without risking loss of Federal funds.

Under present Federal law, States are required to keep these lists secret. Across the country there is growing dissatisfaction with such a requirement.

Public welfare benefits in the aggregate run into millions, and even hundreds of millions of dollars in every State in the Union. The case both for and against secrecy has been ably stated in recent days.

Senator HERBERT LEHMAN pleaded unsuccessfully in the Senate against an amendment which would allow public access to the records. Here is the gist of his argument, as reported in the CONGRESSIONAL RECORD:

"A situation had arisen in Ohio the previous year, I believe, under a Democratic administration there, in which it was proved that the rolls had been used for political purposes. Letters were sent to the unfortunate beneficiaries of relief, calling upon them to support political organizations.

"The situation was so clear, so sinister, that the Congress of the United States enacted legislation which would prevent such a thing in the future. . . . I cannot picture the damage that would be done if we permitted the use of the relief rolls for political purposes.

"Furthermore, up to 1939, when the legislation prohibiting the publication of the records was passed, the names of those on the relief rolls were used for commercial or other purposes. Threats and pressures were exerted on the unfortunate men and women who were on the relief rolls, not, generally speaking, through any fault of theirs, but simply because of the weight of circumstances which bowed them down."

The case against secrecy is best stated by James S. Pope, a Georgian, who is now managing editor of the Louisville Courier-Jour-

nal. He is serving as chairman of the committee on freedom of information for the American Society of Newspaper Editors.

At the last meeting of that society he made a notable report on how public officials, local, State, and Federal, increasingly often attempt to keep the public business a secret.

In the Atlantic Monthly for July, Mr. Pope has an article on the battle for access to all public records. He concedes, citing essentially the same argument advanced by Senator LEHMAN that there were some respectable grounds for keeping welfare rolls confidential. But he adds:

"This reasoning is based, of course, on a dubious faith that if relief rolls are not made public, statehouse and county politicians will not know who is on them, and cannot bring pressure for political support.

"There are certain social arguments in favor of protecting relief clients. On the other hand, here is more than \$2,000,000,000 a year being disbursed, and no reporter can check on all the reports of fraud that every newspaper receives.

"Sentiment seems to be growing that the necessity to guard an increasingly huge sum from grafters takes precedence over the right of personal privacy. Indiana has repealed her secrecy law, risking loss of some \$22,000,000 of Federal funds. Legislatures in Tennessee, Georgia, Illinois, Florida, and other States have expressed great dissatisfaction with the present policy. Two bills which would destroy the confidential status have been introduced in Congress.

"If this area of secrecy, which has some justification, is opened up to the public view, the effect will be profound in other agencies which have no law to sanction their concealments."

We believe, with Mr. Pope, that the weight of public interest lies against secrecy. We hope that Congress will act in accordance with the wishes of legislatures in Georgia and other States which wish to allow the searchlight of public scrutiny on expenditures of these vast sums of money. The people have a right to know how their money is spent.

Silence Costing Ike a Trial Run

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 11, 1951

Mr. ANGELL. Mr. Speaker, under the Oregon primary law a thousand voters may by petition have the name of any registered voter of their party placed on the ballot as a nominee for President. The Oregon law provides:

The name of any candidate for a party nomination of President or Vice President shall be printed on said ballots upon the written request of said candidate . . . or upon the petition of 1,000 supporters who are registered voters in the State of Oregon of the political party to which said candidate belongs.

The Oregon Supreme Court has ruled that the official candidate must under this section be a registered member of the party. In Oregon at the present time there is a movement on foot by both the Democrats and Republicans to have General Eisenhower's name placed on the Oregon ballot in the primary election to be held in May next year as a candidate for the Presidency. However,

under the provision of our law, it would be necessary to have his official party registration made known.

I am including as part of these remarks a portion of an article appearing in the Washington Post for Sunday, July 29, written by Robert C. Albright where the Oregon situation is discussed:

SILENCE COSTING "IKE" A TRIAL RUN
(By Robert C. Albright)

A gimmick in the Oregon election laws is jolting plans of independents in both parties to make that State's May 16 Presidential trials the pay-off primary for General Eisenhower.

The stage was all set to enter Eisenhower's name in the Oregon primaries, with or without his consent. All that was needed, most thought, were the signatures of 1,000 Oregon voters.

Democratic State Senator Thomas R. Mahoney already had announced he was starting to circulate a Democratic petition for Eisenhower. Independent Republicans were planning a similar move.

State election officials informally suggested that the sponsors had better take a second look not only at the election law, but at court interpretations of it.

Then it came out. Eisenhower's name can be entered all right, even without his consent, but there's one big proviso. He must be a registered member of the political party under which his name is proposed.

If Eisenhower is formally affiliated with either political party, he hasn't yet said so. If he is going to come out and state his political affiliation—a highly doubtful speculation—he can get on the ballot simply by filing a written request.

The petition which developed because the primary law itself had a sleeper.

Here's how the law reads:

"The name of any candidate for a party nomination of President or Vice President shall be printed on said ballots upon the written request of said candidate * * * or upon the petition of 1,000 supporters who are registered voters in the State of Oregon of the political party to which said candidate belongs."

The catch is in those last eight words. The petitioners would have to know he belonged to their party, and as of this date they don't.

The State supreme court removed any doubt about the requirement in 1928. The court ruled, in the case of State of Oregon versus William Boyer: "The official candidate must, under this section, be a registered member of the party."

A PLUG FOR HOFFMAN

Oregon Young Republicans are trying to persuade Senator WAYNE MORSE, Republican, of Oregon, to let them enter a favorite-son slate in his name in the primary, on the theory that he could hold the delegation for Ike or some other forward-looking candidate.

On his recent trip back home, a delegation of independent Republicans used this argument. "It's our best chance of preventing a victory for TART in the State primary. If Republicans split up behind different candidates, TART will surely beat the field."

MORSE discouraged the idea. He thanked them for the nice compliment, but said he had no illusions about his role in the Republican Party. Instead of working for a candidate, MORSE told them, "Work for the election of forward-looking delegates to the Republican convention who can be counted on to support some such progressive-minded men for the nomination as Eisenhower, Paul Hoffman, or Jim Duff."

It was the first time, in recent months anyway, that former Marshall Plan Administrator Hoffman had been mentioned as a 1952

GOP possibility. Senator DUFF had been discussed mainly as a cog in the draft-Eisenhower drive.

MORSE put Eisenhower's name first, but reminded Oregon Young Republicans: "There are others, too." You see, no one yet has it in writing that the general will be any more available politically than he was in 1948.

Back in Washington MORSE wrote Oregon supporters to the same effect.

"The Republican Party must pick a winner this time," he said. "I am satisfied we could win easily with Eisenhower, Hoffman, or Duff. I am sure we cannot win with a nominee selected by the reactionary wing of the party."

Silver Lining Seen in Cloud Over Iran

EXTENSION OF REMARKS

OF

HON. WALTER E. ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. ROGERS of Texas. Mr. Speaker, I insert in the Appendix of the RECORD today a news article appearing in the Amarillo (Tex.) News-Globe. This article is of interest to all of us.

SILVER LINING SEEN IN CLOUD OVER IRAN

A silver lining is appearing through the dark clouds overhanging Europe and Iran. Col. Lawrence Hagy and Gen. Ernest O. Thompson told members of the American Business Club yesterday in the Herring Hotel Hagy returned recently from Europe, where he attended the Third World Petroleum Congress at The Hague.

General Thompson, member of the Texas Railroad Commission and American representative to the congress, agreed with Hagy that Gen. Dwight Eisenhower is the man of the hour in the world today. Thompson, home convalescing from a serious illness, said he just dropped in to hear Hagy, who presented the program.

"I returned to America more optimistic over the world situation than at any time since the end of the war," Hagy said. "I spent some time with General Eisenhower, and I honestly believe he is the only man in the world who can pull Europe up by the boot straps and avert another war."

Eisenhower doesn't think Russia wants to fight, Hagy said. Eisenhower wants only 6 or 8 months more to whip the North Atlantic Pact into shape, and the Russian bear will be stopped in Europe.

Hagy labeled the Iranian oil situation as England's greatest blunder. He traced England's domination of its colonies while England was the greatest power in the world and how she has lost out. He revealed that England gave Iran only 25 percent of its oil revenue, while America gives Iraq 50 percent. He said England refused to renegotiate, and the "roof fell in."

Hagy said Iran definitely will be unable to operate the huge refinery and its oil fields, and he doubts that Russia has the technical knowledge to step in and run the operations. Also, Russia could not benefit from the Iranian oil fields because she has no tanker fleet and no waterways to Russia. There are no railroads and no pipelines into Russia.

Hagy said he is disappointed in England, but optimistic that eventually the Nation will solve its crisis. He pointed out that Rome and England dominated the world for hundreds of years and both have fallen. Now the United States is in the same position, but we are paying the way instead of taking from others.

"Socialism has killed the Englishman's incentive to work," Hagy said. "It is a 50-50 bet that the labor government will be defeated in the next election but it will take years to cure the ills of socialism."

There is little war talk in Europe, Hagy said. The people think America is building for war. They can't understand America's armament program unless it is to wage war.

"I tried to tell them we are trying to avert war, not wage war, but they couldn't see it that way," he said.

Hagy praised the Marshall plan but said he wonders if the people of Europe realize its importance to the recovery of their various countries. He said France today is producing 40 percent more manufactured goods than before the war. Italy is in the midst of a building boom comparable to that in Amarillo.

"The entire world wants American dollars and they'll do anything to get them," Hagy said. "Why in London I could order a large steak served in my room while Englishmen get about 2 ounces of meat a week. I could buy cloth in English stores and get a rebate in English money. Prices in England aren't out of line but in France and Italy they are sky high."

Discussing the World Petroleum Congress, Hagy said there were 2,500 representatives from nearly every oil-producing nation in the world present exchanging ideas and discussing their problems.

"If we could arrange more such meetings, I believe the problems of the world could be solved," Hagy declared.

"Do you know who was the best-known man at the conference," Hagy queried? "It was Gen. Ernest O. Thompson. Men from every country wanted to see and talk with him and when he was taken ill he was visited in his hotel room by delegations from many nations who wanted his advice."

General Thompson said he was elated that Averell Harriman was dispatched to Iran and that he has been successful in reopening negotiations between England and Iran.

"It may cost us money getting into the oil squabble, but money is a lot cheaper than the lives of our American boys," Thompson declared.

Gordon Gill was in charge of the program, arranged by Lew Fields.

Blair Jones was introduced as a new member.

Salary Increases for Federal Employees

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made to the Post Office and Civil Service Committee:

I have talked with committee members so many times about this matter that I feel I must apologize for again burdening the members with my views.

It seems to me that any increase granted should be on a permanent basis. Temporary legislation of this type is extremely unsatisfactory and is very unrealistic.

I hope the committee will give every consideration to the matter of eliminating the lower grades. It seems to me that some adjustment should also be made in salary for those employees who have entered the service since July 1, 1945.

I do not want again to repeat the many points I have made on a great many occasions with members of this committee. I think probably most of you are very familiar with my position. Let me conclude by repeating that any increase granted should be on a permanent basis.

Frankly, I do not see how most of these employees are able to provide for their families with the extremely high cost of living that we have and that in all probability is going to increase. They have given long and faithful service and have always been patriotic, conscientious, and valuable employees. They have always been there when the public needed them and they have always responded. Now it is their hour of need and the public must respond to them. They ask nothing but fair play and we must see that they are guaranteed the justice they deserve.

Water Fluoridation in the District of Columbia

EXTENSION OF REMARKS OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. PASSMAN. Mr. Speaker, it has been demonstrated conclusively that the addition of fluorides to public water supplies results in a 65 percent reduction in the incidence of tooth decay. Research has shown that where fluorides in a concentration of one part per million exist naturally in a water supply tooth decay experience is strikingly lower than in areas with no fluorides. Controlled fluoridation by the introduction of fluoride salts brings about the same beneficial results.

Virtually all national organizations concerned with health such as the American Dental Association, the American Public Health Association, the United States Public Health Service, the American Water Works Association, the Association of State and Territorial Health Officers, and many smaller groups have recommended this practice. Their approval has come only after comprehensive study by expert committees competent to judge the evidence.

The findings of the controlled fluoridation studies started in 1945 were not available until after the District of Columbia budget had been cleared by the Bureau of the Budget. In its hearings before the Senate Subcommittee of the Appropriations Committee for the District of Columbia, the District of Columbia Health Department requested inclusion of an additional item for this purpose. The request, of course, had the approval of the Commissioners of the District of Columbia. It had the unqualified support of the District of Columbia Dental Society and the executive committee of the Medical Society of the District of Columbia. The Senate subcommittee saw fit to report this bill out including an item of \$130,000 for water fluoridation.

During World War II one-third of the Nation's dentists were inducted into the armed services to care for the dental needs of our military forces which con-

stituted only 10 percent of the country's population. In spite of this great effort to provide the needed care, the Federal Government is continuing to spend \$40,000,000 annually for reparative dental services for our veterans. Furthermore, our people are spending \$1,000,000,000 annually for dental health services, yet less than one-half of them receive adequate dental care. This situation relates proportionately to the people of the District of Columbia.

The water fluoridation program for the District of Columbia is double-edged. First, residents of the District will receive direct benefits by a reduction of tooth decay by two-thirds, and, second, the approval by the Congress of the United States will be a great stimulus to other cities and communities of the Nation to institute this valuable health program.

Water fluoridation can be brought to our people in the District of Columbia at a very modest cost, \$130,000. It will reduce tooth decay by two-thirds. We can no longer afford to postpone the prompt and widespread application of this preventive measure.

The Greeks Know How To Die

EXTENSION OF REMARKS OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I am including an article by Harold H. Martin from the Saturday Evening Post of July 7, 1951. I had an opportunity to observe the Greek Army in their battle against communism in northern Greece in 1949. I can vouch for the sentiments expressed in this article.

THE GREEKS KNOW HOW TO DIE—EVERY HELENE HARASSING REDS ACROSS THE KOREAN HILLS HAS A 2,500-YEAR-OLD WARLIKE TRADITION BEHIND HIM—AND LIKE LEONIDAS AT THERMOPYLAE, EVERY SON OF GREECE IS READY TO DIE BEFORE YIELDING 1 INCH TO THE ENEMY

(By Harold H. Martin)

SOMEWHERE IN KOREA.—Among them are big, dark men from Crete, handsome and hot-tempered. Among them also are calm, slow-moving men from Thessaly, and steady Macedonians, very sure of themselves in battle, and clever men from the Peloponnese, and tall blond mountain men from the villages of Epirus, tough and long enduring. Each in little ways is different from the others, as a Vermonter differs from an Alabamian. There are variations in their speech, in their songs, and in the bouncing dances they perform when, after the fighting is over, they restore their spirits with good Greek wine. But in some respects all the men of the Greek battalion now fighting in Korea are the same. All remember that once long ago in Attica the first great democracy was born, and that for almost 3,000 years their little country has fought against oppression and tyranny, whether it stemmed from Persia or Istanbul, Berlin, or Moscow.

They do not wonder why they left their graystone villages in the mountains of Greece and traveled around the world to

fight. They know. For them, who fought Communists for long years in their own land in one of the bloodiest civil wars in history, there was no other choice a freedom-loving people could make.

"When a dangerous beast is abroad in the world," a Greek officer said, "he must be killed, no matter whether he approaches your door or that of one far off."

To the rank and file of Americans, and to many of the other nations fighting here, the war in Korea is a dirty, bloody, indecisive business the wisdom of which may be hotly debated. To the Greeks it is a holy crusade. In the years of their own terrible war of brother against brother, they learned to hate Communists of any race with a fierce, implacable hate. They have come here to kill, and they carry out their mission with more skill, perhaps, than any other troops in Korea.

They are the old pros of this war. For 11 years they have been fighting in mountain country, first against Germans and Italians, then against their own Reds, and they fight with a foxlike sagacity, a battle know-how that few other troops can match. Their general, Dascalakis, and their colonel, Dascalopoulos, are old fighters, skilled in combat, but they do not give much advice to the battalion commander, Dionysius Arbouris, for Lieutenant Colonel Arbouris is one of the world's great experts on mountain warfare and the tactics of the Communists in the field. The rank and file are younger and less experienced, but they burn with the same hatred of the Communists and the same pride in the fighting tradition of their race. This hatred and this pride go deep. They are bred into them.

When Apostas Stathias, a young lieutenant, was killed, his father wrote to Arbouris:

"DEAR COLONEL: As a father, I feel deep sorrow, but as a Greek I am proud that my son gave his life for his country, his religion, and for human liberty."

"Our ancestors used to say that holier than mother or father, greater than all else in the world, is a man's duty to his homeland. My son believed those words. Today is the 25th of March. All Greeks are very proud of this day which marks their liberation from the Turks. My own feelings are rather confused. There are moments when I feel desperate, knowing I shall never again see my son celebrating with his comrades this day of Greek independence. But at the same time I cannot help being proud when I think that my son, by his gallant death, proved himself true to the example of the heroes who gave us our freedom from tyranny. The village in which I and my son were born is the village of Athanasios Diakos [Diakos was a hero of the Greek revolt against the Turks]. My mother, whom the Communists killed 3 years ago, at the age of 102, was a niece of Diakos. When he was a little boy in school, my son was chosen to put the flowers upon the hero's grave. And now my son is dead. He has fulfilled his destiny as a Greek, and as a descendant of Diakos. Let us be proud of him."

From tiny Kolandra, in Macedonia, Joan Nyktas, mother of George, writes in wavering script:

"SIR COMMANDER: With deep sorrow I received your letter telling me of the death of my dear son. It would be a lie if I told you that anything in the world would make us forget that he will never come back to his village, to his wife, his babies, and to me. But I am proud of him, for he died fighting against tyranny, against crime, and for the peace of the world. Sir Commander, I beg of you, because he sleeps so far away, when you come near the place where he is buried, will you kiss the cross upon his grave, and tell him that the kiss comes from his father and his mother, from his wife and his two little girls who will forever honor him. My eyes are full of tears. I have not the courage

to write more. May God bless you and all your gallant men."

And from Christos Mechos, of Pendolokos: "With sorrow I learn of the death of my brother, Socrates. Nothing, I know, can bring back to me the good comrade I have lost. But I am proud that he died fighting against those Communist criminals who seek to annihilate from the world all kindness and all peace. And I am glad that in that far-off city of Pusan the Greek cross upon his grave will stand as a symbol of the will of the Greeks to fight, anywhere in all the world, for civilization and for liberty."

The will of the Greeks to fight has been amply demonstrated in many a fierce conflict here in Korea—demonstrated with such fervor that the Seventh Cavalry Regiment, which itself cherishes a proud tradition that goes back to Custer and the Little Big Horn, looks upon them not as attached troops, but as their fourth battalion. In a joyful ceremony on Greek Independence day, Col. William A. Harris, colorful commander of the Seventh, presented guidons, hand-sewn by the ladies of the regiment back in Tokyo, to each of the Greek companies, and gave each man of the Greek battalion the Seventh's big yellow horse-head patch to wear on his shoulder. Touched by this gesture, the Greeks, in voices made vibrant by ozo, a powerful spirit of which they are very fond, sang a roaring Garry Owen, the marching song of the regiment, and Lieutenant Colonel Arbousis led a stamping dance called the gerakina in which Harris and his staff, looking somewhat discomfited, took part in the interest of amicable international relations. The Greeks are very fond of Harris, a flamboyant commander who, before he was rotated, used to tour the front in a jeep with a cavalry saddle strapped to the hood.

"He is somewhat mad, this Harris," they say affectionately, "but that is good. All good fighting men are a little crazy."

Though most soldiers are quiet and introspective as they move up toward the battle lines, the Greeks go up singing lustily, belting, "O K., G I! We kill Russky Koreans!" to the American soldiers they pass, and drawing their hands across their Adam's apples while making a harsh rattling noise, "k-r-r-rk," deep in their throats to indicate what they intend to do to the enemy. Once they move into the attack, though, this jubilant mood leaves them. They work silently, coldly, and cautiously. They admire the valor of the American Marines, the French, and the Turks, who are likely to attack in a headlong frontal assault, but they consider this fool-hardy and wasteful of men's lives. They prefer to advance by fire and maneuver, moving in quick, short dashes from tree to tree, from rock to rock. When one approaches to an enemy position draws heavy fire upon his men, a Greek platoon leader does not hesitate to pull them back and try another approach until he finds a route where the fire is less intense. Later, he will describe in detail the manner in which he moved his men, like a general describing the deployment of an army.

"I proceeded thus," a mustached squad leader once explained to Colonel Harris. "The peak where the enemy machine gun was located was very small, so I maneuvered my men 4 yards to the east, 5 yards to the north, and 4 yards to the west again. Thus I was able to come upon them from the rear."

The Greek attitude toward the frontal assault stems from their deep aversion to unnecessary shedding of Greek blood. The ancient glory of their country died, they know, because of the destruction of their manpower in an endless series of wars, and the life of a single Greek soldier today is cherished by his officers. Foolhardiness is not encouraged, and the man who unnecessarily exposes himself is rebuked.

"The Americans," said Costas Triandafilides, an old guerrilla now covering the Greek battalion for the Athens Acropolis, "are valiant men, but in the view of the Greeks they are not very clever in the attack. The Greek commander, when told that he must take a hill within 1 hour, will spend 50 minutes moving his men up slowly, keeping them protected from enemy fire as much as possible. The Americans will attempt to take the hill in the first 10 minutes. They will get halfway up, suffering heavy casualties, and then they will be driven back by a counterattack. They will charge again and again until they take the hill, but the battalion will be riddled. The Greeks, moving with more care, will go into the final assault in full strength."

Once the Greeks reach a position from which they can make their final onslaught they cast away all the caution they have shown in the approach. Shouting, "Aera, aera,"—"Storm, storm"—a fierce war cry which used to terrify the Bulgarians, they leap from the earth and charge intrepidly. "In this moment," they say, "bullets respect the brave man. He who hangs back is hurt."

Once the Greeks come hand to hand with the enemy they are, according to Triandafilides, very calm, very sure of themselves, and very deadly.

"It is an atavism," he says. "It is in their blood since the days when men fought each other with short swords and with spears."

When a Greek is killed in hand-to-hand combat his family and his friends consider that he died gloriously in battle for the honor of Greece. If wounded or killed by mortar or artillery fire, their sorrow is made more bitter by a deep humiliation. After one fierce fight a doctor of the Seventh Cavalry noticed that one seriously wounded Greek was sobbing and mumbling over and over something in Greek the doctor could not understand.

"First time I ever heard a Greek carry on so," he said to a medic. "Usually they don't say a word."

Triandafilides, in one corner of the tent, overheard the doctor's remark.

"He is not crying because of his wound," Triandafilides explained in his slow, precise English. "He is crying because it was not received in battle. He is saying 'What have I done that this shameful thing must happen to me?'"

"What do you mean, not wounded in battle?" the doctor said. "That's a mortar wound if I ever saw one."

Costas shrugged. "It was received while he was in reserve, out of sight of the enemy. To a Greek this is not a battle wound. This is an accident, a misfortune. The bayonet, the grenade, the bullet fired by an enemy whom you are approaching face to face—from these you receive battle wounds."

The Greek attitude toward any wound is extremely casual. Their doctors go with them into battle, bandage them if they are bleeding, and as long as they have two legs to walk on and one hand left to fight with, they continue to fight. American doctors have been disturbed to find on the bodies of seriously wounded Greeks a half dozen old wounds for which they should have been hospitalized days before. They are also extremely difficult to handle when they reach collecting stations where the more seriously wounded are sent back to the hospital. On one busy morning when the doctors had more than they could attend to immediately, a Greek captain with part of his neck muscle shot away rose from the litter on which he was lying.

"I am sorry," he said. "I do not have time to wait for treatment. The fighting continues and I must return to my company." They had quite a struggle getting him into an ambulance.

Though all the members of the Greek battalion are extremely capable in hand-to-

hand combat, particularly with the long, sharp knives which they carry in their boots, in violation of the rules of war and the orders of their commanders, two or three stand out as notably fierce fighters.

One is Lieutenant Missias, of Peter Company, a thin, fragile-looking little man who was wounded eight times in the Greek war and twice again in this one. A humorless fellow, blind in one eye, after one action he came to Triandafilides in a state of agitation.

"My men have broken 10 rifles upon the heads of the Chinese," he said. "I hesitate to call this matter to the attention of the supply officer, for fear he shall hold me responsible for their cost."

Costas, a man who does possess a sense of humor, told Missias that if he would turn in the 200 Chinese rifles his men had collected after the battle, he believed the supply officer would be satisfied.

Another redoubtable Greek is a sergeant named Kyros, nicknamed "The Killer," a waspish little man, thin and hungry-looking, with black eyes that glow strangely. Kyros, an expert with the lonkhi—the bayonet—fights with a fierceness that verges on insanity, and his extreme savagery is puzzling even to his mates, who figure that his family back in Greece must have suffered greatly at Communist hands. On the other hand, the anger that motivates Warrant Officer Christos Svergos, a short, stocky, big-nosed mountain man from Epirus, who fights like an angry grizzly bear and is reported to have killed 30 Chinese in hand-to-hand combat, is well understood. Three of Svergos' brothers were killed by the Communists in the Greek war.

Warrant Officer Psychoyos, an extremely agile dancer of the gerakina when there is no fighting to be done, is an even more savage fighter than any of these. Psychoyos, commander of the Greek mortar platoon, has become a legend in the battalion for the fits of rage into which he flies when he thinks his mortar crews are not firing fast enough.

"Apostolides, you traitor," he bellowed into his radio during one attack, "you dastard, you Bulgarian, why do you dishonor Greece by ceasing to fire the mortars?"

"But, sir commander," his mortar sergeant replied, distressed at being addressed as a Bulgarian, which is the worst epithet one Greek can apply to another, "the Greeks and the Koreans who are bringing ammunition from the foot of the hill cannot bring shells as fast as we are shooting."

"You Levantine, Apostolides. You traitor!" Psychoyos shouted in a frenzy. "I command you, draw your pistol. Shoot one Greek and one Korean. Then shells will be brought swiftly and the mortars of Greece will be glorious."

Fortunately for the ammunition bearers, Apostolides did not receive this order. As Psychoyos shouted, a bullet smashed his Trumaniki—the Greeks call a walkie-talkie radio a "Little Truman"—and he bellowed his order into a tangle of tubes, wires, and shattered metal.

"For some moment he did not notice that his Little Truman had been hit," said Costas Triandafilides, who witnessed the incident, "and continued to shout epithets at Apostolides. He is a very strange man."

Psychoyos' abuse of his sergeant is not unusual in the Greek battalions. Discipline is harsh, and sometimes cruel when a man fouls up. An officer may, without fear of being disciplined himself, curse his men, kick them, beat them with sticks, or shoot them if they show signs of cowardice in battle. But the good soldiers live on terms of considerable intimacy with their officers. They may visit them in their tents, drink with them, eat with them, or joke with them with complete informality.

"Napoleon," says Arbousis, "was right when he said there are no bad soldiers—only bad officers. If you are kind to your men, and treat them well, and set them a good example, they will follow you. You do not shout at them, 'traitors, why do you not fight?' You say instead, 'follow me and we will kill the enemy.'"

Arbousis' nickname among the troops is "the First Scout," which is a high compliment, since the Greeks, with their guerrilla background, consider scouting and patrolling one of the finer of the warlike arts.

According to Maj. James B. Webel, S-3 of the Seventh Cavalry Regiment, they are incredibly good at it. When an American patrol goes out, it keeps going until it draws fire, and then, unless it is led by an extremely capable patrol leader, it returns with a fairly hazy idea of where the fire was coming from. The Greeks, who are old hands at this business, keep moving in until they are surrounded on three sides, and while his rifle-men cover him with fire, the patrol leader crawls about until he has pin-pointed on his map where each gun position is located. The patrol then returns with data of great value to the S-3 in planning future operations.

The Greeks are very careful about making accurate patrol reports. When Lt. Khondro-lyannis Konstandinos returned from the first patrol made by the Greeks, Arbousis asked him the number of enemy his men had killed.

"I killed one. My sergeant killed one," said Konstantinos. "There was much firing and there may have been others. But only these two I saw die. I will not make a false report."

"And your losses?"

"Unfortunately, sir commander, I lost my gloves."

Later, when the battalion moved into the area where the patrol had had its fire fight, they found 13 enemy dead.

The Greek battalion arrived in Korea in December, but saw no hard fighting until January. Unlike some of the other foreign units joining the United Nations forces in Korea, it was no picked group of volunteers, but an ordinary battalion out of a Greek brigade, though its officers were specially selected not only on their combat records but because they could speak a little English. The original plan was to send a whole brigade, but, at the time, the war seemed nearing the end, and the Greek Government, thinking of the millions of drachmas such an expedition would cost, cut the complement down to 1,000 men.

There was a reason for the plan to send a pick-up battalion instead of a specially selected group, though thousands of Greeks stormed the American Embassy, trying to volunteer. "Our government," said Triandafilides, "felt that if a battalion of the Greek Army was not so good as a battalion of volunteers, then we had no army. We also wished the Americans to see how well the ordinary Greek soldier can fight with the weapons they provided us after World War II."

When Harris, of the Seventh Cavalry, was asked if he would like a unit of foreign troops attached to his regiment, he specifically asked that the Greeks be assigned, knowing that they had been fighting almost constantly for a decade and were therefore already combat-wise and hardened.

The Greek unit at first, though, was not very impressive. The American battle dress did not hang well upon the men and they only shaved when ordered to do so. Mountain fighters, accustomed to using mules for transport, their lack of mechanical knowledge was woeful, and they had a peculiar habit of dismantling the carburetors of their trucks every time an engine failed to function, no matter if the trouble was in the ignition system. To them a jeep was a jeep, and when one of theirs broke down they would pick up any other that happened to

be standing by, a habit that came to an abrupt end when a Greek soldier was found driving happily about in the jeep of the division personnel officer. Their appetite for olive oil was insatiable, being exceeded only by the Thailanders' yearning for hot sauce, and this was a burden on the quartermaster.

It was noted, though, that in the coldest weather they kept themselves clean, breaking the ice in rivers to wash their shirts, and bathing themselves in streams when ice lined the water's edge. It was also noticed, as the month wore on, that with the agility of goats, they could carry heavy machine guns and recoilless 75's up hills which left American soldiers, burdened only with a rifle and grenades, panting, and rubber-legged.

After their first big fight all minor irritations were forgotten. On Hill 381, west of Echon, 3,000 Chinese, supported by mortars, made a night attack upon the Greeks dug in on the slopes of this sharp-topped peak. Fighting began at midnight and raged for 4 hours. Three times the Chinese reached the top and three times the Greeks drove them off with bayonets, knives, gun butts, and fists. At dawn only 15 dead Chinese were found, but the snowy slopes were streaked with bloody trails where the Chinese had dragged away their wounded and their dead. The hill was vital to the defense of the sector, for its loss would have exposed the flank of another battalion and probably would have made it necessary for the whole regiment to fall back.

After that fight no man could question the valor of the Greeks in the presence of a trooper of the Seventh without getting his nose busted. The affection between the Garry Owen and its fourth battalion deepened as the regiment fought on into the spring, with the Greeks fighting magnificently both in attack and defense.

The regiment expressed its appreciation in the big celebration on Greek Independence Day, when General Ridgway and all the high brass of the corps came to decorate the Greeks who had performed most valiantly, with Distinguished Service Crosses and Silver Stars.

That made the Greeks feel good. But the thing that pleased them most came late in the afternoon, after all the brass had gone. Some troopers of the Seventh were around, listening to the Greeks singing to the music of accordion and guitar. Then the troopers started singing the regimental song, Garry Owen. One verse of it goes: "We are Irish, Scotch and thrifty, Sergeant Flynn." The troopers sang that one: "We are Irish, Greek and thrifty, Sergeant Flynn." And another one starts:

"Look at Cameron and O'Brien,
Sergeant Flynn.

With a smile, they're fighting, dying,
Sergeant Flynn."

And they changed that one to "Look at Prokas and Pagonis, Sergeant Flynn."

That made the Greeks very happy, very happy indeed.

And the next time they went into an attack, though many of them still used the old war shout, "Aera!" some of them were bellowing a new, strange cry. In heavy Hellenic accents they were yelling, "Garry Owen."

Know Your Waterways

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 19, 1951

Mr. LARCADE. Mr. Speaker, under permission to extend my remarks in the

Appendix of the Record, I wish to submit an article by the Marine News, of New York, published in the Washington Post, of even date, as follows:

KNOW YOUR WATERWAYS—WATERWAYS OF TOMORROW

European nations, with but a fraction of the wealth of America, develop their waterways to the ultimate. Owing to necessity for economy they learned long ago that no other method of transportation can even approach the low cost of moving certain materials and products over waterways.

The proposed New Orleans Tidewater canal, the authorized Sacramento deep water ship canal, the Cross-Florida canal; the Red River lateral canal, and the Tennessee-Tombigbee waterway will make the Federal waterway system of much greater value to the Nation. Some of America's great rivers have hardly felt the touch of improvement, the Arkansas, White, Red, and Snake among them. Others are only partly developed. The United States, with an area of about 3,000,000 square miles, has only 5 of the 20 great ship canals of the world. Ten of the remaining 15 are in European countries whose total area is only about 500,000 square miles.

The United States has yet far to go in the development of its inland and intracoastal waterways before their potential benefits are even approached.

MARINE NEWS,
GEORGE H. PALMER,
President and Publisher.

NEW YORK, N. Y.

New York Police Department Helicopter Performs Miraculous Rescue

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. HINSHAW. Mr. Speaker, my attention has been called to a remarkable operation by helicopter conducted by the New York Police Department on June 28.

The New York Police Department operates a small fleet of helicopters for the purpose of studying vehicular patterns and traffic control, waterfront patrol, land, and sea rescues, and routine transportation, and observation. While such services are performed regularly, this spectacular rescue serves to underline the work the helicopters are doing for the great city of New York.

Similar work for helicopters has been performed particularly during the Tournament of Roses celebration and the famous Rose Bowl game in Pasadena, Calif., my home city, on New Year's day. At this time, when a million visitors jam into our city of 100,000 people, it is necessary to control traffic from a point of vantage high above the streets, transmitting the information to police officers on the ground, in order that the traffic may be kept moving in the right directions.

The helicopter finds news and important uses almost every day, not only in the military undertaking where it has proven of tremendous value, but in the many civil undertakings of our country.

Mr. Speaker, I include an article from the New York Times under date June 29, 1951, as follows:

HELICOPTER LANDS ON CATHEDRAL ROOF, PICKS UP WORKMAN INJURED IN FALL

(By William M. Farrell)

A police department helicopter from Floyd Bennett Field settled gingerly down onto a corner of the roof of the Cathedral of St. John the Divine yesterday afternoon. It took aboard a workman who had been injured there, soared away to a spot in Riverside Park near Ninety-sixth Street, and landed so the man could be transferred to an ambulance. Then it flew back to Floyd Bennett Field to report the oddest and one of the most breathtaking rescues in the police helicopter's brief history.

The suspenseful quality of the exploit derived from the fact that the landing space available on the roof was barely 30 feet square, while the helicopter's rotory blades cut a circle 36 feet in diameter, and its tip-to-tail length was 41 feet. The tail of the craft, therefore, had to be left hanging over the edge of the roof while the pilot balanced there 160 feet above the ground with the help of the rotors.

The victim of the accident that necessitated the aerial rescue was Peter Burr, 51 years old, of 68 West Sixty-ninth Street. He and four other steeplejacks had gone to the roof of the cathedral yesterday morning to refurbish one of two 75-foot steel structures near the front corners of the edifice, which faces Amsterdam Avenue near One Hundred and Eleventh Street.

The man had just lashed a ladder to the girders of the tower near the cathedral's southwest corner. It was about 11:45 a. m. and Mr. Burr was at the top of the ladder. He started to climb down when, according to a fellow workman, the twenty-ninth rung broke and Mr. Burr hurtled down 29 feet. He struck on his right side, fracturing the right hip, and possibly his right leg and several ribs. He also suffered cuts on the face.

But he remained conscious and fully aware of his predicament. The roof on which he lay was 160 feet above the ground. Normal access is by way of a winding staircase, too narrow for the litter on which Mr. Burr would have to be moved.

Two police emergency squads joined Mr. Burr's fellow steeplejacks, and they were prepared to unite in lowering the injured man to the ground—over the side of the roof, by ropes attached to the wire litter. But Mr. Burr demurred at this long, lonely descent.

In this seemingly insoluble situation, Charles Perceval, of Long Beach, one of the steeplejacks suggested that a police department helicopter be called. The call was received at Floyd Bennett Field at 12:45 p. m. Five minutes later Acting Capt. Gustav Crawford and his copilot, Patrolman John T. Jordan, were in the air. At 1:10 they had completed the trip of about 25 miles.

"One good thing about a helicopter," Captain Crawford said later, "is that you can stand still, see whether it's possible to land, and back out if you have to."

TWO-INCH MARGIN OF ERROR

The proposed landing space at the southwest corner of the cathedral's roof was obstructed on one side by the steel tower, which some day will be the skeleton of a 266 foot steeple. A smaller structure blocked another side. But Captain Crawford and Patrolman Jordan eased on in—though an error of more than 2 inches would have caused the rotors to hit the tower and send the craft down the cathedral's side to the ground.

Dr. Ruth Klinghoffer of Knickerbocker Hospital, riding an ambulance from Beth David Hospital, had given Mr. Burr first aid and prepared him for his flight. The injured man was ready and willing. While the heli-

copter poised he was lifted aboard, above the two pontoons that serve in landing on water as well as on roofs and marshes.

At 1:17 p. m., 7 minutes after its arrival, the helicopter took off, while crowds in the street watched. Three minutes later the craft landed and Mr. Burr, who had enjoyed his ride, was shifted to the ambulance and taken to Beth David Hospital. Later it was reported there that his condition was fairly good.

The police department now has a small fleet of helicopters. Its first was acquired September 30, 1948, and tested by Captain Crawford while the then Mayor William O'Dwyer and Police Commissioner Arthur Vallander watched.

Another Case of the Beam and the Mote

EXTENSION OF REMARKS

OF

HON. WALTER E. ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. ROGERS of Texas. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a newspaper column written by Mr. Wes Izzard, of the *Amerillo (Tex.) News-Globe*. His remarks are most pertinent on a subject that is of great concern to all Americans:

ANOTHER CASE OF THE BEAM AND THE MOTE

It was with a certain smugness that we read about the shameful Cicero, Ill., riots, occasioned by the attempt of a Negro family to move into an apartment in Chicago's most dubious suburb.

The suburb of Cicero is slightly smaller than Amarillo. It is an industrial town with a smelly reputation. At one time it was headquarters for the Capone mob. Gang murders were a nightly occurrence. Vice and gambling rackets were operated openly. Somebody once said that Cicero had more saloons than grocery and drug stores combined.

The people of Cicero, many of whom speak English with the thick accents of central and south Europe, tolerated all this. But one thing they wouldn't tolerate; and that was a Negro living in their midst.

So when a Negro bus driver with a college education tried to move his family into a Cicero apartment, the self-righteous suburb rose in arms.

There were riots. The family's furniture, including a piano, were tossed out the window and burned in the front yard. The apartment house was hacked with axes and its windows smashed with bricks.

The mobsters were mostly teen-age hoodlums. But adults stood by and cheered them on, and the police did little if anything.

Finally the sheriff of Cook County prevailed on the Governor to call out the National Guard. The soldiers staged a pitched battle with the mob. Several people were badly hurt, 119 were arrested.

Now that's the sort of thing that northern liberals say happens in the South. But this occurred in the heart of Yankeland, where politicians support the FEPC for vote-getting purposes, and where liberal "intellectuals" make speeches and write pamphlets about the racial intolerance of the South.

The fact is, the Negro suffers vastly more from intolerance in the North than in the South, despite Jim Crow.

There are, for example, more successful Negro businessmen in Atlanta, Ga., than in

the State of New Jersey plus all of New England.

The worst Negro slums in the world are not on the tenant farms of Alabama, but in Harlem, N. Y., and on Chicago's South Side.

The so-called Negro problem is working itself out more rapidly than any racial problem in all history; and the Negro is making his greatest advances in the South.

If the northern "liberals" who keep shouting about injustice will clean up their own premises, the advance will be even more rapid.

So the next time somebody from up North starts talking about intolerance in the South, you have a right to ask him smugly "Did you hear what happened in Cicero?"

Improvement in European Conditions as a Result of American Assistance

EXTENSION OF REMARKS

OF

HON. ERNEST W. McFARLAND

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. McFARLAND. Mr. President, Mr. William R. Mathews, editor and publisher of the *Arizona Daily Star*, of Tucson, Ariz., has recently returned from an extensive trip to Europe. His analysis, of the growing strength of our friends in Europe, of the renewed confidence they have to meet the Soviet threat of aggression, and the great improvement which has taken place throughout Europe, physically and psychologically, as a result of our program of assistance under the ECA program, is "must" reading. I ask unanimous consent that two articles on this subject, which appeared in the July 27 and 28, 1951 issues of the *Arizona Daily Star*, be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Tucson (Ariz.) *Daily Star* of July 27, 1951]

UNITED STATES EFFORT NOW MEETS RED THREAT—OBSERVER BELIEVES WAR IN EUROPE MAY BE PUT OFF AT LEAST DECADE

(By William R. Mathews)

After making a trip to Yugoslavia, Germany, Switzerland, France, and Britain, I have come home optimistic about the near future. There is not going to be war this year, although there will always be the possibility of a surprise attack.

A stop in Washington on my way home and a talk with Deputy Secretary of Defense Robert Lovett have increased my optimism still more. Our rearmament program is going to be kept within pay-as-you-go bounds. There should be no further inflation. We simply have to realize that we have a long, hard job to do, and that hysteria will harm rather than help.

DIVIDENDS SHOWN

Our diplomatic policy in Europe is beginning to pay off. If we can get through this year without war, the chances are that it can be postponed for a number of years. Our strength, and that of our allies, is mounting to a point that will command respect. If we can learn to be firm without becoming bellicose, there are good chances that a peace, for a decade, may break out in Europe.

The Marshall plan has been one of the cheapest, but most productive, plans for peace that we as a Nation have ever attempted. When it has been combined with the use of a positive political policy in cases like Greece, Turkey, the Berlin airlift, and, more recently, Yugoslavia, we have been making a successful answer to that basic issue of stopping the sweep of communism.

JUST IN TIME

As one who was in Greece and Western Europe in 1947, and who has seen Europe eight different times since 1917, I can testify to the danger that Europe faced in 1947. We got there with our positive program just in time, but not soon enough to save Czechoslovakia. Western Europe and Britain, in 1947, were still groggy from the war. Whoever offered leadership, they would follow.

The contrast between today and 4 years ago is so heartening that I cannot help being optimistic. Western Europe is not going Communist. It is on its feet again and, with a little more help to get it over the final hump of rearmament, it will be able to defend itself.

In my opinion, which many experts will dispute, the workers of France and Britain are better off today than they were during those disgraceful 1930's of unemployment, cowardly pacifism and sterile governments. Conditions are still bad, but they are not as bad for the masses of the people as they were in the 1930's.

EISENHOWER PRAISED

The North Atlantic Treaty, under General Eisenhower, is becoming an instrument of positive strength as he rallies the armed might of the member nations. Ike is doing a magnificent job, and is probably getting more out of them than any other man could get.

Jules Moch, the French defense minister, says that France will have 10 divisions at Ike's disposal by the end of the year. These will be armed with equipment sent from America, which is an example of how our military aid is used. Britain has sent 4 divisions to join our four in Germany. Belgium has three ready. Denmark and Norway have, under the very noses of the Soviet Union, cast their fate with the West and are furnishing battalions of manpower to help out.

ARMS NEEDED

Italy has manpower available and so does Yugoslavia, but it has to be armed. If they are going to be armed in the near future, only America can produce the arms quickly enough.

In time France, Britain, Belgium, Germany, and Italy can produce arms again, but we are going to have to help get those industries started. Thus our military assistance faces the task of furnishing end products like tanks, planes, and guns immediately, but industrial and raw material help for the future.

Marshall-plan aid has already been cut off for Britain, and it can be cut off without hurting France. Belgium is reeking with prosperity. The only countries that do need it are Greece, Italy, Austria, Yugoslavia, and some for Germany.

As I see it, we have risen to meet the menace we face better than most of us realize. If it had not been for our successful program showing our strength, as well as our nonbelligerency, Tito and his group would not have dared to do what they have done.

This break for our side in Yugoslavia is one of historic importance. It shows how strength attracts new sources of strength. Take a look at the map of southern Europe, and note the barrier that Yugoslavia interposes between the Soviet Union, the Adriatic, and the Mediterranean.

[From the Tucson (Ariz.) Daily Star of July 28, 1951]

CHANCE FOR PEACE SEEN AS GROWING—WEST EUROPE STRENGTH, UNITED STATES PLAN OF ACTION REASSURE ANALYST

(By William R. Mathews)

After what I have seen, first hand, of Yugoslavia and its people, I am confident that Tito's decision to turn to the West and to resist Russia is irrevocable.

Yugoslavia was looted by the Russians. The people do see America as a source of strength, and no government of Yugoslavia will dare to repudiate this hope of a better life.

The Yugoslavs will fight, if we give them some guns to shoot. They could not resist a Russian invasion save by taking to the hills. They could defeat an invasion by their satellite neighbors.

When some folks question the propriety of dealing with the Communist government of this country, I cannot help replying that we are engaged in a great political campaign to save as much of the free world as we can from Soviet domination. It is a close campaign.

CONVERTS NECESSARY

I have never seen a close political campaign won without the winning converts from the opposition, or attracting from the other side dissidents looking for a place to express their opposition. F D R would not have been elected in 1932 without the votes of millions of Republicans.

We cannot expect to win our political struggles without taking into our camp dissident Communists who want to get away from Moscow domination and whose faith in communism as a world movement centered in Moscow has been shattered.

SAME FOR SPAIN

The same political principle should apply to Spain. I have enough faith in what we as a Nation stand for to believe that by being friends we can unconsciously moderate Franco's tyranny just as the moderation of Tito's dictatorship has already begun in Yugoslavia. When Rankovic, the Yugoslavia Minister of the Interior (police and justice), announces, as he did early in June, that nearly one-half of the arrests made by the political police during the past year were unjustified, he proclaims a fallibility that no other dictatorship has.

The case of Switzerland is an encouraging one. The people of Switzerland are free because they are so willing to defend their country that every man takes as a matter of course the compulsory military service program that lasts until he is 45. In addition, the Swiss are willing to work. They cannot afford a 40-hour week. They work 48 hours a week, and have to ask for help from no one.

POTENTIAL SOURCE

Germans, too, are at work. They can become a source of strength to the west. They hate the Russians more than any people on earth. If their strength can be integrated with the west, as it can be under the North Atlantic Treaty, the fears of France can be relieved. We Americans have done a good job there, despite some serious mistakes made in the early occupation days.

In getting out in France I found that I aroused a more appreciative response when I explained that we Americans were merely seeking to be on hand at the side of the French when the next war came and to stop an invasion preferably on the line of the Elbe rather than on the Marne. That seemed to make sense to the French with whom I talked.

France, as usual, has her political troubles with their uncertainties and exasperations. Fortunately, France is a rich country. The

new youth crop looks better to me than any other one I have seen over a period of 33 years. France is not going Communist. The moral as well as the financial help that the Marshall plan brought has changed the trend.

BRITISH SITUATION

There is so much vigor and character left in Britain, her political institutions are so strong, that her strength will continue to increase. Unfortunately, so few British people realize that the only way so many, 51,000,000 of them, can continue to live on such a small sterile island is by performing services for the rest of the world, particularly by the development of an empire.

Most Britishers take their empire for granted, while we Americans have been too prone to think, while we build one of our own—in the Pacific for instance—by using just more modern methods, that by fostering economic nationalization in the backward areas we will be enhancing the cause of peace.

On this visit to England I deliberately stayed away from big shots and their sugar-coated explanations of serious problems. Among the British people I found a close comradeship of understanding. They think and act like most of us.

I found no anti-American sentiment among the people and had to hunt up Anaurin Bevan's recent Labor Party manifesto, One Way Only, to get an example of anti-Americanism. He wailed about Britain obeying us obediently, but in the next breath he presented a typical Henry Wallace plan to provide a quart of milk for every Hottentot by Britain, but at American expense.

Within the next year the reinvigorated people of Britain are going to express their growing strength more positively than they have during the postwar years.

OPTIMISM AROUSED

On the basis of what I have seen, the comparisons made possible over a long period of years, I cannot help being optimistic. There is little talk of war in Europe, and no hysteria. There is an acute realization of the danger, but the people of Europe are so close to it, that they would quickly exhaust themselves nervously as well as physically, if they worried about it.

In providing a positive plan of action we Americans have done better than we realize. We have answered that old proverb that "you can't lick something with nothing." A bipartisan foreign policy in Europe is beginning to pay off. The spread of communism has been stopped, if not reversed. The chances of peace have been enhanced.

Income Tax To Finance Republican Economy

EXTENSION OF REMARKS OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. RHODES. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include herewith the following editorial from the New Era of Reading, Pa., an A. F. of L. publication:

INCOME TAX TO FINANCE REPUBLICAN ECONOMY

The Republicans in Harrisburg have a hot potato on their hands. They are trying to

steam-roller through the State legislature a flat income tax of one-half of 1 percent which will hit hardest at the "little fellow" who makes a couple bucks a week in his take-home pay.

Remember, this income-tax idea is definitely a Republican proposal, authorized by a Republican governor and supported by pro-Republican forces such as the chamber of commerce, et al.

Now forget this for just a moment and go back with us to last October and November when a torrid political campaign was being waged for Congress and control of the State government. Remember the Republican theme song then? They pointed with pride to what they called the efficiency of the State regime. They declared that no new taxes would be forthcoming if only the voters would place their trust in the party which stands for "efficiency," meaning, of course, the endowed Republican brass.

And while these Republican tub thumpers were beating their breasts about their efficiency in Harrisburg, they sought to discredit our national administration with the phony slogan, "Tax, tax, tax, and spend, spend, spend."

Many workers may have been confused by this lopsided propaganda. We know from experience that the party of big business always tries to confuse people to get over legislation palatable to big business and distasteful to working men and women. So it was in the election campaign of last fall.

But something seems to have happened since last November. Where are the demands for economy now in Harrisburg? Where is the chamber of commerce in this issue? Down in Philadelphia the chamber has endorsed the income-tax proposal on the grounds that "there is no way out."

Where is the opposition now to the tax-spend-spend cry which the Republicans themselves raised last year? Where are the little Hoover commissions demanding that Governor Fine be stripped of some of his powers and that the State bureaucracy be overhauled? Why doesn't someone demand that the drones on the State highway network be weeded out? Where are the carping critics who always are demanding their pound of flesh by insisting that a Democratic city administration lay off workers?

No, the voices are strangely silent. And the silence proves that their attacks on the Federal Government are insincere and are motivated solely by political objectives. If they really wanted the economy they so solemnly demanded from Washington they would be equally vocal in calling for a housecleaning which is so long overdue in Harrisburg.

Let's make the State regime get its own house in order. Let's demand that the big corporations be forced to carry a bigger load by dipping into swollen war profits. Let's tear apart the State budget and analyze it bureau by bureau with a magnifying glass, or let's do what the Republicans and Dixiecrats usually attempt down in Washington—let's introduce in the State legislature a bill for a flat 10-percent slash in appropriations for all departments. That's the way the Wherrys and the Byrds would do it in the Federal Government, and they get big, page 1 headlines, too.

Now we read that this great and righteous Governor and his boys don't even want to let the public have hearings on the proposed income tax. Just imagine what would happen if President Truman proposed a half of 1 percent increase in Federal income taxes without public hearings. The Republicans would be demanding impeachment.

Organized labor is against the income tax and the sales tax because both are unfair taxes. They hit the wage earner hard but

put an unnoticeable dent in the budgets of rich people. We'd like to see a higher corporation levy plus some of the belt tightening advocated by the economy specialists in Washington. Furthermore, we'd like to see the big press demand public hearings on this important and vital issue, just as they do where Democrats are in office.

We suspect that if the State-wide election were being held today with the public knowing which party is advocating a State income tax, the political seismograph would record a violent revolt against the gang now in power.

If it does nothing else, this State income-tax proposal tells the workers once and for all that the Republican regime is still run by big business, Grundy included.

We Should Hear More About the Responsibilities of European Nations

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. PHILLIPS. Mr. Speaker, the Congress of the United States has been asked to authorize a 1952 fiscal-year expenditure of \$8,500,000,000 in foreign-aid programs.

The American people have contributed in tax money for this purpose to date \$81,900,000,000. This total credits approximately \$10,000,000,000 returned in reverse lend-lease and partial repayment of loans.

At least \$14,000,000,000 of that money went to our enemy, the Soviet Union. No repayment, either in money or in kind, has been offered by the Communists or Communist satellites.

It is impossible to discover how much more assistance has been given to Communist countries indirectly, through transshipment of ECA goods and through expenditure of ECA funds to build new industries, which sell much of their output behind the iron curtain.

The new foreign-aid bill contains everything up to and including the kitchen sink.

Funds are requested in this bill for ECA, point 4, special aid to Israel and some other countries, and for economic and military assistance under various mutual-aid agreements and the Atlantic Pact.

The new authorization, if it totals what we are led to expect, would bring American contributions to other nations to nearly \$100,000,000,000 in less than 12 years.

What have we gained by this outpouring of American money? What have we gained by this tremendous drain upon American resources?

A look at the record, as revealed daily by the newspapers, is enough to convince anyone that we have gained little.

It looks as if we had wasted most of our foreign-aid money. We have thrown it down a hundred ratholes. We have tried to buy friends and allies.

By this time, the administration, and Congress itself, should have learned that money buys only fair-weather friends. We should have learned that in times of trouble, international alliances are dependable only so far as they are founded on mutual interests, mutually recognized.

If the other free nations cannot see the real need for cooperation against the Communist world conspiracy, then no money, no economic or military aid of any kind, can buy it.

The situation today proves this. The Atlantic Pact nations are dragging their feet. They talk about their huge military budgets, but the figures show them to be comparatively small. In no instance does the military budget compare, in proportion to the total budget, with that of the United States.

With a total 1951 budget of \$47,200,000,000, the United States set aside \$20,900,000,000, or nearly half, for defense spending. This year, with a total budget in the neighborhood of \$65,000,000,000, we will spend more than \$48,000,000,000 for national defense. That is more than half of the total budget.

Here are some figures, all of them as accurate as can be found, which show how the military budgets of other Atlantic Pact nations compare with ours. The figures are for the 1951 fiscal year.

Military budgets of Atlantic Pact nations 1951

Country	Total budget	Military budget
Belgium	\$1.8 billion	\$313 million
Denmark	\$351 million	\$46 million
France	\$7,523 billion	\$1,704 billion
Greece	\$1,102 billion	\$317 million
Italy	\$2,410 billion	\$500 million
Luxembourg	\$71 million	\$7 million
Netherlands	\$1,512 billion	\$237 million
Norway	\$347 million	\$51 million
Portugal	\$180 million	\$45 million
Spain	\$680 million	\$218 million
Turkey	\$527 million	\$185 million
Great Britain	\$11 billion	\$2,67 billion
United States	\$47.21 billion	\$20,904 billion

Because no other figures are available for this comparison, those for France, Spain, and Portugal cover the 1950 fiscal year.

Here are some figures showing comparisons for the fiscal year beginning in 1951, as to military budgets and gross national products, on both dollar and percentage bases.

Military budgets and gross national products for fiscal year beginning in 1951

Country	National product	Military expenditures	Percent
Belgium-Luxembourg	\$6,582 billion	\$289 million	4.3
Denmark	\$3,02 billion	\$85 million	2.8
France	\$25,378 billion	\$2,45 billion	9.7
Italy	\$14.45 billion	\$915 million	6.3
Netherlands	\$5,209 billion	\$392 million	7.5
Norway	\$1.81 billion	\$91 million	5.0
Portugal	\$1,635 billion	\$57 million	2.9
Great Britain	\$40,335 billion	\$3,64 billion	9.0
Canada	\$19 billion	\$1,52 billion	8.0
United States	\$308 billion	\$48,473 billion	15.7

The foregoing figures, of course, relate to a fiscal year which has only begun. They were gathered from estimates made by various official and nonofficial

sources. It is conceded by those in governmental authority, both in this country and abroad, that they present as clear a picture as may be had of the situation.

Apologists within the Truman administration say the Atlantic Pact nations are doing the best they can. The excuse is that World War II destroyed the industrial potentials of European Atlantic Pact nations in very large degree.

When it is pointed out that European industrial production in general is now above prewar levels, the apologists say that the increased production barely takes care of increased population in the Atlantic Pact countries.

Here, again, are figures to refute those statements, for people who seem to believe that America alone can and should do the whole job of rearming the free world.

Taking the level of production in Atlantic Pact nations during 1937, well before the outbreak of World War II, as the base index figure of 100, the index figures for 1949, 1950, and March 1951 are as follows:

*Production in Atlantic Pact nations
(Using 1937 production levels as 100 percent)*

Country	1949	1950	1951
Belgium	94	98	116
Denmark	138	152	162
France	112	113	126
Greece	87	110	118
Italy	105	119	140
Luxembourg	96	101	119
Netherlands	127	140	158
Norway	132	131	151
Great Britain	116	127	127

While these large increases over prewar industrial production were being registered by the Atlantic Pact nations of Europe, population increases were comparatively small.

Here once more are some figures. They show the percentage increases of population in Atlantic Pact countries between June 30, 1938, and December 31, 1950, as follows:

Belgium, 3 percent; Luxemburg, 3 percent; Denmark, 14 percent; France, 2 percent; Greece, 11 percent; Italy, 9 percent; Netherlands, 17 percent; Norway, 13 percent; Portugal, 16 percent, and Great Britain, 7 percent.

Thus industrial production among the free nations of Europe now stands at an average of 35.2 percent above pre-World War II level, while over-all population growth approximates 9.3 percent.

At the same time, the military budgets of these nations for the present fiscal year will average 5.08 percent of gross national production, as compared with an American military budget of 15.7 percent of gross national production.

The United States is spending nearly three times as much for national defense as its fellow nations of the Atlantic Pact on a percentage basis. And on this same basis it is spending a third more than France, which comes nearest with 9.7 percent.

How long can the United States keep this up without going broke in the biggest way the world has ever seen?

It adds up to one or two conclusions. Have the other Atlantic Pact nations ob-

served carefully what has happened to the people of Korea and to the physical resources and equipment of their country?

Do they want to be defended by the United States in that way? Or do they want to fall into the clutch of the blood-thirsty despot of the Kremlin? One alternative is almost as bad as the other.

They should realize, now before it is too late, that \$8,500,000,000 of American aid, or any other amount this country can afford, means nothing in comparison with their defense needs. They must cooperate by preparing to defend themselves to the full extent of their productive resources.

We hear from London and Paris that the probability of a new world war is remote. We look upon the astonishing spectacle of Britain at Hong Kong, selling the Chinese Reds war materials with which to kill British and American boys. We see this, while the British Prime Minister tells the world that an alliance with Franco's Spain against the Red dictatorship would soil British hands.

We hear too much talk about the rights of other nations. We hear too little talk about their responsibilities.

Unless the Atlantic Pact nations of Europe act now to assume an honest share of responsibilities in preserving the free world, this country would do better to keep its \$8,500,000,000. The money could be better spent in maintaining a strong America; strong economically, and strong in military potential.

Before the Chinese Reds Ran Amok

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following book review from the New York Herald Tribune for July 26, 1951:

BEFORE THE CHINESE REDS RAN AMOK

(Profile of Red China, by Lynn and Amos Landman; 245 pages, New York: Simon and Schuster; reviewed by Harold R. Isaacs.)

Lynn and Amos Landman, two American journalists, have written a brief report that might have been better called the Year of the Honeymoon in Communist Shanghai. They were in the big Chinese metropolis from June 1948 to April 1950. They saw the last miserable gasps of the dissolving Kuomintang regime. They witnessed the Communist take-over. They watched the Communists go to work to begin coping with the enormous problems bequeathed to them by their predecessors. It was, on the whole, an impressive performance. Like many others, including Chinese and foreign businessmen, the Landmans were duly impressed by it.

The trouble is that just about the time the Landmans left Shanghai, the honeymoon was already coming to an end and they give no evidence anywhere in this hasty little book that they were aware of it. The unfortunate result is to make this book sound like an apologia for the Communist regime

which rings with peculiar hollowness in the light of more recent events. These the authors might have been able to foresee, but in any case they could have read about them in their daily newspapers while they were writing their book. Had they done so, a lot of their earlier snap judgments would have had to be revised.

Consider the one rather important matter of Communist terror. In the "year of the honeymoon," the Communists relied on "moral persuasion." Many Chinese and foreigners, including the Landmans, found it a striking change from Kuomintang practice. In the weeks before the Communist conquest of Shanghai, they had watched Kuomintang executioners shoot "subversives" in the streets in grotesque scenes of terror meant to intimidate the population.

The Communists at first displayed an unexpected mildness, an attitude of patient tolerance toward doubters and potential dissenters whose cooperation they needed. At the same time—and this is what the Landmans did not realize or report—they were creating the basic institutions of absolute power which established the primacy of hard and harsh force to be used as soon as occasion required it. The occasion was not long in forthcoming. In the wake of Chinese intervention in the Korean War, a matter which the Landmans touch on only fleetingly, the first strains began to show under the new Communist dictatorship and the regime reacted in a manner characteristic of its kind. It was soon outdoing the Kuomintang with obscene spectacles of mass executions in public places for the obvious twin purposes of eliminating real or potential dissidents and terrorizing the population into submission.

The Landmans wrote the last sections of this book long after these spectacles had begun. There are allusions made to developments as late as April 1951. But they make no reference whatever to the reinstitution of the death penalty by the Communist regime in February of this year or to the launching of the mass purges that have been going on throughout China ever since. On the contrary, they retain among their hard-headed conclusions the assertion that the regime still enjoys the acquiescence of millions of Chinese and perhaps the active support of other millions and go on to declare: "Nor was there in Red Shanghai an atmosphere of fear and terror or of detestation of the government such as was betrayed by the glance of a coolie at a policeman or at a soldier under the old regime. We are informed that this was equally true in other cities."

The Landmans make much of the familiar argument that the ignorant Asian masses have no appreciation of democracy and are interested only in filling their rice bowls. This is true up to a point. But to suggest that the Chinese will for this reason find Communist terror and oppression any more palatable than Kuomintang terror and oppression is to label their essential humanity. The atmosphere of fear and terror that was so absent during the Landmans' stay in Shanghai has certainly been reestablished now not only in Shanghai but throughout the country and this transformation within a few months does much to vitiate the judgment of these authors on what they saw.

Similarly, one wonders what one would hear now from the long list of intellectuals and democratic personalities who adhered to the new regime in 1949 and 1950 and gave the Landmans their various rationalizations for doing so. One of these was Lo Lung-chi, head of the Democratic League, who is today believed to be in virtual confinement in Peiping. Their occasional reservations and doubts (which the Landmans duly report) must by now have been brutally confirmed by events as the dictatorship consolidated itself by its own inherent means.

None of this is said to impugn the attitude of these two reporters or to suggest that their report is politically colored. They attempted to be even-handed and hard-headed. Their object, they say, was to write a book that would not appeal to special pleaders on either side, but simply to report what we saw and heard. Unfortunately, they did not see or hear enough or understand enough of what they did see and hear. They have illustrated in the process what a gross misjudgment it is to identify the Communist movement, as such, with the revolutionary impulses of the Chinese people. They have shown us how much we still have to learn about the nature of the Communist power mechanism.

Investigation of Certain Educational and Philanthropic Foundations

REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. COX. Mr. Speaker, I have introduced a resolution to create a special committee to conduct a full and complete investigation and study of educational and philanthropic foundations and other comparable organizations which are exempt from Federal income taxation, to determine which such foundations are using their resources for purposes other than the purposes for which they were established, and, specifically, to determine which such foundations and organizations are using their resources for un-American and subversive activities or for purposes not in the interest or tradition of the United States.

The resolution is not intended to raise suspicion against all foundations. Those that have restricted themselves to health, medical research, and popular culture have, as a rule, carried on in admirable fashion. In this class there might be mentioned the Kellogg Foundation, the Duke Endowment, the Hayden Foundation, the Mellon Trust, the Falk Foundation, the Donner Foundation, the Milbank Fund, the Commonwealth Fund, and many others; but of those that have operated in the fields of social reform and international relations, many have brought down upon themselves harsh and just condemnation.

To be specific let me give you a few examples of what I am talking about.

The Negro poet, Langston Hughes, author of the poem, *Good-by Christ*, which urges Jesus to "beat it on away from here now" and to "make way for—Marx, Communist Lenin, Peasant Stalin, Worker Me," last heard of as a "poet in residence" at the Rockefeller supported University of Chicago, was the recipient of a Guggenheim fellowship in 1935, and of fellowships from the Rosenwald Fund in 1931 and 1941. In 1946 he received a grant from the National Institute of Arts and Letters.

When Hans Eisler, brother of the top Soviet Agent Gerhardt Eisler, was

about to be expelled from the United States because he was a Communist, Dr. Alvin S. Johnson, then director of the New School for Social Research, intervened and persuaded James L. Houghteling, then Commissioner of the Bureau of Immigration, to let Eisler remain in the United States in order that he might engage him as a teacher in his New School for Social Research. He then secured a grant of \$20,160 from the Rockefeller Foundation to defray the costs of a music study project to be conducted by Eisler at the New School. All of this was done with the full knowledge that Eisler was a Communist and in this country to spread the doctrine of communism.

The writer, Louis Adamic, a member of or sponsor for 38 Communist organizations, and whose entire literary life has been given to propagandizing for Communist Russia—and more recently Communist Yugoslavia—has worked the various foundations for continuous subsidies. At one time he was given a fellowship by the Guggenheim Foundation worth \$2,500. He received a grant-in-aid from the Rockefeller Foundation in 1937. Later, in 1940, he obtained a grant-in-aid from the Carnegie Corp. to enable him to write his book, *From Many Lands*. In 1942 he was given two additional grants-in-aid by the Carnegie Corp. to write *Two Way Passage* and *What's Your Name?*

Through his Communist friends in the information-education branches of the Army in wartime, Adamic was able to arrange for the distribution of 50,000 copies of his book *Native's Return* among enlisted men. This book was distinctly pro-Russian.

The Public Affairs Committee, supported by the Sloan Foundation, was the publisher of another of Adamic's books, *America and the Refugees*.

A grant of \$110,000 was made by the Rockefeller Foundation in 1947 to Cornell University to conduct a study of "civil liberties and the control of subversive activities." The administration of this grant was then turned over to Prof. Walter F. Gellhorn, of Columbia University, who has himself been the subject of investigation by the Committee on Un-American Activities of the House of Representatives. Professor Gellhorn's qualifications to investigate subversive activities are high-lighted by the fact that he is a member of the National Lawyers Guild and the International Juridical Association. It will be recalled that the Un-American Activities Committee has branded the National Lawyers Guild as the "legal bulwark of the Communist Party" and as "an agent of a foreign principal hostile to the interests of the United States." Attention should also be called to the fact that a committee of the California Legislature described the International Juridical Association as an organization which has specialized in the defense of individual Communists or of the Communist Party itself. It has followed the Communist Party line without deviation.

Gellhorn has also been affiliated with the Open Road, an activity headed by the

millionaire Communist, Frederick Vanderbilt Field, and has outspokenly demanded the abolition of the Un-American Activities Committee.

The Rockefeller Foundation, whose funds have been used to finance individuals and organizations whose business it has been to get communism into the private and public schools of the country, to talk down America and to play up Russia, must take its share of the blame for the swing of the professors and students in China to communism during the years preceding the successful Red revolution in China. For two generations, the Rockefeller Foundation played a guiding role in higher education in China. Over a period of 32 years \$45,000,000 of Rockefeller money was expended in China, most of it going to Chinese institutions of higher learning. If the Rockefeller fund spenders had had even an elementary conception of what was going on among the Chinese teachers and students, they would have taken steps to halt the stampede of the Chinese colleges to communism. When the crisis of the Chinese Revolution came it was the student and teacher element, educated largely with Rockefeller money, who were the backbone of the Red success. Our boys are now suffering and dying in Korea, in part, because Rockefeller money encouraged trends in the Chinese colleges and schools which swung China's intelligentsia to communism.

Again the Rockefeller Foundation, in 1944, made a grant of half a million dollars for the translation and publication in this country of Soviet books. The executive head of the organization which received this grant, the American Council of Learned Societies, was the head of the committee which raised funds for the defense of John S. Service when he was revealed in 1945 as a purveyor of information to the Amerasia spy ring.

Owen Lattimore, who played such an important part in the betrayal of China and the delivery of the mainland of that country into the hands of the Communists, is a past master in extracting money from the various foundations. The Walter Hines Page School of International Relations, which he heads, regularly milks the foundations. For instance, in 1949, the Carnegie Corp. gave Lattimore's school \$75,000.

Guggenheim money was used to spread radicalism throughout the country to an extent not excelled by any other foundation. Among those with Red records who have received Guggenheim fellowships are the following: Louis Adamic, Newton Arvin, Peggy Bacon, Carleton Beals, Albert Bein, Alvah Bessie, Marc Blitzstein, Kenneth Burke, Harriet Buckmaster, Jack Conroy, Aaron Copland, Adolph Dehn, Angner Enters, Kenneth Fearing, Hallie Flanagan, Mordecai Gorelik, William Gropper, Albert Halper, Josephine Herbst, Granville Hicks, Abram L. Harris, Maurice Hindus, Langston Hughes, Rolfe Humphries, Joe Jones, Otto Klineberg, Owen Lattimore, Douglas S. Moore, Carey McWilliams, Lewis Mumford, Alexander North, Max

Nomad, Saul K. Padover, Nathaniel Peffer, Bernard Reiss, Earl Robinson, Isidor Schneider, Harry Slochower, Maxwell S. Stewart, Tom Tippet, Genevieve Taggard, Charles R. Walker, Edmund Wilson, Richard Wright and William E. Zeuch.

The resources of the Rosenwald Fund, now finally exhausted, were disbursed irresponsibly to aid organizations which made a profession of stirring up class and race dissension throughout the South. Among leading Communists and Communist frontiers who received fellowships from the fund were Langston Hughes, W. E. B. DuBois, Claude McKay, Clark Foreman, James Dombrowski, Ira de A. Reid, Lillian Smith, Shirley Graham, Pearl Primus, Horace Clayton, and John P. Davis.

Another notorious situation in the foundation field is the Robert Marshall Foundation. This fund, it has been revealed by the inquiries of the Un-American Activities Committee, is devoted almost exclusively to the aid and subsidy of organizations working for communism in America. One of its trustees, and the dominating figure in the foundation, George Marshall, recently served a prison sentence for refusing to divulge information to the Committee on Un-American Activities concerning the Communist-front Civil Right Congress, of which he is chairman.

The Robert Marshall Foundation, in a period of 2 years, allocated approximately \$100,000 to a group of organizations all of which have been cited by the Un-American Activities Committee as Communist fronts, including the American Youth Congress, the National Federation for Constitutional Liberties, the National Negro Congress, and the Southern Negro Youth Congress, which have been listed by the Department of Justice as subversive and Communist.

Mr. Speaker, these instances are only a few examples, among many of the tragic misuse of foundation money. Over a comparatively short period of time, the foundations have become a powerful and unregulated factor in our national life, enjoying Federal subsidy through tax exemption. The Sloane Foundation, which has since changed its policy and is now being careful not to have any more of its funds used for un-American purposes, has recently estimated the annual spending of the foundations in America as \$100,000,000 per year. This huge amount, if administered irresponsibly, can do an incalculable amount of harm in misguiding American public opinion. There are disquieting evidences that at least a few of the foundations have permitted themselves to be infiltrated by men and women who are disloyal to our American way of life. They should be investigated and exposed to the pitiless light of publicity, and appropriate legislation should be framed to correct the present disquieting situation.

Therefore, Mr. Speaker, I submit that the resolution is deserving of the serious consideration of those who fear for the safety of our country.

"While Russia Looks On, in Iran, the Muezzin Calls to Prayer the Moslem Population of a Nation Swept Into the Headlines by Nationalist Unrest; at Stake Is a Significant Portion of the World's Oil Supply, Which Iran Seeks to Seize From Great Britain's Control and Manage Itself"—Battle Report, Washington

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BOYKIN. Mr. Speaker, once again Battle Report, Washington, the National Broadcasting Co.'s weekly teledocumentary, and the Assistant to the President, Dr. John R. Steelman, have brought to 40,000,000 Americans, by way of television and the coaxials, first-hand information on a number of subjects with respect to current activities of their Government here in Washington.

On this program Dr. Steelman had as his guests the following:

Mrs. Mary Markward, who last week appeared before the House Committee on Un-American Activities and told of her experiences as an FBI informant who became a member of the Communist Party, and its treasurer, here in Washington.

Vice Adm. E. L. Cochrane, Chairman of the Federal Maritime Board, who, in reporting on the splendid work done by the American merchant marine in the Korean War, stated, in part, that—

In the 371 days since fighting first exploded along the thirty-eighth parallel, American merchant ships have carried more than 80 percent of all the men and materials which moved to Korea from the United States or our bases in Japan. In the same historic year the Maritime Administration has taken from its mothball fleet 353 Liberty and Victory ships built during World War II.

Civilian crews manned this vast armada. Operated largely under control of the Military Sea Transport Service, as in World War II, they were the pipeline from stockpiles and production lines in this country to the far-away battlegrounds. Without the availability of vessels broken out of the reserve fleets it certainly would have been impossible for us—or for the entire United Nations—to perform the miracle that has been achieved in Korea.

The Honorable George C. McGhee, Assistant Secretary of State for the Middle East, who made the report on the intricate and delicate situation obtaining in Iran due to the nationalization of the Iranian oil fields. In the course of his remarks, he pointed out that—

The President, the Secretary of State, the American press and radio have, on numerous occasions in recent weeks, emphasized the critical and urgent nature of the Iranian situation. It is indeed loaded with danger. Iran today is balanced on the edge of a precipice.

The United States, for its part, has a deep interest in the continued independence and

territorial integrity of Iran. It has sought also to further the welfare and economic development of the Iranian Nation. When the Soviet Union left military forces in Iran in 1946 we gave strong support to the Iranian case in the United Nations Security Council. As a result of Iran's steadfastness and of her support by the United Nations, in which the United States played an important role, Soviet troops were withdrawn, but the Soviet objective of obtaining control of Iran has remained unaltered and Soviet pressures have continued unabated.

Mr. W. Averell Harriman, who is a sort of roving Ambassador, and who was dispatched by President Truman to lend his assistance in making peaceful settlement of this explosive crisis, was unable to be in the studio in person. However, Mr. Harriman made this transcribed announcement for the battle report program:

I am sorry that I will be unable to appear personally on this program as I had planned.

I am leaving today for Tehran as President Truman's personal representative to talk things over with the Iranian Government in the hope that a solution can be developed for the difficulties that have arisen over the oil question.

An amicable settlement is of great importance—not only to the Iranian people and the British Oil Co—but also to the countries of Europe and the East, who have depended upon Iran for their requirements.

The last but not the least of Dr. Steelman's guests was an airplane pilot, probably one of the most unique men that had ever appeared on the television screen, a distinguished flier in World War II—Bill Bridgeman dropped in his rocket ship from a United States Air Force B-29 while 35,000 feet in the air and started off on his journey at a speed publicly stated to have been in excess of 1,500 miles an hour.

Mr. Speaker, more than ever would I commend the reading of this teledocumentary to my colleagues in this House. I do so because I am convinced that Battle Report, Washington constitutes one of the most progressive steps ever taken in the Nation to bring to the people actual highlights that occur each week which are of vital and significant import to all.

Battle Report, Washington, an NBC sustained program, is produced by Ted Ayers; the technical director is L. A. McClelland; commentary, Robert McCormick; the script is written by Lou Hazam; film director, Bill Brooks; floor manager, Joe Tully; production assistant, Jean Montgomery; art by Joseph Ferrer; music adviser is Fritz Balzer; sound by Bob Haines.

BATTLE REPORT, WASHINGTON

Mr. MCCORMICK The National Broadcasting Co. Television News again focuses on the world in crisis to bring you your Battle Report, Washington.

Washington, whose eyes this week are on the fate of price legislation, the war on the economic front. And the world, whose ears are cocked to reports from a city in Korea named Kaesong, where events may soon spell more war or peace.

We begin your Battle Report tonight with the latest headlines on the Korean cease-fire negotiations.

And now the Assistant to the President, Dr. John R. Steelman.

Dr. JOHN R. STEELMAN. Tonight I am going to ask you to sit with me while we bring you up to the minute on some of the historic developments of the past week.

First, let us look at the negotiations now going on in Korea. The officers who are conducting them have reported progress but we still do not know whether the Communists really want peace.

On the other side of the world, in far-off Iran there is a dispute which threatens the peace of the world. But, thank God, the wise sons of the ancient Persians have taken up arms to enforce their claims. Mr. Averell Harriman, as a special representative of the President, left this afternoon to assist in the negotiations. In the studio tonight we have the Assistant Secretary of State, Mr. George C. McGhee, to tell us more about the situation.

From the Maritime Administration we have a very encouraging report about the steady increase of our merchant fleet. Vice Adm. E. L. Cochrane is here to give us some extremely interesting facts and figures.

A report from the Navy Department wrote a new page in aviation history this week. In Secondo, Calif., a new airplane called the Sky Rocket flew faster than man ever traveled before. The man who piloted the new plane, Mr. William Bridgeman, is with us today to tell us more about that epoch-making flight.

Up on Capitol Hill a charming lady told a remarkable story. She is Mrs. Mary Stalcup Markward, who was an FBI agent for more than 6 years while she was a member of the Communist Party. This past week she testified before the House Committee on Un-American Activities. But now, America, she is your witness—and here she is—Mrs. Markward.

Mr. Wood. Please tell us your name and occupation.

Mrs. MARKWARD. My name is Mary Stalcup Markward. I am a housewife, and I live in Chesterbrook, Va., a suburb of Washington, D. C.

Mr. Wood. Mrs. Markward, what have you been doing for most of the past 8 years?

Mrs. MARKWARD. I have been a member of the Communist Party in the Washington area serving as an informant for the FBI.

Mr. Wood. How did that happen?

Mrs. MARKWARD. Well, it began in 1943. I was working as a beauty-shop operator. An agent of the FBI approached me as a loyal American and told me that while the Communist Party was working with the United States at that time to reach a victory in the war, he had reason to believe that this organization was a potential danger to America. Upon realizing the seriousness of the situation, I volunteered to help—and discovered that the one way I could help best was to join up with the Communists and learn what I could for my Government.

Mr. Wood. Tell us about it.

Mrs. MARKWARD. Well, to the dismay of my family and friends, I became a Communist, rising from recruit to chairman of the Northeast Club here, then to treasurer of the city organization, and finally to membership on the central committee of district 4 of the party, which covers Maryland and the Capital. I was active for almost 7 years and had to quit in 1949 for reasons of health.

Mr. Wood. How were you able to help the United States, Mrs. Markward?

Mrs. MARKWARD. I sat in on party policy meetings, and so was able to keep the Government informed on the party program and plans. Since I also had access to membership records, I was able to pass on to the FBI the names of numerous members of the Communist Party in Washington and Maryland.

Mr. Wood. What did your experience prove to you, Mrs. Markward?

Mrs. MARKWARD. During the time I was a member of the Communist Party, I became more and more convinced that they were determined to divide and conquer . . .

not only divide us from our allies, but divide our own people. That, to me, is the most important thing they are trying to do today in this country. From what I have learned of Communists, our best course is to beware if we would protect the kind of life we love.

Dr. STEELMAN. Thank you, Mrs. Markward, and now back to Robert McCormick and Battle Report.

Mr. MCCORMICK. On the west coast of the Nation, close upon the sea lanes to Korea, ships of America's merchant marine take on the supplies so essential to the defense of our freedoms in the Far East. For an informed report on how these ships are helping to bolster our strength, Battle Report turns now to a top Government official charged with a great responsibility—the Maritime Administrator and Chairman of the Federal Maritime Board—Vice Adm. E. L. Cochrane.

Vice Admiral COCHRANE. America's merchant marine as well as the Nation's Armed Forces can be proud of the monumental accomplishments during the Korean hostilities.

Whether the current cease-fire negotiations result in a peaceful settlement or whether the hostilities continue, the fact remains: The American way has again proved its ability to shape up to any emergency which threatens our way of life.

To our military forces—to the Army and the Navy and the Air Force and the Marines—must go the major portion of our gratitude for stopping the Communist aggression in Korea. But the American merchant marine—privately owned ships or vessels chartered from the Government and manned by civilian crews—have achieved a record of outstanding accomplishment during the 54 weeks since the fighting commenced in Korea.

It was our fighting men who battled the enemy to a standstill and then rolled them in honorably back. But it was the merchant marine that carried the bulk of the materials which kept the American infantry supplied in battle, which kept our planes in the skies, and our fighting ships at sea. I'd like to tell you about a few of those accomplishments. In the 371 days since fighting first exploded along the thirty-eighth parallel, American merchant ships have carried more than 80 percent of all the men and materials which moved to Korea from the United States or our bases in Japan. In the same historic year the Maritime Administration has taken from its mothball fleet 353 Liberty and Victory ships built during World War II.

Civilian crews manned this vast armada. Operated largely under control of the Military Sea Transport Service, these Government-owned ships were chartered to private operators. As in World War II, they were the pipeline from stockpiles and production lines in this country to the far-away battle-grounds. Without the availability of vessels broken out of the reserve fleets it certainly would have been impossible for us—for the entire United Nations—to perform the miracle that has been achieved in Korea.

But as remarkable as has been the magnificent role of merchant ships in supplying our valiant fighting men, the Korean hostilities have pointed up anew the shortcomings of our merchant fleet.

It has shown us beyond doubt that our Liberties and Victories of World War II vintage could not carry the brunt of global logistic demands in an all-out war. Recognizing this, Congress has provided the Maritime Administration with funds to construct the nucleus of a new fleet of speedy cargo ships. We now are building 30 such ships. To be known as the "Mariner" class, these 20-knot ships will be taking to the sea lanes next year—seagoing insurance that America will always be able to deliver the goods.

And Korea has shown us, too, that we need more speedy troop transports. We now are mapping plans to construct 10 such troop-

ers—insurance that we can and mean to deliver the men anywhere in the world to safeguard freedom. We also need swift tankers in increasing numbers—Korea and the demands of our free friends elsewhere in Asia and Europe have shown us this again. And so we hope to add to our insurance for freedom by constructing at least 10 long-range tankers which the Navy can use in times of emergency and which will bolster our civilian economy in peacetime.

The merchant marine is part of the team—it is not the most important nor the least important member of the team. But its record in every combat in which the Nation has found itself is standing testimony of its necessity in the scheme of things upon which we depend to keep the United States the great nation it is and will continue to be.

Mr. WOOD. Mark down your merchant marine, then, America, as a lifeline to your troops, each vessel launched onto the bosom of the sea sails the seven seas with the productive strength of these United (48) States and returns to them the raw material we need for our democracy's survival. Cargo ship, tanker, passenger vessel, whatever they may be, well might we urge them on with Longfellow's blessing:

"Sail on, O ship of state,
Sail on, O Union strong and great,
Humanity with all its fears,
With all the hopes of future years,
Is hanging breathless on thy fate."

Mr. MCCORMICK. In Iran, the muezzin calls to prayer the Moslem population of a nation swept into the headlines by nationalist unrest. As tribesmen go through cavalry exercises outside the capital, at stake is a significant portion of the world's oil supply—which Iran seeks to seize from Great Britain's control and manage itself. Convening for another session on this explosive crisis is the Iranian Parliament. And a letter from Premier Mossadegh—welcoming President Truman's offer to send his assistant W. Averell Harriman to discuss the problem. Before taking off this afternoon for Iran, Mr. Harriman gave us this transcribed message for the audience of Battle Report. And here he is now, W. Averell Harriman.

Mr. HARRIMAN. I am sorry that I will be unable to appear personally on this program as I had planned.

I am leaving today for Tehran, as President Truman's personal representative, to talk things over with the Iranian Government in the hopes that a solution can be developed for the difficulties that have arisen over the oil question.

An amicable settlement is of great importance—not only to the Iranian people and the British Oil Co—but also to the countries of Europe and the East, who have depended upon Iran for their requirements.

Mr. MCCORMICK. And now for the latest State Department report on this critical Iranian situation as Mr. Harriman wings his way across the Atlantic, we bring you the Assistant Secretary of State for the Middle East, George C. McGhee.

Mr. MCGHEE. Now, Iranian oil is an extremely complex, delicate, and involved problem. It has long been an inflammatory and controversial matter. The roots of his present crisis, for instance, go back into the nineteenth century.

Although it is the Soviets alone that may benefit from the Iran oil dispute, the sources of the difficulty are to be found primarily within Iran—not outside. They stem from the deep desire of a deserving and underdeveloped people to raise their standard of living, to eliminate poverty, starvation, and disease and to find greater social and political security. The tragedy of Iran is that this vital spirit of nationalism and the legitimate desire of the Iranian nation to receive greater benefits from its oil resources have become

dominated by extreme emotional attitude which often ignores the best interests of Iran itself.

A stalemate between the parties to the dispute has now lasted for almost 6 weeks. As a result, for 3 weeks no oil has left Iran. The whole machinery of processing and production which constituted Iran's largest industry and largest single source of revenue is threatened with collapse. Business depression, unemployment, and even widespread economic chaos may develop at an early date within Iran.

The President, the Secretary of State, and the American press and radio have on numerous occasions in recent weeks emphasized the critical and urgent nature of the Iranian situation. It is indeed loaded with danger. Iran is balanced on the edge of a precipice.

The United States for its part has a deep interest in the continued independence and territorial integrity of Iran. It has sought also to further the welfare and economic development of the Iranian nation. When the Soviet Union left military forces in Iran in 1946, we gave strong support to the Iranian case in the U N Security Council. As a result of Iran's steadfastness and of her support by the U N, in which the United States played an important role, Soviet troops were withdrawn, but the Soviet objective of obtaining control of Iran has remained unaltered and Soviet pressures have continued unabated.

We can be sure that the Kremlin is losing no opportunity to fish in the troubled oil of Iran, for Iran would be a great and strategic prize, quite apart from oil. Control of its territory, an area approximately as large as the United States east of the Mississippi, would put the USSR astride the communication routes connecting the free nations of Asia and Europe.

Thus the issues at stake in Iran go far beyond the exploitation, distribution and use of Iranian oil resources, important as oil is for the security of Iran, for the development of the Iranian economy, and for the nations of the free world that use this oil. They are issues which affect the very foundations of the civilized methods of law and justice which the twentieth century has been trying so hard to establish for settling disputes.

The United States consistently urged moderation on the part of the Iran government and of the British oil interests. We are convinced, as the President said in a press conference two weeks ago, that there is plenty of opportunity for a settlement of the oil controversy on a mutually satisfactory basis.

We have no magic formula for solving this critical problem. Unfortunately, it is not that kind of a problem, but we do hope that before it is too late—and time is very short—some arrangement, temporary if need be, can be found which will permit the Iranian nation to benefit satisfactorily from the exploitation of its oil resources and the West to continue to receive that oil production.

Mr. McCORMICK. Of importance to Iran and all the free world is the mutual security legislation now before the United States Congress. Averell Harriman has a word about that, planned even before he was assigned to his present mission. Once again, Mr. Harriman.

Mr. HARRIMAN. I had wanted to talk to you tonight about the mutual security program, which President Truman has recently recommended to the Congress.

This program, I feel deeply, is of vital importance to our life and security.

Our allies in Europe are building their forces for our mutual defense under the leadership of General Eisenhower—but they need equipment, which only we can supply, to arm those forces effectively.

We must have well-equipped allies. They also require a reduced amount of economic aid to complete the Marshall plan, and to increase their own arms production.

It is also much to our interest to help the under-developed countries improve their economic conditions, and attain political stability.

We need a constant supply—in fact an increasing supply—of raw materials that they can produce.

They need our technical assistance, and some capital, to increase their production of food to relieve hunger, and also to increase the raw materials we require to have a healthy economic life in this country.

Mr. McCORMICK. And now, before we present Battle Report's most unique guest yet, back into the history of flight as a prelude to a glimpse of its amazing future. Graphics by our own picture-minded Joe Ferrier, with an assist by the Government's research agency on aeronautics, the National Advisory Committee for Aeronautics.

Mr. WOOD. We begin our graphic history of man's battle to fly with the incredible genius Leonardo da Vinci, whose drawings back in the 1400's revealed a man thinking in the right direction, but with no means of bringing his dreams to fruition.

1783, and a Frenchman named Montgolfier balloons into the air for the first man-carrying flight in history. Balloons quickly become a fad, but, by the time the Civil War rolls round, are used as an instrument of warfare—for reconnaissance.

Comes now the century's turn and the Wright brothers, amazing Kitty Hawk, N C, and a slow-to-believe-it-world with the first heavier-than-air flight—the birth of modern aviation.

Three years later, Bleriot puts aside his crutches and takes off from France to fly across the English Channel to Dover, over water, and for the longest flight yet.

The balloon, in the meantime, develops into the rigid-framed Zeppelin, which, during World War I, terrorizes England.

Seaplanes, too, rapidly advance and, the war over, the Navy sends its flying boat, the NC-4, roaring over the Atlantic to Europe for its first ocean crossing by air.

Some 10 years pass, and then, capturing the public imagination, Lucky Lindy, the Lone Eagle, Charles Lindbergh, makes it himself from New York to Paris and undying fame.

Now the appearance of the transport in the mid-twenties, this all-metal Ford trimotor job proving a rugged and reliable carrier of passengers.

Speed the next goal, and in 1939 the German's ME-109 sets a world record, 469 miles an hour and becomes one of the top Nazi fighter planes in World War II.

The war also sees the birth of the big bomber, the American B 29, a fighting weapon which enables the Air Force to get at Japan, and carries history in the shape of the first A-bomb.

In 1942, the first American jet airplane, a plane driven not by propeller but by a turbojet engine, we secure in reverse lend-lease from Great Britain.

Earlier, Sikorsky's genius gives us our first practical helicopter, a flying machine that can rise vertically, fly sideways, forward, or backward.

This, our own decade, greets the biggest of modern bombers, the B-36, a plane that can fly nonstop 10,000 miles while carrying 10,000 pounds of bombs.

And, not to be outdone, our fighter designers come up with the F-86—the Sabre jet that's beating the Russian-made MIG's in Korea, holder of the official world's speed record of 670 miles an hour.

Then, giving us more reason to hold our hats, and built, like the other recent planes we mentioned, in a three-way cooperative effort between the aircraft industry, the military services, and the NACA, the X-1, the first plane ever to fly faster than the speed of sound.

Thus we come to the Douglas Skyrocket, the Navy sonic research plane which only

last week attained the highest speed and the highest altitude ever achieved by a piloted airplane.

Carried aloft over the Mohave desert by a B-29 mother ship, the small 40-foot Skyrocket was launched in the air and proceeded thereafter under its own rocket power.

The conjectured speed of the Skyrocket—1,500 miles an hour.

We said our next guest was unique. He is, for he is the pilot of this plane. A Navy airman in World War II, holder of two Distinguished Flying Crosses, he is presently with Douglas Aircraft. We invite you now to meet the man who has flown higher and faster than any man in human history—Test Pilot Bill Bridgeman.

Mr. McCORMICK. A nice corny question to get started. How does it feel to go so fast?

Mr. WILLIAM BRIDGEMAN. Actually, I believe that kids in their hopped-up jalopies and motorcycles get a feeling of speed superior than you get in a research ship such as the Skyrocket. To reach the speeds that we do attain, it necessitates that we get to extreme altitudes. There are no clouds up there—nothing to compare your speed with. Some experiences showed us that feeling through the controls gives us an idea of what the ship is experiencing but no actual feeling on the body is felt as far as speed is concerned.

Mr. McCORMICK. Are you pretty busy?

Mr. BRIDGEMAN. Yes; you're busy. You have some 80 instruments to watch and the flight is necessarily, after all, an instrument hop. There is no time to look around. You can't tell what color the sky is, really. Some people have told us it turns to a dark blue but as far as being able to look around and find out for yourself, you are just too busy flying airplanes.

Mr. McCORMICK. Well, do you feel anything going through the speed of sound?

Mr. BRIDGEMAN. In the altitudes that we're using now, no. Going through, because of the fact that we can use a mother ship, a B-29, we launched at an altitude of over 35,000 feet. By the time we go through, we are much higher than that and you don't get the phenomena that we have experienced in some other airplanes. Coming back down, yes, your ship buffets somewhat and at lower altitudes you can feel it.

Mr. McCORMICK. Well, what are the purposes of these fantastic flights?

Mr. BRIDGEMAN. We are stuck with having to develop airplanes. It is a thing that we have to do, for many reasons. We need a ship to go out and find a ship that can act as a laboratory, something that will bring back for us the information. The airplane has sacrificed many pounds to do this. We could use that weight in more propellers but we use recorders and in that way bring back the data that is necessary.

Mr. McCORMICK. Well, you mean in other words, you have to go through this sound barrier if aviation is to progress at all.

Mr. BRIDGEMAN. That's right. We have got to get through and get through safely and take armaments or passengers or whatever is needed through that barrier.

Mr. McCORMICK. Well, how do you land this aerial hot rod of yours?

Mr. BRIDGEMAN. We chose Muroc Dry Lake out in California because we have a space of about 12 miles by 8 that is absolutely flat. The airplane by necessity must come back dead stick so we need an area large enough so that the pilot can make a few normal mistakes and still be able to safely put the airplane down.

Mr. McCORMICK. You mean that you don't make a power landing?

Mr. BRIDGEMAN. No. After just a very few moments of flight, the propeller runs out in the airplane and it then becomes more or less a glider.

Mr. McCORMICK. You're 60,000 feet in the air and no motor, no engine. Do you enjoy that?

Mr. BRIDGEMAN. Actually, it isn't too bad. It is the most effortless, vibrationless, and quiet hop you'll ever experience from that altitude on down.

Mr. McCORMICK. It isn't the most quiet experience I'll ever go through because I never intend to go through it. Well, we certainly admire you, Mr. Bridgeman, and I know you have contributed a great deal to aviation, and thank you very much.

So, until we turn our cameras upon the Nation's Capitol again next Friday to report on the battle of democracy against world communism, this is Robert McCormick putting a period on your forty-sixth Battle Report, Washington.

Smears and Smearers

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. RHODES. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include herewith an article from the Littleton (Colo.) Independent:

SMEARS AND SMEARERS

Within the past 2 years several words and phrases have been added to the rapidly growing list of terms in common usage which often can be called "smears"—by definition "to besmirch, sully, defame." The smear technique is an old one, though not especially honored. There is some person, group of persons, or some institution whom one does not like. Then, apply to that person, group, or institution words cloudy with ill meaning so that men will easily and inevitably connect the subjects with the colored expressions which are designed to cast all manner of doubt upon the subject's patriotism, religion, cranial capacity, or birth.

By such means is the spirit and conscience of democracy dealt another stinging blow.

Below are a few of the terms coming into accepted use by many circles who are interested in discrediting everything from the State Department to the next-door neighbor.

1. "Intellectual": One who has had at least 2 years of college and preferably four or more; one who is incapable of being "practical" or "businesslike," who has been so softened by books and professors that he is without doubt a fellow traveler or a full-blooded Communist; generally applied to "dreamers in the State Department," "young lawyers in the Interior Department," or "people who read too many books for their own good."

2. "Diplomat": Obviously a sneaky fellow who was picked for his job by the process of elimination in which it was determined that he could give away more vital secrets to enemy agents or betray his nation more times without getting caught than others in the foreign service.

3. "Left winger": A person who once went to hear Henry Wallace speak in 1936; or who dislikes the Chicago Tribune; or who majored in psychology and social science in school; or who favors Government subsidies for other firms besides his own (crazy fool); or who wore a red necktie the night Norman Thomas came to town; or who said, "Franco is as much of a dictator as Stalin, Mao, Tito,

Perón, and all the rest"; or who campaigns against racial prejudice; or who sometimes disagrees with TAIT or MCCARTHY; or who does, says, or believes several thousand other things.

4. "Administration supporter": One who admits the present Truman administration is often wrong, but who won't admit it is wrong all of the time.

5. "Internationalist": A Communist at heart who secretly wishes to turn the United States over to the Reds lock, stock, and barrel.

6. "Pacifist": A person who won't take up arms against anybody including Communists which makes him, since he won't fight Communists, a Communist himself.

The sad fact about smear words and smearers is that many people who employ this device are absolutely convinced that they and their cohorts are the only bearers of the truth and that all who disagree with them are nothing but the devil's own disciples. They are the people who condemn opponents or persons, who for some reason do not subscribe to their line of thought, as pro-Communist or un-American, while they themselves employ the very methods of communism and un-Americanism, namely, character smearing and invasion of personal rights and privileges.

As stated before, the method is old and no more honorable because of its age, or because of who may use it.

It is well nigh impossible these days to remain entirely objective on the great issues of the times, but there is no excuse for deliberately beclouding these issues which are before the public with colored words and phrases which stir up the emotions without stirring up an equal amount of cool reasoning. He who uses these tactics is certainly doing a disservice to his Nation even as the Communist who tries in his way to bring destruction to the land to which he professes to pledge allegiance.

H. H. W.

Report on Communism

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. VELDE. Mr. Speaker, yesterday I was privileged to insert in the Appendix of the Record the first part of the report on majority opinions held by Albanian-Americans in Massachusetts concerning communism prepared for Gov. Paul Dever, of Massachusetts, by Dr. Glenn A. McLain, 45 Chase Street, Quincy, Mass.

Following is the second part of this report:

THE RELIGIOUS ELEMENTS IN LEADERSHIP: A. M. I. LIPA AND HIS SUPPORTERS

Quite in contrast to the anti-American attitude of Bishop Noli in regard to the majority wishes of the Albanian community has been the position of Mark I. Lipa. Bishop Lipa's episcopacy was formed December 31, 1950, in Boston under his spiritual leadership. (The Evening Gazette, Worcester, Mass., February 23, 1951.) The Albanian-American Episcopacy was formed for two important reasons. First and foremost to combat all atheistic and communistic influences in their midst. (Speech given by Vasil Alarupi before a Boston, Mass., meeting of Albanians, April 15, 1951.) Although

a necessary concomitant to such a reason would be to use any political measures to help remove the influence of Noli, it was decided by Bishop Lipa that he should make no personal intervention in the matter. As a man of God it would not be his duty to sully himself with the political mud, slung by Fan S. Noli. The second goal to be striven for was to preserve the orthodox faith and traditions in the Albanian-American community.

Bishop Lipa was educated in Karcha, Albania, and he received his theological training at the Theological School of Chalcis in Albania. The religious inclination of Bishop Lipa was first noted by the Archbishop of the Albanian Orthodox Church, Christopher Kisi. It has been strikingly evident since the arrival of Bishop Lipa in this country that reasons for his denunciations were political. F. S. Noli was naturally ashamed to countenance the protégé of the man whom he had repudiated in favor of the Communists. Bishop Noli has pulled no punches in his attempt to smear Bishop Lipa, claiming that the pro-Greek sympathies of Bishop Lipa made him unacceptable to the Albanian community.

The accusation falls flat and is totally unsupported by any documentation: Pro-Greek epitaphs are commonly used in criticizing one's political or religious enemies in Albania because of the historical enmity existing between the two countries. Noli has used a convenient "red herring" to confuse the issue.

The supporters of Bishop Lipa fall roughly in two categories. The anti-Communists who petitioned the Holy Synod in Istanbul for someone to take Noli's place and to rid their church of communistic influences. The other group, smaller but rapidly growing in numbers is composed of "centerist" members who because of Noli's scholastic reputation in the Albanian community or because of traditional political conservatism have stayed "on the fence." This middle-of-the-road group, neither pro-Lipa nor pro-Noli are gradually realizing that the only true middle road between the far left (communism) and the far right (fascism) is the democracy of the American republic. The concentration of Bishop Lipa with his spiritual duties and the concentration of Bishop Noli with partisan politics can thus be seen as the real reason for the anomaly that exists in the Albanian church today. Thus the position of the religious leaders in the Albanian-American communities is today, as in the past a basically important one. Let us hope the forces of right not might win the final victory and that the holders of propaganda power will not win over those who hold the basic interests of the Albanian community at heart.

IV. THE BASIC ISSUES AT STAKE IN THE ALBANIAN COMMUNITY

A. Freedom versus totalitarianism

The basic issue at stake in the Albanian community is the same one that confronts the American people today—freedom versus totalitarianism. Freedom to worship free from political taint or influence. Freedom to express one's opinions in public meetings and the free press. The issue of the free press and who controls it is thus one that is vital for protection of the other basic freedoms. The Albanian free press in Boston presents a typical example of the perversion of truth by the pro-Communist by the press.

Since the formation of the first Albanian foreign language newspaper, Kombi, Boston, 1905, the role of the Albanian press has been an important one.

1. Freedom of the press.

(a) Leftist control of informational organs: At first it was necessary to teach the illiterate Albanian immigrants how to read in order for the various papers to be most effectively used in the community. Albanian

newspapers flourished and during the years 1906-39 many newspapers were published in Boston and other parts of the country. Albanian leaders made effective use of their foreign language press in order to stimulate nationalism in the homeland; promote charitable causes in America and Albania; and to effectively stimulate the Albanian-American into participation in community life. Many community leaders became persons of note in the literary world through their prolific pamphleteering and newspaper editorials. Bishop Fan S. Noli has been one of the most active of the Albanian-American religious and political leaders who have used the free press to stress particular points of view. In 1905 he joined Petsi on the newly formed paper, *Kombl*.

In the years since 1905 Noli has been a prolific writer, both on Albanian newspapers and in the general literary field. (A full bibliography of his published works can be found in the card-index files of the Boston public library.)

Noli was sent to Europe as one of the delegates to the peace conference in 1920 (*Writers, Albanian Struggle*, p. 65), and in 1924 he became Prime Minister of Albania after a successful coup d'état. His inability to solve the problems of democratic government was high lighted in the Albanian-American press of that year (Dielli, *Passim*). After a stay of several years in Europe during which time he either promoted, established, or advocated many Communist-front causes (Von Redlich, op. cit., p. 34), he returned to this country in 1930 to stay permanently. An attempt to establish a newspaper, *Repubblica*, to combat the criticism of Dielli was abortive (*Writers*, op. cit., p. 79). Since 1930 he has become the honorary president of Dielli so he has thus effectively stifled the press opposition of his opponents by becoming their honorary president. If you cannot beat them, join them, apparently is good advice.

The position of the newspaper Dielli is summed up by the excellent objective book on the Albanian people, the *Albanian Struggle*, page 128, as follows:

"The Boston Dielli is recognized by the Albanians here as being indirectly subsidized by the Albanian Government. Many are sent to Albania where they are distributed to officials. * * *

Certainly any paper which is being subsidized by the Communist Government of Albania and whose honorary editor has a long record of pro-Communist proclivities should be suspect in the eyes of the Albanian people. Such obvious facts are seldom considered by a great many Albanians in Boston, however, as the only other paper available to them is *Liria* which also is pro-Communist and anti-American in bias. The advice of Goebells, the master Nazi propagandist, has been acted upon by the enemies of democracy and free speech once more. Tell a big lie often enough and all will believe it.

Newspapers are only one aspect of the control of free press and speech by Albanian political partisans. The radio has come in for its full share of attention by the group led by Bishop Fan S. Noli. The long arm of political control has even extended to the Voice of America in the attempt to silence the Albanian forces of democracy.

According to the *New York Times*, Sunday, September 3, 1950:

"Bishop Noli removed Father Rado from his pastorate, the latter said, because he had made Voice of America broadcasts denouncing Communist influence over the Orthodox Church in Albania."

If any lingering doubt remained in the minds of Albanian Americans concerning Bishop Noli's position in regard to the Voice of America, the following excerpt from Dielli (May 30, 1951, p. 3) should dispel it:

"In recent weeks Voice of America, which broadcasts in several languages with a view of counteracting Communist propaganda, has initiated an Albanian-language hour. We have not heard it, and naturally we do not know the line it follows."

The article continues mentioning advice to the United States State Department concerning Albanian Yugoslav, Albanian Italian, and Albanian Greek territorial disputes. A lucid description of those working for the State Department, according to Dielli's point of view, then follows:

It is utter folly to have the so-called Albanian political refugees now in this country broadcast to the Voice of America via the Albanian people. It must be understood that these people, whom we are now coddling, have their hands drenched in the blood of innocent people. They made common cause with the Italians and the Germans, thereby forever discrediting themselves. They are hated in Albania, and, no matter how much we may whitewash them as good little democrats, they are, in the eyes of the Albanian people, renegades and traitors. * * * These people massacred thousands of innocent people, burned and pillaged the country, made common cause with the enemy. In the end they fled for their lives."

The Voice of America could never make sense, the editorial goes on to explain, as it is manned by pro-Greek Albanians and outright Albanian traitors.

In rebuttal to this unprincipled bit of propaganda which helped to buttress Noli's action taken to remove Father Rado, *Spoileria* (vol. 17, New York, June 1, 1951) devotes most of its issue to an explanation of the Voice of America program. The true picture of the American attempt to reaffirm the bond between the Albanian people and the United States is given in this issue.

Another issue of Dielli added further editorial proof for the Albanian people of Boston. This is a typical example of pro-Communist attempts to use American history to document their own distortions of facts. The editorial reads:

"Voice of America is employing Albanian traitors and pro-Greek elements to win over the Albanian people. This is monumental political stupidity. Imagine the Colonial people of the American Revolution responding to the voices of the tory Loyalists. This is precisely what we are doing. We are believing the honeyed words of the Albanian traitors in this country and abroad, who cruelly and unashamedly collaborated with the Fascists and Nazis during the occupation of the country."

Sometimes the techniques of the Communist press demand partial retractions which are unobtrusively inserted so that the press organ can be on both sides. This method was used in Dielli (June 12, 1951, p. 3) when the editorial finished with the following thanks to the State Department:

"We are glad that the Voice of America selected for its first broadcast such genuine friends of the Albanian people as Dr. C. Telford Erickson, Mr. Harry Fultz, and Dr. Nicholas J. Prift; all of them have the interest of the Albanian people at heart, and none of them has any ax to grind."

Are these people the ones who have their hands drenched in blood, who were cruel and unashamed Fascist collaborators? Obviously not but the cover-up had been successful. Now the paper could be on both sides at once. As the apology only occupied seven lines of print and the accusations many hundred lines the effect on politically unaware Albanians can only have been to enhance communism at the expense of criticizing American foreign policy.

No one would criticize the right of any newspaper in America to disagree with any phase of American politics domestic or international. That is in the American tradition. The deliberate distortions of fact in Dielli

and *Liria*, the using of religious power to further subversive activities by Bishop Noli in the case of Father Rado, and the monopoly of news by the pro-Communist press is not in the American tradition.

B. Results of smear tactics by the leftist press, newspapers, and radio

The use of the mass media of information: the radio, the press by the Communists, has not been without its effects on (1) Albanian-American relations and (2) the Albanian-American minority group in Boston and elsewhere.

As yet the pro-Communist advocations of certain sections of the Albanian press, and the activities of certain prominent Albanian individuals has not affected Albanian-American relations. A recent issue of the Appendix of the *CONGRESSIONAL RECORD*, page A4106, reports the feelings of the Congress of the United States toward Rumania:

"That the Congress of the United States hereby expressed the firm conviction of the American people that the people of Rumania have the right to the basic rights and freedoms for which they have long struggled. * * *

This certainly applies to Albania and the Albanian Americans as well as Rumania. Let us hope that newspaper-sown seeds of hate will fall on barren ground.

The effect of this same propaganda on the Albanian-American minority group has had more far-reaching effects. It has caused many sincere Albanian Americans to swallow the Communist line in regard to international and domestic affairs. For those not of the Albanian community who are familiar with the red slants of Dielli and *Liria*; the pulpit exhortations of Bishop F. S. Noli; or the radio monopoly which the Albanian leftists exercise to bracket all Albanians with the Communists. Such random classifications as "types" is all too common in American life today and are a distinct danger to the Albanian community.

V. CONCLUSIONS

(b) Statement of authorship of this report.

This report has primarily been written in the interests of democracy and free speech in America. My long interest and study of the Albanian people; my researches for the eventual publication of a book on the history of Albania; and my interests in the protection of minorities in Massachusetts and America have all been partially responsible for the writing of this report. The idea of this report was entirely my own, the material was gathered through my own efforts, and I am not receiving any pay for this work. At all times I have sincerely tried to document allegations, objectivize my material, and to be nonpartisan.

This report could well have been triple in size but my main concern has been with objectivity, not volume.

I hope this report is successful in obtaining the results for which it was written.

Respectfully submitted

GLENN A. MCLAIN.

Czechoslovak Trade and Mr. Oatis

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the *RECORD*, I include the following radio address delivered by O. R. Strackbein, chairman,

the National Labor-Management Council on Foreign Trade Policy, over Station WOL, Washington, D. C., Sunday, July 29:

CZECHOSLOVAK TRADE AND MR. OATIS

The imprisonment of Mr. William Oatis, American press correspondent, by Czechoslovakia on charges of espionage has aroused many emphatic demands from the American people that immediate retaliatory action be taken by the United States. These demands run all the way from proposals that we apply economic sanctions, to the more drastic step of severing diplomatic relations with Czechoslovakia. It may be recalled that in February 1950 we did break off diplomatic relations with Hungary when that satellite country made charges of espionage against our Ambassador, Mr. Donald Heath.

The proposals that call for the application of economic sanctions are aimed at the reduction of Czechoslovak export to this country which in 1950 amounted to about \$25,000,000. This trade provides just that many dollars that may be used to bolster the Communist economy and to build up war industries through the importation by the Communist countries of scarce war materials and military equipment.

Resolutions have been introduced into Congress that call for the termination of our trade agreement with Czechoslovakia and also the termination of most-favored-nation treatment of imports from Czechoslovakia.

These are technical subjects but their implications should be understood by the American people if they are to pass intelligently upon the merits of the proposals of trade retaliation. Most-favored-nation treatment requires that we give to all countries any and all concessions and favors that we extend to any country in particular. The purpose is to avoid international favoritism. The only exceptions are where other countries discriminate against us. We may then withhold most-favored-nation treatment from them.

It is perhaps not generally known that the Trade Agreements Extension Act of 1951 already requires the President to suspend or withdraw, as soon as practicable, trade agreement concessions from Communist countries and all areas dominated or controlled by the Communists. Three weeks ago the State Department, acting under this congressional mandate, notified Russia, Poland, Rumania, Hungary, and Bulgaria of the termination of most-favored-nation concessions upon imports from these five countries.

This appeared to be a bold step, but actually we did not have a single trade agreement with any of these countries under our trade agreements program. Thus our action in withdrawing most-favored-nation treatment amounted to nothing more than telling those countries that after a certain date we would no longer give them the benefit of lower duties that we had previously negotiated in trade agreements, not with these 5 countries, mind you, but with some 40 other countries.

It is perhaps not generally appreciated that under the most-favored-nation clause, as just described, countries that are not parties to a trade agreement under the trade agreements program and which therefore make no reductions in duty or give no other concession to us or to any other country, nevertheless get the benefit of all the concessions that we grant to other countries, or that other countries grant to us.

In other words, Russia, Poland, Rumania, Hungary, and Bulgaria have been taking a free ride on our trade-agreements wagon since 1934 when the law was first passed. They could and did sit out all the negotiations between us and other countries and obtained all the benefits free—without giving a single concession in return.

Thus when Congress instructed the President to prevent the extension of all trade-agreement concessions to Communist countries, the State Department in its first bold step deprived the five countries that had been taking a free ride for 17 years from further enjoyment of this bountiful gift.

But the State Department did nothing about our concessions to Czechoslovakia. We import about three times as much from Czechoslovakia as we do from Poland, Rumania, Hungary, and Bulgaria combined.

Now, there is a reason for this difference in treatment of Czechoslovakia and these other countries. We do have a trade agreement with Czechoslovakia under the Trade Agreements Law. This agreement is a part of the General Agreement on Tariffs and Trade, known as GATT, and was negotiated in 1947.

Before the agreement took effect, that is, before Czechoslovakia ratified it in 1948, that country went behind the iron curtain. Numerous representations were made to the State Department at that time urging that the agreement not be placed into effect. Nevertheless, that Department, after considerable study and some weeks of delay, did recommend to the President that he proclaim the agreement, and this was done.

The fact that we do have a trade agreement with Czechoslovakia means that we reduced our tariff on a list of products that we regularly import from that country. Czechoslovakia gave us some concessions in return. Beyond these duty reductions, of course, Czechoslovakia still enjoys most-favored-nation treatment and therefore enjoys the benefit of concessions that we have made to other countries. In this respect she stands on the same basis as Russia, Poland, Rumania, etc.

The question now arises: Why can we not simply give notice to Czechoslovakia that we wish to cancel the trade agreement that we have with her and also notify her that we are withdrawing most-favored-nation treatment? These are two separate relationships. Obviously she is not treating one of our citizens in a manner indicative of friendship or favored regard.

We come now to the spot that we, the United States, are in, thanks to the type of trade agreements that has been propagated, promoted, and signed by our State Department. On the basis of a law (the Trade Agreements Act of 1934) that authorized the President to enter into trade agreements in which our duties might be reduced (or raised) as much as 50 percent, the State Department has involved us in the general agreement on tariffs and trade. This instrument is composed of 35 articles of complicated terminology that bind us in a manner that almost certainly is unknown generally to the people of this country, and with equal certainty was not contemplated in the simple act of 1934, just referred to. The Oatis case merely throws the spotlight upon the fact.

Can we denounce our agreement with Czechoslovakia today or tomorrow, should we elect to do so? Many people seem to think so.

Article 23 of the general agreement provides the procedure that must be followed. As a first step we must make written representations or proposals to Czechoslovakia. That country must then give sympathetic consideration to our representations or proposals, as, for example, the release of Mr. Oatis.

Then if no satisfactory adjustment is effected between us within a reasonable time the matter may be referred to all the parties to the general agreement. They are called the contracting parties and shall promptly investigate the matter so referred to them and shall make appropriate recommendations to the two countries concerned; or shall give a ruling on the matter.

Consultations may be held by the contracting parties with the two countries and with the Economic and Social Council of the United Nations. If the countries that are members of the general agreement consider the circumstances serious enough they might authorize us to suspend such of our obligations to Czechoslovakia under our agreement as the countries might determine to be appropriate.

There you have it. We are no longer free to act alone.

We have signed away our freedom of action unless we should elect to denounce and withdraw from the general agreements on tariffs and trade, altogether. This is the agreement that binds us in the manner just described. Then we could act again as a sovereign Nation. But withdrawal from a general agreement with some 40 countries in order to act against one country is a very serious step to take and one that would hardly be considered as feasible.

Undoubtedly then the economic sanctions that have been proposed do not offer a quick means of action. Months might be consumed in carrying out the procedure.

The next meeting of the contracting parties of the general agreement before whom the State Department could bring its case, is not even scheduled before the middle of September. That is nearly 2 months away.

The State Department perhaps regrets that Mr. Oatis cannot be freed today. If so the Department has only itself to blame so far as the use of economic reprisals are concerned. The Department openly, willingly, and with enthusiasm forged the handcuffs that Uncle Sam now wears in this field of action, as a matter of considered and conscious policy.

Should, however, the Department's regret be sufficiently deep there remains the more drastic step of a diplomatic break. By tying its hands against the effective use of the less drastic weapon of economic pressure the State Department finds itself armed only with artillery. This it will find itself reluctant to use as being too loud and explosive in proportion to the weight of the issue at stake. Thus has the failure of the Department to take effective action been compounded.

Directory Overlooks Family Record

EXTENSION OF REMARKS

OF

HON. HOWARD H. BAKER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BAKER. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record the following article by Mr. E. E. Patton, which appeared in the Knoxville Journal of July 29, 1951:

DIRECTORY OVERLOOKS FAMILY RECORD

(By E. E. Patton)

When a new Congress is sworn in on January 3 of the odd years a new Congressional Directory is printed. It contains the name and address of each Senator and each Representative, the States they are from, and, usually, a short sketch of their lives. However, this is not always done in the matter of a biography.

For instance, DEWEY SHORT, of Missouri, has been a Member of the House for many years. He was a soldier in World War I; has a license to preach and one to practice law. He is a graduate of Oxford College, in England, and is one of the most effective

speakers, yet the directory for 1951 has this about him:

"DEWEY SHORT, Republican, Galena, Mo." But he has nothing on PAT SUTTON, who represents the Seventh Tennessee District. His biography is as follows: "PAT SUTTON, Democrat, Lawrenceburg, Tenn." The Tennessee blue book shows that he was born at Lawrenceburg in 1915; that he is a college graduate, a licensed lawyer, that he is a Mason, a member of the American Legion, and a member of the Church of Christ.

But it is about a Harrison that I want to write. In the 1951 Congressional Directory, I find that the State of Wyoming is represented in the Senate by one man who was born in Massachusetts and another born in Illinois; that the population of the State is 250,742—just a little more than Knox County. But each State is entitled to two Senators and at least one Member of the House.

Delaware, Vermont, and Wyoming are the only States with only one Congressman. The biography of the Congressman from Wyoming is one of interest. The two Senators from that far-western State are Democrats, but we find this in regard to the Congressman:

"WILLIAM HENRY HARRISON, Republican, of Sheridan, Wyo.; born in Terre Haute, Ind., August 10, 1898, attended University of Nebraska; member of Sigma Chi and Sigma Delta Kappa fraternities; served in Army, World War I; engaged in the practice of law, Sheridan, Wyo.; member of the Wyoming House of Representatives, 1945, 1947, and 1949; Secretary of the Wyoming Interim Committee 1947-50; married Mary E. Newton, October 19, 1920; two children, Maribeth Brewer and William Henry Harrison, Jr.; elected to Eighty-second Congress, November 7, 1950."

He did not mention the fact that his grandfather was President; that his great-great grandfather was also President for 30 days; that his great-great-great grandfather signed the Declaration of Independence. Rather modest, I would say.

The first Harrison came to Virginia about 1633-34 and during the next century and a half there were four or five Benjamin Harrisons. The Declaration-signing Benjamin Harrison was born in 1726. He received a classical education. Was a member of the Continental Congress from 1774 to 1778 and as such signed the Declaration of Independence. However, he resigned from Congress in 1778 and served in the Virginia Legislature 1776 to 1782 and from 1787 to 1791. It will thus be seen that while serving in the Continental Congress he was also a member of the Virginia State House of Delegates—two legislative offices at the same time. He served as Governor of Virginia from 1782 to 1784, died in 1791. The congressional biography closes with a surprising sentence, "Interment thought to be in Old Westover Church Cemetery."

Can it be that this distinguished patriot is buried in an unknown and an unmarked grave?

SHAME ON AMERICA

His son, William Henry Harrison, ninth President of the United States, was born February 9, 1773, in Berkeley County, Va.; received a college education and was a licensed physician. He was a soldier in many wars against the British and the Indians and settled in what is now Ohio but then known as the Territory northwest of the River Ohio. He represented this Territory in Congress 1799-1800. He was Territorial Governor of Indiana from 1801 to 1813; was elected as a Whig to the Fourteenth Congress and served from 1816 to 1821; was elected to the United States Senate from Ohio and served from 1825 to 1828 when he resigned to become Minister to Colombia, in which capacity he served from May 1828 to September 1829. He is one of the exceptions in the Presidency, he was a candidate for that office and defeated in 1836,

but was elected 4 years later—the first President to die in office and served a shorter term than any other President.

William Henry Harrison's son, John Scott Harrison, was born 1804; studied medicine but gave it up and became a farmer. He was elected to Congress as a Whig and served 1853-57. Defeated for reelection. He was the son and the father of a President.

Benjamin Harrison, son of John Scott Harrison, grandson of William Henry, and great-grandson of Revolutionary Benjamin Harrison, was born in Ohio in 1833. He was a college graduate; became a lawyer; enlisted as a private in the Union Army in 1861 and came out with the rank of brevet brigadier general. He was defeated for governor of Indiana in 1876, but was elected to the United States Senate and served in that body from 1881 to 1887.

Benjamin Harrison defeated Grover Cleveland for the Presidency in 1888 and was, in turn, defeated by Cleveland in 1892. He was a member of the Presbyterian Church and it is said he passed the collection plate in his church in Indianapolis on Sunday after his retirement from the White House.

Chauncey Depew says he was the greatest lawyer ever to occupy the White House. At any rate, he represented many foreign governments in suits. He was the attorney for Venezuela in its international suit against Great Britain.

Benjamin Harrison, Member of the Continental Congress, signer of the Declaration of Independence, Governor of Virginia.

William Henry Harrison, Territorial Delegate, Congressman, Senator, governor of a Territory, defeated for the Presidency in 1836, elected President 4 years later. His wife did not accompany him to Washington and he died before she got there.

Benjamin Harrison, brigadier general, Member of the United States Senate, President from 1889 to 1893. His father's name was John Scott Harrison, his wife's father's name was John Scott.

WILLIAM HENRY HARRISON, grandson of Benjamin Harrison, is now a Congressman from the State of Wyoming. What other family in America can show as many illustrious names?

The Arrival of Henry Kaiser

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

MR. SHEPPARD. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article taken from Fortune magazine that I consider is very illuminating and interesting.

Mr. Kaiser's genius has brought us of the West to new vistas of industry and new concepts of industry employee cooperation and we of the State of California and the West in general are very proud of Mr. Kaiser and his achievements.

The article from Fortune magazine follows:

THE ARRIVAL OF HENRY KAISER

Now that Henry Kaiser has achieved the rank of major industrialist and is widely regarded as quite respectable to boot, where in the whole sensational history of private enterprise is there a success story to match his? Only 13 years ago he was just a prosperous, energetic contractor and dam builder, who for all his ambition to get into processing or factory production had managed,

at the age of 55, to get merely into the production of sand and gravel and workmen's compensation-insurance policies. Today he controls and runs a real industrial empire with total assets of more than \$600,000,000 and sales of more than a half billion, and has by no means finished. Not since the rise of Henry Ford, who in 15 pioneering years built up the assets of one automobile company from \$35,000,000 to \$784,000,000, has any industrial figure come so far in so short a time. And not in all history has any industrial figure successfully got into so many and various projects as Kaiser.

Besides such odds and ends as 25 percent of the West's largest private workmen's compensation-insurance company, several construction organizations with a backlog of more than \$100,000,000, and a sand-and-gravel business that has been netting around three-quarters of a million a year, the Kaiser-controlled companies include the following:

Kaiser Steel Corp., the only integrated steel plant on the west coast, with sales of \$100,000,000.

Kaiser Aluminum & Chemical Corp., one of the "big three" aluminum companies, with sales of \$150,000,000.

Kaiser Metal Products, Inc., a stamping-and-enameling company jointly owned with Sears, Roebuck, with sales of some \$25,000,000.

Kaiser Gypsum, a building-products division with sales of \$8,500,000.

Permanente Cement Co., with sales of \$20,000,000.

Kaiser Community Homes of Los Angeles, which has built and sold about \$30,000,000 worth of houses during the past 2 years.

Kaiser-Frazer automobile company, which in 1950 sold 151,000 cars and grossed \$238,000,000.

Kaiser Engineers, a consulting firm that performs architectural, engineering, and construction services for the public and the Kaiser companies, with a backlog of \$150,000,000.

A Kaiser-sponsored west-coast-wide non-profit health service and hospital system that last year made nearly a million dollars and put it into charity, research, and expansion.

All these are off the Government hook, are strong and stable, and are vulnerable only to gross mismanagement or economic catastrophe. Three are public companies to whose stock and notes the Nation's most conservative banks and investors have subscribed. What is least often noted, most of these successes have been achieved in the 6 years since the end of the war. Kaiser's great reputation, of course, was made during the war. As the man who proposed in 1942 to transport whole armies and their equipment by air, who in the war years built nearly 1,500 ships, some in as few as 4½ days, and who was even ballyhooed for President, he became a national industrial hero such as the country had not known since Henry Ford. Yet Kaiser's achievements since the war, in audacity and timing, probably overshadow anything he did during the war.

KAISER AND THE GOVERNMENT

Almost everybody who knows anything at all about United States business seems to think he knows the secret of Kaiser's success, a colossal ambition coupled with an endless supply of Government money and Government favors. That Kaiser has a colossal ambition needs no qualification. But that Government money alone made him what he is today needs qualification and definition. Let us review the bare facts in the Kaiser-and-Government-money legend up to 1946.

Much is made of the fact that Kaiser started working for Government early. He did. But as an aggressive young paving contractor and a resourceful dam builder, he

necessarily judged his proficiency as a private enterpriser in terms of his ability to land Government contracts in competitive bidding and make money on them. So did his bankers, who thought so well of him he never had trouble raising money for his deals. It is true that Kaiser's second major entry into processing (sand and gravel were first) was influenced by Government policy. At this date, however, the deal seems to rebound almost wholly to Kaiser's credit.

What happened was that he had smarted under the fixed prices of a west coast cement combine for years and wanted to break it. So did the Government. Kaiser saw his chance in 1939, when the United States Bureau of Reclamation called for bids on 5,000,000 barrels of cement for Shasta Dam. Although Kaiser had no cement plant, he worked with his engineers, underbid the combine sharply, raised hell until Washington considered his bid, and looked around for money to build a plant. When his friend A. P. Giannini, of the Bank of America, turned him down because he wasn't a cement man, he went to the RFC's Jesse Jones. Jones laughed at him first, then offered him \$3,000,000 at 5 percent. Once the RFC made the offer, Giannini relented and gave him the money at 4 percent. With this, with \$580,000 of his own and some \$1,750,000 belonging to his contractor associates, including members of the "Big Six," Kaiser founded Permanente Cement Co., which today is one of the world's largest and most profitable cement companies.

When war came, Kaiser just naturally went out for Government jobs—as indeed did hundreds of other industrialists who regarded themselves as patriotic. After Roosevelt's famous 1940 speech calling for 50,000 planes a year, Kaiser plunged himself and his engineers in a whirlwind of activity and came up with a plan to build all the required plane plants at no profit to himself whatsoever, provided he were allowed to operate some of them. Washington expressed amazement and amusement. But Kaiser was not discouraged. He had already got into shipbuilding with Todd and briefly channeled most of his extraordinary energy into more of it.

The story of the phenomenal shipbuilding achievements of Kaiser and his contractor associates has been told often, but the story of just how much Kaiser got out of it has not. At the House merchant-marine investigation in 1946 much was made of the fact that "Kaiser's companies" made a net profit of \$192,000,000 on an investment of \$2,500,000. As so often happens, the facts were set right only after days of involved and repetitious testimony—and after the newspapers had lost interest.

The facts may be oversimplified with tolerable accuracy. The Kaiser investment in shipyards was nearly \$2,000,000 and other investors and banks put up \$30,000,000 more. The profits from the yards Kaiser managed (he owned only one operating company outright and had a small interest in some he did not manage) were \$140,000,000 on shipbuilding, before taxes. After taxes they would have been about \$40,000,000. But Kaiser actually got \$5,600,000 in dividends (before taxes) from all his shipbuilding companies because (1) the other shareholders, of course, got their cut; and (2) two of the most profitable shipbuilding companies showed little profit in the aggregate because they made things other than ships, on which they lost money.

What happened was that Kaiser saw the potential of light metals and persuaded his associates to go along with him into the formation of a company, Permanente Metals, to make magnesium. They balked at putting up their own money, but agreed to pledge shipyard profits against an RFC loan to build a plant. Though profits from Permanente Metals' shipbuilding were \$58,000,-

000, the magnesium losses were \$28,000,000 after amortization, and taxes took \$21,000,000. Thus, the wartime net for the company was only \$9,000,000 after the RFC loan had been paid off.

Kaiser also wanted to go into steel, but his contractor associates were unwilling to go along with him. So Kaiser went it alone, set up Kaiser Co., Inc., which built a steel mill on an RFC loan that it secured with shipyard profits. Through the war Kaiser Co., Inc. made \$41,000,000 on shipbuilding, but lost \$44,000,000 on steel, after amortization.

Some of Kaiser's critics have remarked that if he had been content to stay in shipbuilding and not been consumed with the yearning to be a great industrialist, the Government might have realized some \$100,000,000 more in taxes.¹ But in using his shipbuilding profits to shore up his other deals, Kaiser was doing nothing illegal or unique; every company that draws up a consolidated balance sheet does the same thing. And Kaiser did, after all, risk many sure millions that would have gone to him had he been content with ships.

It is possible that his greatest wartime gain was the experience and confidence his boys acquired as managers of the shipyards and other operations. Men who had hardly turned 30—Henry's son Edgar among them—became accomplished superintendents and general managers, accustomed to directing and dealing with tens of thousands of employees. As for Henry, he spent a good deal of spare time on his dreamboat ideas—his plans for and models of his autos and railroad cars and airplanes, all housed in a small plant near Oakland that he called his hobby lobby.

But what were his tangible wartime acquisitions? Aside from \$5,600,000 in dividends (before taxes), there were three big physical assets, each of which might have been considered as much a source of consternation as of satisfaction. The steel mill at Fontana, encumbered with a \$100,000,000 RFC loan, was inefficient, equipped to make nothing but plate and structural steel and merchant bars, and virtually doomed without expensive additions. The ill-fated magnesium venture had to be closed down, with only a small chemical business and \$3,000,000 in cash left. Kaiser Fleetwings, of Bristol, Pa., an aircraft subcontracting company that Henry had picked up for \$1,695,000 and partially financed with a \$1,000,000 RFC loan, was apparently in extremis. The only going concerns were Gypsum, acquired in 1944 with sand-and-gravel money, and the prewar companies—construction, sand and gravel, cement, and insurance. In short, Kaiser did not have a thing that automatically made him a great industrialist. Something else had to be added. That something, obviously, was management.

KAISER AND HIS SUNSHINE BOYS

The art of managing a dynamic civilian organization, which is the quintessence of the art of leadership, has been analyzed to death as a science, but it remains as much an art as it ever was. The important change has come in the type of man who practices it. The "great" man, the glamorous character who inspired veneration partly because people tend to venerate that which they cannot understand, has all but disappeared from business. He has given way to the more anonymous executive whose natural talent for enlisting the support and best abilities of people expresses itself quietly and unostentatiously. He gets their respect and confidence not because they are dazzled by his halo but because they know his shortcomings as well as his abilities.

¹ Kaiser men automatically retort that the Government has collected, from Kaiser's postwar operation of war plants, some \$139,000,000 in taxes that it might not have received except for Kaiser's enterprise.

Regarded superficially, Henry Kaiser does not seem very much like the latter type. He drives himself and others steadily, blunty, oblivious to everything but the goal. Because his psyche was unscarred by depression—his contracting business, thanks in the main to Government dams, flourished then as never before—he is just a great big optimist. "Since you can't be clairvoyant," he explains, "you have to be an optimist." He is also a dogmatic visionary. His vision and imagination do not express themselves in a perception of the fine relationships between people and things, however. They express themselves in a kind of vast, indiscriminate drive to tackle any plausible project that may come to mind. If somebody could make amphibious office buildings sound possible, he probably would seriously propose to make them. Although he looks about as subtle as an avalanche, he is in some ways a most intuitive man, and consequently he plays his hunches hard. He possesses, in short, many of the characteristics of the autocratic operator who gives orders ex cathedra, keeps talent at a distance, and ruins the dispositions if not the lives of his subordinates and associates.

Actually Henry Kaiser does no such thing. The secret—or the least understood fact—of his success is that he has chosen and built up a group of managers who as a group probably have no peer anywhere. It is not that any one of them is a genius. It is that under Henry they consistently outperform themselves. Kaiser's great talent is his ability to choose good men and get them to work twice as hard, twice as long, and twice as effectively as they would for anyone else. And what is more, he has had the sense and tact to use their talents to compensate for his own deficiencies.

Kaiser has done this simply by letting as many men as possible in on making the important decisions and thenceforth giving them almost complete responsibility. This group-management system developed naturally enough. As a contractor who pooled his talents with other contractors in bidding on jobs, Kaiser early acquired the habit of talking through a problem and coming to a joint decision. He continued to do so in his own company. "On a bidding job," Clay Bedford recalls, "H. J. used to get everybody in and ask for estimates. Then he'd set his price at just half the general consensus and sell like hell. And everybody would say, 'but Henry you can't do it for that,' and he'd ask why and everybody would tell him in great detail. And then he would get convinced and go to twice the figure and sell that just as hard as the first one. He would sit quietly by himself, and then he would make up his mind, and away we'd go."

The system is different today mainly in that Kaiser usually does not make the decision alone. A conference on steel, for example, may start in General Manager Jack Ashby's office, where any number of subordinates are called in, proceed to the office of Eugene Trefethen, adjourn to the executive lunchroom downstairs, pick up again on the Lark on the way to Fontana, and be settled 2 days later in Kaiser's own office. In the end Kaiser's view may prevail, but again it may not. Everybody is not only encouraged but expected to have something to say. Not that Kaiser deliberately baits his boys, he has no sense of humor. "Whenever he says anything, no matter how mild," says one, "he means it. But the point is that it all works out as if he had a sense of humor. He listens to us."

Henry is also candid and guileless with them. Last April, 4 weeks after Mrs. Kaiser died, Kaiser decided to marry her nurse. He called the men together and told them. "I haven't time to do what the other average person does, to slide around corners," he said. "This is a constructive move, and in 60 days I will be a sweeter, simpler, more useful person because of it." Because he is

so candid, he has made his men feel that in some ways they are smarter or more knowledgeable than he; and no men talk more freely about the boss. There are in Kaiser's organization few of the inhibitions that afflict the subordinates of a man who makes it his business to be right all the time. But because they have enormous respect for Henry's courage, candor, and resourcefulness, they overlook his defects and back him with all they've got.

Probably because they have had to think constantly in terms of new things, Kaiser's top men have also developed a remarkable versatility. New assignments for them have often meant a change of function as well as location. A. B. Ordway, for example, began as a laborer in 1912 and has since sold sand and gravel, managed the insurance company, and helped run Richmond shipyards and Kaiser Services, the horizontal company that supplies most of the Kaiser interests with office facilities, industrial relations, legal and financial talent, and so forth. Even Carl Olson, Henry's sand-and-gravel vice president, has moved around in cement and gypsum. About the only exception to the rule is George G. Sherwood, who has been at the helm of the Kaiser treasury for more than 30 years. Yet what with all of Henry's new financial situations, Sherwood has not exactly been in a groove.

The younger men, too, move about a lot. Kaiser discovered that an intelligent and talented executive gains immeasurably from tackling new situations. Once he gains such experience, his very ignorance about a new situation is an advantage rather than a handicap. Kaiser's theory is meeting its supreme test at Kaiser-Frazer, where his "sunshine boys," as they are known in Detroit, are encountering the roughest new situation they could hope to find anywhere (see p. 74).

At the very top of the group versatility becomes virtuosity. Aside from Kaiser himself, who always knows more about the details of his concerns than he seems interested in, there are his two right-hand men; his son Edgar and Eugene Trefethen Jr. Both are about the same age; both have Henry's energy and capacity to concentrate fruitfully on a dozen different subjects in the course of a morning. Because they are not given to extreme flights of creative or emotional fancy, they have made an all-around better impression than Henry. Trefethen might be called Henry's deputy, since he handles everything that Kaiser is interested in; whereas Edgar, although he holds down many jobs, is concentrating on Kaiser-Frazer, of which he is president.

It would be a mistake, however, to get the idea that Kaiser's organization is all fire-works and footwork. One of its distinguishing characteristics is the thoroughness with which it does things. A very important man is George Havas, a Hungarian-born engineer whom Kaiser met in Cuba while building a highway there. Havas heads up Kaiser Engineers, Henry's engineering division, which designed or engineered most of the dams, highways, tunnels, laboratories, water-supply systems that Kaiser worked on before the war, and the steel and cement expansions and so on that he has built since. Havas also does the vital job of researching and reporting on Henry's dreamboat ideas. During the past 20 years there have been few fields of human endeavor that he has not analyzed as something for Henry to get into.

Another example of Kaiser thoroughness is Chad Calhoun, who since 1940 has handled the Kaiser affairs in Washington. He now has a staff of 13 men, but insists he runs no lobbying office. He makes a point of doing no fancy entertaining and making no political contributions. ("The Democrats have let us know it; I guess they sometimes think we're contributing to the Republicans.") The secret of the Kaiser success in getting Government work, aside from

the very positive pressures Henry himself exerts as a public figure, is hard work. Calhoun and his staff devoted their time to following the papers—I. e., keeping a day-by-day check on every certificate of necessity or other paper involving bureaucratic approval, and telephoning or otherwise needling the responsible people. Kaiser's Washington office, which has just moved into handsome quarters in the new Cafritz Building, has never been busier than it is today. As he was last time, Henry is out to get at least his share of defense work.

The Kaiser companies are run to close tolerances, considering their youth and the turmoil they've been through. Salaries, at least at the top level, are relatively low, expense accounts are watched carefully, and the accounting is spectacularly thorough. "Over a period of 15 years I've loaned them two hundred—three hundred million, I'm not sure which," says F. A. Ferroggiaro, senior vice chairman of the board of directors of the Bank of America. "Instead of busting they're getting more solid every day."

It was this solidity that enabled Kaiser to establish himself financially. Late in 1946 Kaiser met George Woods, now board chairman of the First Boston Corp., who took a sharp if not effusive interest in the Kaiser situation. The more Woods looked, the more promising it looked. He went out of his way to intercede for Kaiser Steel before the RFC, helped finance other Kaiser ventures like Metal Products, advised in the K-F crisis, and introduced the Kaisers to the Mellon bank. After lining up 460 security dealers, he took the lead in the steel refinancing, and organized a group to make the original public offering of aluminum stock. "The problem," says Woods, "was mainly to get these boys accepted in eastern banking and industrial circles." That he has, and Woods now functions as a kind of minister of finance, is in touch with the Kaisers and Trefethen nearly every day.

So there it is—a kind of inspired resourcefulness combined with extremely hard work and thoroughgoing day-to-day operations. In his audacious, bumbling, but highly intuitive way Henry Kaiser has built up a management group that provides the perfect foil for his excesses. Journalists and other observers who saw him in his more exuberantly imaginative days had a hard time equating his words with any conceivable deeds. They did not understand that his propensity for letting his landslide of an imagination loose and his habit of donning the savior's cloak, far from being a nuisance or handicap, were a great advantage. Like the antics of a gifted if histrionic conductor, they kept the orchestra whipped up and the public engaged too. So today. The more challenges he throws at his men, the higher they seem to rise to meet them. "You boys," he tells them, "own and run the business." And they go ahead and behave as if they did.

They certainly did in steel and aluminum, Kaiser's two biggest postwar triumphs. In 1940 Kaiser put Havas to work on the subject of an integrated western steel plant, and Havas, contrary to nearly all expert opinion, turned in a report that extolled the economics of locating in the Los Angeles area. Kaiser did nothing about it until late in the year, when his shipyards began to run short of plate. Then he stormed Washington for more than a year trying to get the RFC's Defense Plant Corporation to erect a plant on the coast. DPC eventually put more than \$1,200,000,000 into steel facilities, including \$200,000,000 into a new mill at Geneva, Utah, to be run by United States Steel, but Kaiser got nothing. He borrowed the money from RFC and erected his own plant, securing it with profits from 3 shipyards still unbuilt.

The loan was approved one day in February 1942. Immediately Kaiser called Havas from Washington.

"George," he said, "go out and build a steel plant."

"What kind of steel plant?" Havas asked. "Why just a steel plant—a small one," said Henry. So George Havas, who had previously decided that the seacoast was the logical location, picked a site that met the approval of the military, which specified that it be located at least 50 miles inland. That site was in an orange-grove area near Fontana, in San Bernardino Valley. By early April, when ground was broken, Havas had bought an iron mine and was designing the steel mill. Republic Steel helped with the blast furnace. Then one of Henry's dam-building executives named Tom Price stepped in to help. Forbidden to buy plate-mill equipment from priority-laden Mesta or United, Havas and Price had it made by Lewis Foundry & Machine, which had never built this type of mill before. Unable to obtain unrestricted WPB priorities, they spent \$1,000,000 expediting materials. But they blew in the blast furnace on December 30, 1942, several months ahead of Geneva, which had been started 6 months earlier.

Fontana's war record was good. It made more ship plate than Geneva, and reduced costs steadily. But many heads were shaken about its peacetime prospects. There was little demand in sight for plate, its primary product, and it needed at least \$20,000,000 worth of equipment to diversify. Thus the postwar struggle to make Fontana pay was a struggle to install new machinery. RFC had the \$100,000,000 mortgage, so the battle was primarily with RFC. To Kaiser as to others the RFC displayed the deep contradiction in its mandate, which is to lend money to those who can't get it elsewhere, and yet to make sound loans. Having lent the money for long-term capital purposes, RFC proceeded to watch it as not even the stingiest banker watches working-capital loans. "It cost us a lot of money, the RFC," says Gene Trefethen. "If we'd had only a normal banker-client relation, the plant would have been further along than it is now."

For one thing, the terms of the loan were so onerous that it was hard to put anything away for expansion. As late as 1947 the interest payments left the company with hardly enough for the payroll. Kaiser battled to have the terms revised. He also joined forces with a group of Los Angeles steel users who journeyed to Washington to have the debt revised, but by then revision was politically impossible.

Thus, although the mill operated at 106 percent of capacity in 1947 and showed an operating profit, interest charges were so heavy that there was a loss after depreciation. It was then that George Woods appeared before RFC and testified that it was impossible for Fontana to meet the terms of the loan and build up its resources. He proposed that RFC take second position to a group of private bondholders, among whom he thought he could place \$25,000,000. But RFC turned him down too. In the fall of 1948 Kaiser took advantage of the sellers' market for steel, raised prices about \$30 a ton, and kept them up until the next spring. The howls of dismay were audible in Washington, but nothing came of them. Kaiser's men agree that the good will they lost reduced the value of the \$10,000,000 or so they gained, but as they point out, you can't meet a payroll with good will.

What was as bad as the terms of the debt, they say, was that RFC delayed Fontana in expanding and diversifying out of earnings. In 1945 Fontana was allowed to spend only \$11,500,000 of the \$45,000,000 it wanted to spend, and therefore had to be content with only a continuous-weld pipe mill and a skelp mill to go with it. Not until June of 1948 did RFC O. K. an 86-inch hot-strip mill, an electric-weld pipe mill, and one more open hearth. And Fontana still needed another blast furnace, coke ovens, and other facilities.

Kaiser's case against the RFC, to be sure, was perhaps not so unequivocal as it sounds. Between what he regards as a dead certainty and what a banker regards as a dead certainty there is necessarily a profound gulf. But it seems fairly clear that the RFC, perhaps to avoid even a show of favoritism, went to the extreme of jeopardizing its own investment.

What turned the tide for Fontana was not any relenting on the part of RFC but a stroke of luck and alertness. It so happened that Clay Bedford, who was hunting for something to trade for steel for Kaiser-Frazer, ran across Claude A. Williams, president of Transcontinental Gas Pipe Line Corp., who had to line up steel before he could get an FPC permit to go ahead with his pipeline. Bedford passed the word along to Trefethen, who made the most of the opportunity. Williams agreed not only to give Fontana a \$53,000,000 order but to advance \$10,560,000 in cash, of which \$9,000,000 was to be applied against a second blast furnace and other facilities. It took 2 months to sell the deal to RFC, but in the end Fontana was expanded and took another big step toward becoming an integrated, low-cost operation.

So finally, in the late summer of 1950, Kaiser and Woods were ready to pull out from under the RFC with their biggest financing to date. The deal raised \$125,000,000—\$60,000,000 in first mortgage bonds, \$40,000,000 in stock units, and \$25,000,000 in bank credit. By that time Kaiser had reduced his RFC debt, out of earnings, from \$123,000,000 to \$91,000,000. Thus there was enough left not only to pay off the loan, but to add \$5,400,000 to working capital and to invest \$25,000,000 in much-needed expansion. The deal was more than the payoff for 10 tough years, it was a kind of official recognition of Kaiser's arrival as an industrialist.

Today there is no doubt at all about Fontana or the early analysis by Kaiser's engineers. Its young operators, headed by George McMeans, have succeeded in reducing its hot-metal costs, despite an 800-mile coal haul by rail, to the very lowest in the country. Although the freight rate on coal is not particularly cheap, the coal is company-owned, coke consumption per ton of iron is among the lowest in the country, and ore comes from a large company-owned open-pit mine at Eagle Mountain, only 150 miles away.

What is equally important—and what Havas and his engineers perceived—Fontana is right in its major market area. That means it enjoys a transportation advantage over eastern mills of anywhere from \$10 to \$30 a ton. Kaiser's men were smart enough to see what now gravels the west coast steel consumers. This "phantom" freight would afford Kaiser Steel a price umbrella until it chose to compete pricewise. In the year ending June 1950 Fontana turned out 1,100,000 tons of ingots and grossed nearly \$85,000,000, on which it earned a net after taxes of nearly \$12,000,000. Despite its rather high capital costs, the ratio of net to sales is right on the national average, and the ratio of gross profit to sales is considerably above it. It can probably break even at 60 percent of capacity. But nobody seems to worry about that; ingot capacity is being expanded to 1,380,000 tons, and a tin-plate mill of 200,000 tons is under construction. Barring economic catastrophe, Kaiser Steel seems to have as bright a future, out there in the Golden West, as any steel operation in the United States.

KAISER'S ALUMINUM

Probably no respectable, nonwar company has ever come up so fast as Kaiser Aluminum & Chemical Corp. Five years ago it consisted of nothing except ambition and the remains of the magnesium operation. Today it is one of the Big Three (after Alcoa and Reynolds), expanding capacity to 540,-

000,000 pounds, or more than the whole United States production prewar. Sales for the current year will be about \$150,000,000, and profits have been running at 12 percent of sales, against 9.8 percent for Alcoa and 7.5 percent for Reynolds.

The story of the company, although a good example of how Kaiser works with his management group, is perhaps an even better example of how he sells his men and carries them along with him when he is on the beam. Kaiser had been interested in aluminum since 1941, partly because he wanted to make aluminum planes, and Chad Calhoun had been making overtures for Government-owned plants as early as December 1944. Then, at the end of the war, there arose the question of what to do with the three small plants and chemical business of Permanente Metals. "To make a masterpiece of understatement," says D. A. "Dusty" Rhoades, the company's general manager, "aluminum was not the only thing under consideration." In January 1946, Havas finished a report on aluminum and it was not encouraging. But Kaiser's enthusiasm balanced the report. And Kaiser—and some of his boys, including Calhoun—was convinced that now was the time to buy facilities and talent cheaply, and that the much-talked-about postwar depression would not materialize. Their belief broke up an old Kaiser partner-ship. At that time Permanente Metals was owned not only by Kaiser but by his contracting-shipbuilding associates, and, on Kaiser's insistence on getting into aluminum, three of them decided to get out of Permanente.

That left the company with about \$3,000,000 in cash. Immediately Kaiser arranged a \$15,750,000 line of credit with the Bank of America, guaranteed as usual by himself and the associates who remained, and rented from RFC three plants that had been operated by Alcoa during the war; a reduction plant and a rolling mill at Spokane and an alumina plant at Baton Rouge. Nearly everybody thought Kaiser was crazy. The Bank of America, Henry's old associates who walked out on him, and even Sam Husbands of RFC saw no immediate future in aluminum. Husbands, after all, had sent out no fewer than 281 letters and wires offering the plants at bargain prices, and got only a few other bites. But rarely have so many wise men been so far off in their predictions. By the time Kaiser Aluminum began to operate (July 1946), the aluminum glut had changed to a shortage, and the newly organized sales department found itself allocating instead of selling metal. By the end of May 1947, after less than a year of operation, the company showed aluminum sales of \$41,700,000 and a net of \$5,300,000.

The company's success emboldened it to start negotiations with General Services Administration for more capacity, and in February 1947, it paid \$3,000,000 for a reduction plant at Tacoma. Then occurred a setback. It was nothing more than the seasonal spring slump, but Kaiser's men still had to learn that business usually fell off in the spring. The rolling mill had to be operated at 40 percent of capacity, and pig had to be stockpiled. But the slump lasted only a short while, and both in sales and in net profit the second year was better than the first. And by July 1948, the company marketed 600,000 shares at \$15 (now selling at \$32, after a 20 percent stock dividend) through the First Boston Corp. and Dean Witter.

About the end of 1949 Kaiser began to needle Rhoades for further expansion. When the spring slump failed to appear, Kaiser increased his needling, calling up for the records and ordering sales charts made every other day. But Rhoades and his men still weren't sure about expansion. "I couldn't prove he was wrong," says Rhoades, "and he couldn't prove he was right." But to be

on the safe side, Rhoades assigned engineers to line up power and machinery. The final decision was to build both a 200,000,000-pound-a-year reduction plant and power facilities in the New Orleans area and to open up Jamaican bauxite deposits.

Immediately after the Korean war started Kaiser bombarding the Munitions Board with wires, "Kaiser Aluminum is prepared to go ahead immediately," he said. "What does the Government intend to do?" Kaiser Aluminum did not, however, announce its plans until Stuart Symington announced the industry program: the Government agreed to underwrite the industry by taking output from all new capacity for at least 2½ years.

It was this guarantee, by a colossal irony, that enabled Kaiser to say that all his companies except Kaiser-Frazer were out of hock to the Government. For immediately it was firm. Woods swung into a prepared campaign to borrow no less than \$115,000,000 from 18 insurance companies and 8 banks. It was enough not only to finance the current expansion program, which is raising capacity by 60 percent, but to pay every nickel of the \$37,394,250 that the company owed General Services Administration for the war plants it first rented and then bought on time payments. The decision was made to borrow rather than issue stock because (1) the Government-guaranteed purchase would enable the company to pay nearly half the money back, and (2) the Kaiser group's equity, now 49.7 percent, would not be diluted.

Kaiser Aluminum has worked hard in what it calls the chemical end of its business—dolomite for roofing and metallurgical purposes; magnesia for many uses; and basic refractories or firebricks for kilns and furnaces. These are turned out in the plants left over from the magnesium experiment—the dolomite quarry at Nativid and the magnesia and refractory plant at Moss Landing, Calif. Currently this "chemical" business amounts to \$8,000,000 a year (against \$1,600,000 in 1946), and probably earns an even higher percentage of profit than basic aluminum.

And Rhoades did not coast along on the fact that primary aluminum has a very comfortable profit margin. The production superintendents and plant managers, some of whom were formerly employed by Alcoa and Reynolds in lesser capacities, are making valuable experiments and innovations. This is perhaps why, despite the disadvantage of scattered plants, involving much cross hauling (alumina is made in Louisiana and shipped to the Northwest for reduction and rolling), the company is earning more money than its competitors who have no such consistent disadvantage.

EVEN MY BOYS GET CONSERVATIVE

Such are the postwar triumphs of Henry Kaiser. What else is to be said about the success of this intrepid entrepreneur and his sunshine boys? What, first of all, is to be said about his talent for pulling at the Government jug? Not even Henry denies he has been helped immensely by it. He only notes that he has not been favored, that on the contrary he has had to fight and even make a nuisance of himself for Government business, that he is not the only one doing so, that he has paid or intends to pay Government money back with full interest, and that he has paid at least as much as the going rate for surplus property. He makes the point, which nobody has yet been able to disprove, that his dealings have been meticulously honest, and that he has usually bent over backward to avoid even any appearance of irregularity. He could make the point that the mighty American entrepreneurs of the past often accumulated their capital by methods that would have landed him behind bars. And he could also make the point that if a free enterpriser be defined

as a man who takes both risks and every legitimate opportunity, he's by definition an outstanding free enterpriser.

He could also make the more timely point that he never went to the Government when he could raise money elsewhere, and that his success is a perfect demonstration of the fact that United States tax laws prevent the accumulation of private risk capital on the scale that it should be accumulated under the enterprise system. History, which seems to overlook in her heroes the traits that irritate their contemporaries, may treat the Kaiser-Government-money theme with great generosity.

Whether history will speak as well of Henry's perspicacity only time will tell. Despite the checks and balances of his managers, Kaiser has made mistakes. He made a mistake on magnesium, and on tentative ventures like helicopters, and maybe he has made one on Kaiser-Frazer. Plainly his greatest victories were in many ways close shaves. When others were worrying about the postwar fate of the expanded far west, Kaiser saw nothing but a bright future ahead of it, and never doubted for a minute that an integrated steel plant there could make good. Yet even a moderate depression might have squeezed him out of Fontana. When all other manufacturers avoided aluminum, he plunged boldly into it. Yet even a year's delay in the pick-up of aluminum demand might have put him out of the running. Unless we assume that Henry Kaiser has occult powers, we must also allow for the chance that Kaiser can and maybe will sometime make a beauf of a mistake. The only problem he has not yet faced is hard time, and it is a major one.

But new influences have been brought to bear. All Kaiser's companies with public ownership now have outside directors, and Gene Trefethen and son Edgar and even Henry himself are meticulous in their relations with these directors, performing the chore of regularly informing them of what goes on in the companies. Kaiser's group of managers, who have been saying no to him for years, can almost certainly be counted on to say no more frequently. Henry himself feels it coming. "They all fall down when it comes to expansion," he complains. "Even my boys get conservative. . . . Gene keeps talking about the cash balance in business, and how he would like a fifty or sixty million cash balance. I never heard of such a thing as a fifty million cash balance in one business. . . . Why, I'd have thirty or forty millions less in Kaiser companies if I'd followed my banker's advice."

Musing in such a mood, he recently told a reporter, "I want a new committee. A dream committee. I want somebody to help me to think up ways to expand."

Next day the reporter mentioned the dream committee to Trefethen. "Dream committee?" asked Trefethen, showing no surprise. "Haven't heard of that one yet."

Dedication of the Golden Slipper Square Club Camp for Underprivileged Children

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an ad-

dress delivered by me at the dedication of the Golden Slipper Square Club Camp for Underprivileged Children, at Bartonsville, Monroe County, Pa., on Sunday afternoon, July 15, 1951.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to take part in these splendid ceremonies because they represent the highest standards of good citizenship in action. Here, in this beautiful region of Pennsylvania, you have created an outstanding example of devotion to human welfare.

You have built a living symbol of the spirit of our Republic—the spirit of helpfulness, good will, and tolerance.

In providing this camp, and through its many other benevolent activities, the Golden Slipper Square Club has gained an honored place among those we are proud to call benefactors of humanity.

It has been the good fortune of the United States that many individuals and families who have accumulated wealth, have contributed so generously to advance the public welfare.

Great foundations have been established for scientific and medical research, for the support of schools and colleges, for art and music and for religious and charitable purposes.

Billions of dollars make up the endowments which enable these institutions to serve our people and to stimulate our material, cultural, and spiritual progress.

These foundations offer a great and convincing argument for the free enterprise system, under which the United States, in the short span of 175 years, has become the wealthiest and most powerful Nation on earth.

They demonstrate clearly that free men and women will serve the cause of human brotherhood so much better than any dictatorship or any army of bureaucratic planners.

This camp is representative of a great and worthy human impulse—to do good, to brighten the lives of children and to help in their development—without regard for race, color, or creed.

No more noble purpose can be served than that which helps guide the footsteps of little children toward a better life.

Everything we possess in America, all of our vast progress, all of our cultural and spiritual attainments—were made possible because our plan of government was based upon two fundamental principles—freedom of the individual and equality of opportunity.

Our Republic was founded upon a philosophy of human dignity and freedom under God. Its ideals are based on the eternal truths of the Holy Bible—the divine teachings that are the essence of every religious faith.

The spirit of tolerant religion has guided our statesmen—soldiers—Government officials—educators, and our people.

The founding fathers planned a government on the proposition that "all men are created equal and that they are endowed by their creator with certain unalienable rights." Among those rights they listed "life, liberty, and the pursuit of happiness."

It is important to note that they placed emphasis on the pursuit of happiness. They realized that happiness can be attained only by individual effort. No government can guarantee happiness.

The patriots who established American independence prized liberty above life itself. They feared that government could become oppressive.

They knew from the pages of history that an all-powerful, centralized government always produces tyranny and robs the people of their liberty. They believed with Thomas

Jefferson that "the least governed are the best governed."

Therefore, in framing the Constitution, they sought to limit the power of the central government and to restrict its authority over the lives of the people.

Their aim was to create a system under which men would be free to work, to save, to build and to retain the fruits of their labor.

That plan of economic freedom was based on the right of men to own property, and to enjoy the rewards of their industry, initiative, courage, and thrift.

It provided the incentive which unleashed the potential energy and the resourcefulness of free Americans.

It built the greatest empire of industry, commerce, agriculture, and transportation in all history. It gave our people the highest living standards of all times.

But most important, it has held wide open the golden doors of opportunity for every young man and young woman—no matter how humble his origin or his circumstances.

American freedom extends—without limit, equal opportunity for every boy and girl to reach the highest place in industry, business, the professions or in Government.

It has always offered the same opportunity to the boy born in a log cabin as the one who started life in a mansion.

The boy from the city tenement could rise to the same high place as any other.

No barrier prevented the recent immigrant or his son from advancing, equally with the Mayflower descendant.

Our history is filled with shining examples of this truth.

When I think of opportunity I think of the sturdy, courageous pioneers who braved the savage wilderness to find homes where they could be free.

I think of the brave men and women who pushed westward to new frontiers in search of better opportunities for themselves and their children.

I think of the illustrious patriots of 1776 who pledged "their lives, their fortunes and their sacred honor" in the cause of liberty and independence.

I think of Abraham Lincoln studying by the light of a log fire to prepare for the great task to which he was called by destiny.

I think of the many hard-working men in the shops and factories who applied American inventiveness to their job and created new machines to lighten the burden of everyday life.

I think of Thomas Edison, Henry Ford, George Westinghouse, Walter Chrysler, Harvey Firestone, and a long list of other American workmen who rose from overalls to leadership in giant industries.

And I think also of the thousands of fine, patriotic citizens who fled from tyranny and persecution in their native lands to find freedom and opportunity—to grow and prosper in the New World.

When I think of all these wonderful elements that have contributed to the greatness of our country I am reminded of the solemn obligation that rests upon each and every one of us.

And that is to preserve for all time the divine endowment of freedom and to hand down in all its strength and glory our rich heritage of liberty, independence, and opportunity.

It is up to us to see that we leave to future generations the same kind of America that we have enjoyed.

Yes; we have enjoyed many blessings, but nevertheless we are not free from danger.

The worst evils that strike at our liberties are public debt, deficit financing, excessive taxation, and extravagant spending by all levels of government.

The high cost of big government can destroy our freedom.

Only 20 years ago the total cost of operating the Federal Government, including the

Army and Navy, was less than \$4,000,000,000 a year.

The budget submitted by President Truman for the present fiscal year, which began July 1, calls for the expenditure of \$71,500,000,000. And it has been estimated that this figure will climb in 1953 to eighty or ninety billion dollars.

In my opinion, that is the road to national bankruptcy and the loss of all freedom. It would centralize in Washington all power and authority and would destroy the sacred right of self-government.

It would place such a heavy burden of taxation upon every individual that it would destroy all incentive.

It would dry up the sources of investment capital upon which we must depend for the expansion of productive industry and economic opportunity.

Unless the present trend of reckless and extravagant spending by Government is checked it will be impossible for any individual or family to accumulate the wealth necessary to establish endowments and foundations such as have been created in the past.

It will be impossible to obtain the voluntary contributions needed for the support of our colleges, our hospitals, our churches, temples, and synagogues, and all other institutions that uphold our cultural and spiritual standards.

It will be a tragic day for America when these traditional factors of the American way of life must become dependent upon the Government for financial aid.

When that day comes, American freedom will hang in the balance. The youth of our land will be robbed of any opportunity to pet ahead America, as we have known it, will be a thing of the past.

Therefore, I plead with you to join in the fight for a solvent America because that means a free America.

I ask you to exert all your influence for the strictest economy, not only at the Federal level, but also by State and local governments.

We must have sound fiscal policies.

We must have a stable currency.

We must have balanced budgets.

In these days of crisis, when the world is threatened by Communist aggression, we must not curtail or halt our defense preparations.

But every other proposed expenditure, not related to the safety and security of our country, must be held down to the bare necessities. This is no time for fancy frills in Government.

In closing I want to congratulate most heartily my brethren of the Golden Slipper Square Club, not only on the splendid camp we dedicate today, but also on its magnificent record of worthy projects undertaken through the years.

Your organization has never sought public acclaim for its good works, but has gone ahead, without ostentation, assisting those who need a helping hand.

To the children who are the guests of the Golden Slipper Square Club I have a word of advice which I hope they will heed now and in later life.

To them I say, Learn the meaning of America. Learn the meaning of patriotism and love of our flag. Learn the fundamentals of good citizenship.

Be true to the teachings of your religious faith. All religions that worship God make up the spiritual strength of our country.

Those of us who are Christians can serve our country best by being better Christians.

The American who is of the faith of Israel can be a better American if he is a better Jew.

Together we can go forward in fellowship and understanding, respecting the rights of each other, and reaching upward for the finer things of life that bring peace and friendship.

Report on European Trip by Members of the Foreign Relations Committee

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. WILEY. Mr. President, on Monday night, July 30, I delivered an address by transcription over Station WLS, Chicago, on the subject of the conclusions of the Committee on Foreign Relations as a result of the trip to Europe recently taken by members of the committee. I ask unanimous consent that the text of my broadcast be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WESTERN ALLIANCE IN MID-1951

Friends, I would like to report to you tonight regarding a trip which members of the Senate Foreign Relations Committee and I made to Europe recently.

During that 14-day trip we traveled over 13,000 air-miles. A trip like that is truly a miracle of the air age. If a passenger plane can travel that far that fast, think what Red bombers could do.

We visited seven countries and heard reports from American representatives in six additional lands. Among the distinguished personages with whom we spoke were His Holiness, Pope Pius, and the following distinguished leaders: Mr. Winston Churchill; President Auriol and Prime Minister Schuman, of France; General Eisenhower, United States Ambassador in Paris, London, Athens, Ankara, Madrid, Rome, High Commissioner McCloy in Germany, General Franco, the King and Queen of Greece, and others.

IS EIGHT AND ONE-HALF BILLION AID TO EUROPE JUSTIFIED?

This trip was paid for primarily out of Economic Cooperation Administration counterpart funds. An absolute minimum was involved in terms of direct cost to you, the American taxpayer. Actually, one of our aims in making the trip was to save money. How? Well, as you know, right now Congress is looking into a huge new \$8,500,000,000 appropriation bill which the administration has sent up to us for consideration. Eight and one-half billion dollars—that is a tremendous amount of money for you, the taxpayers, to spend. It is more than the total revenue of all the 48 States combined. Can that money be justified? Is it worth the sacrifices which our people will be asked to make? The answer to those questions will come partly out of the hearings now under way. But we got a good inkling as to what the answer should be during that 2-week trip.

CAN EUROPE BE DEFENDED?

We held hearings in every country we visited, we discussed matters of state from early in the morning till late at night. We asked questions which you, the taxpayers, might have asked if you were there.

Naturally, we were interested in the financial phase of the problem of Europe's defense. But far more crucial was the fundamental problem: Has Western Europe progressed toward genuine defense? Are our American boys now stationed under Ike Eisenhower holding a defensible position? Will Europe do its share rather than over-relying on American manpower and American money?

Now, friends, what did our Foreign Relations Committee find out? Well, here are a

few of the conclusions which I personally reached.

Here they are:

MARSHALL PLAN HAS WORKED

1. Western Europe has indeed made genuine progress toward full economic recovery. In every country we visited, statistics of production told a heartening story. The Marshall plan has worked. The wheels of industry are rolling. Trade has increased. Our economic aid program, as such, could be wound up relatively soon if—and it is a big if—there were not such a crucial need for strengthening of the military potential of the allied lands. Modern arms and ammunition require industrial production. The economic and military programs are therefore closely intertwined. Future aid, however, must and will be geared toward the manufacture of defense matériel.

THE WILL TO OPPOSE COMMUNISM HAS HARDENED

2. The Western European nations today have increased their will to resist communism. You know, my friends, that all of the aid in the world would matter as naught unless there were a genuine will, intent, and purpose in Europe to hold the fort, so to speak, against the menace of communism. This will to resist has been principally due to the presence of and the superb job performed by our own Gen. Dwight Ike Eisenhower.

Formerly there was a combination of fatalism and so-called neutralism in Western Europe. Peoples of the West felt fatalistic about their chances in relations to Soviet Russia. Twice, Western Europe, particularly France, had been relatively easily invaded by an aggressor. Why risk invasion and occupation a third time, many of these people felt. They were impressed by the Red Army's might, and they did not feel that even the powerful United States could stand up to Soviet Russia's legions. Now, however, the heroism of our own and allied forces in Korea, as well as other actions we have taken, have made a deep and favorable impression on these European peoples.

EUROPE'S DEFENSES CAN'T BE IMPROVED TOO FAST

3. The defenses of Europe, while they are considerably stronger than they were one year and two years ago, are obviously still pitifully weak in relation to the tremendous danger posed by 175 Red army divisions. There is no question but that, as of the present time and for a while to come, Russian forces could sweep to the English Channel if they were ever given orders to do so. We cannot, therefore, improve the West's defenses too fast. Time is of the essence.

CABINET CRISIS UNDERMINING DEFENSE

4. Political instability of Western European cabinets is proving a serious liability. While our committee was in Europe, France and Italy were struggling in a parliamentary crisis. In England, the Laborites, and Conservatives were parrying on the threshold of a possible early election.

Now of this land I know that political stability can't be created on a silver platter. Democracy often involves such instability, but that condition is a grave hazard—a grave luxury—in the Europe of today. There must be a heightened sense of responsibility in politician and public alike in Europe. This is no time for Europe's petty politics as usual. Free processes must be continued because, after all, that is why we are striving to defend our heritage. But freedom is one thing and chaos is another.

GREECE, TURKEY, AND SPAIN SHOULD BE ADMITTED

5. Now, fifth, there are still important gaps in the Western alliance. The three most important gaps could be filled by bringing in Turkey, Greece, and Spain so as to give us the benefit of their great military forces.

No one who recalls the brilliant deeds of the Greek people in defending themselves against communism, nor the heroism of Turkish fighting forces in Korea, can doubt for one moment their right to serve as our full allies.

Insofar as Spain is concerned, it is a fact, of course, that her Government is a dictatorship with which our people do not agree. But for that matter, so is the government of Marshal Tito in Yugoslavia a government which we are eagerly aiding. The important thing is that Spain has some 30 divisions, just as Yugoslavia has one of the largest military forces in Europe. And so, it is essential that we make full use of these forces which are bitterly anti-Soviet.

WEST GERMANY TURNING TO US

6. A sixth conclusion is that Franco-German cooperation, which is a key to Europe's defense, is making some progress. The Schuman plan for industrial integration holds forth great promise for resolving the previous bitter economic and other strife between France and Germany.

As for Western Germany itself, it is increasingly recognizing the need to pitch its lot actively with our side. The best single object lesson as to the meaning of communism is provided by Eastern Germany. Trapped behind the iron curtain, the eastern part of the Reich lives in economic, political, social, and spiritual night. The blackness of tyranny enfolds it with the dark forces of hunger, repression, hatred.

WE DON'T LIKE SPOON-FED REQUESTS

7. A seventh conclusion was that certain of our diplomatic and military officials were still trying to spoon feed Congress and the American people. Time after time, we received hints that we weren't being told the full picture as to the expected amount of men and money that would ultimately be required of us. Again and again, we would inquire as to whether we had been told about all—I repeat, all—the foreseeable requests which would be presented to the Congress. But we were left with the vague feeling that we were still getting the requests piecemeal—in spoon-fed doses.

That is not a factor calculated to succeed with the Congress or with our people. We are entitled to be told the full story as to how many divisions—how many billions—will be genuinely requested in the foreseeable future.

CONCLUSIONS

Well, friends, those, then, are some of my conclusions. I submit them humbly as food for thought for you, the people.

In summary, what we found in Europe was encouraging, but it provided no basis for smugness or complacency. The challenge of communism remains. Progress has been made against it. But the big job is still to be done by ourselves and by others. Too much must not be expected of America, but neither must we be guilty of doing too little. We are a part of the team. By teamwork we can win—we can preserve the peace and preserve prosperity. We will do our part. Let Europe do hers.

Thank you.

Release of Charles Luciano From Prison

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record a radio address delivered by W. Kingsland Macy, of Islip, N. Y., on July 17, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

W. KINGSLAND MACY CONTINUES FIGHT AND DISCUSSES DEWEY AND LUCIANO

On June 19 I talked to you about keeping the barriers high against the infiltration of Suffolk County by racketeers and gangsters.

On August 21 every Suffolk Republican can strike a blow for good government by casting a ballot in the primary for E. Conway Plummer.

In a broadcast on July 3 I dealt at length with the infamous Hanley letter, and told the public why I refused Governor Dewey's frantic pleadings to destroy this incriminating letter. There is irony in the fact that Governor Dewey, who was clearly implicated in the letter as a participant with Hanley in a sordid deal, is seeking by underhanded methods to strike at my leadership in Suffolk County. Even before last election he turned his lieutenants loose to defeat me for Congress. He seeks my elimination because I would not go along and destroy the tangible evidence of guilt.

Tonight I want to talk to you about the release of Charles (Lucky) Luciano from prison. This is now a foremost topic of public discussion.

Perhaps, in order that the seriousness of Governor Dewey's parole of Luciano may be properly underscored, the subject can best be introduced by giving our listeners a brief quotation appearing in the June 30, 1951, issue of America, a leading national Catholic publication. In dealing with the dope plague in New York City, on page 321 of the issue referred to, America says, and I quote, "Significantly, the rise in dope peddling ('pushing') especially among the young has taken place since 1946, the year Governor Dewey released Charles (Lucky) Luciano from Sing Sing. The Federal Government thereupon deported him. From Italy, according to many officials, he has since poured dope into the United States."

Federal officials know this last sentence is true. Federal Narcotics Commissioner Harry Anslinger has unequivocally stated that Luciano has been on the international blacklist as a narcotics violator. The Senate Crime Committee has declared that Luciano is the master criminal who is directing dope distribution to this country from the sanctuary in Italy, which Governor Dewey made possible for him.

All of this leads directly to the big question, a question being asked daily by millions of deeply concerned and highly outraged Americans—especially mothers and fathers.

Why did Governor Dewey parole Luciano and release him from what amounted to a life term? That leads to a supplemental and equally important question. Why does Governor Dewey continue to remain silent on this matter?

Surely Governor Dewey must know that his continued refusal to make a direct, forthright statement about the Luciano release is a great embarrassment to every law-abiding citizen of New York State. They do not relish the fact their Governor is under a cloud. They wonder unhappily who the Governor's silence is shielding.

Luciano was convicted of white slavery on June 18, 1936. He was sentenced to from 30 to 50 years in the State penitentiary. In his statement to the court before Luciano was found guilty District Attorney Dewey characterized Luciano as the "greatest gangster in America" and said he should be "convicted for the safety of the public." The Luciano incarceration brought to Dewey the plaudits of a grateful public. As he said in one of his evasive comments last fall, when questioned about the Luciano release, "I'm

the guy who spent a year and a half of my life sending him to jail." One wonders if he will spend the rest of his life mutely disregarding demands that he tell why he opened up the jail doors for this arch criminal.

After Luciano had served only 9½ years he was mysteriously paroled by Governor Dewey on January 3, 1946, to the indignation of an amazed public. The parole came 41 years before the expiration of Luciano's maximum sentence. In his report to the state legislature, required by law, Dewey said, and I quote, "Luciano's aid was sought by the armed services in inducing others to provide information concerning possible enemy attack. It appears that he cooperated in such effort."

Any shortening of what was virtually a life sentence handed down by the Court could only be justified by the most cogent of reasons. The reason given to the Legislature by Governor Dewey for Luciano's parole was false as I will prove from the record. The real reason has not been given by him. He has continued to skulk behind a wall of silence, hoping the public will forget that he abused and misused his executive power in paroling world criminal No. 1.

The United States Senate Crime Investigation Committee—the Kefauver committee—tried to learn the real reason for the Luciano release when it held its sessions in New York City last Spring. It failed lamentably.

Shortly after Luciano was released General (Wild Bill) Donovan, former Republican candidate for Governor and the great chief of our wartime Office of Strategic Services, in refuting Dewey's publicly given reason for the Luciano parole, was quoted as saying, "I can tell you very definitely that we never asked Luciano to do anything for the war effort, that we never heard that he did anything and that I don't see what he could have done anyway. It would not have been our policy to have tried to do anything with or through a fellow like that." End of the Colonel Donovan quote.

Under constant prodding last fall, Governor Dewey declared he had released Luciano merely on the recommendation of the New York State parole board. Frederick Moran, Dewey's parole board chairman, rushed into print with a statement that the Board had recommended Luciano's release. Thus cleverly did the Governor try to get himself off the spot. The parole board alibi must strike everyone as utterly ridiculous.

Remember Dewey said he spent a year and a half convicting Luciano. Out of his great knowledge of the man, he, more than any person alive, should have been fortified against any appeal for the release of Luciano. He certainly knew then and knows more now about Luciano and his criminal activities than any parole board possibly could.

Why was Luciano paroled? Colliers magazine had its say on this subject on April 13, 1947. It said, "The answer to Luciano's freedom is to be found in the political power of Costello."

When indignation over the release flared up again last fall Dewey's opponent, former Congressman Lynch, said, "When you play with the underworld once you can never free yourself from their control. Blackmail is one of their best weapons. Frank Costello knows all of the details of the Luciano release. The man who freed Luciano does not dare speak out. For 4 years the question has been asked and you get not one word from Governor Dewey. If he dared, he would have cleaned up the implications at the first interrogation. His silence leaves no doubt as to who are the bosses of the underworld splinter of the Republican Party. They are Lucky Luciano and Frank Costello."

I realize that these are the words of a Democrat and as a lifelong Republican, in common with thousands of other thoughtful Republicans, I hang my head in shame be-

cause a leader in the opposing party is able to make such damning statements and charges and they are permitted to go unanswered.

The record of the Senate Crime Investigation Committee shows there is nothing far-fetched in the charge that underworld beachheads exist in the Republican Party. In the neighboring county of Nassau, which is dominated by County Executive J. Russel Sprague, one of Governor Dewey's chief advisers and henchmen, we find that George Morton Levy, an attorney for Luciano, and a race track operator himself, confessed to the committee that he had called in Costello to guard his track from bookmakers. A Costello riding herd on invading bookmakers would be laughable if it didn't point up sharply such a degrading condition.

Could Costello operate in Nassau County without the knowledge and consent of Sprague who has iron-handed control there, and without the knowledge of Governor Dewey? I'll leave that answer to you.

I am determined to fight to keep that kind of vicious influence out of Suffolk County despite the efforts of Governor Dewey's Conservation Commissioner Perry Durvea and other Dewey hatchet men to drive me out of the Suffolk leadership.

Now to deal with the iron curtain that the Senate Crime Committee encountered when it tried to get an answer from Governor Dewey on the Luciano release.

Among those testifying at the committee's New York hearings was a Col. George H. White, supervising narcotic agent of the United States Treasury. He stated that underworld efforts had been made to induce the Narcotic Division to intercede for Luciano with Governor Dewey. This his Department flatly declined to do. Colonel White also said that others with the same proposition had approached persons in the Army and Navy. He related that a man named Charles R. Haffenden, a Navy Reserve officer attached to Naval Intelligence, had interested himself in the case. Colonel White said that the Navy Department denied this, thus repudiating Haffenden.

I now quote Colonel White's testimony, "Part of the basis for Luciano's eventual parole by Governor Dewey was a letter from Commander Haffenden to the Governor, in which he stated that Luciano had been of great service to the Armed Forces."

Now listen carefully to this next quotation from the White testimony, which supplements General Donovan's. Colonel White said, "An investigation was made of that by myself and others . . . and all of the Armed Forces—the Army and Navy and Marine Corps—and the OSS all categorically denied that Luciano had furnished any information or given any service whatever."

In the light of the White statement, how does Governor Dewey's report to the legislature that Luciano was paroled to aid the war effort stand up?

The Senate Crime Committee considered the White testimony so vital it invited the Governor to appear before it and talk about it. He declined to make the 150-mile trip from Albany to New York City, where he maintains a year-round office, to testify, and informed the committee he would give it the benefit of his views on crime if it would visit him in Albany. This the committee declined to do and repeated the invitation to Governor Dewey to appear before it. You know the net result. Dewey did not testify, and the committee returned to Washington unenlightened.

Recently, the Senate crime committee announced its determination to get sworn testimony about Florida gambling from Florida Gov. Fuller Warren. That is when Governor Dewey announced his intention of visiting the Far East. Feeling possibly the hot breath of the Senate committee getting nearer his neck, he packed up his troubles in his new kit bag. And so he flew away.

Can the seriousness of Governor Dewey's failure to appear before the Senate committee be exaggerated? I think not. The committee is a bipartisan group, concerned solely with uncovering crime. There is something decidedly rotten in this Dewey-Luciano business. Governor Dewey is the only man who can clear it up. The public wants to hear from him. Substitute alibis will not do. If he declines to make a forthright statement voluntarily, he should be compelled to testify. Even the Governor of New York must account to the public for his official acts.

In his just-published book, *Crime in America*, Senator KEFAUVER comments that Dewey's "abstention from cooperation" was "to say the least, disappointing." That gentle reproving slap on Dewey's wrist was followed on July 9 by a breath-taking blow to the Dewey solar plexus that he must have felt in far-off Japan when Senator KEFAUVER was quoted in the New York Herald Tribune on remarks he had made in an interview. KEFAUVER said that governors should be willing witnesses before the Senate committee and then devastatingly added, and I quote, "When they don't come as willing witnesses they convict themselves." Senator KEFAUVER did not say what governors who failed to appear before the committee convicted themselves, but the inference is plain and the words certainly have an ominous ring.

In the public interest I now make a concrete suggestion. I suggest that the Senate Crime Investigating Committee return to New York immediately and that it demand that Governor Dewey appear before it forthwith to explain the Luciano release. The recent shocking dope disclosures call for action.

Unless the Governor clears himself, his Perry Durveas and other lackeys on Long Island and in Albany who seek political destruction of those who like myself are continuing to fight for good, clean government, will be under the continued suspicion of wanting to make another Costello-dominated Nassau County out of clean Suffolk.

Finally, the public is entitled to the possession of all the facts surrounding the Dewey-Luciano episode. Citizens must be relieved of the embarrassment the Governor is subjecting them to. If the Governor continues to remain silent I am fully prepared and documented to deal with the matter again even more extensively.

RFC Loan to American Lithofold Co.

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding investigation of the RFC loan to the American Lithofold Co.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I have received a number of inquiries as to whether the RFC Subcommittee intends to investigate the matter of the RFC loan to the American Lithofold Co. These inquiries relate to recent St. Louis Post-Dispatch accounts indicating the possible involvement of Mr. William M. Boyle, Jr., Mr. James P. Finnegan, and Mr. E. Merl Young. This loan, and Mr. Finnegan's alleged connection with it, were first brought to public

attention by Senator WILLIAMS, of Delaware, when our RFC investigation was nearing a close. There was then no indication of Mr. Boyle's or Mr. Young's possible connection with the matter.

I agree with those who suggest that this matter should be investigated. If the Committee on Banking and Currency determines that the investigation should be made by the RFC Subcommittee, I will not object.

The RFC Subcommittee is a standing legislative subcommittee, although, of course, it has authority to investigate matters under its jurisdiction. It has been my view that the proper function of the subcommittee is to conduct investigations only to the extent that they are necessary for legislative purposes. This we have done, and upon the basis of our investigations, we have recommended legislation. Since the legislative proposals now before the Congress include provisions aimed at the correction of faults exactly like those which may be present in the Lithofold case, I do not see how the investigation of this matter could possibly have any bearing on further RFC legislation at this time. If the facts developed by congressional investigation should bear out the newspaper accounts of this matter, the evidence would be merely cumulative, in support of the subcommittee's previous hearings and report on the RFC. The RFC has been completely reorganized since this loan was made, substantially in accordance with the subcommittee's recommendations.

My view of the proper duties of a legislative subcommittee in conducting investigations, I think, is borne out by the action of the Senate in providing for a permanent, standing Investigations Subcommittee of the Committee on Expenditures in the Executive Departments. This subcommittee has an able chairman, Senator HOEY, a full-time expert staff, and, I presume, ample funds. It has general authority to conduct investigations.

If the Banking and Currency Committee should decide that the American Lithofold Co. loan should be investigated by its RFC Subcommittee, provision will have to be made for both funds and staff. The staff employed in the special study under Senate Resolution 219 has been dismissed and the funds provided for that study have been expended. The subcommittee does not normally have a staff.

Although I shall be bound by the wishes of the Committee on Banking and Currency, it is my opinion that we should request an investigation by the Hoey subcommittee. I intend to suggest to the committee that it refer this case to Senator HOEY's subcommittee, as we have done in other instances.

Assistance by Kansas American Legion During the Recent Flood

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPLE

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. SCHOEPPLE. Mr. President, so many people and so many organizations have contributed so magnificently during the recent flood disaster in my State, that I desire to call attention to their generous activities.

I have received a letter from Irvin L. Cowger, department adjutant, the American Legion, Topeka, Kans., showing the immediate response of the legionnaires of Kansas during the recent

flood; and I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OFFICE OF THE ADJUTANT,
KANSAS DEPARTMENT,
THE AMERICAN LEGION,
Topeka, Kans., July 26, 1951.
Senator ANDREW F. SCHOEPPLE,
Senate Office Building,
Washington, D. C.

DEAR SENATOR SCHOEPPLE: I'm so proud of the job done by the Legionnaires of Kansas during the recent flood disaster, I want you to know about it, too.

All over the west half of our State Legionnaires got busy early, and every Legion post gathered food and clothing, which were stockpiled principally at Hutchinson, Great Bend, Pratt, Garden City, Liberal, and Colby. From these points the Forbes Air Base sent C-47's, each carrying 5 tons or more, to pick up these supplies and bring them into Topeka, where they were stored at the local Legion post.

From Capitol Post, No. 1, Topeka, these much-needed supplies were trucked to every river town, on both sides of the river, from Salina to Kansas City. The trucks were also furnished by Forbes Air Base.

Over 100,000 pounds were air-lifted in the early stages when it was critically needed by those who left their homes with only the clothes they had on their back.

In all, via airlift and trucks, more than 500,000 pounds were sent to Topeka by the Legion posts in western Kansas.

Practically without exception these materials are being issued from American Legion posts, and everywhere they have a superfluity of clothing—and we still have a large stockpile here in Topeka.

Scores of splendid contributions were made by Legion posts all over the State. For example, at Perry, the Sabetha post and the Leavenworth post sort of adopted that town, and the first morning Perryites were permitted to reenter their little town, these Legion posts had two truckloads of ice, 400 quarts of milk, and other necessities at their disposal.

Certainly many individuals and many organizations did heroic work, and most surely we do not belittle or discredit any of them when we say the American Legion made a gigantic contribution, and, generally speaking, were there first with the most.

With all good wishes, I am
Sincerely yours,

IRVIN L. COWGER,
Department Adjutant, the American Legion.

How to Heckle Stalin

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, part of an article by Stanley Frank entitled, "How to Heckle Stalin," which appeared in the Saturday Evening Post of July 7, 1951.

This article is not only interesting, but, in my opinion, very helpful in our efforts to bring the truth about the

United States to the attention of the misinformed people behind the iron curtain.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

How To Heckle Stalin (By Stanley Frank)

Millions of foreign-connected Americans now bombard iron curtain countries in a letter-writing campaign to make the Kremlin totter. Discontent grows lushly on communism's home grounds, when Sovietized peasants read, "Dear Vladok: Here nobody steals the milk."

Although the proposition cannot be proved at the corner butcher's, the buffalo nickel is not yet extinct. A 5-cent stamp still sends a letter from the United States to any spot on the face of the earth, a service that possibly makes the nickel as valuable a national asset as the gold in Fort Knox. Christopher Columbus first described the abundance of the New World and the amiability of its natives in a series of letters, and no better medium for spreading the truth about America ever has been found.

Every schoolboy knows why immigrants came to this country. History books neglect to explain, though, how news of the land that offered relief from religious persecution and oppressive social and economic conditions reached remote villages abroad. The answer was obvious, perhaps, in another age, but it needs to be spelled out for a generation that hears and sees far-away places brought into the living room by the radio, international press associations, and television. The great migration to the United States was stimulated primarily by letters sent by relatives and friends to folks in the old country. Now that we need those people on our side—if not on our shores—an intelligent effort is being made for the first time to promote the vast reservoir of good will built up over the years by emigrants. This unique program is the Letters From America campaign, the world's largest, least expensive and most spontaneous information service.

The letters project is the brain child born in May 1950, to the union of two lusty sets of statistics. There are 35,000,000 people in the United States of foreign birth or foreign parentage—almost 25 percent of the population. These first- and second-generation Americans know, better than most people, that they are favored with more personal liberty and an immeasurably higher standard of living than any other nation enjoys. And they write more than 400,000,000 letters a year—60 percent to Europe—telling the folks in the old country all about it.

That's right, nearly a quarter of a billion pieces of personal correspondence are sent annually to Europe, according to United States Post Office figures. Some 21,000,000 go to countries under Russian domination, and the overwhelming majority are boosts for democracy. What is more, the letters are delivered. Mail flows freely between the United States and all other countries except the U. S. S. R. and China. Russia's satellites have a sporadic spot-check censorship, but otherwise do not intercept letters or molest the recipients.

There is substantial evidence that mail penetrates the outer fringes of the iron curtain with little interference. For one thing, the volume of correspondence has remained steady for the last 3 years. People obviously would not continue to write if their letters went unanswered or if they thought they were endangering relatives. . . . They hardly would keep on throwing away their money if it wound up in the wrong pockets. More than 21,000,000 pounds of food and clothing were sent by parcel post to Eastern Europe last year, and prompt acknowledgments—with requests for more of the same—

indicated that the packages were received without undue delay or tampering.

Most Americans probably will be surprised to learn that pro-Soviet regimes permit such extensive communication with the arch-enemy of Mother Russia. A technical problem rather than a tolerant policy has kept open this one channel of free expression to the satellite states. Enforcing an airtight censorship on all incoming and outgoing mail requires a tremendous staff of trustworthy Communists—and there are not enough party members in good standing, apparently, to be spared from more sensitive government jobs. The editors of eight Slavic-language newspapers published in Chicago said recently that they did not know of a single case outside the U. S. S. R. in which the recipient of letters from America got into trouble with the security police for that reason alone.

Conditions are much different inside Russia, of course. The MVD breathes heavily on the neck of anyone suspected of "western deviationism" and mail is scrutinized so carefully that nothing but innocuous family news is passed. Only 440,000 American letters a year seep into Russia, compared to more than 1,000,000 to little Albania, yet that mere trickle has a psychological value that cannot be measured by the volume or the nature of the contents. Most of the letters go to the Ukraine and the three Baltic States—Lithuania, Latvia, and Estonia—where active anti-Communist underground movements are sustained largely by the moral support of countrymen in America.

THE 10-YEAR QUARANTINE THAT FAILED

Sometimes the Politburo must get awfully discouraged trying to maintain a quarantine against foreign contagion. Just when it seems a long period of isolation should do the trick, a group like the Lemkos breaks out in a pro-American rash. A clannish people who come from the Carpathian Mountains and speak Ukrainian dialect containing many Slovak words pronounced with a Polish accent, the Lemkos were completely cut off from all ties with the United States for nearly a decade. In 1947 the 250,000 Lemkos in the Soviet Union were resettled in what had been the German part of Poland as an ethnic buffer against western influences. The Lemkos promptly renewed their long-dormant correspondence with American compatriots who are concentrated in the Shenandoah Valley.

Personal letters, the second-oldest medium of communication among men, still are the most reliable weapons in the battle of ideas. Newspapers, periodicals, and books are suppressed and censored, the radio is used to amplify lies and distortions, pictures are faked and misinterpreted, but the mail gets through to the critical arenas of Europe where the winning of men's minds is the prize.

And the letters carry a note of conviction. That's the big thing. Europeans are weary of strident propaganda and bored to death with ideological gobbledygook. Concerned as they are with survival, they want to know about affairs that always have interested the little people. They want to know how much American workers earn, what food, clothing, housing, recreation, and education for their kids the money will buy. They weigh the promises of communism against the car, refrigerator, and television set Jan and Anna own in America—and what would your conclusion be if Jan and Anna came from your home town and you trusted them?

"I have always believed that personal communications between friends and relatives are more vital and effective in interpreting the life and attitudes of peoples across the borders than any other media of information and communication," says Warren R. Austin, the United States chief delegate to the United Nations.

THE FAMOUS DELUGE OF LETTERS TO ITALY

The impact of American letters on postwar Europe was first demonstrated in the spring of 1948 when the Italian Communist Party, the largest on the Continent outside the U. S. S. R., threatened to gain control of the Government in the impending elections. * * *

The success of the Italian experiment suggested a continuing effort along the same lines in other countries to give a positive tone to our public relations abroad. A group of citizens including Winthrop Rockefeller, Mrs. Anna Rosenberg, Elmo Roper, and Charles E. Slaw looked for a private agency geared to coordinate such a program, and they didn't have to search far. The Common Council for American Unity, an organization with 30 years of experience in helping immigrants solve their problems and integrate their cultures into American life, was a natural for the job. It had a staff familiar with the languages and attitudes of foreigners. It had the cooperation of the extensive foreign-language press which is indispensable to any organized effort involving foreign-born citizens.

The common council set up a letters from America section under Henry L. Munson, an aide to Gen. Omar Bradley during World War II. The program was launched a year ago with a refreshing approach in this day of high-pressure gimmicks and gambits. Old and recent immigrants simply were asked to write regularly to people they knew in their native countries. Well aware of a tendency to brag, Munson and his associates urged them to tell the truth about their living conditions. They stressed the importance of depicting down-to-earth touches Americans take for granted, but which make vivid impressions on foreigners.

Eastern Europeans constantly are astonished that milk delivered on doorsteps in the morning is not stolen, that laundry may safely be left hanging on wash lines overnight. One phrase, as predictable as an affectionate salutation, runs through all letters written by newly arrived aliens: "I have been here — months and nobody has asked me to register with the police yet." They are bowled over by coins left on unattended newsstands and that great American institution, the cafeteria. "The owner of a cafeteria in the Balkans would go broke in a week," a Rumanian said. "The customers would find some way to take two tickets, and turn in one punched for a cup of coffee."

A student from Afghanistan who enrolled at Duke University with a thorough indoctrination of Russian propaganda remarked that the chief gripe he heard from workers here was the parking problem. Women invariably comment that it is difficult to distinguish between a stenographer and an aristocrat, a tribute to another institution, the \$10.95 dress shop. "Although my baby is only 17 months old, she already has eaten more ice cream than I had when I was 42 years old," Sandor Havassy, a Hungarian, wrote home.

Three years ago, Yaroslav Chyz, the common council's foreign-press expert, was a member of the American delegation to the Conference of Intellectuals for Peace, at Wrocław, Poland. An ardent anti-Communist—he fled the U. S. S. R. in 1921 as a political refugee and edited a Ukrainian newspaper in Scranton, Pa., for 17 years—Chyz was hooted down by the Russian clique. After one session he was cornered by Polish students who began heckling him on freedom of the press in the United States. Chyz countered by telling them that German, Italian, and Japanese papers were published without censorship throughout the war, and contrasted that policy with the controlled Communist press. He thought he was doing a great job of convincing the students, but became increasingly uncomfortable un-

der their fixed stares. He suddenly realized they were more enthralled by his clothes than by his arguments—and Chyz hardly is a fashion plate on his salary.

Letters from America has a loftier purpose than touting material benefits. Its chief objective is correcting misconceptions regarding the United States, a formidable task that has become more imperative than ever since Congress in April slashed 90 percent off the \$97,500,000 appropriation President Truman asked for expansion of the Voice of America broadcasts. In 1950, Letters had a L. get of \$41,265, including salaries for 20 part-time translators; operating expenses this year will run to about the same figure. With those meager resources, it would appear that the Letters people are fighting Russia's ponderous propaganda machine with a leaky water pistol, but they have assets that do not show on a balance sheet. They have those 400,000,000 letters a year. They have on their side the foreign-language press and 2,000,000 members of 60 national organizations for foreigners. Most important of all, they know where to concentrate their field of fire.

Before launching letters, the common council made a survey of deep-rooted beliefs concerning the United States prevalent in Europe. Questionnaires were submitted to 1,702 qualified observers in 26 countries, from the Dardanelles to the Atlantic. The answers filled a 136-page book and were a depressing testimonial to the success of Communist propaganda. Despite the billions poured into the rehabilitation and defense of Europe, 25 percent of the experts thought the Marshall plan was a Wall Street scheme to gain economic control of the Continent. The common council admitted that the majority of the observers "can be presumed slightly biased in favor of the United States * * * and cooperated with this survey because of some degree of pro-American sentiment." Yet 25 to 40 percent subscribed to familiar Russian clichés—that American foreign policy was designed to destroy the U. S. S. R., that its atomic stockpile endangered the peace, that persecution of the Negro betrayed its false democracy, and that it was a Nation of uncultured money-grabbers.

Convinced that the best refutation to those charges can be made on a personal level by foreign-born Americans who understand the facts and the issues involved, the letters organization is providing them with such material. Translations of special articles written by Secretary of Defense George C. Marshall, Mrs. Eleanor Roosevelt, Bernard Baruch, Paul G. Hoffman, and labor leaders Walter Reuther, William Green, and James Carey, among many others, are sent regularly to 900 foreign-language publications and 195 radio programs. The plan is highly effective in this country. Quotations from the articles or rewritten versions appear constantly in correspondence to Europe.

How effective is the plan abroad? Read Lewis, director of the common council, answers with a candid shrug. "We don't know," he admits. "Breaking down false ideas held by vast numbers is like chipping at a mountain with a spike. There are two factors in our favor. Close to a million chips a day are being made on the mountain, and our technique is right. Advertising and promotion methods have a rasping, offensive quality to Europeans and they are understandably suspicious of anything that smacks of official propaganda. They want desperately to believe someone—and to whom can they turn for the truth if not a relative or an old friend?"

"We must be making progress. The Comics call us every name under the sun—always a sign they're worried. Our best endorsement, though, was a letter written by a Czech to his cousin in Chicago. 'I

have three impressions of America,' the man said. 'One from the Russians, one from the United States Army and one from your letters. I'm depending on the last one.'"

In 1842, a phenomenon historians still refer to as "America fever" swept Scandinavia after letters from Gustaf Unonius, a young Episcopal minister who founded the Pine Lake Colony near Milwaukee, appeared in the Stockholm Aftonbladet.

Foreign governments, alarmed by the stampede to America that was cutting into their economic and military potentials as well as arousing demands for social reform at home, tried to stem it by maligning conditions in the young republic and the "barbarism" of its people. Russia banned emigration in 1860, and Austria-Hungary followed suit in 1877, but that didn't work either. Families spent life savings bribing border guards and buying passage to America, lured by the 160 acres the Homestead Act offered free to all comers. News of the Homestead Act was suppressed in Eastern Europe, but a series of Americanization studies financed by the Carnegie Corp. reported in 1921: "The most general way of learning of such an opportunity was through personal acquaintance or through correspondence with relatives and friends of the immigrant's own nationality who had previously settled on the land." More than 1,000,000 aliens were entering the United States annually when World War I and our subsequent quota laws finally checked the mounting tide of immigration.

Those who do get through the gates write letters that eulogize the Promised Land more eloquently than the florid speeches of professional patriots. From Mrs. Anita Manera, of Dorris, Calif., to Italy: "You should see the schools—magnificent. For education everything is placed at the disposal of the children. Garages, bicycles, poultry yards, fruit in the garden are left unguarded. You can imagine how beautiful it is to live this way and trust everyone."

From Anton Fomin, of Los Angeles, to France: "The word 'laborer' sounds proudly here. It is an honorable profession. The American laborer of middle qualification gets from ten to sixteen dollars a day, the specialists even more. It means 3,500 to 5,600 francs in accordance with the official rates. But you, working as a taxi driver the whole night, get only 800 francs, and Shurochka for a day as a masseuse gets only 300 francs. Everything is said by these figures."

Although immigration was cut drastically in 1924, the United States still retains many characteristics of the melting pot of the early 1900's. Last year 249,000 immigrants were admitted under quotas and the special dispensations granted DP's. According to the 1940 census, 21,996,240 people reported that some language other than English was the "mother tongue" spoken in homes. New York commonly is thought of as the focal point of immigration, but large foreign national groups are scattered throughout the country. Chicago has the greatest concentration of Czechs, Lithuanians, Poles, Slovaks, and Swedes, and the same is true of Cleveland for Rumanians and Slovenes, of Boston for Albanians, of Detroit for Belgians, and of Minneapolis for Norwegians and Finns. There are large colonies of Czechs in Texas, of Danes and Armenians in California, of Croats, Ukrainians, and Lithuanians in Pennsylvania, and of course, Scandinavians blanket the Northwest as the dew covers Dixie.

The catalysts that promote unity in these nationality groups are foreign-language publications, which today have a combined per-issue circulation of 6,000,000. It is significant that approximately half the foreign press is beamed to people whose countrymen

are behind the iron curtain. In the last 4 years papers that follow the Communist line have lost nearly 50 percent of their readers and now command a total circulation of less than 150,000.

The exalted prestige of the foreign-press editor makes him an invaluable ally in the letters campaign. He is the father confessor to subscribers who are confused by strange customs. He is the cultural leader, the social arbiter, and usually the chief strategist in the political intrigues which abound among foreigners. His title and intellectual status, so dear to the hearts of Europeans, lend weight to his opinions and, as a consequence, his views are respected and reflected by his audience. Operating in a small, tight community, the editor is close enough to readers to be shown letters written to or received from the other side. Alerted to watch for new attitudes here and new Communist pitches abroad, the editor sends letters that reveal such trends to New York for analysis by Munson and his staff.

Regardless of eventual results, the letters campaign already has paid a handsome dividend. Correspondence stimulated in Europe has produced massive evidence of violent opposition to communism and the U S S R. In the satellite countries. Dissatisfaction is far more widespread than the democracies have dared to hope. It may well be the reason Russia has avoided a showdown with the West.

One man wrote a former neighbor who had joined the Communist Party: "I earn \$89 for a 33-hour week. I have a car and a five-room apartment and steam heat for my wife and child. I hope you drop dead from envy."

A Lithuanian-American, who had been out of touch with a schoolmate for 20 years, was seized by a bright idea upon learning that his chum was an arrogant party big wheel in their old town. "During the long years of our correspondence," he wrote the fellow, "I never believed freedom of thought and freedom of speech were permitted in the Soviet Union. But the things you said about Stalin in your last letter and your strong criticism of his policy convinced me that a loyal party member does not have to be afraid to say what's on his mind."

He hasn't heard from the guy, and he hopes no one else has either.

The Government as the Country's Ideal Employer

EXTENSION OF REMARKS
OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an article appearing in one of the Washington newspapers on July 29, 1951.

One of the Nation's leading newspapers, the Evening Star, of Washington, D. C., has through its very able Government columnist, Joseph Young, called attention to the serious situation confronting Federal employees because of higher pay and more generous fringe benefits provided by private employers. In a courageous and forthright piece of

news reporting, Mr. Young, a veteran observer of the Washington scene, states that the Government is rapidly losing its reputation as the country's ideal employer.

It was my privilege to introduce legislation to bring pay of Government employees more into line with the present much higher living costs, and Mr. Young's article is a definite step toward improving general public knowledge of the problems confronting the employees of the United States Government.

In requesting permission for insertion of this fine article, I should like to commend Joe Young for having written this article, and the Evening Star for publishing it. It is definitely in the public interest to create better understanding of the problems of Government and its employees. We are fortunate to have the finest Government in the world. We want to keep it that way, and to improve it by all means possible. One important method is to maintain high morale among the Federal work force.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FEDERAL SPOTLIGHT

(By Joseph Young)

GOVERNMENT LOSING REPUTATION AS COUNTRY'S IDEAL EMPLOYER

The Government is rapidly losing its reputation as the country's ideal employer.

For years, many people have regarded Federal employment as a very desirable thing.

The pay was good, the vacation time excellent, and "once you pass a civil-service exam, you've got a lifetime job."

This may have been more or less true in past years. But it is not the case now.

For proof, consider the figures issued recently by the Civil Service Commission. They show that more than twice as many Government employees are leaving their jobs to enter private industry than a year ago.

The Government's personnel turnover during the year has reached the staggering figure of 36 percent.

There are many reasons why Federal employment is losing its allure.

For one thing, the Government has been slow to keep pace with private industry in adjusting wages to meet increased living costs since 1939.

The result is that Federal pay, particularly in the middle and upper brackets, frequently lags behind comparable jobs in private industry.

Then, too, most Federal employees do not get the time-and-one-half overtime payments for extra work current in private industry. Only Government workers earning up to \$2,900 a year get true overtime payments. The rest get much less, with some employees getting even less than straight pay for working overtime.

Job security: Reduced job security is another reason why employees are quitting the Government.

Until 5 to 10 years ago Government career employees were fairly certain that if they did their job satisfactorily, they would not have to worry about job security.

But the large increase in Government employment that started with the last war has brought about widespread economy moves in Congress to trim personnel. This is understandable, but, unfortunately, some career employees with as much as 20 to 25 years of service lost their jobs. This has caused apprehension among other careerists. They feel they might be hit in future economy drives.

Leave: Congress is in the process of reducing Government employees' annual- and sick-leave benefits, which, in the past, have been one of the Federal service's greatest employment attractions.

Undoubtedly, the present 26 days' annual leave for classified employees is more generous than you'll find almost anywhere else. But annual leave is different from vacations given in private industry, in that time taken off work by an employee for various reasons is deducted from his annual leave. Tardiness, special errands, family emergencies, and other human factors that prompt private industry workers to take time off without being docked from their vacations, are deducted from Government employees' annual leave.

Then, too, Government workers are allowed to accumulate only 90 days of sick leave, which often isn't enough for long illnesses.

Government workers have no unemployment-compensation benefits.

Also, Federal employees seem to be the whipping boy for some Members of Congress for political reasons. It does the esprit de corps in Government great harm when Federal employees constantly are attacked as lazy, inefficient, and disloyal.

Remedies: By and large, most Government employees do a conscientious and able job. It's for the Nation's own good and protection that the Federal service should be able to recruit and retain the best possible type of worker. That's why the Government should be made more attractive as an employer, rather than less.

Sponsors of the Federal pay raise legislation cite as one of their strongest arguments the fact that a Government salary increase would help to end the wage disparity and cut down resignations. It is expensive for the Government to spend time and money training an employee, only to see him leave after brief service.

Another thing that would help Government morale would be for Congress and the executive branch to develop a budget system whereby personnel reductions would be accomplished gradually. This would eliminate the meat-ax approach that Congress has sometimes taken.

Enactment of unemployment-compensation benefits and strengthening of job-protection rights of long-time employees also would bolster morale in Government.

The Government's executive branch could help also by further modernizing and streamlining its personnel and administrative programs, with a view toward cutting out waste and improving efficiency. If this were done, rank-and-file Federal employees would not have to be subjected to attacks in Congress and elsewhere for policies over which they have no control. Elimination of personal patronage in some Federal offices would also help a great deal.

A New Strategy for Peace

EXTENSION OF REMARKS
OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record a very splendid sermon delivered by Dr. John T. Wayland, pastor of the First Baptist Church, North Wilkesboro, N. C., on the subject, A New Strategy for Peace.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

A NEW STRATEGY FOR PEACE

(By Dr. John T. Wayland)

Repeatedly we hear it said that America is adept at winning the war but losing the peace. Our people rise to the challenge of an emergency but seem to lack the patience of the daily battle for peace. In the war of ideologies we so often come off second best even though the weapons of our warfare—ideas and ideals—are infinitely superior to those of the totalitarian states. Paul the Apostle called the Ephesian Christians to a spiritual warfare. "Put on the whole armour of God that ye may be able to stand against the wiles of the devil. For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world." Two world wars have been followed by a cold war and thus far a limited hot war. The wars to make the world safe for democracy and to bring peace to mankind have increased the seeds of war. A new strategy for peace is called for. It is the fight for peace by the spirit through consecrated Christian persons who use spiritual weapons.

It is essential for America to be kept militarily strong, but her strength should be joined by that of other democratic states and used through the United Nations. An international police force will always be necessary to curb international gangsters. There is a vast difference between a policeman and a soldier. A policeman represents a majority of the citizens and endeavors to stop the crime without destroying the criminal and his wife and children. He is always responsible to the people for his acts. A soldier forces his will upon the enemy. He is usually a foreigner who seeks revenge and leaves destruction and hate in his wake. Where is the old-time glory in modern warfare?

"War
I abhor,
And yet how sweet
The sound along the marching street
Of drum and file, and I forget
Broken old mothers, and the whole
Dark butchery without a soul."

—Richard LeGallienne.

What has been uppermost in the minds and hearts of the soldiers of World Wars I and II and for what do our boys in Korea pray today? They want to get home to their loved ones as soon as possible, but will fight to the death in order to win the victory for a peaceful world and for some measure of assurance that their sons and grandsons will not have to experience the same horrors through which they are struggling:

"Who goes there, at the dawn,
Across the sun-swept plain?
We are the hosts of those who swear:
It shall not be again."

While the wall of military might holds back the spread of oppression, dictatorship, and war, we must hasten to carry out a new strategy for peace. America is rich in ideas, ideals, technical knowledge, know-how, human services, and in missionary-minded persons. We are far and away ahead of the totalitarian states in these resources. Why not tap this our greatest asset for the sake of human betterment, the spread of democracy, and the defeat of communism? Much of what we know and possess is the development of the rich heritage which has made America great—the faith of our founding fathers in a just God to whom every person and every nation is finally responsible. We are a privileged people. Let us not forget that the misuse of privilege calls for the loss of freedom. That is the lesson of history,

and is as true for nations as it is for individuals.

The American way of life at its best—work, love and worship, neighborliness, "he profits most who serves best," free enterprise, and individual initiative tempered by a sense of social responsibility—all of this should be shared with the rising peoples of the world.

The great movement of our time is not the growth of communism, it is the revolutionary forces, especially evident in Asia and Africa, which declare that millions who are starving physically, mentally, and spiritually refuse to starve any longer. Russia sees in this explosive turmoil the opportunity for communism and sows pretty promises in the seed beds of discontent. Let us see in it the opportunity to be of service to God's children who are hungry and thirsty; who feel like strangers in a world that has despised them; who are naked in embarrassing poverty, sick with divers diseases; and imprisoned both literally and figuratively by oppression and sin. If we play the Christian to these least of Christ's brethren, will we not solve the problem of peace, save the lost, and save our souls?

But how may we do it? Let us as American Christians work with other democratic peoples through the United Nations in sending good-will teams to any country which will receive us. On this team we would suggest a public-school teacher and one trained in mass adult education. Only 17 percent of the people of India are literate. Millions could be taught to read in a few years. A second member of the team would be a farm agent. The basic problem in underprivileged areas is the proper use of the land for the best food production to feed the starving. Great medieval estates would need to be broken up for freeholders. Technical experts, such as engineers of various kinds, should be on the team to lead the people in flood control and irrigation, in power development, in factory management, etc. Certainly physicians, nurses, and public-health officers should go along to fight the disease and illness which sap the strength of the nation.

We would want a Christian minister on the roll, and are inclined to put him first, not for the minister's sake but for what—or rather whom—he represents. The whole project should be thoroughly Christian in motivation. But the presence of a minister raises enough problems to hold up the program indefinitely. On this side denominational and church rivalries and the principle of separation of church and state are a few of several stumbling blocks. On the other side, the people to whom the team would go might resent the intrusion of a rival religion under government subsidy into their land. It seems better to leave the minister off the team, therefore, and endeavor to inspire consecrated laymen with the true spirit of Christ in their work. The various denominations could then send their own missionaries at their own expense. They would undoubtedly find receptive ears in the lands where the good-will teams were bringing applied Christianity.

It is obvious what such a program would do for those who need it, but it would mean fully as much to America. Would she not save her life in losing it for Jesus' sake? In the first place, our country would take a place of noble leadership—a role in which the world likes her best and in which she is happiest. Asiatic peoples are still suspicious of our motives. Imperialism is a ghost that still haunts much of the world.

Secondly, such a program would bring peace to the world and to America. There are not two worlds; there are three; and the third—non-Russian and non-American—is much the largest. This practical program of Christian service would win that third part to the democratic way and Russia would outdo herself to try to follow suit. World

tensions, cold wars, feverish races in armaments would be greatly minimized and the basis for world government—mutual understanding and mutual advantage—would be established.

Third, efficiency in our own governmental affairs would result. With the easing and gradual elimination of the threat of war, government under pressure in an atmosphere of perpetual emergency would become foolish. The excuse for bureaucracy would be eliminated and more efficiency would result. Over 90 percent of our taxes go for past or future wars and they could be drastically lowered and the standard of living raised.

Fourth, our national resources, which suffered such depletion during World War II, would be saved.

Fifth, business would be put to work along constructive lines. A howitzer produces nothing, may destroy a great deal, and is out of date in a few years. A tractor or plow brings food from the earth and renders years of service to mankind.

Sixth, the good-will teams would bring hope to our youth, many of whom are wearing the pall of defeatism. This would be true whether they served on the team or not. "Peace must come as a troubador" calling youth to high adventure. This program would also give another life to older people. A technician about ready to retire could find great joy in giving the last 5 or 10 years of his life training personnel for the teams or going to a foreign land himself.

And lastly, and far from least, such a strategy for peace would give impetus to an upsurge of Christian faith. Paralleled by the regular work of the Christian churches in foreign lands it would constitute missions in the modern manner. It is Jesus' way with the power and efficiency of the twentieth century. It is a call to high, noble, and adventurous living, a call from Him—for us—to help these least, His brethren.

"The soul of Jesus is restless today;

Christ is tramping through the spirit-world,
Compassion in His heart for the fainting
millions;

He trudges through China, through Poland,
Through Russia, Austria, Germany, Armenia,

Patiently He pleads with the Church,

Tenderly He woos her

The wounds of His body are bleeding afresh
for the sorrows of His shepherdless
people.

We besiege Him with selfish petitions,
We weary Him with our petty ambitions,
From the needy we bury Him in piles of
carven stone,

We obscure Him in the smoke of stuffy
incense,

We drown His voice with the snarls and
shrieks of our disgruntled bickerings,
We build temples to Him with hands that
are bloody,

We deny Him in the needs and sorrows of
the exploited 'least of His brethren.'

The soul of Jesus is restless today.

But eternally undismayed."

—Cyprus Mitchell.

Cotton

EXTENSION OF REMARKS OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the Appendix to the RECORD, I include a letter

from cotton farmers from Melville, La., in my district, as follows:

MELVILLE, LA., July 23, 1951.

HON. HENRY D. LARCADE,
Washington, D. C.

DEAR SIR: As you no doubt know, due to a large cotton estimate, speculators are ruining the cotton market for the farmer. If the Government allows this drop in the market to stick, we feel that they are letting us down, since we were asked by the Secretary of Agriculture to produce a 16,000,000-bale crop in 1951. At that time Middling cotton was selling well above 40 cents, and we naturally felt that, even with a large 1951 crop, the price would stay that high.

Ginning will begin in August, and, if something is not done hurriedly, cotton farmers will lose millions of dollars and their confidence in a Government that raises defense workers wages as an incentive to greater production and, on the other hand, penalizes farmers for achieving their goals.

We will appreciate your efforts in preventing speculators and gamblers from selling the cotton farmer short. We ask that you remind your colleagues that malnutrition in the Armed Forces is not conducive to good shooting or accurate atom-bomb dropping.

Yours very truly,

W T. York, L. W. Beard, M J Guideau, Jr., R J Coite, J J Astall, Frank Gerace, Eugene Gordon, J M Janeau, Scott Gordeau, Jack Dondeau, H H. Westerhaus, Leon E Wall, Wm G. McNeil, Joseph Cannatella.

Mr. Speaker, I would also like to include herein a copy of resolutions adopted by the St. Landry Parish Farm Bureau, of the parish of St. Landry, also in connection with the situation in respect to the 1951 cotton crop, as follows:

The St. Landry Parish Farm Bureau board of directors met in special session last night to discuss the deplorable situation of the decline in the price of raw cotton and passed a resolution as follows.

"Whereas during this past winter and spring the United States Department of Agriculture began a program with cotton farmers to bring about a production in 1951 of 16,000,000 bales of cotton to be certain of a sufficient supply of cotton for the defense needs, export to foreign nations, and for domestic use, and

"Whereas, at that particular time, due to an abnormally small crop in 1950, the outlook for a good price was very promising, which was an incentive for farmers to utilize all their resources to go all out in helping to accomplish the production of the large amount of cotton needed; and

"Whereas the United States Government, in the interest of national security, took steps to limit exports of cotton, during 1951 the price of cotton declined well below that of the world market. The Government through the Director of Price Stabilization imposed a ceiling price on domestic cotton which again demoralized the domestic market because of discouraged speculation in our normal channels of cotton trade, and

"Whereas the cotton farmers in cooperating with the Government planted a record acreage to cotton at considerable increase in all costs (labor, seed, fertilizer, machinery equipment, fuel, etc.); and

"Whereas the cotton farmers in achieving the goals of the Government now face the possibility of actually losing money after producing a large crop or at least not realize a profit which is guaranteed by our Government to labor, manufacturers, and other groups; and

"Whereas the office of OPS recently granted an over-all increase in price on certain finished cotton goods in order to insure a fair margin of profit to textile manufacturers after granting an increase to textile workers: Now, therefore, be it

"Resolved by this board in special meeting, That our elected Representatives in Washington should take the following steps to insure cotton farmers a fair profit as guaranteed to afore-mentioned groups:

"1. That the Department of Agriculture raise the floor price from 90 percent to 100 percent of parity.

"2. That the Department of Agriculture increase the export quota of our 1951 cotton to a degree that will stabilize the price of cotton to a figure at least 100 percent of parity."

Results of July 17 Poll

EXTENSION OF REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. PICKETT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following results of July 17 poll of Facts Forum ballot:

Results of July 17 poll, Facts Forum ballot

Vote these three "no" or "yes":

	No	Yes
A Should Nationalist forces be permitted and aided to invade the mainland? (Jerry Gilmore).....	28	72
B Should United States resist seizure of Iranian oil reserves through a puppet government? (Neely G Landrum).....	47	53
C Is socialism as dangerous to freedom in the United States as communism? (poll committee).....	22	78
Check two (only) of nine below to be featured in later poll:		
Percent		
Should United States take retaliatory action to effect the release of correspondent William N. Oatis? (Judge T W. Davidson).....	11	
Will inflation be stopped? (Representative LINDLEY BECKWORTH).....	7	
Would control of prices on wheat and steel sufficiently control all prices? (John W. Carpenter).....	2	
Are high taxes deflationary? (Senator KENNETH S. WHERRY).....	8	
Should nonmilitary spending be reduced 25 percent or more? (Hon. Jesse Jones).....	16	
Should all price and wage ceilings be abandoned? (Representative J. FRANK WILSON).....	11	
Should the Federal budget be balanced even if higher taxes and elimination of some desirable Government programs would be required? (Representative TOM PICKETT).....	15	
Should General MacArthur have been removed from his Far East commands? (Martin J. Corbell).....	13	
Should more stringent Federal narcotics laws be passed? (Lawrence DuMars).....	17	
Total.....	100	

The last two questions above ranked third and fourth in the July 8 poll. The two questions below ranked one and two and thereby became questions for feature study and a poll July 31:

Should the crime of advocating overthrow of the Government by force and violence be a capital offense? (Douglas Rolater).

Is public indifference the greatest factor contributing to corruption in Government? (Owen W. Cotton).

Dean Roscoe Pound's Appraisal of Chiang Kai-shek

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include a speech made by Dean Roscoe Pound concerning Chiang Kai-shek to the Commonwealth Club of California. It is astonishing and pleasing to know that a man of the great ability and recognized standing of Dean Pound pronounces Chiang a really great man.

After 45 years of real friendship with China, we suddenly developed strong antagonism toward Chiang and his government and threw away all the good will that had been developed during that long time. In 1946 we were trying to bring about a coalition government in China and an American executive committee was trying to bring that about. The Nationalists and the Communists met in Peiping with our executive committee for months trying to accomplish this, but the effort failed. In the meantime, the Communists moved a lot of men into Manchuria, where they picked up the arms and supplies left by the Soviets when they disarmed the Japanese Army, and with them drove into China and captured the Government.

Now I do not know what our China policy is. We are objecting to the Communists being recognized or entering the United Nations. We are against the Nationalists and have only the most formal relations with them. Between these two postures China, our traditional friend, has been lost to the free world.

It is refreshing to read what Dean Pound has to say about Chiang and discouraging to realize that our Government should not have recognized this and found a way to continue our cordial relations with China.

Here is what Dean Pound said:

CHIANG KAI-SHEK

I feel strongly about the way a really great man has been misrepresented in this part of the world.

I have seen a few great men and Chiang Kai-shek is by no means the least.

He works hard and devotedly, he lives simply, he tries or did try to conduct a constitutional government under very great difficulties, to adhere zealously to a Bill of Rights when dealing with people whose chief object was to abrogate that Bill of Rights.

I was continually called on to give my opinions on what he could or could not do under the Chinese Constitution.

He did everything in his power to conduct a constitutional government when there was every temptation not to act constitutionally.

I don't think this country has any business today in talking about corruption in the government of any other country.

China for 8 years was in the power of an enemy. For 100 years she has been almost continually in war.

To put the Chinese Republic on its feet after 8 years of enemy occupation was a task of the first magnitude. Chiang Kai-shek was doing great work in accomplishing that.

I have heard complaints about the Chinese financial administration. My grandfather had a small chest filled with the paper used to pay his grandfather for services in the American Revolution. It was not worth a continental.

But the American Revolution was fought on continental currency—the paper money of the Continental Congress—which became a synonym for worthlessness.

It took 7 years, until 1790, before Alexander Hamilton was able to put our money on a sound basis. Yet we complain because the Chinese Republic in 2 or 3 years after an enemy occupation hadn't put its currency on a sound basis. If we judge the Chinese Republic by what we were able to do, Chiang Kai-shek accomplished a magnificent piece of work.

Chiang is absolutely sincere in my experience and exceptionally efficient.

One of the things China needed above everything else is strong leadership. Chiang Kai-shek is one of the few men with the breadth of character and personality that China needs to bring her into modern constitutional government.

Present difficulties go back to Stilwell's insistence that the Chinese Army be redistributed in small units among the Allied Forces.

Chiang had good precedent and excellent reason for not doing so. Wilson refused to do so in World War I when the Allies demanded Pershing's Army be so distributed.

Chiang Kai-shek said: "There are still a few war lords with their own armies—the Communist war lords in the northwest. If I distribute my army as requested, there will be no Chinese officer in command of more than a battalion of men; I'll have to oppose the disciplined armies of the Communists with an army that must be reorganized, re-disciplined, and lacks the experience of large command."

It was the best of reasons, but Chiang has been shamefully abused in this country as obstinate and inefficient.

If he were obstinate, it was obstinacy in doing his duty because to do otherwise would have been fatal to the Nationalist Government.

JUSTICE UNDER THE REDS

To mix Chiang Kai-shek and justice under the Reds in one talk, as I have been asked to do, is a remarkable combination. The two have nothing in common.

When you think about justice under the Reds you can't be thinking about what we think of as the administration of justice.

I began looking into Russian law a good many years ago when, for 37 years, I was teaching comparative law.

I went to China in 1946 as adviser to the Chinese Ministry of Justice. I found some very learned men. But there was an uneasy feeling on the part of some teachers and universities that, though we were getting democratic law, perhaps we were missing something—maybe there was something to be learned from the great experiment in the Soviet Union.

I talked to the Minister of Justice about it. He sent me over to the Russian Embassy. They had shelves and shelves of books—all the books that the Soviet Embassy in Nanking considered necessary in regard to Soviet law.

The thing that struck me at the outset was the enormous amount of window-dressing. When I looked more deeply, I found it was just paper; it had nothing to do with what happened to men and women in the ordinary operations of law in Russia.

You couldn't tell by looking at a code anything about what action would result from a given set of facts. There is no separation of powers. There are various authorities, and orders from any one of them may be in conflict with orders from another.

They have in the form of law utter confusion; that confusion is mitigated and

straightened out by the ultimate authority of the central committee of the Communist Party which is the ultimate source of law, if you call it law, in that government.

In the field of copyright law, it is required of an author that whatever he writes must be written in accordance with the purposes of the Soviet Government—whether it be a novel, a poem, or a play—or it will not be published, and if by chance it is published, it will not be republished. Therefore, there is no such thing as free writing of treatises or of novels or other works of literature in the Soviet Union.

There is a bill of rights in the constitution, for the consumption of those in other parts of the world who want to believe there is a great and beneficent government in Russia.

There are certain things in the human constitution an autocracy always runs into. The Soviet Government has had no end of trouble with peasants who have obstinately tried to assume powers which they consider they were born with, in opposition to the plans of the government for them.

The great bulk of Soviet law is a form of criminal law.

Czarist Russia had a body of secret statutes which were not published but were there to be enforced if need be. The Soviet Government has these also.

There is also the institution of government attorney. He may interfere in any lawsuit at any time. He may reopen a case after final judgment. No court may hear an appeal without bringing in the government attorney.

The administration of justice in the courts from top to bottom is absolutely under the central control of the government attorney. This institution is taken from Czarist Russia. We are told by the Communists that capitalism exploits farmers and labor for the benefit of the capitalists. There is a military and office-holding class today which exploits farmers and laborers in Russia beyond anything ever heard of before. The farmer on the collective farm is as tightly tied to the land as was the medieval cottager to the lord's estate.

The farmer is in actuality working in a government factory to manufacture meat or grain. The laborer is working in a government shop. The great crime is absenteeism. We would call it a strike. It is a serious crime in Russia, and an absentee may be expelled from a collective farm, which means starvation. Large numbers have found that out.

Collective bargaining in that system means acceptance of a contract the significant parts of which are fixed by the government in advance. "Here it is—sign on the dotted line."

With all their talk about the toilers, about how labor is exploited under capitalism, nothing ever seen in the history of law or economics compares in magnitude with the military discipline to which everybody is subject under Soviet justice. You can call it justice if you like.

Blame on the People

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. GOODWIN. Mr. Speaker, public indignation is certainly steadily rising as new instances of corruption in high places continue to come to light. If the

administration will not take steps to clean house, then the only remedy will have to be made effective by a sufficiently aroused electorate at the ballot box. Along this line of thinking, I submit the following recent editorial in the Malden (Mass.) Evening News:

BLAME ON THE PEOPLE

Associate Justice Douglas, of the United States Supreme Court, told an Oklahoma audience that the American people are solely responsible for corruption in government and for the moral breakdown in public life.

Charges are being hurled right and left that the people have lost their sense of moral values, and bad government has taken over as a result. Bad government, in turn, makes for poor citizenship, completing a cycle which is being denounced as vicious.

It is one thing to decry a situation and quite another to supply the remedy. They are aware that crime is flourishing because of bad government. They have read many stories of corruption in high places. Public indignation is rising, but to date it has been futile.

It is not possible to overthrow a government entrenched behind 20 years of tenure and an annual expense account of \$70,000,000,000 without an almost complete reversal of public opinion. But public wrath, now simmering, will finally boil over, perhaps in 1952.

Middle East Aid

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, the following letter which was published in the New York Herald Tribune of July 30, 1951, is most apropos. I urge all Members to read it carefully:

MIDDLE EAST AID—A PLEA FOR UNITED STATES ASSISTANCE TO ISRAEL AND ARAB STATES

To the New York Herald Tribune.

We, like so many Americans, are much concerned with the fate of the mutual-security program now being considered by Congress. It seems self-evident that this is America's best weapon for the strengthening of freedom everywhere, and nowhere more so than in the strategic and problematic area of the Middle East. We wish, therefore, to plead here for enlightenment and generous support of the aid to Israel, the Arab states and the Arab refugees, proposed by the administration's mutual-security program.

The new Israel is being built on a basis that is sound from the social, economic, and ethical points of view. It is mature enough in its political understanding to be free from the irrational xenophobia that is one of the underlying causes of unrest throughout the Middle East. It is we are convinced a natural ally of the free nations to whose security in the threatened Middle East it can contribute in no small measure by means of its uniquely high standard of technological skill and its trained and hardened youth.

American aid to Israel seems to us thoroughly consistent with the tenor of our entire foreign-assistance program in recent years. Israel is a young and promising democracy; it needs and deserves our help and will richly recompense us. But our help is needed with special urgency, because of the vast, humanitarian task Israel has taken upon itself in absorbing hundreds of thousands of Jewish refugees from Europe and

the Middle East. Even a well-established economy could not easily withstand the impact of this sudden expansion. Israel, for all its present difficulties, has in the past proved its ability to make swift economic adjustments. We believe, therefore, that the sum finally assigned to it should be fully commensurate with its great needs and great potentialities, along the lines proposed by the McCormack-Martin and Douglas-Taft bills to authorize a \$150,000,000 grant in aid to Israel.

It seems to us fitting and proper that the yardstick of great need be applied, as well, to the grants to be assigned to the Arab countries and the resettlement of the Palestine Arab refugees. The sensitive and troubled area of the Arab lands needs large-scale irrigation and reconstruction programs which alone can raise the standard of living of their depressed masses and insure stability and peaceful development.

As the Clapp Commission has pointed out, the solution of the Palestine Arab refugee problem can best be worked out in conjunction with the execution of needed public-works projects in the Arab countries. We have been deeply moved by the plight of the refugees which most of us have seen and studied at first hand and which seems to us particularly tragic because it need not have been, and was not desired nor caused by the new State of Israel. The passage of time and the changes it has effected, has made repatriation of the refugees so difficult that it is almost impossible and far from desirable. We believe with the United Nations Conciliation Commission for Palestine that "having the best interests of the refugees themselves in mind," we must concentrate on the resettlement of the refugees in the Arab countries. We cannot overemphasize how great a contribution to Middle East peace and stability will be made by successful settlement along these lines.

meet the enemy commander at any time to discuss acceptable terms of a cease-fire arrangement." "Yet," he added, "for this proposal I was relieved of my command by the same authorities who since have received so enthusiastically the identical proposal when made by the Soviet Government."

This is only half the truth. The full story indicates that it was not primarily his offer to discuss cease-fire arrangements with the enemy commander to which the Washington authorities objected, but rather the timing of his message and the inclusion in it of an implied threat that the United Nations might change its previous policy and carry the war to the territory of Red China itself.

General MacArthur also distorts the facts when he says that the same Washington authorities who dismissed him have now received enthusiastically the cease-fire proposal of the Soviet Government. The record shows that the United Nations has made repeated efforts since June 1950 to secure a cease-fire in Korea. Particularly after the Chinese Communists entered the war were strenuous attempts made in this direction.

The proposal for cease-fire talks made by the Soviet Government on June 23 and subsequently concurred in by Communist China and North Korea omitted all reference to position by the Communists which revived some enthusiasm in Washington and paved the way for the current negotiations at Kaesong. Instead, therefore, of American policy following the Soviet line, as General MacArthur implied, it would seem that Soviet policy had come around at least part way to the American line.

Whatever merits there may be to General MacArthur's arguments, one cannot help but question them seriously because of the tactics and methods of reasoning which he employs.

STATE COLLEGE, PA., July 28, 1951.

Comment on General MacArthur's Boston Address

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Elton Atwater entitled "Tactics and Reasoning Questioned," to the editor of the New York Times, dated July 28, 1951, commenting on General MacArthur's Boston address.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TACTICS AND REASONING QUESTIONED

TO THE EDITOR OF THE NEW YORK TIMES

Your editorial of July 27 clearly pointed out some of the inconsistencies in General MacArthur's recent speech at Boston. It is disturbing to note that General MacArthur, who portrays himself as a symbol of truth and integrity, resorted in this speech to the stratagem of half-truths in order to support his position and discredit his critics.

He said, for example, that one of the reasons for his dismissal was his readiness "to

Shopping for Defense

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. DOYLE. Mr. Speaker, under unanimous consent heretofore granted, I herewith introduce for the attention of yourself and my other distinguished colleagues an editorial which appeared in the Christian Science Monitor of July 30, 1951. It follows:

SHOPPING FOR DEFENSE

Senator LODGE of Massachusetts has presented to the Senate an interesting series of questions and answers between himself and Lt. Gen. Alfred M. Gruenther, chief of staff to General Eisenhower in the Supreme Headquarters, Allied Powers in Europe. The questions relate to the effect of possible reductions in the military aid to other North Atlantic Pact countries, now pending before the Senate.

One proposal has been to cut in half the \$8,500,000,000 requested by the administration for military and economic assistance abroad or to spread it over 2 years instead of one. Senator LODGE asked what changes this would cause in the rate of European rearmament.

General Gruenther said the result would be necessarily to reduce by one-fourth the number of army divisions and air squadrons which are expected to be readied by European nations as their part of the mutual aid program by late 1952.

The Senator calculated from announced goals that this would mean a loss in potential armed manpower of 14 divisions and from 15 to 20 air squadrons.

This poses very squarely the decision that is before Congress. Do the proponents of the approximate \$4,000,000,000 cut believe (a) that with that sum they can create and equip more than an equivalent of American Army divisions and air groups, (b) that by retaining that sum in the American economy they can increase its military production potential in more than equivalent ratio, or (c) that it is simply not necessary to go that far in defense preparation against Communist imperialism?

The last hypothesis scarcely requires argument.

If conserving economic potential is the consideration, two points should be remembered; (1) It takes a long time, perhaps more time than a single-handed America would have, to convert from civilian to defense production. (2) To surrender Western Europe would be to give to the Soviets steel production and other industrial capacity very much greater than their own.

If the choice is between military cooperation and "going it alone," Americans may remember how their own vast Federal aid highway system has been built—on a matching basis, States pooling their resources with those of the National Government. Surely it would seem that \$4,000,000,000 will buy more defense if matched, as is intended, with European matériel and manpower than it will buy otherwise.

Moreover, European sentiment at this time has been built up, partly by American appeals, to a willingness to join in a major rearmament effort for defense of the free world. If the United States now backs away from the response to its own urgings, the effect will be what General Gruenther calls "a severe crisis in confidence" and an undercutting of the effort to evoke full-scale efforts from Western Europe in its own defense.

World Government Opposed by Legislature of the State of Michigan

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a copy of a concurrent resolution by the Legislature of the State of Michigan in which it is on record as opposing with considerable vehemence the idea of a world government. The resolution is as follows:

House Concurrent Resolution 31
Concurrent resolution in opposition to world government

Whereas world government, so-called, is a movement on the part of certain persons and groups in this country who seek, under the guise of peace, to subjugate this country to the rule of a world government which would be operated by representatives of nations whose theories and practice of gov-

ernment are opposed to the fundamental freedoms which have been the foundation upon which this country has grown great; and

Whereas world government would mean that our freedoms would be out-voted 5 to 1 by the dictators of the slave states; and

Whereas under world government the American people would surrender their own sovereignty irrevocably and would no longer be permitted to write their own laws; and

Whereas through the past 150 years this country has grown into a great nation because of the idea of individual freedom and initiative and because of that success has proven to be the rock upon which the two World Wars have been won against the two dictators and would-be world conquerors; and

Whereas this country has demonstrated that it cannot be enslaved by force, the willing adherents of a world government idea (in pursuit of a will-o'-the-wisp of peace at any cost) have become tools in the hands of those who wish to conquer this great Nation by other means, and

Whereas this country has demonstrated in four great wars that individual liberty and freedom are worth any sacrifice, and

Whereas all the great patriotic organizations of this country are opposed to the movement. Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Legislature of the State of Michigan is in opposition to the movement for world government as being intended to reduce all the peoples of the world to the slavery of the state-dominated nations behind the iron curtain and the destruction of all the ideas of freedom of the individual upon which this country has become a great nation, and be it further

Resolved, That copies of this resolution be sent to each member of the Michigan delegation in Congress and to the legislature of each State.

Faltering Leadership

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. JOHNSON. Mr. Speaker, I include an interesting and penetrating editorial from the Stockton Record, published in Stockton, Calif. This paper has a long record of constructive leadership in its field. Also, it is a paper that is not a partisan publication. Its owner, Irving Martin, has been a leader in progressive political matters for half a century. The editorial, unwittingly perhaps, states some of the very questions Congressmen are asking themselves. That is, why have controls not been invoked before? Shortly after the Korean attack the matter came before Congress. Congressman Kunkel, of Pennsylvania, sought in 1950, when the economic control bill was before the House, to have enacted something similar to the proposal of Mr. Baruch. The administration beat that amendment down. However, a controls law was passed and, as everyone knows who reads the papers, nothing very effective was done for months and months. Up to this moment the organization provided for still seems to be uncertain as to what it really

wishes to do. I have talked to several gentlemen in whom I have the utmost confidence, who are personal friends and who have been called here as advisers to the Price Administrator. They have told me that up to date they find very little utilization of their talents. They also find that their suggestions, based on a lifetime of effort and experience in the business world, are not given much attention. This editorial analyzed the situation about as well as any I have seen. I think it indicates that the administration, up to a few months ago, was only half-heartedly supporting the controls program.

Furthermore, it is the belief of many conscientious Members of Congress on both sides of the aisle that the administration has not tackled the real causes of inflation. High prices are merely evidence of inflation. Price ceilings only temporarily stop the inflation at the prices on the items where there is a ceiling. Other steps which could be taken to strike directly at the present serious inflationary trend would be far more effective. The rift between the President and some members of the Federal Reserve Board prevented that agency from taking appropriate steps to control inflation. When one realizes that over the past few years the life insurance policies outstanding have been estimated, by economic and research experts, as having been depreciated in their purchasing power up to about \$100,000,000,000—the estimates vary between \$80,000,000,000 and \$140,000,000,000—one can readily understand why we should take effective steps to halt inflation.

Following is the editorial:

FALTERING LEADERSHIP

In his midyear economic report to Congress Monday, President Truman called for a blood-sweat-and-tears program to bolster American defenses against Communist aggression. The setting had more of the dramatic urgency of Winston Churchill's 1940 appeal, but the hard facts that prompted Mr. Truman's words menace the United States no less than hard facts menaced Britain in 1940. The danger is that the facts will not get the attention they deserve.

In his economic message, the President displayed his two best traits—courage and tenacity. But his very demands for support also showed how deeply he lacks vision and leadership. The Presidential message warned repeatedly of our present inadequacies. Output of planes and tanks is lagging, Mr. Truman said. The Armed Forces must go up through the present 3,500,000-man ceiling. Stiff taxes and controls must be imposed to offset a widening inflationary gap. Further civilian belt-tightening is in prospect, he added.

Yet a balky Congress is threatening to block these new Presidential demands. Many similar ones already have been pigeonholed. Senators and Representatives just do not trust Truman leadership. The reason—

Speaking plainly, South Korea was not invaded Sunday. It was invaded 13 months ago. Quick mobilization, stepped-up production, and rigid economic controls were urged by many last July. Why is Mr. Truman asking for them this week?

Much of the responsibility belongs with the President and his advisers. Convinced that the Korean police action was a local affair and that greater defense efforts would upset political applecarts, they sent word:

"Wait until after the November elections." Congress was told things were not serious yet. Not until the Chinese attacked did the true significance of Korea appear to the soft-peddlers.

By then the opportunity for leadership had been lost. The public was confused. The President's own party, riven with vendettas, refused to respond. Senator Taft and his supporters got their foot in the door. Now, despite all Mr. Truman's zeal, he has a tough selling job to do, and the cost of delay will come high.

Land of Opportunity

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article which appeared in the business and finance section of the July 23 issue of Time magazine subheaded "The general."

In the article we find the sterling example of these United States as a land of opportunity. It is, in effect, a biographical sketch of Gen. David Sarnoff, president of the Radio Corp. of America. The story of his life contains all the classic ingredients of a success story. Where there are brains, imagination, determination, the United States will give room for their development.

The amazing scope of mind of General Sarnoff together with his vitality have enriched our country and added materially to its progress. If General Sarnoff has received his rewards, the benefits flowing to the United States therefrom are immeasurable.

The above-mentioned article follows:

THE GENERAL

The public scored David Sarnoff's Radio Corp. of America with a lost round last year in the great color TV fight with Columbia Broadcasting System. Sarnoff did not stay down. Last week he showed the television industry a new tube that receives clear, true color, and he showed the public that RCA's color system can do what CBS's cannot; color programs broadcast by RCA can be received in black and white on present sets without any change. It looked as if radio's miracle man had not run out of miracles.

For months, Wall Street speculators have been betting on Sarnoff. So far this year, RCA stock has risen from 16½ to 21½. CBS fallen from 33 to 25½. This trend is the more remarkable because 6 months ago RCA was apparently caught flat-footed when the Federal Communications Commission decided to license the CBS "whirling disc" system for commercial broadcasting. RCA promised a much better system, one that existing TV sets would receive in black and white (unlike the CBS method) without any change in the sets. But the color RCA showed FCC last fall was mushy and CBS's was clear. FCC decided not to wait.

Even then, old radiomen kept their eyes on Sarnoff. He is the man who put radio in the home—and never forgets it for a waking moment. He is boss of RCA with its 52,000 employees (including those of the 238-station NBC radio and television network), of 13 manufacturing plants which

turn out millions of radios, TV sets and hundreds of different electronic gadgets, of a research staff which year in and year out develops new wonders. Would Sarnoff, who boasts that he was born about the same time that the electron was discovered (as if they were somehow twins), allow himself to be bested in the next great advance of the industry that he had led for two decades? Those who knew Sarnoff's vast ability—and his vast pride—thought not. They listened when, coldly eyeing the FCC decision, he said: "We may have lost the battle, but we'll win the war."

SECRET WEAPON

To get the weapon he needed, Sarnoff prodded RCA, not a nimble organization, into an amazing burst of speed to improve its color system. Last week, in his Radio City Exhibition Hall, Sarnoff put on a demonstration for some 200 radio and television reporters, who saw a 20-minute program starring Nanette Fabray and Singer Yma Sumac on RCA's new color tubes. (In RCA's system, the color-television camera breaks a picture down into three colors (red, green, and blue). These color impulses are broadcast, picked up by a television receiver circuit, which sets off three electronic "guns" (one for each color) inside the picture tube. They project the picture on the face of the tube so fast (1,800 times a minute) that the three-color pictures blend into a single all-color one.) There was no blurring or running of colors, even in the fastest movement, e. g., a pair of performing lovebirds flapping their wings. As a show topper, an RCA mobile unit focused on a swimming pool near New York where a troupe of swimmers and divers performed. The outdoor telecast, which RCA explained could just as well be a football game or boxing match, came through almost as clearly as the studio show.

Within 2 months, RCA will start putting on similar public color demonstrations on 100 receivers which will be moved from city to city all over the United States. By broadcasting its color show last week on its regular channel, RCA also showed TV set owners that its system is compatible, i. e., it could receive the broadcasts in black and white. (RCA can also convert existing sets to color.) The new tube's performance was so impressive that such TV competitors as Allen B. DuMont, who has opposed any form of color up till now, changed their minds. Said DuMont: "The RCA picture was good enough to start commercial programs immediately."

Sarnoff is far more cautious. He says: "Commercial color television on a big basis is still 2 to 5 years away. Material shortage, NPA cut-backs on TV production, and defense orders will delay it. On top of that, it will take a long time to get the bugs out of mass production of the color tube."

Many a TV man thinks that Sarnoff's 5 years is too long. One big reason is that when FCC made its decision last fall, TV set makers were almost solidly against the CBS system, because they were up to their ears in orders and wanted to make no changes that might upset sales. Now, TV manufacturers are up to their ears in unsold sets, are more likely to grab at RCA's system, which they think will get customers buying again. RCA has already given manufacturers the blueprints of its color system, to make sets (on a royalty basis)—if FCC gives the go-ahead.

Whatever technical or bureaucratic difficulties may lie ahead of RCA's color system, it was clear from last week's demonstration that Sarnoff was fighting his way out of a tough spot.

For more than 50 of his 60 years, Sarnoff has been doing just that. Driving through obstacles is his habit, his joy, his bitter necessity. He says: "There are three drives that rule most men: money, sex, and power." Nobody doubts that Sarnoff's ruling drive

is power. Says a deputy: "There is no question about it, he is the god over here."

THE HERMITAGE

American business biography abounds in up-from-the-bottom stories; few are quite so dramatic and revealing as Sarnoff's. Owen D. Young said that Sarnoff had lived "the most amazing romance of its kind on record." Horatio Alger himself could hardly have done it in one book; he would have needed *Adrift* in New York, *Nelson the Newsboy*, *The Telegraph Boy* and *Joe's Luck* or *Always Wide Awake*.

Sarnoff was born in 1891, eldest son of a poverty-stricken family in the tiny (pop. 200) Jewish community of Uzlian, in Russia's province of Minsk. His father, who came of a trading family, wanted him to become a trader. His mother, who came of a long line of rabbis, insisted that he become a scholar. Sarnoff remembers that in the world of his childhood, prestige was based not on money but on "the possession of knowledge."

When David was four, the dispute over his future ended; his father departed alone for America. His mother, a strong-willed woman, promptly packed David off to her uncle, a rabbi who lived in a hermitage in Korma, about 150 miles east of Minsk. For about 5 years David stayed there, the only boy in the hermitage, up at 6 to begin his studies of the Talmud that lasted until 9 at night. He was lonely and he remembers those strange years with bitterness. The greybeards in the hermitage did not teach him to count. But those years trained his memory (2,000 words of the Talmud a day) and his reasoning powers. He was set simple ethical problems to work out. Sample: "If you saw an article lying in the street, what rights would you have to it?"

This tutelage ended when David was 9½. His father in America sent for his family. David, his mother and a brother took a ship at Libau, Latvia. "I had never even seen a picture of a ship," says David. His mother, afraid of forbidden food on the ship, had cooked, according to strict orthodox rules, a great hamper of bread, cakes, and pickled meats. She explained that these were to be their only food on the voyage. David saw the food hamper being lowered into the hold. Afraid that it would be lost and he would starve, he dived after it into the hold, dropped 50 feet, scrambled about until he found the hamper and was rescued by a seaman. A sailor who spoke Russian told him: "You'll do all right in America."

He had to. When the Sarnoffs arrived in New York, they found the father broken in health. Ten-year-old David, who could not speak English, became the chief breadwinner for the family, which soon included two more babies. At 4 in the morning he left the family room on the lower East Side to deliver the Jewish Morning Journal, ran errands for a butcher before going to school. He saved enough money to buy a newsstand, sold papers after school until late at night. David, who had a fine soprano voice, also earned \$1.50 a week singing in the synagogue. At 15, on the day before he was to get \$100 for singing during the Jewish holy days, his voice began to change. It was a disaster. He had to quit grammar school to look for a full-time job.

INCIDENTALLY ME

He found one (at \$5 a week) as an office boy, saved \$150 to buy a telegraph key, and taught himself the Morse code. Soon he talked himself into an office job with American Marconi, the United States subsidiary of Marconi's British-owned company. The magic of wireless captured the boy's imagination; so did the personality of Marconi. "I carried his bag, delivered candy and flowers to his girl friends. I admired the simplicity of his approach to problems."

Up to this point, David had merely reacted with extraordinary energy to the responsibilities thrust upon him. Luck put him into the communications business, but had nothing to do with his next step. What he did next may have stemmed from the training in the lonely years in the hermitage at Korma: he sat down and thought out the path to his future. He noted that the company's wireless operators knew nothing about the office and that the office staff knew nothing about wireless. He decided that, as the business grew, it would need a man who knew both.

Sarnoff got his first operator's job on Nantucket Island, a job so lonely that few operators wanted it (\$70 a month, \$40 home to mother). David used his spare time to study books on wireless as tirelessly as he had the Talmud. Soon his expert "fist" could send 45 words per minute steadily for 8 hours—a pace not many could equal. After 2 years there, he got himself transferred to Long Island, at a \$10 cut in pay, so that he could go to night school, where he finished a 3-year electrical-engineering course in 12 months. When his big chance came, he was ready for it. He was an operator in the Marconi wireless station, atop John Wanamaker's Manhattan store, on the night of April 14, 1912, when he picked up a message from steamship *Titanic*: "Ran into iceberg. Sinking fast." For 3 days and nights, the Nation waited breathlessly while Sarnoff, going without sleep, provided its only news of the disaster and survivors. President Taft ordered all other stations off the air to enable Operator Sarnoff to catch the messages.

Sarnoff notes that the *Titanic* disaster "brought radio (and incidentally me) to the front." As a result of the disaster, Congress passed a law requiring every ship with more than 50 passengers to carry wireless. American Marconi set up a school to fill the sudden demand for operators; Sarnoff became an instructor at the school, rapidly moved up the ladder to commercial manager.

THE MUSIC BOX

In 1915 he wrote a historic memo to his boss. Experiments had already proved that wireless could broadcast speech as well as signals, but since anybody could "listen in" on such messages, the wireless companies thought the lack of privacy robbed radio-telephony of any commercial value. (Reginald Fessenden had made such a broadcast in 1906, when wireless operators at sea were startled to pick up the unearthly sounds.) Sarnoff realized its possibilities. In his memo, he proposed to build a "Radio music box to bring music into the house by wireless. Receiving lectures at home can be made perfectly audible; also events of national importance can be simultaneously announced and received." In the turmoil of World War I, Sarnoff's memo was ignored.

At war's end, the United States determined to end the British wireless monopoly. At Government urging, General Electric's Vice President Owen D. Young got G. E., Westinghouse, United Fruit and A. T. & T. to pool all their wireless patents and jointly organize RCA. It took over American Marconi—and Sarnoff. As RCA's chairman, Young was so impressed with Sarnoff's vision and knowledge of wireless theory and practice that he made him general manager.

Sarnoff dug out his old 1915 memo and tried it on Young, who like the "music box" idea. But RCA's directors were willing to risk only \$2,000. Sarnoff gave a demonstration that woke them up. He borrowed a Navy transmitter and helped give a blow-by-blow broadcast of the 1921 Dempsey-Carpentier world championship fight. It created a sensation; about 200,000 amateur wireless operators and others with home-made sets heard it, and spread the news of the wonder so widely that the public clamored for sets. RCA quickly developed the "music

box," and both GE and Westinghouse began making it, with RCA acting as wholesaler.

Everyone thought that Sarnoff was foolishly optimistic when he predicted that \$75,000,000 in boxes would be sold within 3 years. Actual sales: \$83,000,000. David Sarnoff, a prophet with honor, was soon radio's wonder boy, teeming with ideas. Why not, he proposed, put radios and phonographs in a single cabinet, save space, cut costs by using the same loudspeakers. Sales of such combinations soared. Why not start a radio network to improve programs, broaden the market for sets? At Sarnoff's urging, RCA found NBC and the Red Network. Two months later, the Blue Network was added.

CHANGING THE TUNE

The radio field was being invaded by so many newcomers that Sarnoff got worried; he thought RCA should expand into other fields. But RCA's profits were needed to keep pace with the mushrooming radio business; there was little left for the kind of expansion he had in mind. So Sarnoff began his famous series of expansions without cash; he traded RCA products and stock for the companies he wanted. RCA had developed the photophone, a device for talking movies, and traded rights to it to Radio-Albee-Orpheum and FPO Productions, Inc. for 65 percent of their stock. The name was changed to the Radio-Keith-Orpheum (RKO). To get into the manufacturing business on its own, instead of remaining only a wholesaler of sets, RCA swung an even bigger deal, RCA took over Victor Talking Machine for \$150,000,000 worth of RCA preferred and common stock, a price that Wall Street thought far too high. RCA profits continued to soar. In 1929, the company that had hesitated to spend \$2,000 on Sarnoff's music box grossed \$178,500,000 as a result of it, netted \$15,800,000, and was one of the sensations of the big bull market.

Radio stock went soaring from \$2.50 to \$54.9 a share, was split and resplit. Insiders made killings in radio pools, but Sarnoff had a reputation for keeping aloof from such shenanigans. At their height, he sailed to Europe to help Owen Young set up the Young plan for German reparations.

When Sarnoff came back in 1930, he was elected president of RCA and faced the depression. It was forcing many a radiomaker to the wall, but Sarnoff kept on driving ahead. In 1932, the Department of Justice forced GE and Westinghouse to give up their 51.3 percent control of RCA (by distributing their RCA holdings to their own stockholders). In this way RCA achieved independence, but as part of the deal Sarnoff also had to pay off \$17,900,000 that RCA owed its parents. He did it partly when he turned over to them RCA's new skyscraper headquarters in Manhattan (which GE still uses for its executive office), partly when GE and Westinghouse wiped out \$8,900,000 of the debt. RCA had outgrown the building, anyway. For new quarters, RCA took over the biggest building in Rockefeller Center and handed out 100,000 shares of preferred stock as part of the deal.

By then, the depression had hit hard enough so that Sarnoff decided to lighten ship. He started selling off control of RKO and later, on orders of FCC, sold the Blue network (it became the American Broadcasting Co.). In RCA's stock-swapping years, it paid no dividends. The first one was not paid until 1937, nearly 20 years after the company started. Sarnoff has thought it more important to plow earnings into research to keep up with the electronic world. And profits from research have often been a long time coming.

BRAVE NEW WORLD

Television is the best example. In 1923, Dr. Vladimir Zworykin, Westinghouse's Russian-born wizard, invented the eye of the

modern TV camera—the iconoscope, and developed the kinescope. Sarnoff then called television a dream whose shadowy outlines are beginning to appear on the far horizon, and set to work to make it come true. In 1928, RCA opened an experimental TV station in New York and during the next 20 years poured \$50,000,000 into television. At the opening of New York's World Fair on April 30, 1939, Sarnoff made the first United States commercial telecast with the words: "Now at last we add sight to sound."

But even so it was not until after World War II that the mass production of TV sets began.

Out of RCA's big research headquarters at Princeton, N. J., Dr. Zworykin (who joined RCA in 1929) and his colleagues, under Vice President C. B. Jolliffe, brought many other startling developments: the electron microscope, the infra-red sniperscope which enabled World War II G.I.'s to knock off skulking Japanese troops at night, shoran, for accurate blind-bombing. In World War II, RCA turned out an estimated \$500,000,000 worth of devices for the Armed Forces. Now it has big defense orders, many for products no one else can make.

Sarnoff is no scientist yet of all RCA's activities, research is nearest his heart and he is one of the few top men of the industry who can talk to scientists within an interpreter. And research represents tomorrow, expansion, new success which David Sarnoff, after the painful insecurity of his early life, still seeks.

COLLECTORS ITEMS

Modesty, false or otherwise, does not disguise Sarnoff's power and success. His chill blue eyes shine with impatient energy, his boyish, scrubbed-pink face radiates cockiness. All 5 feet 5 inches of his bull-necked, bull-chested figure bristles with authority and assurance. He dresses with conservative, expensive elegance, even carries a gold frame to hold matchbooks.

At RCA he makes all the top decisions, is brusque with slower-witted underlings. He insists that every memo to him must be no more than a page, but allows himself more latitude, has written memos as long as 30 pages. A collection of his better memos, bound in gold-tooled leather, is a prized Sarnoff possession.

To record his accomplishments more fully, Sarnoff keeps a man working on the history of RCA and his life and times (unpublished, it is now in its twelfth volume). He is proudest of the fact that President Roosevelt made him a brigadier general for his work in organizing communications for SHAEF, and he wears a gold ring with SHAEF's flaming sword insignia. He likes to be called General, and everybody at RCA does so. Even his wife and sons Robert, an NBC vice president, Edward, an electric appliance distributor, and Thomas, an ABC employee, so refer to him.

Again and again, he makes two points about his own personality: (1) He loves music, (2) he does not love money.

In the teeth of the realities of commercial radio and TV, he tries sincerely to hang on to his dream of the music box. Sarnoff gets much of the credit for the fact that radio has helped to change America from musical illiteracy to a nation where millions know and love good music. Sarnoff's original idea was that makers of radio sets would sponsor cultural programs. To this day he has little knowledge of radio advertising and he despises cheap radio entertainment.

SHARPS AND FLATS

Sarnoff's closest friends are from the musical world. Occasionally, such friends as NBC Music Director Sam Chotzinoff, Jascha Heifetz, Vladimir Horowitz, etc., stage elaborate costume parties at Sarnoff's home. At a surprise party for Toscanini, the maestro was shown to the sixth floor when he arrived,

asked if he had a reservation, was finally led into what seemed to be a night club. A blare of jazz assailed the conductor's ears. Sarnoff acted as ringmaster in a circus act while Elza Helfetz Behrman, sister of Jascha Heifetz and wife of Playwright S. N. Behrman, rode a make-believe horse. Toscanini sat with his head in his hands all evening, would not look at the show, and was not amused.

Last year, for Sarnoff's birthday, the group staged a satire. Chotzinoff, impersonating Sarnoff, sat at a breakfast table, surrounded by telephones, talked into all of them at once, pounded the table, chewed up cigars. Sarnoff was amused.

Sarnoff likes to tell people that he is not a man of big wealth. Considering that he has been for 20 years at or near the top of an expanding industry, this is a sensational statement—and people who ought to know believe it. He has 5,000 shares of RCA stock and a \$200,000-a-year salary.

His home life is as elegantly comfortable as that of any nonmillionaire in the world. The Sarnoff home in Manhattan has 6 floors, 30 rooms, 2 patios, a barber shop, and a projection room. In almost every room, including the servants', are radio and TV sets, with tuning gadgets concealed among the furnishings.

This ménage is presided over by his French-born wife, Lizette, whom he met and married 34 years ago in the Bronx. Sarnoff explains the courtship: "I could speak no French. She could speak no English. So what else could we do?"

MAJOR WEAKNESS

Sarnoff's lack of interest in some of the commercial aspects of radio may account for the fact that RCA's brilliant record in research and financing has not been equaled by its sales record—until recently. The man who has done much to eliminate this weakness is Frank M. Folsom, one-time vice president of Chicago's Goldblatt Bros. and Montgomery Ward, and chief of the procurement branch of the Navy during World War II, who joined RCA Victor in 1944.

As RCA chairman, Sarnoff lets President Folsom handle most executive details. Folsom is thus the empire's only heir-apparent, but at 57, he is close to Sarnoff's own age. There are a few able younger men coming up, but RCA's major weakness is lack of a solid second echelon of younger executives. Its size often makes it hard for RCA to turn fast enough to cope with the crack team of Paley and Frank Stanton at smaller CBS.

SLOW BUT SURE

CBS got the jump on RCA, not only in color, but in putting on the market 3 years ago the slow-playing record that revolutionized the phonograph business. Not long after that, CBS raided NBC's radio shows, snatched away such top stars as Jack Benny, Amos and Andy. At the time NBC lost the stars; it looked as if it would be hard hit. But Sarnoff has a way of coming out ahead despite defeats. After the rumpus over the long-playing records died down, business for all record companies, including RCA, picked up. Thanks to the astounding spread of television, the network has hardly missed its radio stars.

To Sarnoff, these were all skirmishes, nothing to scare him from his plans to expand RCA into new territory. He is already itching to put RCA into the electric-appliance business. NBC into the movie business (to make films for television), and is planning a "pay-as-you-hear" TV system which would not depend on telephones as does Zenith Radio Corp.'s system (Time, June 4). Above all, he is confident that the vast sums he has poured into research will continue to pay off with more spectacular advances than even his color-television tube.

"Electrons," he points out, "can supply the brains for the control of machinery,

respond to light, color, a wisp of smoke—the faintest touch or the feeblest sound. Today, these electrons can follow a chart, a blueprint or a pattern more accurately than the human eye. Some day, they may even respond to smell and taste. Who would dare predict the future? He is a rash man who would limit an art as limitless as space itself."

The Gains We Have Made

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. ZABLOCKI. Mr. Speaker, repeatedly we hear accusations and charges of a lack of foreign policy and a past complete failure of the present administration in the fields of international relations and security. It is heartening, therefore, to read the following straightforward and unbiased report such as *The Gains We Have Made*, an editorial which appeared in the Milwaukee Journal of Sunday, July 29, which I recommend to the membership:

THE GAINS WE HAVE MADE

Tremendous global developments of the last several weeks have spurred the hope that the free world, working in unity, may yet realize the age-old hope of a peaceful earth.

The basic free-world policy at this moment in history is "containment" of Russian imperialist aggression. The line of defense is long. It extends from Korea through Japan, the Philippines, Indochina, Malaya, and India, to the Middle East, through the Mediterranean and Western Europe to northern Scandinavia. It is a military, moral, and economic line.

The success of the free-world policy has been impressive—in Greece, at Trieste, in Berlin, in Indochina and, now, in the biggest struggle in Korea. There are still weak spots in the defense line—in the Far and Middle East in particular. But the brakes have been applied to the Communist drive. And free-world unity is making terrific strides.

Europe was the free world's most vulnerable spot, the most attractive prize for aggressors. It is in Europe that the greatest gains are being made. The Marshall plan helped put the European economy on its feet. The Atlantic Pact and military aid program are building military forces capable of insuring security. The Council of Europe is spurring action in many fields of mutual endeavor.

The Schuman plan for integrating European coal and steel production and similar plans for agriculture, transport, and civil aviation have brought new conceptions of European unification and laid the ground work for political unity. Age-old currency barriers are being cut by the European payments union. Customs unions are leveling tariff walls and opening doors to trade. British Commonwealth and affiliated sterling-bloc nations have, through loans and trade agreements, stimulated commerce and rehabilitation.

In the Far East progress is slower as new nations, freed from colonial ties, feel their way slowly. But progress is there. With U. N. and American and British aid gains are being made in food production, industry, health, and military security. Korea has given new courage to far-eastern nations which desire to remain free.

The results of this great global program have pyramided progress and now the timetable is being stepped up. Recent weeks have brought many new developments—any one of which would have sufficed for a decade in the prewar world, and many of which would have been beyond the conception of that world.

Five European nations—France, Luxembourg, Italy, Germany, and Belgium—agreed on basic principles for pooling their armies under one command and one banner as the start of a unified European army.

Greece and Turkey, already members of the Council of Europe, have had the way cleared for participation in the North Atlantic Pact. In the making may be a Near East security plan joining them more solidly to the "containment" arc.

Announcement of Japanese peace-treaty plans and the decision of the Allies to end the state of war with Germany paves the way for those defeated nations to play a part in the free world. Supporting those policies is the new Anzac-United States mutual security pact, forerunner of a pact for the Pacific similar to the Atlantic Pact.

Simultaneously, steps were taken to strengthen the European defense perimeter by an agreement for use of Spanish bases by American air and naval forces. The British Commonwealth Colombo plan for far eastern economic development was started with projects for India. The United States point 4 program was developing along broader and sounder lines in Congress.

No period in world history has seen such tremendous developments for mutual aid and security to insure peace and a better life for free men. It has been slow and difficult work in the face of old nationalist suspicions and the tendency of political opportunists to claim "no policy at all" in this great world-wide program. But the struggles of the last few years are now paying off. As General Eisenhower said in London a few days ago.

"Caution that is inescapable in a new and unique enterprise has been replaced by confidence born out of obstacles overcome. * * * If we march together, endure together, share together, we shall succeed—we shall gloriously succeed together."

After Cease-Fire, Can We Have Real Bipartisanship?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BENDER. Mr. Speaker, the old maxim, "Politics ends where the oceans begin," may well have another testing ground soon. If the cease-fire holds good in Korea, the administration will have another chance to make its old claim of a bipartisan foreign policy really true. There has always been in our history an amazing degree of national unity on the conduct of foreign affairs, once the issues had been clarified. To be sure, we have fought long and hard on policies in the debating stages, but when the chips were down, when any threat matured, we have joined forces and driven political differences out of the arena.

In the decisive questions still ahead—the development of our national strength, the strengthening of the

United Nations as a force for peace, the realization of the Western European coalition, there is room for large-scale agreement between Democrats and Republicans. Here, the issue will be resolved by the extent to which Mr. Truman invites Republicans into Government councils before decisions are made, rather than after they have been reached.

The complex problems are so weighty that they demand of the administration the same kind of foresighted statesmanship which Mr. Churchill displayed in taking Mr. Atlee to international conferences while Churchill was still Prime Minister. If we have this kind of bipartisanship now, we may prevent sorrow and tragedy later.

The Tidelands Cases

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BROOKS. Mr. Speaker, under permission to extend my remarks, I include the following article by George Sokolsky dated July 29, 1951:

THESE DAYS

(By George Sokolsky)

I became interested in the tidelands cases for two reasons, perhaps somewhat different from those which immediately trouble the people of the States of California, Texas, and Louisiana.

The first reason is the constant encroachment of the Federal Government on the revenues of State governments. In some States, in which the Federal Government has established vast national parks and reservations, State revenues are in such a dismal condition that the States turn to Washington for a hand-out.

This is a bad practice. It was part of the theory of the New Dealers that States should be abolished and that the United States should be divided into administrative provinces—nine, if my memory serves me.

Such a procedure would have destroyed the sovereignty of the States and would have established an administrative system that could have been a basis for a totalitarian government.

The scheme failed and has been forgotten, but Federal encroachment on the rights of the States and of the people thereof has continued, often in such small respects that it amounts to a whittling process that can, in time, completely alter our form of government.

The second reason for my interest in the tidelands question is that in the case of the United States against Texas, the Supreme Court, deciding against the State 4 to 3, Mr. Justice Hugo Black and Mr. Justice William O. Douglas employed startling language, as in the California case, which ought not to be permitted to stand as precedent in American law.

The theory that what, at a particular moment, an administration of Government believes to be necessary is ipso facto right is not American but Nazi law.

Justice Oliver Wendell Holmes, throughout his long career as an Hegelian philosopher, essayist, and jurist, did believe that law as a function of the power of the state involved no moral criteria, but both the

Declaration of Independence and the Constitution of the United States conceived of law in this country as a limited procedure which, in the case of the individual, must not breach his inalienable rights and, in the case of States, must not invade their jurisdiction beyond the specific provisions of the Constitution.

Whereas the Democratic Party pays lip service to the memory of Thomas Jefferson, the tendency of both the Roosevelt and Truman administrations has been to ignore such limitations on the assumption that the necessities of the Government are paramount.

In the California and Texas cases the Supreme Court upheld this doctrine without, however, a very clear definition of the necessities of the Government.

Moreover, when such phrases are employed as "bare legal title" or "mere property ownership," the peril is far beyond these particular cases.

Our social and economic life is organized around "legal titles." A man has a legal title to his home, his automobile, his furniture, his television set, etc. And that is all that he has. That legal title is his sole right to possess whatever he has, even the suit on his back.

There are countries where a "legal title" does not exist for the individual but is vested in the government. In such countries, the government can, in pursuit of its so-called necessities, divest the individual of his possessions, because the title to the means of production, distribution, and exchange is socially vested in the state.

This is Marxian socialism, now practiced in Soviet Russia and other Communist countries.

When, therefore, a Justice of the United States Supreme Court denounces "legal titles" by using such an adjective as "bare" to describe them, he is moving a step toward the concept that a legal title is unimportant per se.

Ignoring for the moment all other considerations in these Tidelands cases, such a concept as this held by Mr. Justice Douglas must not be permitted to stand:

"Property rights must then be so subordinated to political rights as in substance to coalesce and unite in the national sovereignty."

The American conception of property rights is that they exist by right of law and not by the fiat of the administration in power. Were it otherwise, it would be possible for the Republicans, when they achieved power, to deny property rights to Democrats and vice versa.

As a matter of fact, that process is actually employed today in countries where nationalization is incomplete, such as China and Czechoslovakia, and it was used by Soviet Russia to deprive landowning farmers, Kulaks, of their property.

In a word, here we have an issue that transcends oil and goes to the heart of the American philosophy of life.

Missouri Valley Flood Problem

EXTENSION OF REMARKS OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BAKEWELL. Mr. Speaker, the recent floods in the Missouri Valley have tragically and forcefully called the attention of the Congress and the American people once again to the necessity

of action by the Federal Government to prevent repeated recurrences of floods and the resulting suffering, private loss, and harm to the national economy as well as to the Nation's food supply.

In the past, numerous plans have been advocated as the solution for this problem. Unfortunately, there has been considerable diversity of opinion amongst the proponents of these plans as to which is the best plan. I believe, however, that the Congress and the American people generally, especially those living in the Missouri Valley, are all agreed that some plan is necessary. I would like to see those who are concerned with this problem forget the differences which have separated them and unite behind a plan which, of necessity, must involve some compromise, and present a common front, so that we may move forward expeditiously and effectively toward a solution of the problem.

As I see it, there are five basic factors inherent in any flood-control plan which are as follows:

First. Flood control.

Second. Irrigation.

Third. Navigation.

Fourth. Soil conservation.

Fifth. Power production.

With regard to the first, there is complete unanimity. There is some difference of opinion with regard to the necessity for irrigation, navigation, and soil conservation, although I believe that practically all the proponents of flood control realize that all of these factors are important and to a certain extent must be included in any over-all flood-control plan which will be acceptable to all concerned.

The most controversial element is power production. It is my belief that for the present plans for power production in a flood-control plan for the Missouri Valley must be kept to a minimum. While we all recognize the fact that it is desirable to make electricity available to the largest number of citizens, still we must take into account the existence of private power production and distribution facilities. It is not my intention to deprive investors and private utilities of their capital; nor to destroy large corporations which provide employment in communities in which they serve.

It is my hope, Mr. Speaker, that the Department of the Interior, the Army engineers, and the proponents of a Missouri Valley authority, as well as the various flood-control associations, chambers of commerce, and farmers' groups concerned, will come together in a joint meeting for the purpose of exploring and analyzing plans heretofore advocated and then, through a spirit of good will and compromise and a sense of the importance and the immediacy of the problem, arrive at a common plan which can be presented to the Congress.

We have heard many accounts and have seen numerous pictures of the effect of a flood in rural areas. I think, however, that fewer Americans are aware of the devastating effects that a flood has upon an urban area. Although my home city of St. Louis, through a fortuitous combination of circumstances, escaped severe damage from the flood, our sister city of Kansas City was not so fortunate.

I would like to close by including herewith the following article by James Lawrence, editorial writer for the St. Louis Post-Dispatch, which appeared in the Post-Dispatch on Sunday, July 29:

IN THE WAKE OF A FLOOD (By James Lawrence)

KANSAS CITY.—The story of a great flood can be told in terms of so many feet of a river stage, in terms of roads closed, bridges washed out, factories flooded, in terms of statistics on the homeless. But that is not what a flood is.

A flood is homes cracked into matchsticks, industrial plants thrown into rubble piles, smokestacks staring above the wreckage, a pervasive odor of decay, a city turned into a battlefield drenched in mud.

The muddy Kansas River is often a slow stream, and a man can sometimes wade across it at Eudora, west of Kansas City. But ever since the Ice Age which helped create the winding river, the Kaw has occasionally flooded out its valley. For a time this July the Kansas lost its quiet and turned the bigger Missouri into its tributary.

From Kansas City west to Lawrence the highway skirts the Kaw valley. There are few crossings of the river, for nearly every bridge on up to Manhattan was flung into the floods, and along the edges of the road now, the fields are full of rippled black silt, with no green thing showing.

WHEN WATER HITS A CITY

Over many acres there are lakes, though the river has receded to its banks. These lakes will remain, to sour the soil and defy the plow, until the sun sucks them away. Back from the road, beyond or in the lakes, there is a white glint from farm homes, some crumpled on their foundations, some floated into trees or banks where they collapsed.

That is a flood in the country. It is an old story, how the water makes a desert of the countryside.

But this concept of a flood would prepare no one for what happens when a wall of water hits a city. What happens to a city is a shock to perception and a challenge to belief.

Southwest boulevard runs northeast from Merriam in Kansas, across the State line and into Kansas City. Near the State line the road touches on the edges of major industrial districts. It threads among small plants, warehouses, oil supply depots, freight yards, homes and tenements, crowded below the terraced skyscrapers of the city.

A few days ago bulldozers, road scrapers, and men with shovels moved slowly down Southwest boulevard to clear the debris, salvage what there was to salvage and make way for traffic. And this is what the motorist could see:

On each side, the pavement was lined with piles of Kansas gumbo and sand three or four feet high. This was no more than the mud and its gluey collection of bottles, dishes, clothing, boards, cans and bricks which had been cleared from the road. Behind these muddy barricades were the ruins.

BRICKS, TOOTHPICKS, MUD

Three-story brick warehouses had collapsed into cones of bricks. A few had resisted. In other cases two or three walls stood, or a chimney or smokestack rose like a pier above the level wreckage.

Frame homes were torn from their foundations and tossed backward. Front walls leaned against rear walls which leaned against trees or rubble, and the trees bent nearly to the ground. The flimsier tenements had vanished into toothpicks.

Mud covered the low-lying railroad tracks and rose over the trucks of boxcars. In the shambled freight yards, boxcars were overturned and their cargoes gone.

The water had tossed large oil and gasoline tanks into tilted angles, and anchored them in mud. Where had the tanks come from?

One had rolled over a shed, smashing it into the flat alluvial land.

All this devastation apparently had come with the speed of the tide which battered and crushed the high levees. These levees had been expected to protect the industrial districts, and instead only added to the haste of the destruction when they gave way.

WHERE WERE THE PEOPLE?

And the people? For the most part, the people of the district were not there.

A few road workers kept scraping a path for traffic. Trucks carried smashed equipment away and new equipment into the area. A scattering of industrial employees worked here and there with shovels and hoses.

But few of those who lived in the area had returned. The Kaw had begun to return to its lazy path, the sun had returned, industry was digging its way back. For too many of the residents the flood had left a place of no return.

Turkey, Sentinel of the West

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts translated from a series of three articles by Edouard Sablier, published in *Le Monde*, leading Paris daily, on July 6, 7, and 8, 1951, under the headline "Turkey, sentinel of the west." The subject matter of these articles is of great importance to the United States.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

TURKEY, SENTINEL OF THE WEST

Since Ataturk realigned the frontiers of the country with those of the Turkish people, the people have lived amid feelings of solitude but also of intense patriotism and pride. These two feelings are expressed especially in regard to the army. The war in Korea has demonstrated the combat valor and heroism of the Turkish expeditionary corps. The whole nation is determined to make every effort for the defense of its territory and, for that, it looks confidently to the magnificent Anatolian soldier. In addition, the army is treated with the greatest care by the government, and its modern organization makes it unquestionably one of the best instruments of Western Europe.

Today the entire attention of Turkey is directed to its frontiers. The Russians maintain their pressure on the straits and the Armenian provinces. The Bulgarians are deporting their Turkish-speaking citizens. Iran and the Arab countries continue their historic antipathy. Only Greece has warmed up toward Turkey, to a certain degree, in the face of the common danger. To the ethical isolation of the Turks is added their strategic responsibility: guardians of the straits, the Turks are searching desperately for whatever can fortify them in their mission.

This situation cannot help but influence their state of mind. Spy consciousness deepens in intensity: until recent days non-Turks, foreigners, or members of minorities did not have the right to an outside an-

tenna for their radio sets. On the Bosphorus nets bar access to the straits. Theoretically no ship can wander in there without a pilot. But the Russians seem ingenious in bypassing the rule; often one of their boats gets tangled in the nets, pays the fine and, next time, tries it again. Sometimes a ship reaches the banks and the press never fails to cry "fifth column."

The Russian is the obsession. In all the speeches and all the articles, he represents the bete noir, or the scapegoat. * * *

Turkish foreign policy is dominated today by one single preoccupation: Adherence to the Atlantic Pact. The entire parliamentary and journalistic life turns around this question. It is not even dictated by diplomatic considerations, but is a veritable affair of passion.

To remain neutral between the Bolshevik east and the capitalist west was a highly honored principle in Turkey, well before the war. The Kemal regime constantly made common cause with the east to counterbalance the overelish aims of the west. Locarno, it should not be forgotten, was followed by a Turco-Soviet pact that Pravda called "anti-Locarno." At the same time, Turkey envisaged taking the lead in an Asiatic coalition of which the treaty of Saadabad seems to have been the first stage. Today there exist few countries so determined to align themselves in the western camp.

At the end of the last war Moscow refused to renew the treaty of friendship; Russian diplomacy demanded a share in the control of the straits, then sketched out claims to the Armenian provinces of Kars and Ardahan. The era of understanding has ended. The Turks are in arms, American credits nourish the superarmament program, military missions are proceeding with the intensive training of three classes now under the colors, while technicians of all sorts are going ahead with the preparation of bases in the Anatolian redoubt.

Turkey doesn't hide its astonishment at the reserved attitude that its request to join the Atlantic Pact meets in European chancelleries. Members of the Council of Europe and of the economic organization (OEEC), having fulfilled all the conditions required by the statutes, disposing of the sponsorship of the United States, Turkey sees herself refused admission to a club where everybody agrees to welcome her without making the slightest gesture to do so.

It was not without long hesitation that Washington consented to become the champion of Turkey in the Atlantic organization. The United States unquestionably is taking on more commitments than it can uphold, a troubling situation in the face of Congress even more than with respect to the Allies. Some time ago, applying to Turkey the fearful conception of the "Breton redoubt," the American military chiefs had suggested a strategic withdrawal of Turkish defenses to the region of Adana, thus underlining the impossibility of defending Istanbul and all of European Turkey. This attitude produced terrible agitation. A wave of neutralism appeared, particularly among those who opposed Turkish participation in the Korean affair because they considered it preferable to concentrate the country's entire forces on its own defense.

Before these reactions, the State Department admitted the necessity of including Turkey in the Atlantic Pact. This procedure would avoid asking new commitments in Congress, at the same time as it would assure Washington that in case of aggression against Turkey the cosigners of the pact would no longer show the hesitation that they demonstrated at the time of the affair in Korea.

Among the numerous objections, tacit or expressed, opposing the Turkish demand, the most widespread is that the inclusion of Turkey would be equivalent to a provocation of the Soviet Union.

The Foreign Minister, Fouad Keuprulu, undertook to refute this argument forcefully: "If our adherence to the Atlantic organization should constitute a provocation for the Soviet Union, what then should be said of the Truman doctrine itself? If Greece and Turkey are juridically covered by the Atlantic defense, that would, on the contrary, be the best assurance of peace and stability through giving a salutary warning to the aggressor."

More serious, it seems, is the objection to bases: in joining the Atlantic Pact, Norway in order to avoid Soviet hostility, believed it necessary to commit itself, to not furnish military bases for the Atlantic armies on its territory. The Atlantic countries feel that if Turkey saw itself obliged to make the same commitments, its adherence to the pact would constitute a loss for the West whose whole interest in this part of the world is precisely to obtain bases.

To which the Turks, with out making precise commitments on the question of bases, reply that at the point where things are, it is no longer a question of illusory arrangements, and that military necessities must take priority over all the rest. Gone is the time when, to the Anglo-Turk and Franco-Turk treaties of 1939, a protocol was added providing that Turkey would remain neutral if the U. S. S. R. was engaged in a conflict in the Mediterranean (which, it may be said in passing, singularly reduced the extent of the Anglo-Franco-Turk alliance).

In reality, between the Western Powers and Turkey, the conversation flows on two different levels. The Atlantic Pact in fact brings no additional advantage to Ankara. The Republican People's Party, gone into the opposition, omits no occasion for underlining this. Mr. Necmettin Sadak, former Minister of Foreign Affairs, set forth his views on this matter: "What's the use of joining the Atlantic Pact? If France and Great Britain alone can reply to an appeal for help in the Mediterranean, it's enough merely to rejuvenate the pact that links us with these two powers by suppressing the protocol that embarrasses us. As for the United States, we all know that they will intervene if they can, and only if they can."

But for Turkey adherence presents a moral advantage: Mr. Keuprulu says: "Today our public opinion is waiting. It considers that we have a right to an Atlantic recognition. We have shown our good will, our fidelity to the principles of the United Nations, and above all, we form an integral part of Europe. Without Greece and Turkey there can be no true European unity. From the military point of view, the defense of the Mediterranean is impossible without these two countries. But all these reasons are subordinate to an argument of a moral order. Imagine the profit that Communist propaganda would earn if we were refused entry and all the sacrifices consented to by our people were deliberately neglected. In Turkey this eventuality would have disastrous repercussions. The terrain would be favorable to a neutralist propaganda that would break down our will to defense. I am sure, not as a diplomat, but as a historian, that this would be for the front of the free nations a moral failure with incalculable consequences."

Frankly, when one sees the present-day disposition of the Turkish people, the hypothesis of a neutrality, even caused by spite, appears little likely. From various conversations that we have had it becomes clear all the same that Turkish participation in a conflict would be immediate only if the country itself were attacked. In the case

where an aggression took place in the neighborhood, the intervention would doubtless be limited, as in Korea, to the dispatch of a symbolic contingent. For if the Turks appear decided to let no one penetrate into their country, they seem very little disposed themselves to go forth from it.

Turkey wants even more strongly to attach itself to the west as the east beckons it dangerously. During my stay in Istanbul a curious zoological auction set India against Pakistan. Pandit Nehru had just sent a gift of a young elephant to the Turkish children; immediately Pakistan announced the shipment of a big elephant for the adults. India countered by sending a monkey, which resulted in inciting Karachi at once to send a panther. Such are the methods, among others, that oriental countries employ to conciliate the good graces of Turkey.

The Turks visibly feel themselves frightened by the appeal of Asia. The Ottoman Empire played an immense role in Islam, but the Turkish Republic is most suspicious of pan-Islamism.

That is why the rulers and public opinion show great coolness toward British intentions. Mr. Morrison, announcing in Commons that Great Britain did not oppose the admission of Turkey into the Atlantic Pact, added, however, that in his opinion there should exist a better solution. This latter, everyone knows, for London is to be found in the conclusion of a Mediterranean or Near East Pact. The Turkish press considers that Great Britain subordinates her whole policy in the Near East to the desire of obtaining supremacy in that region. Otherwise put, that she will sincerely accept the participation of Turkey in the Atlantic organization only if London obtains the supreme command. And the Turks don't want to hear talk of that, at any price. "Everything is happening," said a politician at Istanbul to me, "as if one wanted to cut Turkey off from the west and throw it toward the east. In this case we would be lined up in the category of underdeveloped countries."

Is it understood that this hypothesis hardly pleases the Nation of Ataturk?

After having added brilliant pages to the history of his country during the first war and the revolution, Gen. Refaat Belay is presently the representative of Turkey on the Palestine Refugee Commission. When he visits Gaza, the mukhtar (mayor) kisses his shoulder, as did his father at the time when Refaat Pasha commanded the sector. If the general meets Egyptian officers, they interrogate him respectfully on the details of the campaign against the Suez Canal, which is still at the base of their military instruction concerning that region. At Tel Aviv the Foreign Minister, Moshe Sharett, receives with no less regard the general in whose army he served in other times as an interpreter second lieutenant. And in his presence, Noury Said, Iraq's Prime Minister, slips discreetly over the period when, as an officer in the Turkish Army headquarters, he deserted to join the Anglo-Arab banner of Lawrence.

This is a striking example of what the evocation of their former southern provinces suggests to the Turks. When the Turkish authority extended in the Near East to the Persian Gulf and the Suez Canal, the defense and unity of that region posed no problem. The young republic has deliberately cut itself off from this recent past. One of the principal acts of Ataturk was abolition of the Caliphate, which furnished the Chief of the Turkish State with a temporal authority over all the countries of Sunni Islam. The rulers of Ankara, doubtless, have no desire to tie themselves again with the tradition. But Ankara clearly is wounded when appeal is not more willingly made to her experience.

Several months ago the United States, France, and Great Britain set forth in a common declaration their objectives in the Near East. Turkey, unless I am mistaken, was not consulted. However the permanent aims of her policy coincide with those of the three great western powers—and especially with France—in that they tend to defend the status quo and the peace while at the same time affording a solution to the principal problems of the Near East, such as Israeli-Arab relations and reintegration of the refugees. The future of the Near East depends in great measure on an harmonious cooperation among the four powers.

Since the end of the last war Turkey has sincerely tried to win the friendship of her former Arab vassals. No one takes seriously the fears expressed by certain Arab nationalists lest their countries be implicated in a conflict for the defense of Turkey. The Turks in fact have no need of Arab military aid and have no illusions as to the real value of such aid.

Recently the United States seemed to have suggested to Ankara the idea of putting a little order into the Near East mosaic. The results up to now don't seem convincing. King Abdullah of Jordan has just made a trip, which he desired to be a solemn one, through Turkey. Raised in Istanbul, deputy in the Ottoman Parliament, the Hachemite sovereign is continually looking for a way of retightening links between Arabs and Turks that are rather loose because of the revolt directed by his family. No doubt his joyous character merited him a certain sympathy in Turkey, but on the political plane the results seem just about nil. Several Turkish friends confided to me the amusement that the last caprice of the little King had caused. He had obstinately insisted on camping in a tent that he had raised in the gardens of the palace placed at his disposal.

Several days later, it was the turn of Azzam Pasha to come seeking Turkish suzerainty. The usual repertory of the secretary-general of the Arab League, capable of impressing an Anglo-Saxon audience, was a complete fiasco in Turkey. The press recorded without comment declarations such as that announcing the entry into war of Moslem countries at the side of Iran in case the latter became engaged in conflict with England. But on the whole the Turks showed no enthusiasm for going along with the Moslem countries beyond this moral pact of which Azzam Pasha spoke. In a word, Turkey is willing to busy herself with the Near East sector, but she wants above all to take part in the Atlantic community, which for her signifies especially not being left alone in tête-à-tête with London.

It is surprising to discover how much alive the memory of Lawrence is in Turkey. Officers, traveling companions, newspapermen have told us many times the conditions under which the Hejaz trains were attacked by the Anglo-Hachemite troopers and, above all, how several hundred wounded Turks were massacred in the Damascus hospital after the triumph of the Arab revolt. In this respect the famous "Seven Pillars of Wisdom" are raised like an unsurmountable dam between Turkish policy and British aims in the Near East.

The great argument of the Arab or Moslem rulers who want to drag Turkey into their furrow is naturally the appeal to Islamic solidarity. Inconceivable a few months ago, has this hope today more chances of being realized?

One month to the day after its electoral victory of May 1950, the Democratic Party authorized once again the Ezzan to be sung in Arabic. The Ezzan is the call to prayer launched from the top of the minarets by the muezzins. Desiring to cut off all foreign influences, Ataturk had ordered that

this call, like all the rest of the liturgical language, be done in Turkish. The fact that it can once again be expressed in the language of the Prophet is not in itself a menace to the fundamental lay principle, but the greatest part of opinion sees in this reform a sign of a sliding toward a religious renewal. Is it possible from this to speak today of an Islamic reaction?

Certainly, at first glance, the situation has changed a good deal. Almost everywhere mosques are being built at the expense of the community. The faithful fill the holy places for Ramadan. The Government, after authorizing radio broadcasts of Koranic prayers, has reestablished religious instruction in the schools and reopened certain mausoleums to the faith.

It is possible to multiply these examples. But it seems necessary to receive them with the greatest reserve. In according certain facilities to the partisans of religion, the Democratic Party is paying certain electoral obligations and is taking into account manifestations of public opinion before the elections. Ataturk had imposed his reforms by reducing the opposition to silence. Today the Ghazi is no longer in existence, his regime is more supple, the protestors are raising their voices.

Curious fact: The very ones whom one would tend to consider as natural defenders of the Ataturk reforms sometimes show themselves to be their most violent adversaries. Thus a goodly number of students and professors are in the advance guard of the pan-Islamic movement. Perhaps they sin by an excess of "Kemalism." Essentially beneficiaries of the progressive and national reforms, they often arrive at a racist and xenophobic notion very far from the conceptions of Ataturk, which leads them to combat the democratic and liberal spirit of the regime and to seek in religion an arm against it.

The sparse elements of this political, rather than religious and racial, movement have just united to form the Federation of Nationalists. This has practically no influence, very few newspapers. Recently a sympathetic review, *Orkun*, complained that no big daily had agreed to publish the releases of the federation, and launched an appeal inviting sympathizers to join it en masse.

The immense majority of students has chosen to defend Kemalism. The National Federation of Students, of democratic tendency, and the National Union of Students, whose sympathies are with the Republican People's Party, have adopted an attitude of strict defense of the reforms and of the lay principle. . . .

Likewise some religious sects such as the Tijanis are emboldened more every day to challenge the laic laws. It is impossible not to note an increase in the number of men wearing the turban and of women wearing the veil, which a few months ago would have led to severe punishment.

"On the whole, the Government is determined to defend the reforms and the lay principle. But certain elements in the Democratic Party (among others, Tewfik Ileri, Minister of Public Instruction, is mentioned) openly flirt with the religious movement. President Djelal Bayar, Kemalist from the first day, recently denounced in a speech at the University of Istanbul "the danger of reaction." Several days later the prime minister, Mr. Menderes, declared "There is no reaction." It was left to Mr. Karasmanoglu, Democratic leader, to resolve this contradiction, or rather to make a synthesis of it: "There is no reaction, but only reactionaries."

It is troubling to find that all these politico-religious attempts are happening simultaneously, and at the moment when activities in the same sense are going on in

Iran to lead the Government and the masses to adopt a pan-Islamic policy.

Several Turks believed they could assure us that the common origin of these movements must be looked for abroad. Now it is precisely to put an end to foreign interferences that the Kemalist regime abolished the Caliphate, which was the generator of authority over the whole of Islam but also the cause of vulnerability for Turkey whose foreign policy had to be inserted into the framework of pan-Islamic interests.

Pakistan scarcely hides the efforts it is making at present to bring Turkey to play once again a role in pan-Islamic policy. But the Turks care little to align themselves in a coalition of this sort, if only for fear of being submerged by numbers. If ever an Islamic Holy Alliance should see the light of day, it would be Karachi and not Ankara that would be at the head of it. That is why the authorities look with a rather jaundiced eye on the ceremonies that the Pakistanis organize with the participation of whirling dervishes who, up to now, were formally forbidden by the laws of the Republic.

That said, it does not seem that the equilibrium of modern Turkey is really menaced by the double "black peril"—interior or exterior—as certain defenders of the lay principle are already calling it. If, in the interior, the faithful are again finding, little by little, the right to exercise in full freedom and in the language of their choice the prescriptions of their creed, it appears rather improbable that the fanatics will succeed through this in throwing the victories of the revolution into doubt.

The invitation to the pan-Islamic voyage seems doomed to the same failure. The panthers or elephants of Pakistan continue to fatten in the Istanbul zoo. Abdullah and Azzam can occupy the first page of the newspapers, but Turkish opinion remains cool toward the invitations of these former vassals. And in the barracks, young recruits learn the old complaint inherited from their elders: "He's gone with his regiment to Yemen, and he's never come back again."

The Louisiana Tidelands

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BROOKS. Mr. Speaker, under leave to revise and extend my remarks, I am inserting the following article by George Sokolsky:

THESE DAYS

(By George Sokolsky)

Up to the present generation, Americans generally took great pride in State history and tradition, and were usually offended by Federal encroachment upon States' rights. In public addresses and private conversation, the reference was "these United States" rather than to "the United States."

Like so much else that has had deep roots in American tradition, this long-held attitude has lost some of its meaning. Maybe it is due to the automobile and good roads or to the radio and television.

I think rather that this tendency should be attributed to the propaganda efforts of the New Deal to make States administrative adjuncts of a national administration.

This propaganda has been continuous and intense for 18 years, during which an in-

creasingly large number of Americans have become interested in or dependent upon Federal Treasury checks.

In the so-called tidelands cases—California, Louisiana, and Texas—the Supreme Court has been laying down doctrine, which, while dealing with oil, can be widely applied to the lessening of the sovereignty of the States.

Mr. Justice Douglas in the Louisiana case stated:

"The marginal sea is a National, not a State concern. National interests, national responsibilities, national concerns are involved. The problems of commerce, national defense relations with other powers, war and peace, focus there. National rights must therefore be paramount there."

The learned Dean Roscoe Pound, who taught law to some of our Supreme Court Justices, asks:

"But as to such things as are specified, namely commerce with foreign states (e. g., obligations) and conduct of war, are not the rights or powers of the United States paramount also over the whole land? Such rights, incidents of external sovereignty, are not incompatible with ownership, dominium, as distinct from sovereignty. For example, the power of eminent domain of the Federal Government extends for Federal purposes over the whole land."

"Private land may be used for national defense throughout the whole land. It is not for that reason excluded from private ownership. Private land may be used for national defense throughout the country and is nonetheless private property because of this."

If Mr. Justice Douglas' theory is correct, why should there be any private ownership of property in the city of New York? The financial affairs of the Nation, insurance, banking, publishing, etc., are concentrated there.

A very large part of the international and domestic commerce of this country either originates in New York or is handled there. The United Nations is situated in that city.

Surely the Empire State tower would, in a war against us, be employed in the national defense. Should it not now be confiscated according to the reasoning of Mr. Justice Douglas?

The intellectual difficulty which the followers of Oliver Wendell Holmes face is that they are forced by their theory of the law to accept it as an instrument for the exercise of power by the administration in authority without moral restraints.

If that theory is applied in all directions, it must produce a state in which no individual can have any inalienable rights.

Yet the Declaration of Independence specifies that that was the reason for the founding of our country.

In the tidelands cases, these decisions probably will not affect the actual production of a barrel of oil for private use for the national defense. Therefore, that is not the issue.

The issue is the right of the State—of any State—to its sovereignty and right of the individual to his property, as the Constitution provides.

It is a question as to whether we are living under the Constitution or under a rule of thumb Federal jurisdiction which Mr. Justice Douglas calls paramount national rights.

As Dean Pound so aptly put it in an article in the *Baylor Law Review*:

"If sovereignty with responsibility for defense and international relations did necessarily and inseparably involve dominium, that is ownership of land, all private ownership of land would have to be given up."

If defense has to be by air, for instance, at what point up in the air do private and State rights end? Dean Pound argues this

point with clear logic, ending with this conclusion:

"Under the conditions of warfare today the argument for national defense would make the United States owner of the whole land as well as the shore of the sea and the sea adjacent to our territory."

Actually, these three decisions of the Supreme Court could by judicial fiat alter the structure of American life.

Can a New North-South Political Alliance Preserve America?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview between the editorial staff of the United States News and World Report and me which appears in the August 3 issue of that important weekly magazine. The theme of this interview is the suggestion that in 1952 a political formula be evolved whereby the people who think alike in America can vote alike regardless of where they live or the political party in which they are registered.

Inasmuch as in many instances the differences within our major political parties as now functioning are actually greater than the differences between the parties themselves as manifested by the votes and pronouncements of top members of both parties in Congress, it would seem that the time has arrived when serious thought and planning should be devoted to developing an alliance between like-minded voters which will put an end to government by minority pressure groups in America. This interview is devoted to an exploration of the possibilities of such a working alliance in the presidential campaign of 1952.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

NEW POLITICAL ALLIANCE

(An interview with KARL E. MUNDT, Republican Senator from South Dakota)

(EDITOR'S NOTE.—Can the Republicans win in 1952? If so, how—after 20 years of unbroken Democratic success? Does the fact of the solid South leave the balance of power with certain northern groups? Is the North-South coalition in Congress a forerunner of the presidential campaign? Senator MUNDT is one of a number of persons who have been thinking and working out answers to these questions. To get his answers, the editors of United States News and World Report invited him to their conference room. KARL E. MUNDT was a teacher of speech and of social science before he began to apply both fields of knowledge in Congress. He was elected to the House from his native South Dakota in 1938 and moved on to the Senate 10 years later. Senator MUNDT, now 51, has been a farmer and businessman as well as teacher and legislator. In Congress he has been active in foreign affairs. He was a prominent member of the House Un-American Activities Committee.

Interest in the proposed North-South alliance recently has taken him into the South on many speaking trips.)

Question. Senator MUNDT, what is your idea of a Republican-Democratic coalition in the South?

Answer. Our proposal isn't exactly a coalition in the South of the Democrats and the Republicans as much as it is an alliance between the Democrats of the South and the Republicans of the North.

Question. In other words, each side would be free to retain its party identity?

Answer. Exactly. And it would merge them together at the electoral college level.

Question. So that it doesn't involve any actual amalgamation of parties as such or interference with freedom of action on the part of either party?

Answer. That's correct. Because that is a very genuine stumbling block and we get away from that. We also get away from the fact that it's pretty difficult in any short-pull effort to induce a majority in the South to join the Republican Party. So we're going to suggest they vote for antiadministration electors, under the banner of the rooster, which is the Democratic emblem in much of the South.

Question. This actually then would be a three-party system, wouldn't it?

Answer. No. After a series of preliminary "make-ready" conferences before the conventions between like-minded Democrats and Republicans I believe the situation might well develop about as follows: In 1952, the campaign would proceed as usual in the North with voters choosing between the Democratic and Republican candidates in the customary manner. But in the South, if the Democratic National Convention is controlled by New Dealers who, it is expected, will nominate a candidate and write a platform which are distasteful and perhaps repugnant to the South, a new procedure would be evolved whereby citizens in the South would once again reassert their independence.

The procedure would differ from State to State, but in general it would follow these lines: In Southern States where the majority of the Democrats are not New Dealers—do not favor the welfare state nor the concepts of Trumanism—Presidential electors would be selected to run on the regular Democratic ticket under the emblem of the rooster but pledged to the people not to vote for the candidates nominated by the Democratic National New Deal Convention. These electors might be committed in advance to vote for the Republican nominees if the preliminary alliance conferences establish the proper background for such a move. Or they might be what they call "free electors," simply committed not to vote for Truman or any other welfare-state candidate for President.

Question. What do you think will happen in the South in the way of a countermovement by the officeholders and the Federal machine? They have considerable political power in the South, too—what will they do?

Answer. They can work it in one of two ways. In Mississippi, for example, they will organize a Truman Democratic group. They will put their electors on the ballot under the donkey instead of under the rooster just as they did last time; they will campaign valiantly for the administration and its electors and probably get less than 12 percent of the votes, because they got 11 percent for Truman last time. That's the way they'll do it in Mississippi.

Now in Arkansas, where the Governor is a New Dealer and may be able to control the electoral machinery, it's entirely possible that he will put the rooster and the Democratic label over the electors there who favor the Truman group, so that in Arkansas those Democrats who are opposed to Truman—who in my opinion are vastly in the majority—will hold a convention, select

their own electors, get a name—call themselves "Jeffersonian Democrats," "Anti-Truman Democrats," "Anti-Socialist Democrats," or whatever they want—put their electors on the ballot. And each group will conduct a fair and honest campaign in the South to determine once and for all whether or not the South favors the welfare-state concept of government.

The Republicans will pull out, or, if necessary in order to keep the Republican Party alive in case this thing peters out—since there may be some State laws that if you don't have a man on the ballot you can't continue the party—they will put the Republican nominees on the ballot but the word goes round that Republicans should vote in the box where the anti-Truman electors are listed.

In Texas a few weeks ago the Governor signed a new bill which facilitates this whole movement, and which was promoted in Texas by some of the folks interested in the alliance program and opposed to New Dealism in all its forms. This provides now that in 1952 for the first time in Texas you can cross-file. There is a device so that you can amalgamate and add together the anti-Truman votes for President. And that was done specifically by those, including the Governor, who are opposed to Trumanism in Texas. Now if in Texas—and that is the key State, really—we can get the ball rolling—and there is enough power down there and enough leadership down there, and enough genuine, rugged Americanism down there if you will find a harness that will fit it—we believe Texas can pull most of the South along on some effective program of political realignment.

NORTH-SOUTH GROUPING COULD ELECT A PRESIDENT—COALITION NOW WORKING—V H Y "DIXIECRATS FAILED"

Two sets of electors

Question. What about the other Southern States?

Answer. In other States where the party machinery is controlled by Democrats favoring the Truman program, those opposing it would nominate electors and run them under some hyphenated Democratic label—Jeffersonian Democrats or Anti-New Deal Democrats, for example. In other words, much the same arrangement would be worked out as was done with the Dixiecrat movement in 1948, but instead of wasting votes on a splinter party with no national connections, the anti-welfare-state Democrats would go to the electoral college with electors ready, able, and willing to associate themselves with other like-minded electors in choosing an administration sympathetic with their viewpoint and consistent with their concepts.

Under either arrangement, two sets of Democratic electors would be before the southern voters in November and they would decide once and for all in a fair and honest poll whether to continue to embrace the concepts of collectivism and complete federalism that are so apparent in the Truman program.

Question. Isn't there a commitment on the part of electors chosen on the regular Democratic ticket to vote for the nominee of the regular Democratic Party?

Answer. It depends on the terms on which they are nominated or selected. If they are selected at a convention down in the South with the understanding that they go as free electors or that they go as electors under the Democratic banners but pledged to vote for this alliance combination which has been worked up, then they're keeping faith with the voters and are in conformity with the law.

Convention strategy

Question. You speak of a convention held prior to the selection of the electors. Is that a State convention?

Answer. Yes. And it is also possible a Dixie Democratic convention might precede these State conventions.

Question. Held before the national convention?

Answer. No; after the national convention. Let me outline this movement as we see it shaping up. We envision that, as we approach election time, it will really become clear to the Democratic South that the results of the Democratic National Convention are going to leave them very, very unhappy. So it has been suggested that delegates be selected by the Democrats in the South who will go to the national convention making an effort to get a restoration of the rule requiring a two-thirds majority to secure a presidential and vice-presidential nomination—which they won't succeed in doing, but they can try; making an effort to bring about a real ringing reaffirmation of the doctrine of States' rights—which they will not be able to do, but they can try; making an effort to have one of their southern sons selected as a candidate for President on the basis that the South has provided the bulk of the strength of the Democratic Party for all these years—that they can do, but they will not succeed.

Then, after they have watched the convention, over their protests, renominate Truman or somebody to the left of Truman; when they have watched the convention, over their protests, put planks in the platform which are repugnant to the people of the South; when they have heard some of the liberal left-wing element of their own party stand up at their own convention and insult them to their face by calling them bourbons and reactionaries and snarl at them at the convention as they sometimes sneer at them on the floor of Congress, it's expected then that, having been insulted, having been rejected, having been disillusioned, they'll be ready to go home and assert their independence as they did in 1948.

Now, the difficulty in 1948 was that when they went home they had no place to go—just a little branch-line railroad called Dixiecrat, which had no real destination but was simply a protest vote that didn't have any genuine effectiveness other than to demonstrate that there is a limit somewhere to the insults southern voters will endure.

What Dixiecrats lacked

Question. What do you mean by no effectiveness?

Answer. No effectiveness because the Dixiecrats had no national connections or cohesion. It just appealed to voters in a few States, and never in their most optimistic dreams did the Dixiecrats expect to succeed in electing a President.

Question. Did they have a separate set of electors in 1948?

Answer. Oh, yes; they had a separate set of electors in 1948. They carried four States. Thirty-nine electors voted for Thurmond and Wright. It wasn't enough to turn the tide, but it was a surprisingly significant vote, considering the short time in which they had to work. It demonstrated that the spirit of independence still thrives in the South.

Question. Well, after a Democratic convention such as you outline, then what happens?

Answer. Then they go home and they hold a convention, precisely as they did last time. But instead of doing what they did last time, which was a futile splinter-party gesture, they then agree to select electors to run as Democratic electors, pledged to vote at the electoral college for some other candidate than that nominated by the New Dealers at the Democratic national convention. Perhaps they may even be pledged to vote for the alliance choice, that is, for the Republican nominees selected at the Republican convention. Having agreed to this joint program, they then hold their State conventions

to put the Democratic electors on the ballot and conduct a campaign in the South strictly between Democratic parties.

You'd have the Truman Democratic Party, the administration Democratic Party, which would probably be referred to by its opponents down South as the Socialist fringe of the Democratic Party, and you'd have the States' Rights Democratic Party, the constitutional Democratic Party, which would be referred to down there as the Jeffersonian Democrats or the Democrats who are in favor of reestablishing States' rights, and their electors would go to the electoral college with that purpose.

ALLIANCE AN ACTUALITY IN CONGRESS ABOUT 15 YEARS

Now, preliminary to all this, some work must be done both by Republicans and by the anti-New Deal Democrats before either convention in order to set the stage for the kind of political alliance operation we've been talking about. It's our thought that these preliminary meetings can be held in large part between Democrats in Congress and Republicans in Congress who, over a period now of about 15 years, have been working together in an alliance which is not a theoretical factor at all but which is an actuality in Congress today.

So that, probably in the Senate or perhaps in the Senate and the House, preliminary considerations would be given to these following objectives: That at the next Republican convention—coming as it must now ahead of the Democratic—having in mind the possibility of what will transpire and what I believe at that time will look like the inevitable outcome of the Democratic National Convention, we should give some thought in the selection of our nominee for President to a man who is personally acceptable to the South. Some of our potential candidates are, some of them are not. But if we decide that we're going to court the South—not capture it, but court support in the South—that we should give some thought to that in the selection of our candidates, and we should also give some thought to southern concepts in the writing of a platform.

Question. In civil rights?

Answer. In civil rights, in education, in socialized medicine, in all matters leading to the concept of the superstate and the preservation of the States' rights concept. We would come out strongly in our Republican platform stating a position that we recognize the responsibility of the Federal Government to provide leadership in making living conditions better and in making health and educational opportunities better, and in eliminating discriminations, etc., but we propose to approach these objectives within the purview of the doctrine of States' rights.

Platform problems

Question. Do you think the Republicans who have already voted for FEPC (Fair Employment Practice Commission) and for other measures of civil rights will be able to remain silent?

Answer. No, I don't think they will be silent. I think they will present their point of view before the platform committee. I think they'll argue in favor of a Federal centralized approach to the problems of education, of health, of housing, and of discrimination. But I propose that those of us in the Republican Party who oppose centralization of power and up to now have remained comparatively silent do not remain silent any longer.

I propose that we present the fact that, if we're going to have a party that presumes to be against the superstate and the complete centralization of power in Washington, we have got to recognize the doctrine of States' rights, which is a peculiarly and uniquely American concept in government.

Question. Is there a possibility that these Republicans who are ardently in favor of civil rights may go out and try to get electors in their States and do the same thing to the Republicans?

Answer. I think that's a possibility. I think that, if this program works out, there is going to be some migration in both directions from one party to the other. But I think that the country desperately needs today a party alignment in which there is a recognizable and defensible philosophy of government imbedded within each party. We lack that today.

Effects in North

Question. Won't you, as a practical matter, be up against the fact that in the Northern States you will be driving the Democratic Party to be the civil-rights party—as it has to be to win the votes in Harlem and elsewhere—and that those Republicans who feel the same way about civil rights will join with those Democrats and carry most of these Northern States?

Answer. No; I don't think that they will. There is, of course, some fear of that on the part of some northern Republicans. There is some pretty clear-cut evidence, however, that there is a tremendous amount of theory in that connection not substantiated by fact, as there is in connection with the alleged opposition to the Taft-Hartley bill. I mean the election of TAFT in Ohio pretty well knocked into a cocked hat a lot of theories about labor's attitude toward the Taft-Hartley bill.

Now, we believe that in the groups, in the colored organizations, among the colored population, and in places where FEPC has been a very definite issue, there are a great many people there who also believe in the doctrine of States' rights. We can present a pretty good Republican position, for example, to those who believe in FEPC, who are largely in the northern cities. We can say: "What party was it that freed the colored men? It was the Republican Party. What party was it that has given the colored man his best opportunity to succeed in this country? It has been the Republican Party under Republican government. What kind of States have given him State FEPC's, to give him a better chance and an opportunity? It has been almost without exception Republican States under Republican governors empowered by Republican legislatures."

Question. Do you think the South would accept the program that these States have adopted in the North?

Answer. The South is completely willing. I have discussed it now in almost every State of the South. The South is not inhabited by sadists who are desirous of penalizing the black man and kicking him around because they enjoy it. Actually, a great many Negroes in the South are very happy and are making rapid progress both economically and politically. The South is confronted with a very realistic problem because, in many areas, over half the people are of the colored race.

Southerners have no desire to hold the Negro down. They want to promote programs in an area where by evolution and by education they must work out a harmonious adjustment. They're not even opposed to State FEPC legislation. They told me in Mississippi: "We're perfectly willing to have an FEPC in Jackson, Miss., manned by Mississippians, progressing at the Mississippi level, at the Mississippi speed to meet Mississippi conditions. What we are afraid of is an FEPC manned in Washington by Northern theorists and liberals who decide to provide in Mississippi the kind of conditions for the colored man that you can provide in New Jersey or New York." And they say it simply won't work, because conditions are different in the South. So they're willing to do that.

SUGGESTED CANDIDATES: TAFT, EISENHOWER, BYRD, RUSSELL

There has been a definite movement in many of the Southern States by which the State and its public officials interest themselves in improving the lot of the colored men. In many areas it has eliminated by States action, and I think that's the right way to do it, the poll tax. They've passed laws against lynching and have done the things that the northern theorists who want to produce utopia out of a hat like a rabbit in 15 minutes by Federal legislation have been unable to do by Federal coercion.

Question. Whom do you have specifically in mind as candidates who might be acceptable to the southern Democrats and the northern Republicans?

Answer. We have tried to keep strictly away from getting a movement of this kind identified with any candidate, because then it becomes the football of every other candidate not associated with it. In talks on this, because everybody thinks in terms of candidates as a tangible outcome of the movement, I have said: "Look, I think a movement of this kind could revolve around and could succeed with two candidates selected almost indiscriminately from the following four." Then I have suggested the names of Taft and Eisenhower and Senator Byrd and Senator Russell, and have said that it wouldn't make much difference to me which of the four were at the top and which of the four were vice president. I think they are four sound Americans who basically would lead this country back to a premise of sound government and sound fiscal policy.

How Taft stands

Question. Isn't TAFT's position on civil rights, however, pretty generally unsatisfactory to the South?

Answer. Not nearly as unsatisfactory to the South as Dewey's position on civil rights was 4 years ago. TAFT has been a middle-of-the-roader on civil rights. We haven't had a vote directly on it. There have been votes on cloture and on other maneuvers which don't look like a vote on a FEPC but which actually were related to it, and he has leaned a bit toward the FEPC crowd, but he hasn't been out giving speeches about it, he hasn't been crusading for it. They have a pretty good respect in the South, I think, for TAFT's basic philosophy of government. He is in opposition to the concept of the strong centralized authoritarian power. He is a respecter and supporter of States' rights.

The key: States' rights

Question. If TAFT abandons, however, a Federal FEPC platform, how much chance does he have for carrying a lot of these areas in the North?

Answer. That goes back to what we were discussing—whether we propose to present to the American voter this time a clear-cut philosophy of Government built around States' rights in a platform which consistently revolves around that concept. We should not again throw the voter another crazy quilt like we threw him last time in a platform where we say in one breath we're 100 percent for the rights of the individual and the rights of the States and in the next breath we're 100 percent for giving politicians in Washington the power to tell him who he can hire in his business. Now Americans generally are just plain basically sound. If we present them such a bewildering jigsaw puzzle as we had in the Republican platform last time, in which we tried to say all things to all men—which to those interested in FEPC talked like it was going to create in Washington the authoritarian power that they have in Moscow, but, in terms of business and farming, talked as if it was going back completely to the

original Jeffersonian concept of States' rights—we fall in our duty to speak frankly to the voters.

Question. In your concept, you would have a Democrat on the ticket, wouldn't you?

Answer. Yes; that's at least one possibility. First, we should get a candidate personally acceptable to the South. Second, we must explore with the South its desire as to whether it would prefer to have a southern Democrat running as Vice President. If we find that it would prefer to have that, and we can determine that by the preliminary conferences, then I think we should say frankly, too, in the Republican convention: "This time we're trying to win a victory for America. We're not so much interested in partyism and partisanship as we are in basic principles. So, we suggest that with our Republican candidate for President we nominate—let's say, just for an example—Senator BYRD, of Virginia, or Senator RUSSELL, of Georgia, as Vice President."

That's one conceivable possibility. Another conceivable possibility growing out of the preliminary conferences is this: How would it be, some have conjectured, if in the Republican campaign this time—with this alliance movement in mind and the possibility that some of these southern statesmen would prefer not to run as Democrats for Vice President under the Republican banner—if we nominate the best cast of Republican leaders we can secure as President and Vice President and then 6 weeks to 2 months before the voting time, our Presidential nominee, having consulted with his advisers, announces then the identity of his Cabinet, if he is elected? And in that list include three or four distinguished southern statesmen as Secretary of Agriculture, as Secretary of War, as Secretary of Commerce, wherever you're going to put them.

Suppose the Republican nominee for President announces on the 1st day of October that, if he is elected President, he's going to have a Cabinet comprised of A, B, C, and D and Senator DRICK RUSSELL, of Georgia, as Secretary of Defense—don't you believe that this would help make it easier for southern voters to support the alliance? Or, perhaps, if Senator BYRD could be induced to become Secretary of the Treasury, it would help cement the forces favoring a real Democratic-Republican alliance in 1952. I use the names of RUSSELL and BYRD merely as illustrations—perhaps other equally good southern Democrats could be named so RUSSELL and BYRD could continue their fine leadership in the Senate.

Keeping southern power in Congress

Question. This is in addition to a Democrat for Vice President?

Answer. It could be in addition to or in lieu thereof. It's just one proposed type of strategy. Here's something more which is essential. In these preliminary conferences, if the alliance is going to win, we've got to come to an understanding with the southern leaders in Congress as to what happens to their seniority. That's not unimportant in elections in the South. A Senator and Congressman, I think, has more prestige there than he does in the Middle West. And I think a southern Congressman or Senator probably has a little better personal following than has been developed in many other areas.

Now these officials are important cogs in the electoral machinery and you can't very well expect 15 or 20 southern Senators and Congressmen to get enthused about crusading for a principle and a cause and a ticket which, if it wins, means that they are committing political suicide in Congress and stepping out of positions of importance into positions of unimportance. So we've got to come to an understanding with them that, if this thing operates, the seniority status

of the cooperating southern Congressmen and Senators will be sustained.

So it is recommended that in the organization of the new Congress, assuming that the alliance elects its candidates for President and Vice President, that we caucus together on a basis of position rather than a basis of party. The Members of the Senate and the Members of the House would have a caucus, therefore, of the Republicans and the southern Democrats who have participated in this program for the establishment of the organization of the Senate and for the organization of the respective committees with each man maintaining his seniority status regardless of party. As an example, this would mean that if Senator GEORGE, of Georgia, participates—and, if the program works, Georgia and such States must participate—he would retain his chairmanship of the Senate Committee on Finance because he's the oldest ranking member of either party on that committee. We would put the members around the table in conformity with their seniority status to comprise a majority reflecting a position on principle, not merely a political party.

Question. You'd like to have Speaker RAYBURN on your side, wouldn't you?

Answer. I'd like to have him on our side and I have a hunch that, if things worked out so that he could do that and still be with his own group in Texas, he'd love it.

Question. Then he could be Speaker of the House under your program?

Answer. He could be Speaker of the House under our program—the caucus of like-minded House Members would determine that by their votes.

Question. In other words, you people are willing to make concessions and have got to make concessions in order to accomplish this particular objective, which is a party that is committed to your philosophy?

Answer. Precisely. Because there isn't any chance, in my opinion, for the Republican Party, without making concessions, to get the votes it needs in the South. And, frankly, I don't see any very likely place you can pick up this extra million votes in the North. Certainly to do so you would have to make some concessions to whatever new element in the North you were trying to attract.

Eisenhower's strength

Question. How about Eisenhower?

Answer. That might do it. I think that occasionally a man comes along or perhaps an issue that can unite the country—there may be something involved in the war issue. But I'm looking at the long pull. Suppose we win in 1952—what do we do to stay in following 1956? We would be forced to begin at once, throwing out lures to exactly the same people to whom the New Dealers have cast their seductive bait. As long as we divorce ourselves from over 100 electoral votes in the conservative South, it means that the balance of power in this country is certain to be in the hands of the left-wing groups. So that, to stay in, we Republicans would have to make concessions to the same group to whom the New Dealers now cater so zealously. And I'm no more desirous of seeing the country veer over toward national socialism with a Republican in power than I am with a Democrat. Now, there's some pretty good historic background from which we can draw a lesson.

Question. How much damage would be done to the alliance idea if the Democrats should nominate a southerner, Fred Vinson, for instance?

Answer. I would assume that if they were to nominate a real southerner running on a platform even remotely acceptable in the South, there would not be an alliance idea in 1952. It would defer and delay such a movement. Now in my opinion my guess would be that Fred Vinson would come close enough to answering that definition to make the alliance unworkable, although I am im-

pressed by the number of people in the South interested in this movement who seem to think that Fred Vinson would not be completely acceptable to them.

Question. You've got to have some name down South besides a Republican. You can't have a group of electors pledged to vote for a Republican ticket—isn't that true?

Answer. The electors will be Democrats. They will be pledged to oppose the Truman administration.

Anti-Trumanites this way

Question. But they can turn but one way and that's to the Republicans?

Answer. I don't think that's particularly going to hurt. I don't think if these other preliminary steps have happened, if they can show them about the seniority-status agreement, if they can show them a vice-presidential nominee or Cabinet members, I believe the anti-Truman electors can win in most of the South. The difficulty is not with the leadership and the business echelon.

Now we have made a study of what this alliance has been doing because this isn't something which is just pulled out of the air.

This is something which has been functioning now since 1936 in the House of Representatives and in the Senate. Since 1936 this informal Republican-Democratic congressional alliance has functioned successfully on 35 important and significant roll-call votes; 9 have been in opposition to some suggested step toward socialism; 18 have been in protection of our private-enterprise system; 3 have effected important economies; 2 have been on foreign affairs; and 3 were crack-downs on subversive activities both in and out of Government. These were times when, because of the alliance of the people of the South, Democrats, and Republicans of the North, victories have been won in the votes of Congress. We can provide the date, we can provide the evidence, we can provide the roll calls as proof.

They did this, not once but 35 times since 1936. We simply propose to expand this "congressional alliance" so it can become effective in electing a like-minded President.

Question. If you work out this arrangement to take care of seniority problems for southern Democrats in the House and in the Senate, wouldn't that mean that whether or not the Republicans won the election, they would control Congress?

Answer. No. We wouldn't control it, but the alliance group, or coalition, would control it, because a coalition seems to mean to many people in the South that the Democrats and the Republicans merge their identities in the South, and that's pretty difficult to do.

Question. So that the alliance would organize Congress?

Answer. The alliance controls it now. They don't organize it, but they could organize it, and they could establish a committee set-up and conduct the majority caucus.

We now have an occasional alliance, but it's spasmodic, it's intermittent, it's leaderless, it's thrown together as a creature of necessity and only on certain issues.

It has worked since 1936, and it's working more frequently all the time; it's accelerating. Already it has been the determining factor several times in the current session of Congress.

Seniority for all

Question. When you spoke of seniority you didn't mean just chairmanships; you meant, too, that individual Members would not lose their seniority positions, didn't you?

Answer. Correct. That's exactly what we have to protect and that is almost a must, and that's a new feature of this program. That's one of the new elements of our present proposals.

Question. Do you have time to get this operating this year—it isn't long?

Answer. No; it isn't long, but we can move mighty fast. I would say that there is a good possibility of it moving next year if Harry Truman is renominated.

Question. Well, you're assuming that—

Answer. If he is not renominated, it injures the chances of the alliance. But if, instead of Harry Truman, they nominate Justice Douglas, I would say you haven't injured its chances very much. If instead of that they nominate Chief Justice Vinson, I would say you have injured the chances more seriously.

Question. Unless Vinson's declarations and a platform make it clear that he has taken the northern point of view?

Answer. In which case it actually might facilitate the alliance, because you know how people are. If one of your own turns his back on you, you get pretty desperate and disgusted.

Question. You have an alliance now but the ultimate aim is a party, isn't it?

Answer. Yes. If this thing should work in 1952, we would suggest that in 1953, after the first session of Congress, that there be a post-presidential election convention, led by this President and this Vice President and this positional majority in Congress who would have control of the White House and the Congress. But they have no name. They have no National organization. They have no party. They say, "Well, how about making this thing permanent, get organized so that 3 years from now we can have our own ticket in the field? Let's see if we can't agree on a set of principles built around this dictum of an indestructible union of indestructible States. Let's see if we can't find a label and develop an organization, with a chairman, and find a suitable party name."

AFTER 1952, A REGULAR PARTY WITH A NAME

Some have suggested that the party then be called, in the South, the Democratic-Republican alliance for the next election, and that they work with this new political organization under that name. In the North, it would be called the Republican-Democratic alliance. The two would stem from the same central headquarters. In other words, it would be the same organization, with the order in which the alliance is listed reversed in the North and the South.

This would enable all like-minded people, you see, to join up with the new party. It would compel the opposition viewpoint to organize a second party, and call themselves New Dealers, or Fair Dealers, or Socialists, or whatever they prefer. Then you'd have two real political parties. Each would stand for something definite. The voter would get a choice. For the first time since the War Between the States, the South would get the benefit of a two-party system at the local level, from the standpoint of local campaigns—and that's important because if you don't have that, you soon develop corrupt machines. The biggest dividend, I think, would be that the voter then could go to the polls and help direct the destiny of his Government because he would know he was voting for one concept of government or the other. Within each party there would still be great issues, of course, but you would have a basic philosophical and political basis for cohesion and agreement. We used to have that in the past but that's gone. We don't have any basic difference between our two political parties as they now operate.

A voice for the South

Question. How about the Dixiecrats?

Answer. I believe that that is a movement which has terminated. I think that the people who belonged to it and who lead it are looking for some other more effective device for the elections which lie ahead. I believe they and many others in the South are eager to associate themselves with some national movement to once again give the South a strong voice in the selection and the election of our Presidents.

Will Danger of World War Be Greater After Korea Cease-Fire Than Before?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

WHY HAGGLE ON PEACE TERMS?—ARMISTICE WON'T LESSEN PRESENT DANGER ANYWAY

(By Edgar Ansel Mowrer)

Again the President of the United States has warned us of the dangers inherent in the Korean armistice talks.

He has said that already, during these talks, the Communists are building up their armed forces north of the present line, ready, if the talks break down, to hit us a harder blow than they could have without the talks, when General Ridgway was effectively "keeping them off balance."

He has warned that we cannot immediately hope to get our troops out of Korea lest the talks turn out to have been a Communist trap to get us out and then move in again and take over.

Defense Secretary Marshall told the members of the House Foreign Affairs Committee not to expect that peace in Korea would mean that we could take our seven divisions home, still less send some of them to swell the growing American forces in Europe. The farthest—according to Marshall—that we should think of retiring them would be to Japan. Protecting the northern Japanese islands against a Soviet invasion until, a couple of years from now, the Japanese have re-created their own defensive forces, is an unsatisfying prospect. Yet that is the best that the Defense Secretary seems able to offer.

To make the picture worse, all American leaders, beginning with Mr. Truman, have warned and rewarned us not to believe that peace in Korea will lessen the present danger.

The Communists may be planning to wait until the United Nations have rebuilt the devastated Republic of Korea—and then take it over. Or they may invade some other country. If this target happens to lie outside of Asia, say, in the Middle East or in Europe, the masses of Chinese Communists will still remain quite free to concentrate their aggressive might against Indochina or Burma.

RICE MOST VITAL

Indochina and Burma are the twin gates to southeastern Asia. Southeastern Asia holds precisely what the Communists in Asia need most—petroleum, rubber, tin, and, above all, rice. Under normal circumstances China cannot feed its growing millions without some outside rice. In all Asia, only Indochina (once there is peace), Burma and Thailand are able to export rice in any considerable quantities.

Certain it is, however, that without active Soviet participation, which means a world war that would probably not be decided in Asia, Red China is unable to launch any new large-scale offensive so long as its divisions are bogged down in a struggle in Korea. They can do that only if the present armistice talks lead to some sort of settlement.

Considering these facts, one may wonder why the American administration is so eager to end the Korean fighting without total victory, or to end it before the free world has rebuilt its military strength.

Conceivably, the 35 percent of Americans who, according to Gallup, oppose the with-

drawal of United Nations forces from Korea, may have a case.

MOSCOW'S GOOD TIME

Why does the administration disagree? President Truman has recently stated that we are negotiating because the Soviet Union wanted to negotiate. But Moscow was mum about its desire for 6 months during which UN and the United States spokesmen repeatedly expressed our desire to end the Korean fighting. It would be more accurate to say that Moscow consented to let its Asian confederates negotiate in its own good time.

The greater urge is undoubtedly on our side. So once more we ask, why?

Ending a war indecisively just to end a war cannot be the answer, particularly not when such an end would leave the adversary able and ready to attack the free world at some other equally sensitive spot.

There must be another explanation—and there is. Part of it was given by Gen. Omar Bradley when he told the Senators that conflict with Communist China would be "the wrong war, at the wrong time, in the wrong place, and with the wrong adversary."

WHY THE "WRONG PLACE"?

Anybody can understand why American military leaders hate to see our all-too-few ground divisions rubbed away in Korea while the U. S. S. R. is keeping its own forces intact. One can understand an American desire to make up for the years when we failed to rearm. But why in the "wrong place" if, as the administration seems to admit, by fighting in Korea we are perhaps saving southeastern Asia?

The rest of the answer was given by Secretary Marshall to the House Foreign Affairs Committee (July 1, 1951):

"Mr. Judd. Do you believe that the independence of Asia is essential to the independence and security of Europe?"

"Secretary MARSHALL. I do not think that [a Communist Asia] would be fatal to the defense of Europe. . . ."

"Mr. Judd. In my judgment, finding means of keeping Asia out of the Communist fold is just as essential to Europe as it is to send divisions there."

Here is the root of the dispute over Asia that divides the American people. The President and the Joint Chiefs of Staff—up to a point—back Secretary Marshall.

Most Republicans and some thoughtful Democrats, like Senator PAUL DOUGLAS, of Illinois, back Representative Judd.

Which side should the people support? Clearly, to be wrong here is to gamble the safety of the United States.

The Plight of Lithuania

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

AMERICAN LITHUANIAN COUNCIL OF BOSTON,

July 11, 1951.

DEAR CONGRESSMAN: The Lithuanian American people throughout the United States, as well as those Lithuanians privileged to reside in the free countries of the world, commemorated the eleventh anniversary of the resubjugation of Lithuania and the decennial of the first horrible deportations from Lithuania to Siberia on June 16, 1951.

In Boston we observed this occasion with appropriate ceremonies, at which a resolution was adopted concerning the plight of our dear motherland, Lithuania. We enclose a copy of this resolution and sincerely hope that you will find time to read it.

We earnestly hope that you will continue to fight the cause of freedom and do all in your power to help Lithuania and other oppressed nations of the world regain their freedom and liberty.

Yours respectfully,

ALEXANDER CHAPLIK, *President.*

Resolution unanimously adopted at a mass meeting held at the Municipal Building, South Boston, Mass., on June 16, 1951, under the auspices of the American-Lithuanian Council, Boston chapter, in protest and commemoration of the following tragedies which have befallen Lithuania and its people: (1) Eleventh anniversary of the resubjugation of Lithuania; and (2) decennial of the first horrible deportations from Lithuania, when, during one night, the Bolshevik secret police—NKVD—arrested and carried off to the wastes of Siberia 40,000 innocent Lithuanians:

"Whereas the Soviet Union, relying upon the spurious Ribbentrop-Molotov pact of August 23, 1939, and in disregard of all treaties and agreements with Lithuania, including the Peace Treaty of 1920, the Nonaggression Pact of 1926, and the Mutual Assistance Pact of 1939, did occupy Lithuania by most brutal means, and did subject Lithuania to a most cruel oppression; and

"Whereas the Soviet Union, in furtherance of its designs to implant communism in Lithuania and throughout the world, and being unable to bend the resistance of Lithuania to its will, has embarked upon a relentless and unprecedented policy to eradicate the Lithuanian Nation, as attested by the fact that it has already deported or annihilated 800,000 Lithuanians, which constitutes over 30 percent of the entire Lithuanian people: Now, therefore, be it

Resolved—

"1. That said resubjugation and genocide being practiced in Lithuania is sorely protested, decried, and deplored; and further be it resolved

"2. That the attention of the United Nations, and of the whole cultured world be directed to the plight of blood-soaked Lithuania, and all effective means be solicited to block the ravisher of Lithuania and to expose him to the nations of the world; and further be it resolved

"3. That copies of this resolution be forwarded to the President of the United States, to all Congressmen and Senators of the United States, and to the representatives in Washington, D. C., of the Governments of Great Britain, France, Italy, Poland, Estonia, Latvia, Finland, Norway, Sweden, Denmark, Spain, Portugal, Belgium and to the press."

AMERICAN-LITHUANIAN COUNCIL,
BOSTON CHAPTER,
ALEXANDER J. CHAPLIK,

Chairman.

J. JANUNIN, *Secretary.*

Veterans of Foreign Wars of the United States is worthy of the careful perusal of every Member of the House:

KETCHUM-HENNESSEY POST, No. 1515,

VETERANS OF FOREIGN WARS

OF THE UNITED STATES,

Brooklyn, N. Y., July 26, 1951.

HON. ABRAHAM J. MULTER,

Member of Congress,

Washington, D. C.

Dear CONGRESSMAN MULTER: As commander of the Ketchum-Hennessey Post, 1515, Veterans of Foreign Wars of the United States, I have been mandated by the members of my post to transmit to you its proposal against the spiraling cost of living.

At the outset, the Ketchum-Hennessey Post would like you to know that we commend you and your eight fellow Congressmen from Kings County for your splendid efforts in trying to keep both prices and wages in line. However, all your efforts have been frustrated by a sinister coalition in Congress, which at present appears to be in the majority, and whose policies and actions are dictated by the "profit at any cost" lobbyists who are now riding high in Washington.

It is ironic to think that there are in Congress elected officials who have not learned the lessons of the last war and who have permitted themselves to be dominated by these lobbyists and the greedy interests they represent; interests whose lust for excessive profits at any cost is not restrained by the blood and lives of our men in Korea and in the hospitals, nor by the danger to the economic structure of our beloved country.

Without going into the merits of the present control system, the fact remains that since the start of the Korea conflict, more than a year ago, the cost of living has been allowed to rise beyond due bounds and is continuing to rise with no end in sight, while Congress as a whole has made no serious effort to hold a line. If this inflation is permitted to go unchecked, it will not only wreck our economy, but make us a prey to our enemies.

The members of our post, like all wage earners, small-business men, and householders in the country, are finding it impossible to make ends meet. We feel, as citizens and veterans, that the very things we fought and died for are being seriously endangered.

The time is now here when we must take stock of our situation. The time is now here when the Congressmen from Brooklyn must start a campaign in the Halls of Congress to call halt to this undermining of our economic structure.

We petition you, our representatives, to lead the fight for a system of controls that will permit all of us, workingmen, businessmen, and farmer, to live together as an integrated whole without one group taking economic advantage of the others.

Yours in comradeship,

BERNARD HABER,

Commander.

include the following article by Vicente Villamin, published in the Washington Post, July 28, 1951. Mr. Villamin is a Washington columnist for the Manila Bulletin.

PEACE TREATY WITH JAPAN

(By Vicente Villamin)

After more than a year's preparatory work, Mr. John Foster Dulles, special assistant to Secretary of State Acheson, presents a draft treaty of peace with Japan. It is not yet final and is still open to comments and suggestions by interested governments and presumably also by the public.

The 50 nations which declared war against Japan, including Russia but not China, have been invited by the United States to an international conference at San Francisco commencing on September 4 to end formally the state of war with Japan and to agree on the terms of peace.

To date only three countries have registered opposition to the draft treaty. They are Russia, the Philippines, and Nationalist China. Each of them has different grounds for opposition and they are acting separately. Their respective positions may be stated as follows:

1 Russia is against the whole treaty because it is not hard and restrictive enough on Japan and, further, it is not written by herself or jointly by the United States, Russia, Great Britain, and Communist China. She is expected to boycott the peace conference. Communist China, following Russia's example, is opposed to the treaty. But if she comes out from under the Russian hypnosis long enough to study the draft treaty, she would find it to her interest not to oppose it, for she could enter into a bilateral agreement with Japan under its provisions if Japan consented, as she probably would.

Russia has always proved that she can look after her own interests. Whether she signs the Japanese peace treaty or not, she has already received valuable concessions for her 6-day war with Japan. Mr. Dulles said in a speech that after the Japanese surrender "the Russians moved into Manchuria, Port Arthur, Dairien, North Korea, South Sakhalin, and the Kurile and Habonai Islands, thus cashing in on a formal belligerency that had lasted 6 days. In Manchuria they acquired not only Japanese industrial investments valued at \$1,830,000,000 but vast amounts of Japanese armaments and ammunition dumps. These latter were turned over to the Chinese Red armies in direct violation of the explicit agreement they had just made to give military supplies only to the Nationalist Government. The Red armies of China, thus immensely strengthened, then began to win victories over the Nationalist Government." That government, according to Mao Tse-tung himself, the Communist chieftain, had been able to inflict on the Communist armies a total loss of more than 1,200,000 men in 3 years, which showed that it did some fighting.

2. The Philippines is not opposed to the entire treaty but chiefly to the inadequacy of its provisions regarding payment of monetary reparations by Japan to the country that demands it and is entitled to it. Article 14 of the draft treaty admits in principle Japan's obligation to pay reparations, but at the same time makes the categorical statement that she is not in a position to make any payment. This provision rules out the reasonable possibility that Japan in the years to come may acquire, as she surely will, the capacity to pay reparations in amounts within reason. What is the remedy? There should be some technical body like the Dawes-Young Commission, which determined Germany's capacity to pay under the Versailles Treaty that ended World War I, and let it resolve the question of fact of Japan's capacity to pay episodically.

Veterans of Foreign Wars Demand Price Controls

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, the following letter which I received from the

Peace Treaty With Japan Loaded With Danger for United States Position in the Far East

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I

Under the treaty technical service with compensation of Japanese technicians, advisers and industrial facilities is offered to the Philippines. That cannot be considered as a concession on the part of Japan because Filipinos would prefer American and other foreign technicians and advisers to Japanese; and they would not ship raw materials to Japan for processing, but would try and process them locally themselves, thus carrying out their program of industrialization and avoiding the revival of the blasted Japanese coprosperity sphere under which Japan would receive the lion's share of benefits.

The difference of the position of the Philippines on reparations from that of the United States should be noted. The separate, self-governing Philippine Commonwealth had no quarrel with Japan, but being under the sovereignty of the United States she was involved in the war when the latter was attacked by Japan. She made common cause with the United States and fought as best as she could the Japanese enemy. She became a battleground, while the United States did not. She was devastated and lost many lives. The United States can afford to be generous and magnanimous to Japan, but the Philippines cannot. It is only proper and just that Japan should be made to pay both compensatory and punitive damages in the form of reparations. The punitive is not vindictive, but it would serve as a reminder to and a deterrent on Japan against committing acts of aggression in the future.

3 There are two Chinas, the Nationalist and the Communist. The former is still recognized by the United States and many other nations as the legitimate government of China, while the latter has the recognition of Russia and her satellites, Great Britain, and India. Neither China has been invited to attend the peace conference.

Nationalist China naturally is humiliated for not having been invited to the peace conference, for it was that China that fought the war against Japan and helped the Allies to whip her. She will be more humiliated when she realizes that under the draft treaty Japan is in a position to practically sentence her to juridical death and put her out of legal existence. This result would have also the most adverse effect on the political and strategic position of the United States in the entire Pacific area.

This is how that astounding situation will come about. The draft treaty gives Japan the right to choose which China to negotiate her treaty of peace with. It is generally expected that she will choose Communist China, which now controls most of China territorially, for she wants to revive her trade with that country. Those countries which have recognized Communist China would want Japan to deal with her.

If Japan concludes her treaty with that China, that action would virtually mean (1) recognition of the Communist government, (2) acquiescence of the signers of the general treaty to the position of Communist China as legalized by Japan, and (3) enhanced prestige and popularity for Communist China which would serve her well when the General Assembly of the United Nations decides which China should be represented in that world organization. In other words, the action of Japan is bound to have the tremendous actual and psychological effects of putting Communist China forward as the legitimate government of China, and that would be the beginning of the end of Nationalist China.

If Communist China is substituted for Nationalist China in the United Nations, she can rightly demand that Formosa be ceded to her as provided in the Cairo Declaration of 1943, which was signed by President

Roosevelt, Prime Minister Churchill, and Generalissimo Chiang Kai-shek and subsequently by Premier Stalin. It is certain that Generalissimo Chiang Kai-shek will not honor the demand for him to give up Formosa to the Communists and he will fight with his 500,000 men supported by the more than 7,000,000 people of Formosa until overcome by superior force. The United Nations would be embarrassed if it helped the Communists and it would be embarrassed if it did not.

But it is the United States that would be placed in the most disadvantageous position of all once it were determined that Formosa should go to Communist China. She would be morally and legally prevented from aiding Nationalist China in resisting Communist invasion of Formosa. If she does not aid Formosa sufficiently and that island falls into the hands of the Communists, all her military and political leaders agree that the position of the United States in the entire Pacific area would be greatly weakened, her western Pacific defense perimeter extending from Alaska to the Philippines, with Formosa as a vital link, would be broken, the new Japan would be isolated from the democratic nations line-up, and the Philippines would be exposed dangerously to Communist infiltration and invasion.

Thus would be the fatal result of giving Japan the right under the draft treaty of selecting for and by herself with which China to negotiate a treaty of peace, that is if she selected Communist China.

What is the remedy? Several might be suggested, but if Nationalist China could not be admitted as a regular member of the peace conference for some overpowering reason, then one possible remedy is to have a provision putting off the negotiation of a Japan-China treaty, if it is going to be with the Communists, until the status of Nationalist China shall have been more specifically defined. After all, most of the expected trade of Japan with Communist China will fall under the ban of the United Nations embargo.

European View of American Treatment of Negroes

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 1, 1951

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the Record an article entitled "The Phantom American Negro." This article, by George S. Schuyler, is condensed from the Freeman. It contains vitally important facts and is well worth reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PHANTOM AMERICAN NEGRO

(By George S. Schuyler)

Wherever our citizens travel abroad, they are quizzed about the "oppressed and persecuted" American Negroes. "How can you tell others about democracy when you terrorize and lynch Negroes? Why do you deny them their civil rights?"

"How does it feel," a Norwegian asked me last December in an Oslo hotel, "to be able

to stay in a nice place like this and eat in such a fine dining room?" He would not believe that I had been a guest in fine hotels in the United States.

A Uruguayan cabinet officer discoursed dolefully on the tragedy of the "poor Negroes" of North America until I observed that they owned several times more automobiles than the total number of cars his country boasted, and that in no city in our South were the Negroes as impoverished as the Mestizos I had seen in Montevideo.

Who is responsible for this false picture of the American Negro? The Communists, of course, have done their part in spreading a fantastically biased picture of American race relations. There has been no effective American counterpropaganda. Indeed, Americans themselves have helped to publicize misinformation. The books that literate foreigners have read—Kingsblood Royal, Freedom Road, Strange Fruit, Native Son—all stress hatred between whites and blacks. The news services send abroad mostly the sensational and discreditable items, salted with occasional mention of Marian Anderson, Jackie Robinson, or Ralph Bunche. On the screen, foreigners see Home of the Brave, Pinky, and No Way Out. Small wonder that they believe in this phantom Negro.

Paradoxically, the average white American is as misinformed as the average European, for he has been exposed to the same propaganda in books, magazines, newspapers, and movies.

Actually, the progressive improvement of race relations and the economic rise of the Negro in the United States is a flattering example of democracy in action. The most "exploited" Negroes in Mississippi are better off than the citizens of Russia or her satellites.

In 1865 about 95 percent of American Negroes were illiterate. Today there is little illiteracy among them. The educational systems that have eliminated their illiteracy were voted and maintained by white-controlled counties and States. By 1900 there were a million and a half colored pupils in public elementary schools. Today the enrollment exceeds two and a quarter million. In 1900 there were 92 public high schools for Negroes in the South. Today there are 2,500. Some 10,000 Negroes are graduated from college each year, and there are 70,000 students in attendance—proportionately more than the total number of college students in Great Britain. This climb from chattel slavery is not accomplished in an atmosphere of persecution.

In 1900 it was prophesied that disease would exterminate the American Negroes. Today their life expectancy is 60 years, only 8 years less than that of American whites.

In 1900 Negroes owned 17 percent of the nonfarm homes in which they dwelt. By 1947 they owned 34 percent. Altogether American Negroes now own over 1,000,000 homes. There are 184,000 Negro farm owners, with farms averaging 70 acres. And in the past few years Negroes have themselves financed and erected 25,000 new housing units—quite an achievement for a "terrorized" populace.

A standard Soviet charge is that American capitalists grind down the Negro. The Julius Rosenwald fund expended more than \$22,000,000 largely for Negro education and helped erect 5,000 schools in the South. The general education board, set up by John D. Rockefeller in 1902, has expended 20 percent of its money to advance the education of Negroes, and recently John D. Rockefeller, Jr., gave \$5,000,000 to aid privately owned Negro colleges.

For the past 50 years the economic gulf between Negroes and whites has been narrowing. Negroes own 14 banks, 200 credit unions, 60,000 retail businesses, 26 savings and loan associations, and 25 large insurance

companies with assets of more than \$100,000,000, with a billion dollars' worth of insurance in force in 27 States and the District of Columbia.

Negroes own and publish 150 newspapers and several major magazines with a combined circulation of 3,000,000. Not a single one has been suppressed, south or north, although they are unsparing in their criticism of racial proscription.

More than 1,250,000 United States Negroes are members of labor unions and many predominantly white unions have Negro officers, even in the South.

Segregation in the armed services has been rapidly broken down since 1944. Today training schools for all services are fully integrated racially, and there are some 3,000 Negro commissioned officers.

The process of integrating the Negro into the national social structure has been faster in some States than in others, and the record of the inhumanities attending the process has been deplorable in many areas, but in spite of all this there has been amazing and unprecedented adjustment within the memory of living men.

Here, then, is the real Negro in American society, not the phantom Negro of the anti-American propagandists native and foreign. Admittedly we still have a long way to go, but instead of being apologetic about this record, Americans should be proud that their free system has been capable of such elasticity.

Congressmen: Beware the Meat Shortage

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 16, 1951

Mr. MULTER. Mr. Speaker, I cannot resist calling to the attention of my colleagues the item which appeared in Time magazine of July 16, 1951. Could it be that the distinguished French Senator had voted in favor of eliminating slaughter quotas? The item follows:

TABLED?

The ferocity of French politics is well known, but in the case of Senator Victor Blaka-Boda, of French West Africa, it seemed to have reached new heights. Deputies of France's new Assembly, meeting for the first time last week, stood around on the floor of the Chamber uneasily discussing the senator's fate. Rumor had it that the senator had been eaten by his constituents.

Blaka-Boda used to be a witch doctor on Africa's Ivory Coast. As long as he stuck to spells, charms and incantations, he was all right. His troubles started when he began to occupy himself with such potent magic as ballot boxes and election campaigns. He took the Christian name Victor, joined the fellow-traveling Rassemblement Démocratique Africain, was elected to the French Senate. A small, thin, worried-looking man, the ex-witch doctor did not take to light-hearted Paris, made only a few appearances there, always seemed to his colleagues in the Senate to be thinking of home. Home he went. On some political business on the Ivory Coast, Senator Blaka-Boda was driving through darkest Africa in January 1950, when, at Bouafé (population 1,000), the car broke down. Instructing his chauffeur to

repair it, Senator Blaka-Boda strolled off into the jungle to stretch his legs. That was the last of the senator until, in November, some charred bones were found in the jungle. They were shipped to Paris for examination, and last week it was announced that the bones were Blaka-Boda's.

Cannibalism used to flourish on the Ivory Coast. Paris heard that the senator was either: (1) devoured by cannibals who, for reasons of their own, were mad at him; or (2) murdered in conventional fashion by political enemies. By and large, Paris preferred to believe theory No. 1.

Explorer Dedicates Life to Stopping Future Wars

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York World-Telegram and Sun of July 21, 1951:

EXPLORER DEDICATES LIFE TO STOPPING FUTURE WARS—GENERAL RIISER-LARSEN VOWED PEACE CRUSADE AS HE LED NORWEGIAN TROOPS IN WAR

(By Frederick Woltman)

Arctic explorations and the need for a stronger world organization may seem poles apart as conversation pieces. But they're the favorite topics of a sturdy Norwegian of 61 whose pale-blue eyes accentuate the deep creases in a face hard-bitten by the winds of the frozen north.

He is Maj. Gen. Hjalmar Riiser-Larsen, famous explorer and aviator who commanded Norway's air forces in World War II. He arrived here recently as new president of the World Movement for a World Federal Government.

The general today recalled an exploit which made air history. That was in 1925 when he piloted Roald Amundsen and Lincoln Ellsworth on the first flight to the polar regions. Their two primitive flying boats were forced down by fog between ice floes 120 miles from the North Pole.

His take-off, which saved the renowned explorers and both crews, was one of the most exciting in aviation.

"The ice closed in, so we had to skid one of the planes from floe to floe," he said. "Then, after about 2 weeks, we found a long one, 1,300 feet. For 8 days we stamped down the snow with our feet. We marked the runway with black paper from the back of films."

GRAZES FLOE

Riiser-Larsen, then a naval air captain, ordered everything dumped overboard, including a vest-pocket camera Amundsen had carried for years. With his passengers huddled in the center of the plane, he pulled the boat into the air at the end of the ice. But only after the hull had grazed the next floe.

"Everybody embraced everybody else," he said. "And Amundsen gave me a piece of chocolate he had saved."

In 1928 the young Norwegian captain headed another daring flight to the Far North in an amphibian, from Spitzbergen. He helped locate Italian Gen. Umberto No-

bile and the marooned crew of the dirigible Italia.

Over the next 5 years he led three arduous dog-sled expeditions into the Antarctic, discovering, mapping, and claiming important unexplored land along the Atlantic coastline for King Haakon VII.

LED AIR TROOPS

Now Norway director of the Scandinavian Airlines, General Riiser-Larsen came to the United States to attend the annual general assembly of the United World Federalists at Des Moines, Iowa, last month.

It was during the war that the general got interested in world federalism as a means of establishing permanent peace. He then had 3,000 Norwegian air troops under him in Canada and England, escorting convoys, patrolling the coast and fighting.

"Their parents were in Nazi-occupied Norway," he said, "so they came to me with their troubles. We lost many of the boys and few ever expected to return to Norway. They all hoped and begged that this would be the last war in the world."

"So I promised if I ever got home to use all my spare time working to stop future wars."

Today, with atomic bombs to speed the destruction of civilization, the general is determined there shall be no next world war.

BLESSED BY VATICAN

When he was elected president of the organization to succeed Britain's Lord Boyd Orr in Rome last April, General Riiser-Larsen and 30 world government delegates were invited to the Vatican, where Pope Pius gave the movement his blessing from the papal throne.

"The Vatican had carefully gone into the question and it was of great importance to us," he stated. "While the Scandinavian countries are not Catholic, we regard the present Pope as one of the great cultural leaders of the world."

His movement claims 28 affiliated groups in 27 nations, with a membership of two to four million. The largest is United World Federalists in America. Its immediate objective is to revise article 109 of the United Nations Charter so as to strengthen the General Assembly and make it a democratic world parliament. The veto power, which gives the Soviet bloc the whip hand, would be abolished.

"If we had that today," he explained, "the United States would not have to bear the brunt of the fighting in Korea. The UN could allot troop contributions. Each nation would surrender only its right to wage war on other countries. The Atlantic Pact countries have done that already among themselves."

ALMOST FLUNKED

In 1915 he was the first pupil in Norway's first military flying school. But he almost failed to make the grade.

That's because he tipped 200 on the scale, and excess avoirdupois, in the early days of flying, ended aviation careers. The youthful, overweight cadet made it, however.

With the German invasion of Norway in 1941, the world press services reported that the Germans had killed the noted explorer. Instead, he was watching the airborne attack from the roof of naval air headquarters in Oslo.

"I then heard Quisling wanted to arrest me for refusing to surrender the airport. So I just stayed at home, which was the last place they would look," he said. Later he escaped to England with important data on Hitler's air-invasion tactics.

His 3,500-mile expedition to Queen Maud Land and Hearst Land, Antarctica, 8 years earlier made page 1 headlines all over the world. And nearly cost him his life.

ADRIFT 5 DAYS

An ice floe broke off and carried General Riiser-Larsen and two companions out to sea. Their supplies and 55 huskies were lost. The men drifted 5 days, as the sea ground their floe smaller and smaller.

"We sent out radio calls on a set with a dynamo operated by pedals like a bicycle," he recalled. "A floating Norwegian whaling factory picked up the messages and sent one of its fleet, the *Globe* No. 5.

"One morning we saw two masts of a whaler passing us over the horizon. We hurriedly wirelessly the factory. The two masts slowly changed course. When they came in line with our ice floe, we knew we were saved

The World Over, Poles Lead in the Fight for Freedom

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. ZABLOCKI. Mr. Speaker, the International Confederation of Free Trade Unions, composed of representatives from all over the world, has been very successful fighting the Communist infiltration into trade unions. In this respect, the work of the confederation supplements our efforts in behalf of European recovery, and united the working trade unionists of the world behind the movement to do away with communism, and to spread democracy and freedom throughout the world.

In trade-union endeavors are projects to promote a better understanding of the peoples of the world. The article *The World Over, Poles Lead in the Fight for Freedom*, by Hilton E. Hanna, which appeared in the *AFL Amalgamated Meat Cutters and Butcher Workers* magazine, and which was recently brought to my attention, exemplifies the type of work they are doing.

Under leave to extend my remarks in the RECORD, I am including the article and believe its contents merit our consideration:

THE WORLD OVER, POLES LEAD IN THE FIGHT FOR FREEDOM

(By Hilton E. Hanna)

On May 3, 1791, not many years after our American Constitution was adopted, the Poles up and adopted one of their own. Ever since then May 3 is recognized and observed as Polish Independence Day—just as we celebrate Fourth of July.

In Chicago alone, upward of one hundred thousand Poles or Americans of Polish birth or extraction gather at the Kosciuszko monument on May 3 each year to watch and join the colorful parade and applaud the speeches pledging new allegiance to America but vowing also that Poland will never, never be forgotten. The event is observed, just as sincerely and patriotically—though perhaps not always on so spectacular a scale—wherever Poles are found.

For the sake of the record let's place events in their correct order. While the constitution approved by Poland in 1791 was pat-

terned somewhat after the American Constitution, the basic idea of democracy had been practiced and adopted as a way of life in Poland at least 500 years before there was a United States of America.

It is worth noting that during the Convention of 1787 when the founders of our American Republic were looking around for forms and types of government to adopt, the political system of Poland was frequently referred to as being nearest what we wanted. Alexander Hamilton, first Secretary of the Treasury, even proposed that our Chief Executive be elected for life, like the Polish king.

On the other hand there is no denying the fact that Poland, like France, was greatly influenced by the American Revolution. . . . The success of our venture in self-determination has literally set the world on fire with the freedom bug. We actually started something.

Poland adopted Christianity in the year 966. For centuries she existed as an odd country among peculiar neighbors. Down to this very day Polish temperament and the role of her country in the promotion of civilization is hardly understood.

At a time when the divine rights of kings held sway over most of the known world and the individual human being was treated like so much paving material in the building of empires, Poland was a thriving commonwealth, which included Lithuania, Byelo-Ruthenia, and the Ukraine, dedicated to the proposition that all men are created equal, entitled to serve God after the dictates of their own hearts, speak their minds—by tongue or pen—as their better judgment directed, and receive the help of their fellow men in the pursuit of happiness for themselves and their families.

Immediately after it was founded in 1364, the University of Cracow became the rallying center and cultural haven for European scholars expelled from their own countries whether because of religious, scientific, or artistic nonconformity. History Prof. Hermann Aubin, of the German University of Breslau, points out in his books that German settlers who went to Poland in the Middle Ages were attracted there mainly by Polish tolerance and by the freedom of thought and speech they found there.

The Jews, persecuted, hunted and hounded elsewhere throughout Europe, found an early sanctuary in Poland. The Statute of Kalisz, in 1264, gave them cultural autonomy and their own coinage. It was the only document of its kind in all Europe.

The spirit of tolerance and understanding in Poland is probably nowhere better illustrated than in its dealing with leaders of the Protestant Reformation. Predominantly a Catholic country, Poland, nevertheless, issued a royal decree in 1563 giving full freedom and protection both to the leaders of the Reformation and their followers. Furthermore, the Polish Catholic clergy, itself, joined in opposing the severe penalties imposed by the Bohemian Council of Constance on those whose religious views differed from their own.

Nor is that all. The laws of Poland which protected the Jew and the Protestant also extended the principle of equality to the Eastern Church. As a result, members of the Greek Orthodox Church, for instance, were admitted as full-fledged members of the Polish Parliament.

This Christian-democratic tradition which has characterized Poland through the years was specifically incorporated into the Act of Lublin, 1569, which united Poland and Lithuania to form the Republican Commonwealth of Poland-Lithuania. It was confirmed by the Constitution of May 3, 1791, and extended by the later Constitution of modern Poland.

The American Revolution struck a familiar note with the Poles. Many Polish Patriots came over and joined the fight. They have been fighting for us and the cause of freedom ever since.

Tadeusz Kosciuszko and Casimir Pulaski were indeed military geniuses who rendered invaluable service to our cause during the Revolutionary War. For that they have been universally recognized. But that is only part of the story. These Polish patriots were also symbols of the eternal struggle of the human spirit for freedom from bondage, persecution, and dictatorship of any kind.

It is of no little significance that Kosciuszko liberated the serfs on his own large estate in Poland. Then when leaving the United States in 1797, after his second visit, he further demonstrated his genuine concern for freedom of the individual by leaving his entire American fortune to Thomas Jefferson for freeing and educating the Negro slaves.

The document speaks for itself:

"I, Tadeusz Kosciuszko, being just on my departure from America, do hereby declare and direct that should I make no other testamentary disposition of my property in these United States I hereby authorize my friend, Thomas Jefferson, to employ the whole thereof in purchasing Negroes from among his own or any others and giving them liberty in my name; in giving them an education in trade or otherwise; in having them instructed for their new condition in the duties of morality which may make them good neighbors, good fathers and mothers, husbands and wives in their duty as citizens, teaching them to be defenders of their liberties and country, of the good order of society and in whatsoever will make them happy and useful; and I make the said Thomas Jefferson executor of this."

Well might we join Teodor Josef Konrad Korzenowski, himself a Pole—Joseph Conrad to you—foremost English-writing novelist of the early twentieth century in quoting Thomas Campbell:

"Hope, for a season, bade the world farewell
And Freedom shrieked—as Kosciuszko fell."

It was the Poles, under King Jan Sobieski, who, by timely assistance to the Austrians, in the Battle of Vienna against the Turks in 1683 saved Europe for Christianity.

In education, literature, art, science, music, and other technical fields of endeavor the Poles "hold their own" as compared with any other nationality groups. An abbreviated list of famous Poles would include Mikolaj Kopernik (Copernicus), whose discoveries in the sixteenth century are the basis of present-day studies of astronomy, Madam Sklodowska-Curie, Nobel Prize winner, discoverer of radium; Olszewski and Wroblewski, scientists who first liquefied air, Chopin, Moniuszko, and Paderewski, music; the latter also patriot and statesman. Baudouin de Courtenay, Rozwadowski, and Jerzy Kurylowicz, linguistics; Oskar Halecki and Kucharski, historians; Kochanowski, Rymont, and Sienkiewicz, literature; the latter two Nobel Prize winners. Matejko, Kosak, and Wyczolkowski, painters; Stwosch and Ostrowski, sculptors.

Kosciuszko and Pulaski won fame for themselves and country during the Revolutionary War but they were not the first Poles to cast their lot with America. The first Poles came to America with the Second Supply, October 1608. They came, employed by the Virginia Company of London, as experts and instructors in the manufacture of glass and pitch, tar and similar products which England then imported from Poland. Capt. John Smith spoke very highly of them in his *True Travels* and other sources confirmed his respect for their contributions.

The record shows that as the Poles came they settled in increasing numbers in New York, Texas, New Jersey, Pennsylvania, Ohio, and Kentucky. They played a prominent part in the settlement of the section of the United States known generally as the West and Midwest—Illinois, Michigan, Wisconsin, Indiana, Massachusetts and Connecticut are other States with large numbers of inhabitants of Polish origin and descent. It is estimated that all together there are about 5,250,000 Polish-derived Americans in the United States. They rank as the third largest national group in the country, next to the Germans and the Italians.

Like other groups, the Polish-American has made notable advances in every field of endeavor in which he has been engaged. This is true in Government, labor, the professions, business, industry, agriculture, or wherever else he has gone.

In the industrial life of the Nation the contribution of the Polish-American is substantial in such areas as textiles, coal mining, the production of iron and steel, meat packing and retailing, and related industries.

His traditional love of freedom and the fuller life for himself and his fellowman makes the Pole an almost ideal trade-unionist. He is dependable and trustworthy. Without detracting in the least, from the contributions of others, the Amalgamated Meat Cutters and Butcher Workmen of North America can testify that its present position of influence and service is due, in no small measure, to the doggedness, determination, and stick-to-it-iveness of many of its Polish members when the International Union was passing through its darkest days.

Poland, like every nation in world history, has had her ups and downs or less rosy days. She has been divided and partitioned, overrun and occupied. And she has been faced with domestic problems that brought her almost to her knees. One such era was the period between the two World Wars.

In a very real sense Poland found herself in a predicament. Internally she was literally bled white by the horrors and destruction of the war and the ravages of starvation. It was her misfortune to fall under the control of leaders and forces at least alien if not downright hostile to democratic practices and Poland's liberal heritage. For the most part her friends and neighbors deserted her. * * * It was a most trying time in her history.

In spite of these obstacles, the democratic forces and traditions that had become part and parcel of Poland's national life were sufficiently strong to wrest a considerable amount of land reforms from the landlords. This survival of the democratic spirit was also able to modify, where it was unable to prevent, reactionary practices in the field of civil liberties. Poland was nationalist. But minority groups, nevertheless, still had the right of appeal and the right to be heard. The country was badly bent but not quite broken.

The spirit of Poland and her sons and daughters never shone brighter than in World War II. She was dismembered by her neighbors both from the east and the west. Her peoples were assaulted and slaughtered. Her churches desecrated and her land laid waste. Her government fled into exile. She was mortally wounded but she kept the faith. She never lost hope.

She lives now in hope. The so-called iron curtain is not so solid or soundproof that the fighters for freedom, whose ancestors saved the west for Christianity, can't see and hear what we say and do, on this side of the curtain, to give substance to their faith.

While the democracies search frantically for friends behind and around the iron curtain, let us not forget Poland and the Poles.

Servicemen's Readjustment Act for Veterans of Korea

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting a copy of a bill which I have introduced to provide certain educational and training benefits to veterans who served in the active military, naval, or air service on or after June 27, 1950, which, of course, means the Korean veterans.

The text of the bill follows:

Be it enacted, etc. That section 1, title I, Public Law No. 2, Seventy-third Congress, as amended, is hereby amended by adding at the end thereof a new subsection known as subsection (h) and to read as follows:

"(h) Any person who served in the active military, naval, or air service on or after June 27, 1950, and prior to such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress, shall be entitled to education or training subject to the provisions and limitation of part X of Veterans Regulation No. 1 (a), as amended."

SEC. 2. Veterans Regulation No. 1 (a), as amended, is hereby amended by adding at the end thereof a new part to be known as part X and to read as follows:

"PART X

"1. Any person who served in the active military, naval, or air service on or after June 27, 1950, and prior to such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress (hereinafter referred to as the basic service period), and who shall have been discharged or released therefrom under conditions other than dishonorable, and whose education or training was interrupted by reason of his entrance into the service, or who desires a course of education or training for a period of not in excess of 12 months, and who either shall have served 90 days or more, exclusive of any period he was assigned to a civilian institution for a course of education or training under the Army, the Navy, or the Air Force which course was substantially the same as established courses offered to civilians, or as a cadet or midshipman at one of the service academies, or shall have been discharged or released from active service by reason of an actual service-incurred injury or disability, shall be eligible for and entitled to receive a course of education or training under this part. *Provided*, That such course shall be initiated not later than 2 years after the date of his discharge unless he shall, within the 2-year period and prior to termination of the basic-service period, return to active duty in the Armed Forces, in which event his 2-year period shall cease to run until his subsequent discharge: *Provided further*, That no such course of education or training shall be afforded beyond 7 years after the termination of the basic-service period: *And provided further*, That any such person who had not passed his 23d birthday on June 27, 1950, or the date he entered the service, whichever is later, shall be deemed to have had his education or training interrupted.

"2. Any such eligible person upon application to the Administrator, shall be entitled

to a course of education or training to assist him in attaining an educational or vocational objective for a period not to exceed the time such person was in the active service on or after June 27, 1950, and before such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress (the basic service period), exclusive of any period he was assigned to a civilian institution for a course of education or training under the Army, the Navy, or the Air Force which course was substantially the same as established courses offered to civilians or as a cadet or midshipman at one of the service academies, but an eligible person whose education or training was not interrupted by reason of his entrance into the service shall not be entitled to more than 12 months of education or training under this law: *Provided*, That in no event shall the total period of education or training under this part X, or under both this part and part VIII of Veterans Regulation No. 1 (a), as amended, exceed 48 months: *Provided further*, That his work continues to be satisfactory throughout the period, according to the regularly prescribed standards and practices of the institution: *Provided further*, That for veterans in schools regularly operated on the quarter or semester system, wherever the period of eligibility ends during a quarter or semester and after a major part of such quarter or semester has expired, such period shall be extended to the termination of such unexpired quarter or semester. In all other institutional courses, wherever the period of eligibility ends after a major portion of the course is completed, such period may be extended not more than 9 weeks to completion.

"3. (a) Such person shall be eligible for and entitled to such course of education or training, in full time (or the equivalent thereof in part-time) training, as he may elect, and at any approved educational or training institution at which he chooses to enroll, whether or not located in the State in which he resides, which will accept or retain him as a student or trainee in any field or branch of knowledge which such institution finds him qualified to undertake or pursue. *Provided*, That prior to the applicable delimiting date for initiating his course and subject to the limitations of subparagraph (c) of this paragraph 3, such person shall be entitled to change his course of education or training once without approval from the Administrator: *Provided further*, That the Administrator is authorized to approve additional changes of course of education or training when he finds that—

"A. The veteran is not making satisfactory progress in his present course and the failure is not due to his own misconduct, his own neglect, or his own lack of application; or

"B. The course to which the veteran desires to change is more in keeping with his aptitude, previous education, training, or other such pertinent facts, or

"C. A course to which the veteran desires to change, while not a part of the course currently pursued by him, is a normal progression from said course and will enable him to attain his educational or vocational objective, or

"D. There exist other most cogent reasons for the change.

"*And provided further*, That any such course of education or training may be discontinued at any time, if it is found by the Administrator that, according to the regularly prescribed standards and practices of the institution, the conduct or progress of such person is unsatisfactory.

"(b) Any such eligible person may apply for a course of instruction by correspondence without any subsistence allowance: *Provided*, That one-fourth of the elapsed time in following such course shall be charged against

the veteran's period of eligibility: *Provided further*, That the Administrator shall have authority to contract with approved institutions for such courses if he finds that the agreed cost is reasonable and fair: *And provided further*, That the provisions of paragraph 5 shall not prevent the payment of such agreed rates.

"(c) The Administrator shall refuse approval to any course elected or commenced by a veteran which is avocational or recreational in character. The following courses shall be presumed to be avocational or recreational in character: Dancing courses; photography courses; flight and glider courses; bartending courses; personality-development courses; entertainment courses; music courses—instrumental and vocal; public-speaking courses; and courses in sports and athletics such as horseback riding, swimming, fishing, skiing, golf, baseball, tennis, bowling, and sports officiating (except applied music, physical education, or public-speaking courses which are offered by institutions of higher learning for credit as an integral part of a course leading to an educational objective); but no such course shall be considered to be avocational or recreational in character if the veteran submits complete justification that such course will contribute to bona fide use in the veteran's present or contemplated business or occupation; and the Administrator may find any other course to be avocational or recreational in character.

"4. From time to time the Administrator shall secure from the appropriate agency of each State a list of the educational and training institutions (including industrial establishments), within such jurisdiction, which are qualified and equipped to furnish education or training, which institutions, together with such additional ones as may be recognized and approved by the Administrator, shall be deemed qualified and approved to furnish education or training to such persons as shall enroll under this part: *Provided*, That wherever there are established State apprenticeship agencies expressly charged by State laws to administer apprentice training, whenever possible, the Administrator shall utilize such existing facilities and services in training on the job when such training is of a year's duration or more: *Provided further*, That any school operated for profit shall not be deemed to be qualified and approved for the enrollment of veterans not already enrolled during any period in which the Administrator finds that it has fewer than 25 equivalent full-time students or one-third of the equivalent full-time students enrolled (whichever is larger), paying all of their own tuition without rebate or scholarships: *Provided further*, That no school or course shall be deemed qualified and approved unless the Administrator finds that it was in operation for a period of 1 year immediately prior to the date of approval, but this shall not require or permit the disapproval of (a) any course in a public school or other tax-supported school, (b) any course in an institution which has been in operation for a period of more than 1 year which does not completely depart from the whole character of the instruction previously given by such institution, or (c) any course in an institution which has been in operation for a period of more than 1 year, by reason of a change in the location of such institution from one point to another within the same general locality: *Provided*, That upon the certification of any State approval agency, that a new or existing institution is essential to meet the requirements of veterans in such State, the Administrator in his discretion may approve such an institution notwithstanding the provisions of this paragraph.

"5. (a) The Administrator shall pay to the educational or training institution for each person enrolled in a course of education or training an amount not to exceed one-half of such tuition and fees as are charged regular nonveteran students of the same category, but in no event shall the total amount paid by the veteran and the Administrator exceed that charged to other students in similar category within the institution for the successful pursuit and completion of the course: *Provided*, That in no event shall such payments, by the Administrator, with respect to any person, exceed \$300 for a full-time course for an ordinary school year: *Provided further*, That no payments shall be made to institutions, business or other establishments furnishing apprentice or other training on the job: *And provided further*, That, subject to the first proviso hereof, where the enrollment in any course in a nonprofit school (including an institutional on-farm-training course) consists of fewer than one-third of the students enrolled paying all of their own tuition, the Administrator shall determine a fair and reasonable rate to be paid for such course by the Administrator and the veteran. *And provided further*, That as to any veteran who pursues a course of education or training full time or part time without subsistence allowance, the Administrator shall pay to the approved institution the charges for tuition and fees required of other students for the successful pursuit and completion of the course by other students in the institution, or the fair and reasonable rate established in applicable cases pursuant to the third proviso hereof, but not in excess of the rate of \$600 for a full-time course for an ordinary school year.

"(b) In any case where it is found that an overpayment to a veteran of subsistence allowance (which overpayment has not been recovered or waived) is proved in a hearing before the Committee on Waivers of the appropriate Veterans' Administration regional office to be the result of willful or negligent failure of the school to report, as required by applicable regulation or contract, to the Veterans' Administration unauthorized or excessive absences from a course, or discontinuance or interruption of a course by the veteran, the amount of such overpayment shall, at the discretion of the Administrator, constitute a liability of the school for such failure to report, and may be recovered by an offset from the amounts otherwise due the school or in other appropriate action: *Provided*, That any amount so collected shall be reimbursed if the overpayment is received from the veteran. This provision shall not preclude the imposition of any civil or criminal action under any other statute.

"6. (a) While enrolled in and pursuing a course under this part, such person, upon application to the Administrator and certification of actual attendance each month shall be paid an allowance for subsistence, supplies, and equipment beginning with the first day of required attendance and ending with the last day of required attendance of a given academic year or other enrollment period, including not in excess of 30 days in a calendar year for absences authorized by the institution or establishment and days when the institution is not regularly in session, not counting as absences week ends or legal holidays established by Federal or State law during which the institution is not regularly in session: *Provided*, That (1) while so enrolled and pursuing a course of full-time institutional training, such person shall be paid an allowance for subsistence, supplies and equipment of \$80 per month, if without a dependent or dependents, or \$110 per month if he has one dependent, or \$125 per month, if he has more than one de-

pendent, and (2) while so enrolled and pursuing a course of part-time institutional training, or a course of institutional on-farm training, or a course of apprenticeship training, or other training on the job, or a combination course, such person shall be paid an allowance for subsistence, supplies, and equipment at the rate for a full-time course, of \$70 per month, if without a dependent or dependents, or \$95 per month, if he has a dependent or dependents: *Provided further*, That while so enrolled and pursuing a course of institutional on-farm training, or a course of apprenticeship training, or other training on the job, such allowance for subsistence, supplies, and equipment shall be reduced each 4 months as the course progresses in the ratio that such 4 months' period bears to the total length of the veterans' approved course under this part, converted to the next higher 4 months' interval in the case of a course which is not equal to an exact multiple of 4 months: *Provided further*, That such person attending a course of less than one-half time basis shall not be entitled to an allowance for subsistence, supplies, and equipment: *Provided further*, That at the beginning of the veteran's course, or enrollment period, and each 12 months thereafter, if continuously enrolled, the Administrator shall require a report of income from productive labor reasonably to be expected by the veteran during his enrollment period or the next 12 months' period if he will be continuously enrolled, and the veteran's allowance for subsistence, supplies, and equipment shall be adjusted prospectively so that in no event shall the rate of such allowance plus the income from productive labor reasonably expected to be received by the veteran exceed the rate of \$2,580 for a 12-months' period for a veteran without a dependent, or \$3,300 for a 12-months' period for a veteran with one dependent, or \$3,540 for a 12-months' period for a veteran with two or more dependents.

"(b) For the purpose of this part, a trade or technical course, offered on a clock-hour basis below the college level, for training in those occupations which are customarily learned through apprenticeships or other training on the job shall be considered a full-time course when a minimum of 36 hours per week of attendance is required.

"7. Any such person eligible for the benefits of this part, who is also eligible for the benefit of part VII, Veterans Regulation No. 1 (a), may elect either benefit or may be provided an approved combination of such courses: *Provided*, That the total period of any such combined courses shall not exceed the maximum period or limitations under the part affording the greater period of eligibility.

"8. No department, agency, or officer of the United States, in carrying out the provisions of this part, shall exercise any supervision or control, whatsoever, over any State educational agency, or State apprenticeship agency, or any educational or training institution: *Provided*, That nothing in this section shall be deemed to prevent any department, agency, or officer of the United States from exercising any supervision or control which such department, agency, or officer is authorized, by existing provisions of law, to exercise over any Federal educational or training institution, or to prevent the furnishing of education or training under this part in any institution over which supervision or control is exercised by such other department, agency, or officer under authority of existing provisions of law.

"9. The Administrator of Veterans' Affairs is authorized and empowered to administer this title, and, insofar as he deems practicable, shall utilize existing facilities and services of Federal and State departments

And agencies on the basis of mutual agreements with them. Consistent with and subject to the provisions and limitations set forth in this title, the Administrator shall, from time to time, prescribe and promulgate such rules and regulations as may be necessary to carry out its purposes and provisions.

"10. The Administrator may arrange for educational and vocational guidance to persons eligible for education and training under this part and, if the Administrator requires such educational and vocational guidance, he is authorized, in his discretion, to defray, or reimburse the veteran for, his traveling expenses to and from the place of advisement. At such intervals as he deems necessary, he shall make available information respecting the need for general education and for trained personnel in the various crafts, trades, and professions: *Provided*, That facilities of other Federal agencies collecting such information shall be utilized to the extent he deems practicable.

"11. (a) As used in this part, the term 'educational or training institutions' shall include all public or private elementary, secondary, or other schools furnishing education for adults, business schools and colleges, scientific and technical institutions, colleges, vocational schools, junior colleges, teachers colleges, normal schools, professional schools, universities, and other educational institutions, and shall also include business or other establishments providing apprentice or other training on the job, including those under the supervision of an approved college or university or any State department of education, or any State apprenticeship agency or State board of vocational education, or any State apprenticeship council or the Federal Apprenticeship Training Service established in accordance with Public Law No. 308, Seventy-fifth Congress, or any agency in the executive branch of the Federal Government authorized under other laws to supervise such training.

"(b) As used in this part the term 'apprentice or other training on the job' shall include courses offered by establishments approved by the appropriate agency of the State or the Administrator whenever such courses of apprentice or other training on the job are furnished in accordance with the following provisions:

"1. Any establishment desiring to undertake an apprentice or other training-on-the-job program will be required to submit to the appropriate State approving agency a written application setting forth the course of training for each job for which a veteran is to be trained. The written application covering the training program will include the following:

"a. Title and description of the specific job objective for which the veteran is to be trained.

"b. Length of the training period.

"c. Schedule listing various operations for major kinds of work or tasks to be learned and showing for each, job operations or work, tasks to be performed, and the approximate length of time to be spent on each operation or task.

"d. Wage or salary to be paid at the beginning of the training program, at each successive step in the program, and at the completion of training.

"e. Entrance wage or salary paid by the establishment to employees already trained in the kind of work for which the veteran is to be trained.

"f. Number of hours of supplemental instructions required.

"2 The appropriate approving agency of the State or the Administrator may approve the application of the establishment when such establishment is found upon investigation to have met or made provision for meeting the following criteria:

"a. The training content of the program is adequate to qualify the veteran for ap-

pointment to the job for which he is to be trained.

"b. There is reasonable certainty that the job for which the veteran is to be trained will be available to him at the end of the training period.

"c. The job is one in which progression and appointment to the next higher classification are based upon skills learned through organized training on the job and not on such factors as length of service and normal turnover.

"d. The wages to be paid the veteran for each successive period of training are not less than those customarily paid in the establishment and the community to a learner in the same job and who is not a veteran and are in conformity with State and Federal laws and applicable bargaining agreements.

"e. The job customarily requires a period of training of not less than 3 months and not more than 2 years of full-time training: *Provided*, That this requirement shall not be applicable to courses of apprentice training.

"f. The length of the training period is no longer than customarily required by the establishment and other establishments in the community to provide the trainee with the required skills, arrange for the acquiring of job knowledge, technical information, and other facts which the trainee will need to learn in order to become competent on the job for which he is being trained.

"g. Provision is made for related instruction for the individual veteran who may need it.

"h. There is in the establishment adequate space, equipment, instructional material, and instructor personnel to provide satisfactory training on the job.

"i. Adequate records are kept to show the progress made by the veteran toward his job objective and a periodic report showing the conduct and progress made in the course of training on the job will be provided for the Veterans' Administration.

"j. Appropriate credit is given the veteran for previous training or job experience, whether in the military service or elsewhere, his beginning wage adjusted to the level to which such credit advances him and his training period shortened accordingly. No course of training will be considered bona fide if given to a veteran who is already qualified by training and experience for the job objective.

"k. A copy of the training program as approved by the State agency is provided to the veteran and to the Veterans' Administration by the employer.

"l. Upon completion of the training the veteran is given a certificate by the employer indicating the length and type of training provided and that the veteran has completed the course of training on the job satisfactorily.

"3. The Veterans' Administration is not authorized to award the benefits under this part, if it is found by either the Administrator or the appropriate State approving agency that the course of apprentice training or other training on the job fails to meet the requirements of this paragraph.

"(c) As used in this part the term 'institutional on-farm training' shall include any course of instruction approved by the appropriate agency of the State or the Administrator. Such course shall be considered a full-time course when it combines (1) organized-group instruction in agricultural and related subjects of at least 200 hours per year—and of at least 8 hours each month—at an educational or training institution, with (2) supervised-work experience on a farm or other agricultural establishment. To be approved, such a course shall be developed with due consideration to the size and character of the farm on which the veteran is to receive his supervised-work

experience and to the need of the veteran, in the type of farming for which he is training, for proficiency in planning, producing, marketing, farm mechanics, conservation of resources, food conservation, farm financing, farm management, and the keeping of farm and home accounts. Such a course shall, in addition, satisfy the requirements of the following:

"1. If the veteran performs part of his course on a farm under his own control—

"a. He shall receive not less than 100 hours of individual instruction per year, not less than 50 hours of which shall be on such farm—with at least two visits by the instructor to such farm each month. Such individual instruction shall be given by the instructor responsible for the veteran's institutional instruction and shall include instruction and home-study assignments in the preparation of budgets, inventories, and statements showing the production, use on the farm, and sale of crops, livestock, and livestock products;

"(b) He shall be assured of control of such farm (whether by ownership, lease, management, agreement, or other tenure arrangement) until the completion of his course; and

"(c) Such farm shall be of a size and character which (1) together with the group instruction part of the course will occupy the full time of the veteran, (2) will permit instruction in all aspects of the management of a farm of the type for which the veteran is being trained; and (3) if the veteran intends to continue operating such farm at the close of his course, will assure him a satisfactory income under normal conditions.

"2 If the veteran performs part of his course as the employee of another—

"(a) He shall receive, on his employer's farm, not less than 50 hours of individual instruction per year (with at least one visit by the instructor to such farm each month). Such individual instruction shall be given by the instructor responsible for the veteran's institutional instruction;

"(b) His employer's farm shall be of a size and character which (1) together with the group-instruction part of the course will occupy the full time of the veteran, and (2) will permit instruction in all aspects of the management of a farm of the type for which the veteran is being trained;

"(c) His employer shall agree to instruct him in various aspects of farm management in accordance with the training schedule developed for the veteran by his instructor, working in cooperation with the employer.

"3 The Veterans' Administration is not authorized to award the benefits under this part if it is found, by either the Administrator or the appropriate State approving agency, that any approved course of institutional-on-farm training fails to meet the requirements of this subparagraph (c).

"(d). 1. In order to secure or retain approval to train veterans, any school operated for profit will be required to submit to the appropriate State approving agency a written application, in form and contents prescribed by the State approving agency, setting forth the course or courses of training. The written application covering each course must include the following:

"a. Title of the course and specific description of the objective for which given.

"b. Length of course.

"c. A detailed curriculum showing subjects taught, type of work or skills to be learned, and approximate length of time to be spent on each.

"d. A showing of educational and experience qualifications of the instructors.

"e. A description of space, facilities, and equipment used for the course.

"f. A statement of the maximum number of students proposed to be trained in the course at one time.

"g. A statement of the educational prerequisite for such a course.

"2. The appropriate approving agency of the State or the Administrator may approve the application of such school when the school is found upon investigation to have met the following criteria:

"a. The curriculum and instruction are consistent in quality, content, and length with similar courses in the public schools or other private schools with recognized and accepted standards.

"b. There is in the school adequate space, equipment, instructional material, and instructor personnel to provide satisfactory training. When approval is given, it shall state the maximum number authorized to be trained in each course.

"c. Educational and experience qualifications of the instructor are adequate as determined by the State approval agency.

"d. Adequate records are kept to show attendance, progress, and conduct, with periodic report to be provided to the Veterans' Administration; and there are clearly stated and enforced standards of attendance, progress, and conduct.

"e. Appropriate credit is given for previous training or experience, with training period shortened proportionately. No course of training will be considered bona fide as to a veteran who is already qualified by training and experience for the course objective.

"f. A copy of curriculum as approved is provided to the veteran and the Veterans' Administration by the school.

"g. Upon completion of the training, the veteran is given a certificate by the school indicating the approved course, title, and length, and that the training was completed satisfactorily.

"h. Such additional criteria established by the State approving agency as it may deem necessary for approval of schools training veterans under this part.

"3. No new course, or additions to the capacity of an existing course, in any school operated for profit, shall be approved if the State approving agency shall determine that the occupation for which the course is intended to provide training is crowded in the State where the training is to be given and that existing training facilities are adequate.

"4. The Veterans' Administration is not authorized to award benefits under this part if it is found by either the appropriate State approving agency or the Administrator that the course offered by a school operated for profit fails to meet the applicable requirements of this subparagraph (d) or the Administrator finds that the school has submitted willfully false or misleading claims.

"12. The appropriation for the Veterans' Administration, 'Administration, Medical, Hospital, and Domiciliary Services,' shall be available for necessary expenses under this part of Veterans Regulation 1 (a), and there is hereby authorized to be appropriated such additional amount or amounts as may be necessary to accomplish the purposes hereof. Any such appropriation shall also be available for use by the Administrator in reimbursing State and local agencies for reasonable expenses incurred by them in (1) rendering necessary services in ascertaining the qualifications of industrial establishments for furnishing on-the-job training to veterans under the provisions of this part of such regulation, and in the supervision of industrial establishments furnishing such training, or (2) furnishing, at the request of the Administrator, any other services or facilities in connection with the administration of programs for training on the job under such provisions, or (3) rendering necessary services in ascertaining the qualifications of profit institutions for furnishing

education and training under the provisions of this part of such regulation and in the supervision of such institutions."

SEC. 3. Any person who served in the active military, naval, or air service on or after June 27, 1950, and prior to such date as shall thereafter be determined by Presidential proclamation or concurrent resolution of the Congress, shall be entitled to job counseling and employment placement services subject to the provisions and limitations of title IV of the Servicemen's Readjustment Act of 1944, as amended.

SEC. 4. This act may be cited as the Korean Conflict Servicemen's Readjustment Act.

DESCRIPTION OF DRAFT KOREAN CONFLICT SERVICEMEN'S READJUSTMENT ACT GENERAL

The draft bill attached hereto has been prepared by the various interested agencies within the executive branch of the Government. It is a synthesis of their sometimes divergent views and to this extent is not completely satisfactory to any single agency. However, the general objectives of the bill (including the objectives of the changes from the provisions of the GI bill) are endorsed by all the participating agencies. While there are some differences of opinion between agencies as to the best means of achieving these objectives, the specific provisions of the bill are a compromise which adequately represents the views of the agencies principally concerned.

In addition to providing more adequate safeguards against excessive expenditure of public funds than did the GI bill, the draft bill would be much simpler to administer and would more adequately assure the veterans of good quality training.

The following statement (1) describes the major provisions of the draft bill, and (2) points out the major differences between the draft bill and the GI bill.

MAJOR PROVISIONS OF BILL

The bill provides education or training to any veteran of 90 days' military service since June 27, 1950, with other than a dishonorable discharge, whose training was interrupted by reason of his entrance into service, or who desires a refresher course. Time spent while in military service in courses substantially the same as civilian courses would be deducted in the determination of eligibility and entitlement. Veterans who had not passed their twenty-third birthday on June 27, 1950, or the date they entered service, whichever is later, would be deemed to have had their training interrupted. The amount of training to which the veteran would be entitled is computed on the basis of 1 month of full-time training for each month of active service. The provisions of the bill would enable each trainee to complete at least one school term. The individual veteran whose training was interrupted will have a maximum entitlement of 4 years (48 months) under this proposed bill. Other veterans would be entitled to a maximum of 1 year (12 months). Training received under the Servicemen's Readjustment Act and under the draft bill could not exceed a total of 4 years. The veteran must enter training within 2 years after his date of discharge and complete training 7 years after a date to be established by Presidential proclamation or concurrent resolution of the Congress.

Types of training provided include college, below college (trade and vocational), job, and farm. Avocational or recreational training would be prohibited.

The bill provides that subsistence, supplies, and equipment allowances in the fol-

lowing maximum amounts would be paid to all full-time trainees:

	Veteran with no de- pendents	Veteran with 1 dependent	Veteran with more than 1 dependent
On-the-job trainees.....	\$70	\$95	\$95
Institutional trainees....	80	110	125

Where the veteran had other income from productive labor available, his total income, including subsistence, could not exceed \$215 if he had no dependents, \$275 if he had one dependent, or \$295 if he had more than one dependent. No subsistence would be paid for less than half-time training. All income from productive labor would be considered in arriving at the amount of subsistence to be paid.

The draft bill provides that the Government will pay one-half of the cost of tuition and fees up to a maximum payment of \$300, except that where no subsistence is paid, the Government will pay the full cost of tuition and fees.

The bill establishes minimum standards for on-job training, for schools operated for profit, and for institutional on-farm training.

The Administrator of Veterans' Affairs would have the authority to approve or disapprove all changes of course after the first. He would be prohibited from authorizing benefits where training is substandard, or where fraud has occurred. He could provide vocational advisement and guidance to all veterans eligible for education or training, and reimburse veterans for travel expense incurred when advisement and guidance was required.

The bill also assures veterans of service since June 27, 1950, of job counseling and employment-placement services comparable to those granted World War II veterans by title IV of the GI bill.

DIFFERENCES BETWEEN DRAFT BILL AND EDUCA- TION AND TRAINING PROVISIONS OF GI BILL

Eligibility: Eligibility requirements would remain unchanged from those under the GI bill, except that for the veteran to be eligible for a full 4 years of training his education or training must have been interrupted by reason of entrance into service. Veterans who had not passed their twenty-third birthday on June 27, 1950, or on the date they entered military service would be deemed to have had their education or training interrupted. Veterans whose training was not interrupted would be eligible for a maximum of 1 year of training.

Experience with the GI bill has indicated that a substantial amount of the training granted particularly in the latter stages of the program, was not a result of readjustment needs or of interference with education or training by military service. Rather it was the result of the veteran's interest, apart from his military service, either in further education or training or in the cash benefits associated with the training.

The original GI bill had a restriction in it similar in type to that proposed, but it was removed by amendment. Its removal relieved VA of the administrative burden it imposed, when the agency was having difficulty in processing the tremendous volume of work resulting from the mass demobilization at the end of World War II. The administrative burden imposed on VA under current conditions would be relatively small. The restoration of this type of limitation will more adequately assure that the veteran's need for training is associated with his military service.

Entitlement: The GI bill formula for computing education and training entitlement was very heavily weighted in favor of the man with short service, providing that he had at least 90 days of service. A full year of training was available to every eligible veteran, plus an additional month for each month of service. Under this formula a man with 89 days' service would not be eligible for any training, whereas a man with 91 days would be eligible for 15 months of full-time training. While under the circumstances surrounding World War II mobilization and demobilization, there may have been more justification for this bias in favor of the man with short service, current conditions would not appear to justify providing 15 months' training (one and two-thirds school years) to men with only 3 months' service. No definite information is available as to the average period of entitlement under the proposed month-for-month formula, but it appears likely that it would approximate 24 months (two and two-thirds school years). Minimum entitlement would be one school term, since the veteran would be eligible to complete any term more than half over at the time his entitlement ran out. The maximum amount of training to which any man would be entitled under this proposed bill is 4 years. Veterans whose training was not interrupted would be entitled to 1 year of training for refresher purposes. Training received under the GI bill would be deductible from the 4-year maximum.

Deadlines for entering and completing training would be reduced from 4 and 9 years, respectively, as they were established by amendments to the GI bill, to 2 years after release from active service and 7 years after the date to be established by proclamation or resolution. This reduction is consistent with the more favorable circumstances surrounding the demobilization of veterans of Korean service. Since there will be a much smaller number of servicemen to be discharged, the schools will not have the waiting lists of trainees which forced many veterans to postpone training after the last war.

SUBSISTENCE, SUPPLIES, EQUIPMENT

The amounts paid for subsistence would be no different than under the GI bill. However, to the subsistence allowance would be added \$5 per month to cover supplies and equipment. This would enable the veteran to purchase supplies and equipment himself and would relieve the Government of the administrative burden of purchasing these items. Available information indicates that \$5 per month is somewhat more than the average cost to the Government of these items under the GI bill. Income ceilings under the draft bill would be increased \$5 to compensate for supplies and equipment expense.

The subsistence would not be paid until after attendance certification, rather than without such certification as is the practice under existing law. This would largely eliminate the major cause of overpayments to veterans.

The draft bill also differs from the GI bill in that no subsistence would be paid for less than one-half time training. Provisions pertaining to the payment of subsistence to institutional on-the-farm trainees have been modified to make them more consistent with on-job-training subsistence provisions. With respect to subsistence payments for these two types of training, the bill also provides for the automatic adjustment of subsistence payments, as the course progresses, in accordance with a preestablished formula, rather than for adjustment on the basis of the changing relationship between income and ceilings, as was the case under the GI bill. The revised procedures would greatly simplify the administration of these portions of the program.

TUITION

Whereas under the GI bill the full cost of tuition and fees (up to a maximum of \$500, less supplies and equipment) is borne by the Government, the draft bill provides that where subsistence is paid to the trainee the Government would bear one-half the cost of tuition and fees, up to a maximum Government payment of \$300. This change is designed to accomplish two objectives:

(1) To eliminate a substantial part of the administrative burden both upon the VA and upon the schools that has resulted from the "customary" and "reasonable" cost concepts under which VA negotiated with schools training GI bill students.

(2) To give the veteran a financial interest in his own training.

Many of the difficulties experienced in administering the GI bill were a result of the fact that normal competitive factors were not operative, since there was a large supply of trainees and all funds for tuition were provided by the Government. The payment of one-half of the tuition by the veteran will restore, in part, this normal competitive element to the situation. With an investment of his own in the training, the veteran will in many instances be more discriminating in his choice of courses and schools, and he will also consider more carefully the basic question of whether he should enter training at all. This provision to give the veteran a financial responsibility will in most instances make unnecessary the cost formulas used in the past by VA for arriving at tuition payments.

Where no subsistence is paid, the Government would pay all tuition and fees up to a maximum of \$600 for an ordinary school year.

TYPES OF TRAINING AVAILABLE

The same types of training would be available under the draft bill as under the GI bill.

CHANGES OF COURSE

The GI bill, as amended, provides for the approval by the Administrator of Veterans' Affairs of all changes of course from one general field to another after the first such change. This provision was added to the original bill by amendment and was designed to reduce the volume of indiscriminate course-jumping by trainees. The draft bill provides for the approval by the Administrator of all changes of course after the first, and outlines the bases for the approval of such changes. This revision will for the most part limit course changes after the first to those instances where (1) the trainee is not making satisfactory progress and the failure is not due to his own misconduct, neglect, or lack of application; (2) the new course would be more in keeping with the trainee's aptitude, experience, etc.; or (3) the new course is a normal progression from his present course. All changes, including the first, would require approval by the Administrator, if made after the deadline date for initiating a course (as is the case under the GI bill, as amended):

AWARD OF BENEFITS

The draft bill provides that the Administrator may deny benefits for job, farm, or profit school training if either he or the State approval agency finds that the course fails to meet the requirements of the law or if fraud exists. Under the GI bill, the Administrator could deny benefits only if he found fraud to exist. He could not deny benefits for substandard training if the school was approved by the State approval agency. Experience has shown that this separation in the GI bill of administrative responsibility from financial responsibility has caused substantial waste of public funds and of the time of veteran trainees. The draft bill provision is designed to eliminate this waste.

William N. Oatis

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the *Christian Science Monitor*, Wednesday, August 1, 1951:

THE OATIS CASE

(By Joseph C. Harsch)

WASHINGTON — William N. Oatis, an American reporter who served faithfully the concept of free journalism, is still behind bars in a jail in Czechoslovakia manned by Communist secret police trained by men from Moscow.

Efforts by the State Department to secure his release, and in the meantime the right of consular access, so far have failed.

Congress has become interested in the case. A half-dozen resolutions proposing various forms of reprisal against the Czech Government are pending in the legislative hopper. A number of our legislators have berated the State Department for its failure to obtain release for Mr. Oatis.

This is a case where it is easier to criticize the State Department than it is to suggest an effective remedy.

So far, the ideas formulated in Congress are either unrealistic or would damage the interests of the United States more than they would penalize the country which is guilty of violation of contract and decent international behavior.

An example of the unreality of some of the proposals is one for the arrest of 10 Czechs for every missing American. That might work except for the fact that there literally are no Czechs under the present judicial jurisdiction of the United States except for (1) refugees from the present Communist regime and (2) Czech diplomats. Obviously, arresting persons of the first category would merely delight the Communist regime in Czechoslovakia. Arresting Czech diplomats would only invite reprisals on American diplomats in Prague who there perform the useful task of observing events in that country for our better knowledge.

One facet of this case so far overlooked in the debate is that the State Department does have upon its head some degree of responsibility for the arrest and imprisonment of Mr. Oatis. This responsibility derives from past behavior of the Congress.

And it arises from the fact that the State Department allowed a precedent to be established in Czechoslovakia for the illegal seizure of American citizens without vigorous reaction from Washington.

In the summer of 1949, two American citizens disappeared in Prague—Noel and Herta Field. Also the brother of Noel Field, Hermann, disappeared somewhere in the course of an air flight between Warsaw and Prague. Later, an adopted daughter of Noel Field disappeared in Berlin.

The State Department made routine inquiries about the four members of the Field family, but it never pressed the Czech Government as it pressed the Hungarians in the Vogeler case, or is pressing the Czechs now in the Oatis case.

There was a reason for the relative disinterest in the Field family. Noel Field had Communist connections in his past. Whether he was ever a party member has not been

established. He did have many active Communist connections. He also served American intelligence during the war in Switzerland when he acted as a channel of communication to both German and French undergrounds for the United States Office of Strategic Services.

Obviously the State Department, under constant drumfire from Congress for alleged softness on communism, was not eager to go all out in behalf of the Field family. It did not. And there was no great protest.

But this relative apathy in the Field case now bears its evil fruit at the expense of Mr. Oatis. The Czechs got away with the disappearance of the Fields. Three American citizens disappeared from inside their borders. No one did anything about it vigorously. The evil precedent was established.

The only possible basis for the rescue of Mr. Oatis is his American citizenship. The rights of the American citizen were neglected in the Field case. Now everyone wants to revive them in behalf of Mr. Oatis. But rights once neglected and compromised are harder to revive. The situation suggests that the rights of citizenship are a seamless garment to be upheld for all, regardless of personal worthiness.

World Government Opposed by California Department, Veterans of Foreign Wars of the United States

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including a resolution adopted at the thirty-first encampment of the Department of California, Veterans of Foreign Wars of the United States, at Santa Cruz, Calif., June 24-27, 1951. This great patriotic organization will have no part in the move for one world as proposed by the United World Federalists.

Whereas the Veterans of Foreign Wars of the United States is on record as opposing any form of world government in which the United States of America would surrender any of its sovereignty; and

Whereas the World Federalists movement is sponsored and backed by an organization known as the United World Federalists; and

Whereas it now appears that these organizations may be infiltrated by subversive elements and devoted to the task of making the United States a subject state in a world government and depriving American citizens of their citizenship and of their rights and protections under the Constitution; and

Whereas it further appears that the organizations sponsoring this movement have unlimited funds with which to propagandize and attempt to influence legislation in furtherance of their aims, which funds it is believed are derived from subversive sources: Now, therefore, be it

Resolved, That the Congress of the United States be requested to appoint a committee to investigate all phases of the World Federalist movement, including the purposes and aims of their sponsors and backers, the source of funds used to further such aims, and the methods employed to influence legislation in furtherance thereof.

Czechoslovakia Should Be Disciplined

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. JENKINS. Mr. Speaker, the Republican Members of Congress from Ohio at their weekly meeting yesterday took note of the unlawful and unjust imprisonment of William N. Oatis by the authorities in Czechoslovakia. By a unanimous vote they instructed me as the chairman of the delegation to write a letter to President Truman sending him their views as expressed in resolutions that they at that time had adopted. In compliance with those instructions I wrote President Truman a letter which includes these resolutions. The letter including the resolutions is as follows:

WASHINGTON, D. C., August 1, 1951.

The Honorable HARRY S. TRUMAN,
President of the United States,
White House, Washington, D. C.

DEAR MR. PRESIDENT: The Republican Members of Congress from Ohio at their weekly meeting today accepted the following resolutions concerning the imprisonment of William N. Oatis by the Government of Czechoslovakia

"Resolved, That all commercial relations with Czechoslovakia should be terminated immediately and should be resumed only if and when the Government of Czechoslovakia restores William N. Oatis to his freedom; and it is further

"Resolved, That if the said William N. Oatis is not restored to his freedom within a reasonable time that the Department of State should take steps to evacuate all Nationals of the United States in Czechoslovakia with the view of severing diplomatic relations with that Government."

The Ohio Republican delegation is as follows: CHARLES H. ELSTON, WILLIAM E. HESS, WILLIAM M. MCCULLOCH, CLIFF CLEVINGER, CLARENCE J. BROWN, JACKSON E. BETTS, THOMAS A. JENKINS, WALTER ELLSWORTH BREHM, JOHN M. VORYS, ALVIN F. WEICHEL, WILLIAM HANES AYRES, J. HARRY MCGREGOR, FRANK T. BOW, FRANCES P. BOLTON, and GEORGE H. BENDER.

As chairman of the Ohio Republican delegation in the House of Representatives, I was authorized and instructed to transmit to you a copy of these resolutions and to express to you the hope that you will give this important matter prompt and serious consideration.

Respectfully,

THOMAS A. JENKINS,
Chairman, Ohio Republican Delegation, House of Representatives.

Mr. Speaker, the American people are tremendously interested in the alacrity with which the authorities in some of the foreign countries throw our citizens into prison upon the least provocation and without regard to the comity that exists between nations and without regard to law and to common decency.

The newspaper correspondents are naturally very much interested for the imprisonment of this man is due to his efforts as a newspaperman. But the

freedom of the press evidently does not count for so much in that country.

The conduct of Czechoslovakia in this Oatis matter indicates her lack of appreciation of the many trade concessions that the United States has extended to her over the violent protests of many Congressmen who have for years been seeking to protect the interests of American industries whose products have had to compete with cheap foreign labor. The pottery and the glass manufacturers of the country have suffered great commercial distress because of trade agreements made by American authorities in favor of Czechoslovakian industries. The same is true with reference to shoe manufacturers and textile manufacturers and many others.

Mr. Speaker, I hope the President will demand that justice be done immediately. I further hope that American trade authorities and diplomatic authorities will show a greater desire to look after the best interest of America as against the interest of these ungrateful foreign countries.

Hospital Survey and Construction Program

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from *Valor*, August 1951, by John W. Cronin, M. D., F. A. C. S., Chief, Division of Hospital Facilities, United States Public Health Service, Washington, D. C.:

THE NATIONAL HOSPITAL SURVEY AND CONSTRUCTION PROGRAM

(By Dr. John W. Cronin)

There are dangers in building small hospitals, and these must be considered in the administration of the Hill-Burton program. Methods of avoiding them must be worked out in a feasible, practical way. Small hospitals cannot always provide the variety of service that can be given in larger hospitals. Low occupancy rates are frequently found in the small hospital. There is a relationship between demand for hospital care and the ability to pay for it, and the lower the financial resources of the community the lower the use of the hospital beds. Due to relatively low income of small towns and rural communities, charges for hospital care must be kept comparatively low. As a result, the small hospital in a small community has found it difficult to set aside sufficient funds for the purchase and maintenance of modern equipment, or for the employment of specialized personnel. The temptation given to a small-hospital staff to perform services beyond their skills may bring harm to the patient.

There is a real need for the small facility in many small communities and rural areas. We do not believe in the indiscriminate building of small hospitals in all rural areas. We do believe that the provision of such facilities where they can effectively serve their purpose of bringing needed medical

services to the population is acceptable. This requires careful study and sound community planning. Small hospitals should not stand alone but should share with the larger hospitals of the hospital service area and accept services and assistance as well as render services and assistance to those hospitals. This is the basis of the coordinated and integrated hospital system. It is the key note of modern medical care. Such plans as the Rochester, N. Y. plan; the Bingham Associates (Mass.) plan; and those in Virginia, Michigan, Kansas, and North Carolina among others are pointing this way.

The Division of Medical and Hospital Resources works very closely with the Division of Hospital Facilities in the Public Health Service in developing guide lines for the National Hospital Construction program. When we realize that for nearly 20 years the hospital plant of this country lay dormant we know the need is great. In the depression years money was not available for hospital construction; during the war years materials were used for purposes other than hospitals. The normal attrition rate for hospitals is estimated at \$75,000,000 per year. At \$13,500 per bed that means a 6,000 bed loss per year. A review of the State plans above shows that we now have about 1,000,000 beds and based on the formula toward which we can build as stated in Public Law 725, Seventy-ninth Congress we need 900,000 more beds for normal peacetime.

(The formula is roughly 45 beds per 1,000 population for general hospitals; 2 beds per 1,000 population for chronic disease; 5 beds per 1,000 population for mental and 2.5 beds per average annual death (1939-44) for tuberculosis; and one health center per 30,000 people.)

With the onset of the Korean incident on June 25, 1950, the need for and value of all our health resources became greatly enhanced. The Hill-Burton program will undoubtedly in time be geared to new and greater responsibilities in line with the defense of the Nation. Its scope and content will be changed to meet the need. It should not be forgotten that we are only slowly making an inroad on our normal peacetime need.

TRENDS

The trends of the national hospital program can be summed up as follows:

1. The development, slowly but surely, of hospital services in needy areas, especially in rural areas.
2. The establishment of the hospital as the health center of the community.
3. The regional coordination of hospital services.
4. The coordination of hospital and public-health services.
5. The strengthening of the centers of medical education through acquisition of facilities to permit these centers to play their vital and much-needed role.
6. The demand for the general hospital to be more truly general and include services for the mental, tuberculous, and chronic type of patient.
7. The realization that prepayment plans for hospital care are the only sound, feasible plan.
8. The fact that good planning, good design and construction, and good administration is the basic tripod of success for hospital services to the patient.
9. The programs of basic research and consultation are imperative to each aspect of that basic tripod.
10. The need for and value of regional health councils to determine health needs of the region and community, evaluate existing facilities, and determine methods and means of acquiring the needed additional facilities and services.

11. The fact that local community, State, and Federal groups can successfully work together toward a common goal and achieve it.

12. Modern medicine demands a health promotion, health maintenance, and health conservation type of program, rather than just the treatment of disease.

The objectives of the national hospital program are being reflected in the trends being manifested. In short, the objective is to make possible the provision of quality medical care as economically as possible to those receiving it and as conveniently as possible for those who have the responsibility of providing it to the patient.

The cut-back of \$550,000,000 in the appropriation for the operation of the Federal Government during the fiscal year 1951 included \$75,000,000 of Hill-Burton funds. The effect on the States is to require a great deal of replanning and reconsideration of plans already made. This is currently being done. Many communities which had planned on acquiring hospitals may have to have their projects postponed until a later year.

The division operates through the 10 regional offices where a typical staff consists of a program director, a health program representative, an architect, a construction engineer, and a mechanical engineer. The staff at headquarters is divided into a program operations branch consisting of individuals trained in medico-socio-economic aspects of hospital services; the technical services branch made up of architects, construction engineers, mechanical engineers, specification and estimates experts, wage-rate authorities, electrical engineers, and others; the equipment section with trained equipment personnel; the program evaluation and reports branch with personnel trained to obtain adequate reports and to evaluate them; the information section and the usual administration, fiscal and budget personnel. A very close liaison is maintained with professional groups throughout other divisions of the service as well as non-Federal governmental and private organizations since the national hospital construction program in its ramifications directly and indirectly affects our daily lives and professional careers. The national hospital construction program is a fine example of how the local community, State and Federal Government can cooperate in achieving a common goal of better medical care for those who need hospital services.

National Clay Week

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. BOW. Mr. Speaker, I am today introducing a House resolution officially proclaiming the week of August 19, 1951, as National Clay Week throughout the Nation.

By passing such a resolution, the House of Representatives would pay fitting tribute to one of this country's basic industries, an industry which has contributed in countless ways to the Nation's health and welfare. So numerous, so diversified, have been the contributions of clay products to our progress as a Nation and as a people, that merely to list them would be a task of Herculean proportions.

Clay products and their varied influence on our way of life are in evidence in all fields of human activity. In the home, in the factory, on highways and byways, on the Nation's farms, on almost any type of construction or engineering project you would care to mention, products made of clay, the raw material of a timeless industry, are serving in some vital capacity. These products include such invaluable tools of progress as clay pipe, brick, refractories, china, pottery, and tile. Probably no other industry in existence makes such widely contrasting products from a single basic material—length of clay pipe as large as 36 inches in diameter, designed to be buried underground for centuries, is formed from a mass of stiff clay. And from this same basic ingredient is made such a vastly different item as a base for a delicately modeled figurine, designed for display in art collections.

Certainly no other industry boasts a documented history that dates back 6,000 years—4,000 years before the birth of Christ. Ancient civilizations not only constructed drainage lines, but they also left records of their existence on clay tablets.

Yes, clay products have been in the vanguard of civilization's progress since the dawn of recorded history. The story of clay has gone hand in hand with the age-old saga of mankind's constant struggle to make the world a better, more healthful place in which to live.

Although the clay industry had its inception so many centuries ago in ancient, long-dead civilizations, the technique of making products from clay has kept pace with the steady advancement of knowledge and technology. And, as had been true in virtually every field of industrial and commercial enterprise, the clay industry has made by far its greatest forward strides in the United States. The story of the clay industry in this country has been one of resourcefulness, ingenuity and development that epitomizes the American free-enterprise system.

The clay manufacturers of the United States have constantly improved their products through better equipment, better manufacturing methods and greater know-how. From the old potter's wheel which was the main unit utilized in the old days, equipment employed in clay manufacturing has undergone constant refinement until today, the clay industry is one of the most modern and completely equipped in the land.

From the excavation of fire clay or shale from surface or underground mines to the loading of finished products by speedy, efficient lift-trucks, the business of making clay products is an up-to-date, streamlined process. And, throughout the production process, skilled specialists utilizing highly sensitive and accurate tools, maintain a never-ceasing vigil on product quality. The wide range of clay products that move out daily from the spacious yards of the Nation's clay factories are of uniformly high quality and dependability.

And the clay industry is not resting on its hard-earned laurels—not by any means. A never-ending program of research and experimentation in modern,

completely equipped and staffed laboratories, present an indisputable guaranty that the quality of clay products will continue to improve, and the efficiency and volume of clay production will continue to expand.

Yes; clay has long been a key factor in the Nation's development. But, today, more than ever, this basic material of the earth is of paramount importance. Korea and the threat of international conflict are putting added demands on industry. And the big burden of maintaining our civilian economy while rearming our Nation and our allies falls upon United States manufacturers. Demands upon the clay industry are keeping pace with this trend. Clay pipe and other products of clay are performing yeoman service as materials for the defense rearmament program.

It is no surprise that clay products are being drafted in project after project, rushed into construction to meet expanding needs. Clay products are on the job in countless essential-defense industries, in atomic-bomb plants, in military installations both here and abroad. And clay products are meeting ever-mounting requirements for additional sewerage and sanitary facilities, both public and private, and for new factories, airports, highways, railroads, hospitals, and schools.

In performing these many jobs with outstanding success, clay products at the same time release other materials critically needed in the defense program. Clay is classified as a noncritical material, and is in abundant supply. Yes, war or peace, clay is always on the job, serving the Nation's health, welfare, and security.

With the essentiality of clay never more apparent than it is today, it is only fitting that the Nation set aside a special week to honor the industry. Already, elaborate plans are under way for the celebration of National Clay Week during the week of August 19. Clay-products plants throughout the country will observe this week and will open their doors to the American people for a firsthand look at the modern methods and facilities utilized in the present-day clay manufacturing.

Focal point of this observance will be Uhrichsville, Ohio, located in Tuscarawas County, generally regarded as "the clay center of the world." A large share of the Nation's vital clay production is concentrated in Tuscarawas County, and the community of Uhrichsville will pay tribute to this great industry which has figured so prominently in the growth and progress of that city, of Tuscarawas County, and of the Nation. A gala week of festivities has been planned, and countless thousands are expected to converge on Uhrichsville for this significant occasion.

It will be my pleasure to participate in the final day of these festivities, on August 25. On that day I shall be privileged to attend the annual picnic of the United Brick and Clay Workers.

I am certain that no finer group of workers can be found in this country. I am extremely proud of the fact that they are my constituents, for their skill and

their long record of cooperation with leaders of the industry have been great factors in the tremendous growth of the clay industry in Tuscarawas County.

Official recognition of the week of August 19 as National Clay Week by the Congress of the United States would represent the crowning touch to an already outstanding program that will commemorate one of our country's most important industries. By passing this resolution, the House will be conferring a richly deserved honor on the clay industry and the many thousands of Americans who are associated with it.

I strongly urge that you endorse this resolution to officially set aside the week of August 19-25 as National Clay Week throughout the United States.

One-Way Freight Rates Abolished

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. RANKIN. Mr. Speaker, on day before yesterday the people of the Southern and Western States, the 32 States south of the Ohio River and west of the Mississippi, won the greatest victory they have achieved in the last 50 years, when we induced the Interstate Commerce Commission to readjust its regulations and wipe out that one-way freight rate with which we have been punished for more than a generation.

Mr. REECE of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. Yes; I yield.

Mr. REECE of Tennessee. The gentleman from Mississippi [Mr. RANKIN] deserves a great deal of credit from the people in the South and Southwest for the able leadership which he has exerted over a period of years in the accomplishment of this abolishment of the one-way-freight rate.

Mr. RANKIN. I thank the gentleman from Tennessee.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Iowa.

Mr. GROSS. I want to compliment the gentleman from Mississippi on behalf of the people of the Midwest for his untiring efforts in behalf of the abolition of the one-way-freight rate.

Mr. RANKIN. I thank the gentleman from Iowa.

As we all know, the areas north of the Ohio River and east of the Mississippi have been provided cheaper freight rates for materials hauled the same distances than those charged the people south of the Ohio River and west of the Mississippi.

This, in itself, was an unjust discrimination that should have been abandoned long ago. In fact, it should never have been permitted in the first place.

But in addition to that, the people in the Southern and Western States, that

is in the States south of the Ohio River and west of the Mississippi, have been punished by a one-way freight rate that has prevented them from processing their own materials and developing their own resources.

To give you an example of what this means, there has been a different charge imposed on shipping processed materials from any State west of the Mississippi or south of the Ohio into this protected area from that charged for shipping the same materials out of that area into any of the Western or Southern States.

Here are examples.

I know a firm in the district I represent that was doing business with another firm in New England. The New England firm shipped this local concern a consignment of goods by mistake. It should have gone to another customer in some other section of the country. When it arrived, the recipient shipped it back over the same road by which it came, and it cost twice as much to ship it back as it did to ship it down there.

A firm in Kansas, manufacturing the same articles that are manufactured in one of the Northeastern States, found that to ship its goods to a certain city in Ohio, which was exactly the same distance from both places, was compelled to pay 65 percent more freight than his competitor behind the iron curtain paid for shipping the same goods the same distance to the same customer.

I am told that a former President of the United States had a consignment of goods shipped from New York to a member of his family in one of the Southwestern States. For some reason it was not delivered, but was shipped back over the same route, and it cost twice as much to ship it back as it did to ship it out there.

Only a short time ago, the enterprising citizens of a certain locality in the district I represent made arrangements for the construction of a small factory. They found on investigation that this one-way freight rate would penalize them \$550,000 a year.

The same thing would have happened if this plant had been in Tennessee, Georgia, Alabama, Louisiana, or any other State south of the Ohio River, or in Missouri, Oklahoma, Minnesota, Nebraska, North Dakota, Montana, South Dakota, Colorado, Texas, or any other State west of the Mississippi River.

We have been trying for years to get this injustice removed; but the same selfish interests that got it imposed in the first place concentrated their efforts to block its repeal.

They have even tried to mislead the railroad employees into the belief that removing this outrageous regulation and giving justice to the people in all the States in the Union in transportation rates, would throw them out of work. When the truth is that it will stimulate progress, increase the amount of freight hauled and employ more men.

The same influences have turned heaven and earth to try to block the construction of the Tennessee-Tombigbee inland waterway, which, when completed, will provide the short missing link in our internal waterway system, as

well as the missing link in our national defense program.

It would not throw a single employee out of work, but would stimulate transportation and cause the employment of more men than are now employed by the railroads in that area.

This project has already been approved by Congress. It is now written into the law of the land. More than half of the route from the Gulf to the Tennessee River has already been constructed, or will be when the Demopolis Dam, which is now under construction, is completed.

As I pointed out the other day, it will cut the water distance between the Gulf of Mexico and our atomic-bomb plant at Oak Ridge, Tenn., by more than 800 miles; and will cut the water distance between Mobile and our new atomic-bomb plant at Paducah, on the Ohio River, by more than 300 miles; and will cut the cost of transportation between those points to the irreducible minimum.

It is the only possible way to provide what will amount to a slack-water route from the Gulf of Mexico to the Great Lakes, and to all points on the upper Mississippi to Minneapolis and St. Paul; and to all points on the Ohio River all the way up to Pittsburgh, Pa.; and ultimately to all points on the Missouri River all the way to Fort Benton, Mont., as well as to all points on the Tennessee River all the way up to Oak Ridge where our atomic-bomb plant is located, and at the same time, save the swift current of the Mississippi for downstream traffic.

But the same lobbyists, that have been fighting the elimination of this unjust one-way freight rate, are attempting to mislead Congress into refusing appropriations to speed up the construction of this Tennessee-Tombigbee inland waterway—the missing link in our great inland waterway system, as well as the missing link in our national defense program.

They knew that this Tennessee-Tombigbee inland waterway would do more to eliminate this one-way freight rate than anything else, unless the Interstate Commerce Commission came to the rescue of the South and West, as it did on yesterday, and wiped out these discriminations.

The American people owe the present members of the Interstate Commerce Commission a lasting debt of gratitude for this service.

If everybody in the United States realized just what this far-reaching decision means, there would be a celebration in every State south of the Ohio River and west of the Mississippi.

From a transportation standpoint, the Western and Southern States will no longer be treated as conquered provinces.

Mr. Speaker, I have been in this battle a long time. I have contacted the Members of Congress of both Houses, and of both parties, from every State whose people have been adversely affected by these unjust discriminations and I am glad to report that, without regard to party, they have responded most generously in their appeals to Interstate Commerce Commission to wipe out these discriminations and insure justice in

transportation rates to the people of every section of this country.

That goal has now been attained through this regulation.

As I said, it is one of the greatest victories ever won for the people of those 32 States south of the Ohio and west of the Mississippi Rivers.

Souvenirs of War

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Christian Science Monitor of Wednesday, August 1, 1951:

AMONG MY SOUVENIRS

There is a dividing line between souvenirs of war and spoils of war. There is another dividing line between liberating a friendly nation and defeating an enemy nation. In the confusion of war and in the widespread enthusiasm of victorious troops for collecting souvenirs, both those dividing lines are easily crossed.

The \$100,000 leopard-skin rug sent home from Korea by an American sergeant is a case in point. While doubtless purchased in good faith by the soldier from a Korean seller who had somehow come into possession of it during the time Seoul was repeatedly changing hands, the fact remains that it is a Korean national treasure which belongs to the Republic of Korea. We are sure it will be so recognized by the soldier in question and by his family, and will find its way back where it belongs.

But the record of American troops in the last war indicates the need for higher standards in such matters. The many GI's lost their lives stopping for souvenirs in the midst of battle. Too much happy-go-lucky looting accompanied the arrival of the Yanks even in liberated areas. Too much trading in misery resulted in picking up hard-earned treasures for a song on rapidly organized black markets.

Such happenings, to be sure, are the usual accompaniment of war. Among the Americans they were frequently balanced by an easygoing generosity toward conquered and occupied peoples. Yet, despite this mitigating factor American troops showed themselves less disciplined than some others in respect of the property of other peoples. The wealthiest nation in the world cannot afford this kind of souvenirs of war.

An Editor's Viewpoint on Floods

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. STEFAN. Mr. Speaker, Mr. Stanley Matzke, the farm editor of the Nebraska State Journal, has written a very enlightening editorial regarding the flood situation about which we have heard so

much on the floor of the House recently. I feel that the membership should have the advantage of his statement, and by leave granted me I include Mr. Matzke's statement with my remarks:

MORE OR LESS PERSONAL

As the waters of the most devastating flood in the history of the Middle West recede, leaving death, destruction, and desolation in their wake, its terrible implications are being cited to prove many things by many people.

Those who advocate the authority method of resource development say, "See, if we had a Missouri Valley Authority it never would have happened."

Those who have opposed the Pick-Sloan plan of valley development are certain that the Kansas flood proves that this multiple-purpose program of water use and control is nothing more than wasteful pork-barrel spending.

FLOOD POST MORTEM

Those who fail to see the relation of rain falling on land and those same raindrops collected into flood depths 8 miles wide say, "You can't do anything about it."

Those who emphasize conservation insist that adequate conservation practices and structures on the land would have been the answer to greatly reducing the damaging effects of runoff waters which are still roaring across Kansas and Missouri bottom lands.

Those who call conservation's effect on runoff absurd and claim that only by building huge dams can we hold back floodwaters are loud in their criticism of Congress for not having authorized more multimillion-dollar appropriations for dam building.

Those who oppose both reservoirs and on and in the land moisture retention say, "There you are. The only way to stop floods is to speed the water on down the valley with deeper, wider, and straighter channels and to keep it off of property with levees."

And then there are those who use this greatest tragedy the Middle West has ever suffered as an argument against aid to foreign countries, for more electrical power or navigation development, for their own pet theories and plans and against those of their opponents.

You can hear—and read—Kansas' tragedy used as an argument for everything under the sun except the one basic thing involved—the effective control of surface waters.

IT WILL HAPPEN AGAIN

And while the arguments rage, little people and big industries are digging themselves out of the mud which once was good productive topsoil on someone's farm. Are wishing the water in their homes, and business places, and factories, and anywhere else, on somebody's farm or in the Gulf of Mexico. And are wondering how soon it will happen again.

And it will happen again and again. With increasing intensity as each period of heavy precipitation removes more and more of our absorbent topsoil.

It will happen again and again and again. Unless it stops raining.

Or unless a complete program of runoff and erosion control is applied to every watershed. A program which begins by holding as much water as possible on and in the land where the rain falls by full conservation treatment on all the land.

Which slows down the runoff by adequate soil cover on the land and in the waterways.

Which provides retention and retardation of runoff waters on the upper tributaries and little streams and creeks.

And which provides final protection by providing adequate storage and channel facilities on the main stream to hold and safely dispose of the waters which abnormal conditions, like those causing this year's floods, allow to collect in the flood plain.

Folks interested in stopping flood damage and in building for continued prosperity based on proper use and conservation of our land and water resources are little interested in the side arguments.

They want the problem attacked at every point, not just where it will serve some special interest, whims, or fancy.

And they insist that effective runoff control must begin at the very top of every watershed and continue all the way down. This is the kind of program contemplated by the coordinated efforts of the Corps of Army Engineers and the USDA Soil Conservation Service in their present survey of the Salt-Wahoo watershed.

STANLEY A. MATEKE,
Farm Editor.

Amendment of Federal Food, Drug, and Cosmetic Act

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Mississippi. Mr. Speaker, the enactment of H. R. 3298, passed by the House yesterday, will be of great benefit to the druggists of the country and to the general public.

One of the leaders in bringing this bill before the House was the Honorable KENNETH ROBERTS, of Alabama. Mr. ROBERTS presented a very good explanation of the bill in an address over Station WSB, Atlanta, on July 28. Under unanimous consent, I include a copy of this address:

Ladies and gentlemen, I should like to talk to you today for a few minutes about a bill which was introduced in the Congress by the Honorable CARL T. DURHAM, a Congressman from the State of North Carolina. This bill is known as the Durham-Humphrey bill and was introduced in the Congress as House Resolution 3298. The bill seeks to amend section 503 (b) of the Federal Food, Drug, and Cosmetic Act. Hearings on this bill began on May 1 and continued through May 5, 1951, before the Committee on Interstate and Foreign Commerce of which I am a member. The Federal Food and Drug Act was enacted in 1906 and the law was amended in 1938 and also in 1944.

There are approximately 52,000 drug stores and approximately 110,000 druggists who handle most of the drugs in the country. A recent writer on the subject has estimated that there are around 375,000,000 prescriptions filled annually, therefore, it is easy to realize the importance of this legislation. Then, too, one of the necessary items in the family budget is that of doctors' fees for prescriptions and drug bills. I do not suppose there is a family in this country which escapes these costs. Many families unfortunately find these costs to be quite heavy.

Dr. Paul Dunbar, Food and Drug Commissioner, at the convention of the druggists in 1948, said that once a prescription is filled it is "like a canceled check" and it is, therefore, unrefillable. He insisted in his talk that a new written prescription from the doctor was required before a druggist can provide another supply of medicine. He also stated in this same speech to the druggists that the prescriptions taken over the telephone were illegal and hence, that druggists who had been dealing in telephone prescrip-

tions were in violation of the law. This was quite an alarming thing to the druggists of this Nation. It is common knowledge that doctors frequently call druggists on the telephone in emergencies or in cases where the doctor is away from his office; perhaps, at the patient's home and gives an order for a supply of medicine over the telephone. The druggist who is naturally desirous of supplying the physician's demands and desirous also of taking care of his customer, has been operating in an illegal zone for some years, in the opinion of Dr. Dunbar. The druggists being responsible citizens in the communities in which they live resented this fact that we had a law which made it necessary for them in their customary practices to become law violators and were anxious to remove this impossible situation.

One of the main purposes of the act is to reduce the cost of medication to the consumer. The law aims at reducing the need for doctor's prescription for many well-known household remedies. The present law requires a written prescription each time a prescription for these simple remedies is refilled. H. R. 3298 would repeal this requirement. H. R. 3298 will decrease the necessity for prescriptions and thereby decrease the cost of medical care. There are many ways in which this reduction of cost will be attained if this bill becomes law. First of all, H. R. 3298 amends the present law and permits the druggists to dispense drugs when the prescription is telephoned in by the doctor. Secondly, H. R. 3298 will also amend the present law and permit the druggists to refill a prescription without consulting the doctor if a prescription calls for drugs which are not specifically required to be dispensed by prescription only, and even if the drug is required to be sold only on prescription this law specifically provides that the druggists may dispense the drug upon the oral authority of the doctor provided the druggist himself reduces such oral authority to writing and files it. Third, H. R. 3298 further reduces the requirements for a doctor's prescription since it provides a means of limiting the number of drugs to be sold on prescription only. It authorizes a legally constituted governmental agency to select the drugs to be so restricted and it further protects the public in view of the fact that the law limits the selection of the list so restricted to those drugs which are habit-forming, or to drugs which, after investigation and an opportunity for a public hearing, have been declared to be unsafe or ineffective for use without the diagnosis and supervision of a licensed practitioner.

This bill will remove the druggist from being placed in jeopardy by circumstances which he is powerless to prevent. They are tired of being forced to violate the law and the consumers of this country are tired of having to get refills of prescriptions for such household remedies as charcoal, nose drops, and epsom salts. It seems to me that the druggists and consumers of this country want this authority placed in someone's hands to say what drugs should be sold on prescription and what drugs can be sold over the counter. I have had many letters, telegrams, and conversations with druggists in my section of the country who tell me that this is a good law and that it is legislation which is in the public interest. I feel that the Federal Security Administration has in the foods, drug, and cosmetics enforcement section and also in its research division many able scientists and I believe that the interests of the public are amply protected by the fact that a public hearing is to be held and that any party aggrieved in such public hearing has a right to appeal to the circuit court of appeals to protect whatever rights may have been damaged by the decision of the Administrator. Whatever dangers may be present in this law, I

feel, are overcome by the tremendous advantages which will be flowing to the public by the adoption of this legislation. I hope and trust that the Members of Congress will see fit to adopt this vital legislation.

It was a pleasure to talk to you on this Report from Congress. This is Representative KENNETH A. ROBERTS, of the Fourth District of Alabama.

The Missouri River Basin

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. STEFAN. Mr. Speaker, my State of Nebraska is enjoying 100-percent public power. The organizations behind Nebraska public power are operating very successfully. They pay annual taxes in the State of Nebraska amounting to over \$315,000. Officials of the public power organizations in our State are deeply interested in soil conservation, flood control, irrigation, and additional electric energy. Hearings were recently held by a congressional committee on appropriations for flood control. Among the prominent witnesses appearing before that committee was Mr. C. C. Sheldon, of Columbus, Nebr., who is a director of the Consumers Public Power District. By leave granted me, I include his remarks before that committee:

Members of Congress have been elected to outline and provide for certain activities of our Government. In that capacity the Pick-Sloan development of the Missouri River Basin has been approved and various agencies authorized and directed to design and construct the project.

Plans have been prepared, schedules of progress established and appropriations for construction requested and granted. The work is well under way and on schedule.

Now there appears a danger that appropriations may be reduced to an extent that will disrupt the schedules. This would cause serious consequences in many areas.

All of our defense agencies are concerned about a possible shortage of power.

Any interruption in the progress of construction of a project, such as the one under consideration, is expensive in many ways. Delays cause waste of material as well as time. The carrying charges and depreciation on partly completed construction add greatly to the ultimate cost.

In making this statement I represent the board of directors of the Consumers Public Power District of Nebraska. Like Members of Congress we are elected by the people of a subdivision of the State.

We want to cooperate with the Federal Government and the other nine States in the Missouri River Basin by using the amount of power allotted to us from that produced by the Pick-Sloan development. We have all of the transmission and distribution facilities required to this within the State of Nebraska, but our plans will be of no avail if the construction is delayed until our power supply is exhausted.

The people who elected us, look to us to have their power available when they turn the switch.

Do you wonder that we are concerned? Very, very much concerned.

Every other supplier of electric power looking to the same source for his requirements is in the same precarious position.

The sequence is simple. Each purchaser looks to his supplier. We must cooperate or chaos results.

There is another consideration of prime importance and general concern. The conservation of our natural resources.

High among them is our running water. Every drop allowed to reach the sea without rendering its fullest service is a loss that cannot be retrieved. And that is not the whole loss because every kilowatt of power that might have been generated by water, but was not, has consumed the fuel required for its production which might have been saved for other uses.

These considerations have been presented because they are my immediate responsibility but when you add these to the overwhelming need for flood regulation you have a demand that cannot be ignored.

The soundness and magnitude of the Pick-Sloan concept marks a high in engineering and technical skill.

The wisdom and statesmanship expressed in its approval, authorization, and continued support mark a corresponding high in a much-neglected field of national endeavor.

The action of our Congress and the devotion of our technicians are thoroughly appreciated and we cannot believe that any action at this time will be permitted to destroy this magnificent conception.

Endless Slaughter

EXTENSION OF REMARKS OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. ADAIR. Mr. Speaker, under leave to extend my remarks, I include the following article, written by Norman Sweet, from the News-Sentinel, Fort Wayne, Ind., June 26, 1951:

ENDLESS SLAUGHTER

With 20,000,000 of Red China soldiers to be potentially thrown in the Korean war; with no opportunity to destroy war supplies in Manchuria; with 50,000,000 more Red China soldiers to be thrown in when they're slaughtered, the present Korean war is endless, but America's soldiers and economic security is not.

Russia keeps this New Fair Deal administration fluffed and full of fear that they might come in if we do. Are we to lose by degrees—or win by one master stroke?

This is war; brutal, insane, illogical war, and Congress should wake up and bomb supplies wherever they are without one moment's delay. War front, home front abruptly ended their broadcast, when Cecil Brown asked if the GI's morale wasn't very low about the endlessness of this war, because while the Red China soldier potential was endless and could go on for 10 years (Marshall), or 20 to 50 years for that matter, I add until we destroy the food and military supplies in Manchuria, for soldiers cannot fight without food and military supplies.

This is the big issue which General MacArthur rightly advocated and was discharged for, and, I intend to have this letter published in the CONGRESSIONAL RECORD as soon as locally published, so that the entire Congress may read, and ignore, and continue this endless slaughter of American boys.

Dr. Frank J. Prout, President of Bowling Green State University, Bowling Green, Ohio

EXTENSION OF REMARKS OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. WEICHEL. Mr. Speaker, down through the years Ohio has been known as a State of universities and colleges, and to this distinguished group Bowling Green State University has earned its way. The rise of the university can be particularly attributed to the untiring effort, vision, and abilities of Dr. Frank J. Prout, of Sandusky, Ohio. He comes from a family of early pioneers in the Firclear District of Ohio of the great Northwest territory, and has spent many years in the field of education. His effort and achievement at Bowling Green State University is a lasting memorial crowning the work of a lifetime, especially being a worthy contribution in the field of education for those in the low-income group. His accomplishment of building at Bowling Green State University is described in the Bee Gee News of the university and is included:

PROUT STORY SEEN IN NEW BUILDINGS (By Don Tindall)

It was shortly after his appointment that President-elect Frank Jay Prout told a student newspaperman, "I shall do my best to help make Bowling Green State University a bigger and better institution." Now his record speaks for itself.

When Dr. Prout took over his duties as president in April 1949 there were nine brick buildings on campus and the library. The number of brick buildings now totals 39, along with such frame structures as the commons, east and west halls, north dorm, and the temporary annexes behind the women's gym. In other words, the number of buildings has more than quadrupled in 12 years, despite a wartime period when building construction stopped.

To make room for all these buildings campus acreage has been doubled from 105 to 240 acres.

The third president of this 37-year-old institution has watched enrollment more than triple from 1,228 to 3,743, with a peak of over 4,600.

Accreditations by national and regional bodies have increased from two to five. The library, now undergoing enlargement in one of the latest construction projects, contains 115,000 bound volumes, as contrasted to 55,000 when Dr. Prout came to the university.

The graduate school, ever increasing in number of courses offered and size of faculty, has been established. Bowling Green has become one of the few educational institutions in the Nation to house a cerebral-palsy center.

National defense has certainly come in for its share of President Prout's administrative ability. During World War II, university facilities were used to train the V-12 and V-5 units. A Reserve Officers' Training Corps, with a limit of 500 men, has become well established. Just this year has seen an Air Force clerk-typist school located here and plans are already completed to have an Air Force ROTC on campus next fall.

As one of their most ardent boosters, Dr. Prout has seen Bowling Green's basketball and debate teams become nationally known.

The student body, increasing in size and cosmopolitanism, has been delegated more authority with the creation of student court and the faculty was given a more active voice in administration by the university senate. Almost 40 States are now represented at the university, with nearly 50 students coming from foreign countries. All the students have benefited by the increased number of course offerings made by the three colleges and the graduate school.

A loyal and active member of Phi Delta Theta himself, Dr. Prout has displayed more than a passive interest in the nationalization of local sororities and fraternities. Whereas there were only a few local groups in 1939, there are now 11 national sororities, 16 national fraternities, one local sorority, and two independent societies.

If a visitor from Missouri had to be shown what Dr. Prout has accomplished in his 12½ years as president of the university, probably the best way to convince the disbeliever would be to take him on an extended tour of the campus.

First of all, we would point out the 10 buildings that were here when Dr. Prout took over—the administration building, the laboratory school, the old science building, or Moseley Hall, the library, Shatzel Hall, Williams Hall, Koh Hall, the practical arts building, men's gym, and the women's gym.

Then perhaps we could point out the construction going on at the present time: The library addition, the new Delta Zeta house, and additions to dormitories on Fraternity Row. Already in the planning stage is the million-dollar Student Union. Not readily visible would be all the changes and improvements made possible for numerous departments.

Dr. Prout wasted no time in his new capacity as president in 1939 in getting the construction ball rolling. The Natatorium was dedicated soon after the new president was appointed; then came the Falcon's Nest in 1941, and Johnston Hospital in 1942. The Airport and Bricker Field were completed in time to be used during the war.

World War II and its demands stopped the construction, but failed to halt the planning. Sorority Row, probably one of Dr. Prout's most ambitious projects, was completed as soon as conditions would permit. What was once a tree-filled park is now the site of nine sorority houses and one independent dorm.

Enrollment boomed after the war; dorms had to be obtained to house all the men. The seven brick structures on Fraternity Row were rushed to completion, but room still had to be found for the freshmen and independents. So from nearby Camp Perry came North Dorm, East and West Hall, the Commons, and what was to become the Gate Theater. The Stadium was remodeled to make more beds available. Fourteen huts and over 100 trailers housed the students who could not get rooms in the campus dorms or off-campus accommodations.

Once the wartime restrictions were taken off, new buildings appeared in rapid succession. Construction was not the only solution to expansion. The old factory on the corner of Wooster and Thurston was purchased and remodeled into Ivy Hall, housing two fraternities. The Urschel property was bought, adding two more brick structures to campus housing facilities.

But if any one term can be used to designate Dr. Prout's administration, it is construction and expansion. The modern and beautiful Fine Arts Building houses one of the best departments in the State. A cerebral palsy dorm was built to house the patients enrolled in the therapy center. Two

large men's dorms, housing 80 men apiece, went up east of the commons.

Just this fall the campus welcomed the replacement of the old power plant by a functional, yet good-looking central heating plant. Shortly after Christmas, the plain white chapel, now complete with flower landscaping and authentic rail fence, was dedicated. And then came what has turned out to be the last dedication in which the 68-year-old president will take part, the official opening of the 783,000 chemistry laboratory unit of the new science building.

Mr. Speaker, I want to congratulate Dr. Prout for his achievements in the field of education which merit a well-earned retirement as one of Ohio's first citizens.

Foreign Aid? Nobody Can Tell What It Will Cost

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the foreign-spending program of Mr. Truman's administration has reached such fantastic proportions that the experts sent to testify before House committees cannot unravel the mysteries of it.

Mr. George Sokolsky correctly points out in an article today in the Washington Times-Herald that this country is headed for trouble, perhaps bankruptcy, unless our policies are changed. I include said article as part of my remarks:

THESE DAYS

(By George Sokolsky)

Dean Acheson has established \$25,000,000,000 as the minimum amount that the United States will have to allocate for European military aid until 1954. Apparently, it is Government policy to give away an amount of wealth by one means or another each year as a means of maintaining its type of economy as well as to protect Europe.

Senator ROBERT A. TAFT stated the case of these expenditures as follows:

"I pointed out that even a country the size of the United States had definite economic limitations, and that those limitations are more severe when applied to a 10-year mobilization program than to a brief war.

"I criticized the Government because no one has analyzed for the people the ultimate cost of what is now proposed by a dozen different departments. I estimated that the total of all these proposals might amount to \$85,000,000,000 a year, mostly for Armed Forces, and that this total might, in my opinion, bring inflation, hardship, instability and damage to that very productivity which is our greatest asset in time of war and peace."

When a country spends itself into bankruptcy, symbolized by inflation, depreciation of currency and a diminishing standard of living, the effect can be as devastating as war itself—as a defeat in war.

Even if we accept the entire Marshall-Acheson program of a defensive war, of a stalemated world armed to the teeth, we nevertheless need to have some concept of its cost both in dollars and wealth.

The latter is particularly important, for while the expenditures in dollars affect the immediate purchasing power of the people,

the expenditure in wealth involves the reduction of the reservoir of natural resources upon which the economic and political power of this Nation stands.

Thus far, no precise data is available on many subjects. For instance, the United States is putting into the pot at least \$5,000,000,000 a year in foreign military aid.

What is Great Britain putting into that pot? What is France putting into it?

Their figures are confused because the American contributions to each country have to be traced and deducted from any estimate of what their contributions are in terms of both dollars and wealth.

When, prior to World War I, Great Britain was the principal nation on this earth and a vast empire, her access to natural resources and to manpower was enormous. Today the British Empire has ceased to exist; each so-called dominion is an independent state which acts independently on important issues.

The British Foreign Office speaks only for itself; it cannot speak for Canada, the Union of South Africa, Australia, New Zealand, India, or Pakistan.

Senator TAFT shows how confusion exists in high places when he recounts:

"It was in March 1950 that General Bradley, Chairman of the Joint Chiefs of Staff, testified they were satisfied that a budget of \$13,000,000,000 for fiscal 1951 and a million and a half men in uniform was about sufficient for the interest of the country.

"He said: 'We do not have any way of knowing whether this figure should be \$13,000,000,000, \$14,000,000,000, or \$15,000,000,000. We think we must not spend this country into economic collapse and spoil our industrial potential.'

"He testified: 'The Joint Chiefs of Staff never went along with this great big feature of \$20,000,000,000.' He testified that if he came and recommended a \$30,000,000,000 budget for defense he would be doing a disservice and that 'maybe you should get a new Chairman of the Joint Chiefs of Staff.' Now they want \$50,000,000,000 or, according to some reports, \$100,000,000,000."

General Bradley can, of course, say that he did not know in March 1950 that the Korean war would occur. I do not believe that he would say that that changed everything, for actually it changed nothing since Yalta, which occurred in February 1945.

When Gen. Douglas MacArthur accused the administration of having no policy his reference dealt directly with the problem we are here discussing. For if Russia is our enemy now, Stalin laid down the program of that enmity at Yalta and again at Potsdam in 1945.

Maybe, to give them the benefit of the doubt, the administration has been hoping that Stalin would drop dead or that some other act of God might save them.

The greatest cost in dollars and wealth comes from this lack of a sharply defined policy. It means that often we pour both down a bottomless pit. In Korea it even made American lives cheaply expendable.

Alteration of Certain Bridges Over Navigable Waters

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. LANE. Mr. Speaker, the Truman-Hobbs Act, whereby the Federal Government shares in the cost of altering

railroad bridges over navigable streams when such changes are required for the improvement of water navigation, was passed on June 21, 1940.

It did not anticipate the increase of automobile traffic, with the extra burdens imposed upon the States for the building and maintenance of highways to service the tremendous volume of land transport.

There is one serious blind spot in this law which, without intent, favors waterborne and railroad carriers over automobile traffic. This is all the more difficult to understand when one considers that highway transportation, serving for more passengers, and expediting the delivery of freight in trailers of boxcar size, is becoming the circulatory system of this Nation.

Why it should be subordinated to the needs of coastal or inland shipping and the railroads may be described as an oversight that stands in the way of progress.

My State of Massachusetts is engaged in a great and difficult program of highway expansion that is a must if our Commonwealth is to serve the needs of its business, its commerce, and its citizens.

We will have to dig deep, via taxation, to pay the costs of these improvements, without making the highway program subsidize other forms of transportation. We expect that the Department of the Army in furtherance of the national-defense program, will soon require bridge alterations, but we hope that the Truman-Hobbs Act will be amended, to distribute the costs on an equitable basis. Publicly owned highway bridges merit the same financial help for alterations which is presently extended to privately owned bridges used by the railroads.

To be consistent, there can be no distinction between the two.

The Department of the Army, if anything, should be concerned with land transport.

The Commonwealth of Massachusetts, as part of its civilian-defense program, is marking certain highways with signs indicating that they will be reserved for emergency use in the event of an attack.

The Army, of course, will not want priority traffic to be slowed up by bridge bottlenecks. It will, looking at the overall problem, insist upon sufficient elbow room on the navigable streams and on the elevated highway that crosses it. And it should logically support the contention that all such bridge alterations as required are deserving of a financial assistance from the United States Government.

Even back in 1940 it should have been the other way around, with the Federal Government sharing the costs with the State government before helping the privately owned railroads.

Be that as it may, our present responsibility is to amend the law so that public bodies such as a State, city, town, or county will not be forced to pay the entire cost of alterations on bridges that may be required by the Department of the Army.

The present drain of such expenses, made mandatory upon us by an outside authority, diverts funds from the highway program for the benefit of those

who profit by water transportation and reduces in proportion the improved facilities for travel that we have promised to the motorists of Massachusetts.

The change in the law that we recommend will not weaken congressional control over the waterways of this Nation, as delegated to it by the Constitution.

The purpose of the change is to afford some relief to the States in complying with the orders of the Department of the Army.

A few figures will demonstrate that Massachusetts needs this relief.

For the construction of 12 highway bridges over navigable waters in recent years our State has had to pay nearly \$5,000,000 in terms of present-day costs just to meet the needs of water-borne traffic. In addition, our Commonwealth has to spend \$100,000 a year in raising and lowering bridges for the convenience of those who use water transportation.

In Boston Harbor there is a bridge under construction which is costing the Commonwealth \$4,000,000. Alterations ordered by the Army for sole purpose of widening the channel beneath must be paid for out of money taken from the regular highway fund.

There are two other Boston bridges that must also be changed, not to meet the needs of highway transportation, but for the improvement of a water-transport facility.

It is the policy of the Congress to oppose the diversion of highway funds, but the Truman-Hobbs Act as it stands violates that intent.

The President's Water Policy Commission has recommended that the cost of altering highway bridges to meet navigation requirements should be borne jointly by the water project and the highway interests on an equitable basis.

I sincerely hope that the House Committee on Public Works will soon program H. R. 3764 and S. 1608 so that all interested parties may be given an ample opportunity to be heard on these important bills.

How Can Full Confidence Be Placed in an "Expert" Who Can Be So Wrong on the Most Important Issue of Our Time—The Nature of Communism?

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News for August 1, 1951:

THIS IS ACHESONISM

John P. Davies, Jr., veteran career Foreign Service officer, has been cleared and returned to active duty without prejudice and with full confidence of the State Department, after a hearing by the Department's Loyalty and Security Board.

Since neither the charges against Mr. Davies nor the evidence relating thereto

have been disclosed, it is not possible to make an independent evaluation of this finding.

However, it is not necessary to go beyond Mr. Davies' own official reports to form an estimate of his qualifications as a political expert, particularly where communism is involved. It is in order to do so since Mr. Davies is expected to be assigned as a political adviser to the United States High Commissioner in Germany.

In recommending an American policy for China November 15, 1944, Mr. Davies said, in an official report to the Department: "A coalition Chinese Government in which the Communists find a satisfactory place is the solution of this impasse most desirable to us. It provides our greatest assurance of a strong, united, democratic, independent, and friendly China—our basic aim in Asia and the Pacific."

When a man so naive as to believe that a government satisfactory to the Communists could be independent of Russia and friendly to the United States can qualify as a State Department political expert, how can the public be expected to follow such leadership?

By contrast there is the case of Angus Ward, a real expert on communism and the Soviet mentality, through his long service in China, Manchuria, and Russia itself.

Because of his fidelity to American principles, the scholarly Mr. Ward spent long dreary months in a Communist prison at Mukden. Upon his return to the United States, his reward for a long career of distinguished service was an assignment to an obscure post at Nairobi, in Central Africa.

When a man who understood communism and was opposed to it is banished in this manner, and when one of the Department's choicest plums is given to an official who so misunderstood communism that he was sympathetic to it, it is easy to see the kind of influences which are running the State Department.

Some departments need a new broom, but this one should be given meat-ax treatment.

Tidelands Legislation

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. NIXON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Arthur Krock, the distinguished Washington correspondent of the New York Times, regarding the proposed tidelands legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, July 25.—The States are up in arms, with force they have not mustered hitherto, over the question of Federal or State ownership of submerged lands and their products, including the oil beneath the marginal seas. Though the Supreme Court decided that the central Government has proprietary rights as well as political sovereignty in these marine areas off Texas, California, and Louisiana, a broader conflict growing out of these decisions is raging in Congress and the State capitals.

This week the House is expected to dispose of the Walter bill, specifically assigning to the States all ownership rights within their original boundaries over the yield of sub-

merged lands, inland and coastal. Original State coastal boundaries vary from 3 miles into the Atlantic and Pacific to 9 miles into the Gulf of Mexico and more for Texas. The Senate will soon be voting on a similar proposal. Its advocates are pressing hard for favorable action, but they are not sure they can obtain it by the two-thirds approval necessary in both branches to override an anticipated veto by the President.

The appeal they are making is impressive, however, for the two-thirds they did not muster when Congress previously assigned the products of the marginal seas to coastal States and the President vetoed the bill. In certifying State ownership of all submerged lands within their original boundaries, and reserving to the Federal Government its paramount powers in national defense, international affairs, interstate commerce and navigation, they have greatly increased the number of beneficiaries. The new bill assures State ownership of many more products than the oil which was at stake in the Texas, California, and Louisiana cases; hence its supporters hope to attract many votes in Congress they did not get before.

Under the inland submerged areas now included in the bill are sand, gravel, shell, kelp, iodine, gold, fish, stone, sodium sulphate and other products over which States now assert ownership. Government attorneys in arguing the oil cases gave numerous assurances that the Central Government laid no claim to these and did not intend to do so. And the justices who found against the three coastal States at the bar made note of this proclamation of policy.

DISSENTERS SEE THREAT

But the three dissenters in the Texas case argued that the majority's reasoning offered a foundation for the claim of Federal ownership over submerged lands inland and left room for its validation by the Supreme Court at some later date. In their protest, Justices Reed and Minton wrote:

"The needs of defense and foreign affairs alone cannot transfer ownership of an ocean bed from a State to the Federal Government any more than they could transfer iron ore under uplands from State to Federal ownership. National ownership is no greater in respect to the marginal sea than it is toward every other particle of American territory."

In other words, the dissenters said that the basis of the majority finding—the political sovereignty of the Federal Government in every area of the Union—was a threat to private and State ownership of submerged products which had been established by the Court for more than a hundred years, and Justice Frankfurter drew a somewhat similar inference.

The States were quick to avail themselves of this reasoning, and it was elaborated in a memorandum which was furnished to every Member of Congress this week. "A barrage of false and misleading propaganda emanating from Federal lease applicants and executive agencies of the Federal Government," said this memorandum, "has clouded the issue. . . . These propagandists would have the public believe that the issue involved nothing but tidelands oil and that corrective legislation [the pending House bill] restores and confirms submerged-lands ownership to only three States."

THE WYOMING EXAMPLE

"The truth is," the paper continued, "that each of the 48 States has submerged lands and many valuable resources to which State ownership would be restored and confirmed [by the pending bill]. The ownership of the States to this type of property would be destroyed by the Supreme Court's tidelands decisions"; and it cited, as precedent for the House bill, an instance in which the Supreme Court "took from Wyoming a section of school land which the State had claimed in good faith for 57 years," after

"oil valued at more than \$3,000,000 had been discovered on this section," and Senator O'MAHONEY induced Congress to restore title to the State.

In a floor speech yesterday Senator CONNALLY, of Texas, brought up another point on which supporters of the pending legislation rely. This is the fact that in the Texas case a minority (four) of the Supreme Court overruled many past decisions. Because two Justices excused themselves, the case was decided by less than a majority or a quorum of the Court. This is being used as an argument for those Members of Congress who hesitate to undo by statute a Supreme Court finding.

This factor of a minority ruling appeared only in the Texas case because, unlike Louisiana and California, its original boundaries included the entire continental ocean shelf. But if that dulls this particular point with some State delegations they have a choice of many others.

Truce in Korea

EXTENSION OF REMARKS OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. NIXON. Mr. President, I call to the attention of the Members of the Senate a timely and thought-provoking editorial by Paul C. Smith, editor of the San Francisco Chronicle. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUCE IN KOREA IS NOT PEACE

To the American soldier, sailor, or marine, none of whom in history has ever had the least desire to conquer the rest of the world, the term "cease fire" is the best command in the whole military lexicon.

If this command is actually given on the Korean front as a result of the present confused truce maneuvers, there will be rejoicing amongst the men who have had to take the punishment of war for the past 12 months. This is understandable. It is also understandable that there will be rejoicing amongst the families of the men who have been fighting or are about to fight. All their fellow citizens will share sympathetically their sense of personal relief that the great personal hazards of the moment are abated. This, too, is understandable.

But there are other factors involved that call for the searching, dispassionate attention of all those who bear the responsibility for sound, democratic decision. They demand consideration, even though they may tend to dilute the gaiety with which the prospect of armistice is being approached.

When and if the cease fire command materializes, it should be understood that a truce on or near the thirty-eighth parallel represents neither victory nor peace for the more or less free states of the United Nations bound together in opposition to the international Communist conspiracy. Such a truce does not guarantee settlement in Asia, and it certainly does not guarantee peace and accommodation in the world.

Gains may be made from such a truce but the truce itself does not represent the gain. Real gains can be achieved only by a tough, resolute and realistic approach to the re-

actionary Communist threat that still menaces the principles upon which our revolution is founded. A truce does not represent the achievement of peace and security to those nations who believe in the dignity and integrity of individual man. It by no stretch of the imagination represents an opportunity to "return to normalcy." Even if there is a cease fire in Korea, the struggle must go on.

It is possible that the advantages to us will be many but those advantages will be realized, if at all, only by firm and resolute diplomacy over a long and dangerous period by the United States and her allies in the United Nations.

The immediate advantages of such a truce are primarily on the side of the enemy. Russia will liquidate a situation costly to her, and free herself to produce more and greater tensions elsewhere. The leaders of Red China will, for the time being, escape the consequences of a defeat it is within our power to administer.

Red propaganda channels will exploit the cease fire by every conceivable means. The Communists now dominating China will have a freer hand to consolidate their gains on the Chinese mainland. The resources of Russia will be freed to support other satellites in pursuing the will and the plan of the Kremlin.

All these factors constitute chances worth taking only if the American people have the good sense to maintain and increase the pace of their present development of military power, and only if American leadership is firm and resolute in handling the problems that lie ahead. Specifically, this means the patient mounting and pitting of power against power, and the scrupulous avoidance of appeasement.

There were sighs of relief from mothers and wives and soldiers and soldiers-to-be when in 1938 Mr. Chamberlain alighted from a flight to Munich, and waved a scrap of paper into the eyes of newsreel cameras with the statement that the scrap of paper promised peace in our time.

The sighs of relief were understandable then, even as now. But it must be understood that peace in our time is not yet achieved. There is still a world settlement to be made and while we may hope to make it without global war, we must still be prepared, upon all fronts, for the undiminished possibility of that war.

Neckyoke Jones Says

EXTENSION OF REMARKS OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, I insert in the Appendix of the RECORD today another Neckyoke Jones Says column, published in the July 28 issue of the Sheridan Press at Sheridan, Wyo.:

NECKYOKES JONES SAYS

"Did you seen where Genrul Marshall said he was 'shocked' at the letdown of Americans since the armistick talk started?" I enquiries of Greasewood today. "Yessir" he refurbishes, "but he ain't half as shocked as the American people is at his astin' for 25 billyun dollars to pass out to Eurup in the nex' 3 years. Cripes! The Genrul don't say where he thinks the money is comin' from. Not havin' ever earned a dollar in his

life—an' always havin' been livin' off the publick—he probbly don't know that some folks works for a livin'." Then some talks about havin' a army man fer presyident! Of course army men isn't the only fellers who spends money. It costs the country, accordin' to figgers jest give out, 2 millyun dollars a year to enjoy the luxury of Harry Truman—more'n twict as much as F. D. R. cost the people—an' he wasn't no piker when it comes to spendin' public money! Between the Genrul an' Harry's steamboat—it looks like the party is gittin' expensive. The publick either don't know or don't give a damn—so whatever comes in the future there won't be no one to blame but the home folks." Greasewood's quit worryin' for fear he'll git ulcers, and besides he ain't got no yatch to sail on Goose Crick. Hopin' you are the same, I am

Yure fren,

NECKYOKES JONES.

Proposal of J. Edgar Hoover for President Brings Many Letters of Approval

EXTENSION OF REMARKS OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. SHAFER. Mr. Speaker, on July 19 I delivered a speech in this House reporting and endorsing a grass-roots suggestion by a constituent of mine in the Third Michigan District that the Republican Party nominate J. Edgar Hoover for President in 1952.

At that time I described the suggestion as "a blast of fresh air."

My mail indicates that a great many other people throughout the country feel the same way about it.

I have received scores of letters enthusiastically endorsing J. Edgar Hoover for President. There have been three letters critical of the suggestion.

Under leave to extend my remarks, I include excerpts from typical letters written by Americans throughout the country welcoming the "blast of fresh air":

A Chicago woman writes:

It has always been my contention that the truly great statesmen are those men with ability and leadership, combined with honesty and ideals, and to me J. Edgar Hoover is synonymous with all these attributes.

What an inspiration to the youth of America, if our President were an example of what hard work, with an aim to protect each individual's God-given rights, could accomplish.

Almost without exception, everyone with whom I discuss [the suggestion] agrees with your "Hoover for President" idea wholeheartedly.

Here is what an attorney from Albion, Mich., in my district, writes:

I was very happy to read your suggestion. I sincerely agree with the qualifications that you stated, as those necessary for the 1952 candidate. There was something very refreshing about the whole suggestion.

From a Mitchell, S. Dak., woman:

Congratulations for a brilliant suggestion: J. Edgar Hoover.

We so desperately want someone good and decent, fine, and honest. He has a splendid record and reputation.

Several people have commented that they are almost embarrassed to think they hadn't thought of him.

J. Edgar Hoover would have my full support.

A Kirksville, Mo., businessman writes:

A fine idea and an elegant choice for President. If he will run he will be elected by the greatest majority any President ever received.

From a Watervliet, Mich., woman:

I think J. Edgar Hoover would be fine. Anything but what we have.

From a Kalamazoo, Mich., man, a constituent of mine:

I would highly commend your suggestion. When I contemplate the remaining months yet to run under the present administration, I am very much afraid that the status of our national affairs in domestic matters will very much demand a man of his caliber.

Again from Kalamazoo, Mich., the senior member of a prominent law firm writes in behalf of himself and his wife:

As you know [we] are nonpartisan voters. We have always supported the man we believed best fitted for the office regardless of party affiliation.

We have your release suggesting J. Edgar Hoover as Republican nominee for President in 1952. We have given this considerable thought, and the more we think about it, the better we like it.

From Salem, Mo., a gentleman writes:

I am in favor of your suggestion of J. Edgar Hoover as a 1952 nominee for President. Would like to start a J. Edgar Hoover Club in Dent County, Mo.

A St. Louis, Mo., man, who describes himself as "an ex-serviceman and weary Democrat," writes:

We have long considered Mr. J. E. Hoover to be our most popular citizen. We believe he has the admiration of this entire Nation and would be just the leader to restore to it the confidence in our Government that has been so thoroughly dissipated.

Having been associated with Washington for so long, Mr. Hoover's knowledge and ability are naturally far superior to a proposed military candidate whose chief fitness for this very demanding position would seem to be merely a fine and pleasing personality.

Our present situation demands a leader of no less executive stature than Mr. Hoover's, and we believe he would be the choice of every State in the Union.

From a retail merchant in my home town of Battle Creek:

Your suggestion of J. Edgar Hoover is a 10-strike.

A former Battle Creek man, now a deputy sheriff in an Arizona county, writes:

Good for you and J. Edgar Hoover. Push him.

From Springfield, Ohio, a gentleman writes:

I sincerely approve this suggestion. Let us not let this idea die. I am prepared to form a Hoover-for-President committee.

A Detroit woman who is a registered nurse connected with a boys' club says:

America now needs a candidate such as J. Edgar Hoover and you can expect the sup-

port of me and my family. What can we do to help?

A Battle Creek, Mich., woman, owner of a jewelry store, writes:

Just the thought that J. Edgar Hoover might become our "flag bearer" is refreshing.

Again from my district, a Hillsdale, Mich., couple writes:

Most people one talks with seem to feel that there should be someone elected to head our Government whom we could trust and have confidence in. We certainly need a change, and that badly. The name of J. Edgar Hoover is like a blast of fresh air. His many years of experience and knowledge of affairs in Washington and the United States, and his past record of achievements, speak so well for him.

From Dowling, Mich., a member of the Pilgrim Holiness Church writes:

I am back of the idea 100 percent. I can think of no man who would stand a better chance than he, and certainly he is a man who has won the respect of all except the underworld, regardless of politics.

This was brought to the attention of the church in our midweek prayer meeting. It seemed to meet almost unanimous approval.

Certainly our Nation needs to do some house cleaning and returning to the fundamental Christian principles and liberties of our forefathers. We must either do that or meet with certain national disaster under God's hand of judgment.

A farmer living near Charlotte, Mich., in my district, writes:

It is hoped if J. E. Hoover could be nominated that he would be elected and able to clear Government of racketeers and form a workable policy at home and abroad.

It is evident that many are sick of rank deals and will not vote for candidates that go along with them.

A Detroit woman writes:

It was gratifying indeed for you to spearhead a drive to draft J. Edgar Hoover, and [I] know that the real Americans want a candidate that they can vote for, not an internationalist.

An Albion, Mich., businessman says:

I would be delighted [with Hoover]. You are right that the people want honesty and competence in Government.

From a Kalamazoo, Mich., paper-mill executive:

You might be surprised how many ordinary people, regardless of party affiliations, would back [Hoover]. Count on me and a good many other Americans to back him.

From three Battle Creek, Mich., businessmen:

We are proud of you at the selection of J. Edgar Hoover to lead the party in 1952. The whole district is with you.

From a Winfield, Kans., housewife:

I can think of no other man on the public scene who would be more qualified for the Nation's top job.

Who is better equipped to recognize and combat the enemies of our Nation, both foreign and home grown? Crime, corruption, and communism would turn white with fear were he to enter the White House. He is a man that the youth of our Nation can look up to with honor and respect.

If he carries into the Nation's highest office his habit of thrift, the American taxpayer would indeed rejoice. Does any other Government agency but the FBI ever turn back unused sums?

And from the young Hillsdale, Mich., businessman who originally suggested the name of J. Edgar Hoover for the Republican nomination for President comes this further word:

The interest [has] both amazed and pleased me. To the extent that I have visited and discussed with many Republicans in Hillsdale, their reception to such a movement is unanimous. They agree that we need a man of his unquestionable honesty, respect, and ability [and] that it is now a matter of self-preservation to boom such a movement.

We invite you to join [the first J. Edgar Hoover for President Club] as a charter member.

An Artillery Officer's Experiences in Korea

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. AIKEN. Mr. President, I have in my hand a letter from 1st Lieut. Paul R. Teetor, Jr., to his parents, who live in Vermont. Lieutenant Teetor was a bombardier during World War II, and was attached to the Eighth Air Force in England. His plane was shot down over Germany and he was a prisoner of war for 16 months. Lieutenant Teetor was practicing law at Middlebury, Vt., when called to active duty with Forty-third Division. He is now an artillery officer.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SOMEWHERE IN KOREA,

June 20, 1951.

DEAR MOTHER AND DAD: I have time just for a brief note. I am still not up front but closer to it. Today we rode by truck up from the Division Replacement Center near Seoul to Division Artillery headquarters where I am spending the night. Tomorrow I should be sent to a battalion. I must be careful about telling you where I am but probably it is proper to tell you that I am on the central front. The ride would have been quite beautiful but for the vast quantities of dust thrown up by such military traffic. This is really very mountainous country, more so than I had realized. It is like the Green Mountains only on a bigger scale. Every gap is a Lincoln Gap. My earlier depreciation of Korea war damage I must withdraw. It is terrible. The Seoul area which is the only metropolitan center is just beginning to be reopened. Most of the population has yet to return. While many if not most of the private homes there are little touched, absolutely all industrial and other large structures are wrecks. Above Seoul, even the villages are largely shambles, Chunchon, the only good-sized town I have seen in this area, was not completely leveled like Caen and St. Lo in Normandy but it is the next worst thing that I can recall. There are still some refugees on the road. In one village I saw the longest chow line that I have ever seen.

Last night I had one of those rare exhilarating experiences induced by moonlight that literally bathed the world. As I looked

out to the vast mountains of Asia silhouetted in the distance, I felt an extraordinary sense of spiritual strength. Before my mind passed the pictures of Leonidas at Thermopylae, Martel at Tours, and Sobiesky at Vienna, each withstanding in turn the hordes of Asian conquest, thereby making possible the continued growth of our distinctive western culture with the great promise that it holds out for the future of mankind. Something of the same sort is upon us today. I make no more of this Communist wave than another chapter in the age-old story of Asiatic despotism rising to sudden power in the righteous wrath of miserable millions but doomed by its inherent limitations of inevitable degeneration into the same corruption and misery out of which it arose. Set against it, I see the genius of our own western culture, kindled in little democratic Greece so many centuries ago and nurtured through many vicissitudes, in spite of the recurrent attacks from out of Asia, into that wonderful world we call America, where freedom and democracy have reached such heights. I thank God for our towering strength, itself a product of that freedom, and I pray that it may be our "last best hope" that will govern earth when these terrific struggles have run their course rather than the deadening hand of Asiatic despotism with which we have now come to grips. I am proud and even joyful to be able to take part in the battle for our priceless heritage here and now in this far off little land of Korea where the issue has been joined. In the perspective of world history I cannot really doubt that it will be our way which survives to posterity.

As I thought of these things I also thought of my wife with whom I am so happy, and of my daughter of whom I am so proud, and of you two who have been my guardian angels for so many years. I felt that you were with me in spirit, and I knew that only the things of the spirit really mattered.

PAUL.

The Tideland Oil Question

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Tideland Myth," which appeared in the Washington Post this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIDELAND MYTH

The House of Representatives did a sorry piece of business on Monday when it voted, 265 to 109, to give away to certain individual States the fabulously rich area of the marginal sea which the Supreme Court has held belongs to the entire Nation. Behind this colossal grab of a vital national resource lies a twin deception embraced by supporters of the Walter bill: (1) That the marginal sea is indistinguishable from the tidelands or inland waters; (2) that somehow traditional States' rights were violated by the Supreme Court decisions in the California, Texas, and Louisiana cases.

The marginal sea, the only area involved in these cases, is the strip of submerged land lying seaward of the low-tide mark to the traditional 3-mile limit of national sov-

ereignty. Tidelands are the strip lying between the low-tide and high-tide marks. Inland waters, as the term implies, are rivers, lakes, bays, and other ocean areas within coastal indentations. From the early days of the Republic, tidelands and inland waters have been held to belong to the individual States; no claim of title to them has been made by the Federal Government. All that the Supreme Court did was to assert that the Federal Government, as an attribute of national sovereignty, possesses paramount rights in and full dominion over the marginal sea—outside the tidelands and the inland waters.

Proponents of the Walter bill have pretended to see in this decision a threat not only to the tideland oil interests of Texas, Louisiana, and California, but a threat also to the fishing interests and harbor installations of the 18 other coastal States, and even to the river-bed and lake-shore ownership of completely landlocked States. That this amounts to nothing more than a hobgoblin conjured up to gain the support of inland Congressmen was made plain on Monday, when supporters of the Walter bill voted down amendments offered by Representatives MANSFIELD and CASE specifically renouncing any Federal claim to tidelands or inland waters. No such quitclaim legislation is necessary, of course, but these amendments would have quieted any fears concerning the tideland and inland waters, had the fears been genuine. The Walter bill is aimed, obviously, not at settling States' rights respecting tidelands and inland waters, but at grabbing the marginal sea, and even, in addition, a large portion of the Continental Shelf lying beyond the marginal sea. Its supporters went so far, indeed, as to reject an amendment restricting the grab to the 3-mile limit.

The House ruled out on a specious point of order Representative MANSFIELD's amendment or substitute bill providing for Federal management of the marginal sea and dedicating the revenue to be produced from it to a program of Federal aid to education. This would provide a wise and magnanimous resolution of the long controversy. It would make possible a prudent conservation of the submerged oil in the interest of national defense while at the same time furnishing the means to deal with an urgent national problem—the crisis in the country's public schools—in the interest of the whole American people. This proposal will be advanced again, under bipartisan sponsorship, when the Walter bill reaches the Senate. It cannot be ruled out there on an arbitrary point of order. And it should not be ruled out on any fictitious plea of States' rights. In the Congress of the United States the Nation's rights ought to be considered paramount.

The Place of Television in Education

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. JOHNSON of Colorado. Mr. President, it has been most reassuring to note the great interest educators are taking in television and what contribution television may make to educational processes. An editorial in Broadcasting magazine of July 23 discusses this matter most interestingly and pointedly. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDUCATORS ADVISED

A stop, look, and listen sign has been hoisted beside the tracks of steamed-up educators who want to own and operate a non-commercial television station for educational purposes.

The sign bearers are Col. Harry C. Wilder, president, WSYR-AM-TV Syracuse, and D. L. (Tony) Provost, business manager, WBAL-AM-TV Baltimore and acting general manager of Hearst Radio Inc.

Both men hold positions in operations which embrace more than one broadcast property. WBAL-AM-TV is owned by Hearst, whose properties include WISN-AM-FM Milwaukee. Hearst Consolidated operates WCAE Pittsburgh. Col. Wilder, in addition to his WSYR post, is president and stockholder of WELI New Haven and WTRY Troy, N. Y.

They feel the educators' problem of where to get the funds to operate and the broadcasters' dilemma of how to meet educational program demands can be met by broadcaster-educator cooperation.

On the practical level, they are convinced that this cooperation, as exemplified by the "Syracuse U. TV Plan," and as contemplated by an excursion into educational TV in the fall by WBAL-TV, is workable and serves both parties with a minimum of burden imposed.

Noting the fierce fight waged in Washington between educators and commercial TV forces, which resulted in the FCC allotting * * * new TV channels to educational stations, Colonel Wilder said the issue has resolved into the question of "how long such ear-marked channels should be held open for education institutions."

DEPRIVE PUBLIC?

"In other words," he said, "should the public be deprived of program service on these channels for a period of years waiting for educational use?"

Colonel Wilder wishes to underscore what he calls the "common sense compromise" offered by the Syracuse U.-WSYR operation.

The plan saves a university heavy TV investment in transmitters and a station plant because the station provides these facilities. The university, Colonel Wilder continued, only has the smaller investment in studios and program facilities. Use of university facilities for many of its own live shows, he points out, creates a large revenue source for the university.

Another "practical reason" why the plan "does not soak up funds" of the university, according to Colonel Wilder, "is the limitation on how many good TV programs any university can create, produce, rehearse, and put on the air."

"It has been demonstrated on the campus here that three of four hours weekly is the absolute limit of university educational programs that can be aired of the high standard the TV audience requires and that the institution must have."

"When a university owns the complete station 12 hours average daily must be filled with consequent sacrifice of quality and proportionately higher expenses," Colonel Wilder explained. "To supply 100 hours weekly instead of three to four hours places a crushing burden on the educators, based on the Syracuse experience in 1950-51."

WSYR-AM also cooperates with Syracuse U. and has been doing so since 1932, Colonel Wilder, a pioneer in educational-broadcasting endeavor, points out. The TV plan was started in 1949.

Colonel Wilder's comments follow the pattern set in a letter by a Syracuse U. graduate student, working toward a master's degree, which was sent to Senate Interstate Com-

merce Committee Chairman Ed C. JOHNSON, (Democrat, Colorado). The Senator forwarded a copy to FCC (Broadcasting, Telecasting, July 9).

DASHEFSKY LETTER

In his letter, Sidney Dashefsky opined that educational institutions and commercial TV station operators can do the best educational job if they work together.

In announcing the WBAL-TV project to start this fall, Mr. Provost said the services of a complete professional creative staff will be made available to colleges and universities desiring to put their own shows on TV. The station will offer educators at least 1 hour "class A" time.

WBAL-TV said it was instituting the program in order to assist and expand educational television in Maryland. The "package-staff" is to include a professor, director, writer, set designer, and announcer, and will be similar to that of a mobile unit. It will go directly to the schools and participate in story conferences, casting, and rehearsals prior to any on-camera activities, the station announced.

This plan, WBAL-TV said, is the answer to the school that cannot get into the business of broadcasting and lacks the personnel with professional know-how to take full advantage of the facilities offered.

Elaborating, Mr. Provost said time has been available for Maryland institutions which want to put on shows but that they have lacked people who knew how to do the necessary job. "We want to get Maryland colleges and universities into the television act on a sound and permanent basis as soon as possible," he said, adding that the station is "setting aside several commercial programs to accommodate the scheduling of this series in prime evening time."

Arnold Wilkes, WBAL-TV program manager will supervise the "educational creative unit." Mr. Wilkes, former instructor in speech and dramatics at Middlebury (Vt.) College, held the post of director at WRGB (TV), Schenectady, N. Y., and WSYR-TV before joining the Baltimore station.

WBAL-TV reported that 12 Maryland colleges are going ahead with plans for fall programs. Conferences have been held with the Baltimore Board of Education looking for a series of programs to start after Labor Day.

Endorsement of the program has come from Dr. H. C. Byrd, University of Maryland president, and Mrs. Eleanor B. Kane, radio-TV education specialist for Baltimore's department of education, WBAL-TV said.

The United States Is a Republic, Not a Democracy

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "This Is a Republic; Democracy a Misnomer," published in the Norristown Times-Herald, of Norristown, Pa., on July 25, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS IS A REPUBLIC; DEMOCRACY A MISNOMER

We are getting rather weary of hearing America called a democracy; particularly so

in view of the antics by European countries calling themselves democracies.

America is not a democracy and never has been.

Democracy was a form of government shunned by the founding fathers of this Nation when they adopted the Constitution in Philadelphia.

They considered monarchy, perhaps a bit seriously for a moment or two, but democracy was cast aside as a scourge. It is a word that, because of its misuse and deliberate misinterpretation by some of our highest public officials in the last two decades, should be at least figuratively discarded from our American vocabulary; literally, so far as application to our own Nation and its form of government is concerned.

The American form of government is that of republic. We seem to have forgotten that. It no longer seems to be taught in the schools. The National Education Association, for example, no longer refers to republican form of government in its literature. It never refers to Americanism. It refers only to democracy and uses the word in a manner to imply that Americanism and true democracy are synonymous, or that the latter is an objective of the former. (The NEA boasts that its membership includes a vast majority of the educators of the nation.)

In Washington, and in state capitals, political leaders prate of democracy. There is no talk of republican form of government or what it means. Little talk of Americanism except the effort to imply that we can forget it if we seek democracy.

Actually, democracy, in its ultimate end, becomes socialism, which is a step in the direction of communism, though the actual philosophies of each differ from the other. In the end, democracy means mobocracy, which can be solved only by dictatorship. We have been following that course in this nation far too much of late; the pretense to the public that this is a democracy in which each person is a ruler, but with an authoritarian over-all rule essential to maintain the fallacy.

In other words, that philosophy is what "democracy" as practiced and preached at the highest governmental levels in this nation actually has produced—or tended to produce—and that is what democracy always must produce. Consequently, it is time to get rid of the word and to understand its meaning in its modern practical applications as well as in its original meanings. There is no reason to substitute the word "democracy" for "Americanism," even though there were unanimity of thought that we would apply the full and true meanings of "Americanism" to "democracy." What's wrong with "Americanism," either as a word or as a philosophy?

Russia claims to be a full democracy. It labels its sections of Berlin with big signs—"Entrance to Democratic Berlin," etc. And the signs are not too far wrong in their basic meaning and application. That should be enough to make Americans stick to their own word and forget Russia's.

Are Farmers Making Too Much Money?

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. HOPE. Mr. Speaker, a few weeks ago I made a speech by transcription

over radio Station KXXX, of Colby, Kans., entitled "Are Farmers Making Too Much Money?" Under leave to extend my remarks in the RECORD, I include herewith a revised draft of this speech:

I am grateful to the management of Station KXXX for this opportunity to talk to those who comprise its listening audience in Western Kansas and adjoining States. My subject is Are Farmers Making Too Much Money?

Here in Washington and in all of the eastern cities we hear the constant refrain that food prices and farm prices are too high and that farmers are getting rich at the expense of the rest of the people. We read articles and editorials in the big-city newspapers and in nationally circulated magazines published in the East all of which add up to the charge that farmers are making too much money. Maybe some who are listening to me have been misled into thinking that this is true. What I want to point out in the few minutes I have with you is that facts and figures do not bear out the contention that farm and food prices are high in relation to other prices or that farmers are making too much money compared with other people.

GOOD FARM PRICES IMPORTANT TO EVERYONE IN KANSAS

But before I give you these figures I want to point out the importance of fair farm prices to everyone who lives in an agricultural section. In Kansas and surrounding States agriculture is the basic industry. Take all of the agricultural income out of this area and four-fifths of our people would have to move out—I don't care whether they live on farms, in small communities, or in the cities—with agricultural income gone there just wouldn't be anything to maintain normal business activity. If farm prices were suddenly cut in two and that condition continued for any length of time, half the businesses in Kansas would fold up. Thousands and thousands of people would lose their jobs. Churches and schools would close or have their activities reduced because we wouldn't have the money to keep them going. Railroads would curtail service. We couldn't maintain our highway system or the other activities of our State and local governments. Kansans should know this, but I fear that there are people even in Kansas not actually engaged in farming who overlook the fact that the well-being of themselves and their communities depends almost entirely upon the prosperity of agriculture.

FARMER'S INCOME ABOUT HALF THAT OF NONFARMER'S

Well what about it? Are farmers making too much money compared with other people? The Department of Agriculture has plenty of figures on this subject. The most important and pertinent are those which show that for 1950 the average annual income of persons living on farms was \$804 and the average annual income of people living off of farms was \$1,548. In considering these figures we must keep in mind that there are wide variations in farm income just as there are in the incomes of those living off of farms. The significant thing is that the average farmer makes just about half as much as the average nonfarmer.

FARMERS GET LOWEST PAY OF ALL

Secretary Brannan has figured it out in another way. He says that for 1950 if we broke down the income from farming of all persons on farms and took into consideration the number of hours they worked, the amount of money they had invested, and the management that was required to carry on farm operations, it would amount to 49

cents an hour for labor, 5 percent interest on the investment, and nothing for management. That compares with the 1950 average of \$1.46 an hour for manufacturing workers, \$1.17 for retail trade workers, and \$2.03 for building construction workers (keeping in mind, of course, that these are average figures). The farmers' 5 percent interest allowance compares with profits in 1950 of 15 percent on net investments of manufacturing corporations after taxes. So you see when we look at the figures we find that instead of making too much money, farmers are making far less money considering their labor, investment, and management than people engaged in other lines of activity, many of which have nothing like the importance of farming or require the education and skill that a farmer must have.

MOST FARM PRICES ARE BELOW PARITY

Another basis for comparison is that of parity which has been generally accepted as representing a fair scale of prices for agricultural products—yet most agricultural prices are below parity today. A good many farm prices have actually declined in

recent weeks, as every farmer knows. Yet industrial wages and prices are steadily increasing.

HOW HIGH ARE FOOD PRICES?

There have been few times in the past when an hour's work in a factory would buy as much food as it does right now. We can talk all we want to about high prices and low prices, but it is what a man can buy with his wages that counts. A few weeks ago the Secretary of Agriculture submitted official figures to the House Committee on Agriculture showing how much food can be purchased with an hour's factory labor today as compared with various periods in the past. The figures speak for themselves. Not only do food prices now compare as favorably with wage rates as they have in the past, but it must be remembered that the quality of food on the market now is higher than it has ever been. Moreover, it is processed and distributed under sanitary conditions and packaged for convenient handling and use to an extent never known before.

The figures submitted by Secretary Brannan are as follows:

Quantity of each item that could be purchased with 1 hour of factory labor, United States, designated years

Item	Unit	1914	1919	1929	1939	1949	February 1951
Bread, white	Pound	4.0	4.8	6.4	7.9	10.0	10.0
Round steak	do.	.9	1.2	1.2	1.8	1.6	1.5
Pork chops	do.	1.0	1.1	1.5	2.1	1.9	2.0
Sliced bacon	do.	.8	.9	1.3	2.0	2.1	2.3
Butter	do.	.6	.7	1.0	1.9	1.9	1.9
Cheese	do.	1.0	1.1	1.4	2.6	2.7	2.6
Milk, fresh (delivered)	Quart	2.5	3.1	3.9	5.1	6.7	6.9
Eggs, fresh	Dozen	.6	.8	1.1	1.9	2.0	2.5
Oranges	do.		.9	1.3	2.3	2.7	3.2
Potatoes	Pound	12.4	12.6	17.7	26.3	25.5	36.3
Tomatoes (canned)	No. 2 can		2.0	4.4	7.4	9.2	8.4
Margarine	Pound		1.2	2.1	3.9	4.5	4.0

NOTE.—Prices and earnings used were compiled from Bureau of Labor Statistics data

One thing more should be mentioned and that is that there is no other country in the world except Australia where a given amount of work will buy as much food as in the United States. Even in most of the advanced countries it will buy far less. In Russia a man would have to work 7 hours to buy the amount of food he can buy in this country for 1 hour's work, assuming that the food were available in Russia which it isn't.

EASTERN PRESS WOULD EXPLOIT THOSE WHO LIVE IN RURAL AREAS

Many more figures are available to show that farmers are not making too much money, but these figures do not seem to mean a thing to many people in the eastern cities and to the press in those cities whose editorial articles indicate that they look upon the farming sections of this country as areas to be exploited, like empires of the past exploited their colonial possessions.

If the people who are opposed to fair prices for agricultural commodities were not so shortsighted, they would realize that if any part of our economy is sick and out of harmony with the remainder, then the whole Nation suffers. This has been demonstrated time and time again in the economic history of our country.

IT'S TIME FOR FARMERS TO TALK BACK

I think it's time for farmers to talk back on this question. Businessmen and workers, and everyone else in our agricultural sections, should talk back too. Our incomes and living standards as well as our future as an important part of the Nation depend upon a fair relationship between farm prices and other prices. The people in our cities should be told what it means to them for

farmers to have fair prices and good incomes. They should be told of the economic disadvantages from which farmers suffer and it should be made clear that farmers have nothing to say about the price they receive for their products. When they go to market, they must take what buyers and middlemen offer them or haul their products back home. Few people in our cities understand this.

OUR FARMERS ARE THE BEST IN THE WORLD

A moment ago I said that with one exception, there is no country in the world where a given amount of work in a factory will buy as much food as it will right here in the United States. Nor is there any country where a smaller proportion of the people are engaged in producing food than here. Eighteen percent of our people living on farms produce enough food and fiber for all the rest of us, and its good food and plenty of it. In the more backward countries the situation is just reversed. It takes the work of 85 percent of the people to produce the food for such nations, and in many cases it is a very meager supply of food. Famines and starvation are frequent.

Eighteen percent of our people can feed the rest of us because we have a rich soil, because most of our farmers are educated and skilled and because we have the great advantages which go with labor-saving machinery. But we can maintain the fertility of our soil and keep up our research and educational programs and improve our machinery and techniques only if farmers receive their fair share of the national income. It can't be done if farmers as a group are forced to accept the inferior economic position which the metropolitan press of this country would assign them.

FARMERS ARE NOT GETTING RICH

Are farmers making too much money when per capita farm income is \$804 per year, when the 18 percent of the people living on our farms received in 1950 only 9 percent of our national income, when the returns from farming last year amounted on an average to 69 cents per hour for labor, 5 percent on investment, and nothing for management? No; farmers are not making too much money.

Indiana Welfare Funds

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. MADDEN. Mr. Speaker, the unfortunate action of the Indiana Legislature last spring in passing a law, in violation of the Federal statutes, calling for the publicizing of welfare roles prohibits Federal welfare funds from being allotted to Indiana.

The following is a statement by Oscar R. Ewing, Federal Security Administrator, and also legal opinions, findings of fact, and conclusions of law, substantiating the necessity for him to follow the Federal law and deny relief allocations to the State of Indiana:

STATEMENT BY OSCAR R. EWING, FEDERAL SECURITY ADMINISTRATOR

I deeply regret having to make this decision disapproving the Indiana State plans for old-age assistance, aid to dependent children and aid to the blind. However, the Indiana legislature has given me no choice and I am compelled by law to do so.

Congress appropriates money to be granted to the States to help pay the costs of these assistance programs. But long before I became Federal Security Administrator, Congress specifically provided that if a State wishes to receive Federal money for these programs, the State must first submit and have approved a plan for each program, which "must * * * provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration" of the particular assistance program.

The State of Indiana complied with this requirement of the Federal law from the time it became effective in 1941 until July 20 of this year when chapter 321 Indiana laws 1951 became effective. This law repealed every vestige of the safeguards previously contained in the Indiana law against the use or disclosure of such information. In fact, insofar as disclosure is concerned, the new Indiana law now requires that lists of the names, addresses, and amounts received by recipients "be open to public inspection." It is true that the law also contains criminal penalties for—but no "safeguards" against—the misuse of information regarding recipients of assistance. However, insofar as disclosure is concerned, there are not even any criminal penalties against this.

Before chapter 321, Indiana laws 1951, was first passed by the Indiana Legislature, the State was notified by Mr. Arthur J. Altmeyer,

¹ In the matter of the amendments to Indiana State plans for old-age assistance, aid to dependent children and aid to the blind necessitated by ch. 321, Indiana laws 1951.

Commissioner of Social Security, in response to an inquiry from Mr. Maurice O. Hunt, administrator of the Indiana Department of Welfare, that if the bill became law grants of Federal funds would have to be discontinued. I understand that Mr. Hunt took appropriate steps to transmit this information to the legislature. The legislature, however, went ahead and passed the bill. Then the governor vetoed the bill and sent it back to the legislature with a message saying that if it was enacted, the Federal Government would have no option but to discontinue Federal grants to Indiana. The legislature, nevertheless, passed the law over the governor's veto.

It now becomes the duty of the Federal Security Administrator, under a requirement of the Federal law, to say whether or not Indiana's plans for aid to the aged, dependent children, and blind persons as amended by chapter 321, Indiana laws 1951, meets the requirements that Congress has stipulated. I have reached the only possible conclusion, namely, that these plans do not meet the requirement of the Federal laws. I hope and pray that this decision, which I am compelled to make, will deprive no beneficiary of the assistance payments to which he or she is properly entitled. But if it does, full responsibility rests on the Indiana Legislature which passed the bill after being fully advised of the probable consequences of its enactment.

If the State of Indiana wishes to appeal to the courts from this decision, I will do everything possible to expedite the proceeding. Since the State would be a party to such proceeding, the State may wish to ask the United States Supreme Court to permit a direct appeal to that Court. If no appeal is taken, then so far as I can see, the only way that the State of Indiana can again receive Federal moneys for these assistance programs will be for Congress to make appropriate amendments in the Federal law or for the Indiana Legislature to amend its laws so as to provide the safeguards required by the Federal statute.

IN THE MATTER OF THE AMENDMENTS TO INDIANA STATE PLANS FOR OLD-AGE ASSISTANCE, AID TO DEPENDENT CHILDREN, AND AID TO THE BLIND NECESSITATED BY CHAPTER 321, INDIANA LAWS 1951

OPINION OF FEDERAL SECURITY ADMINISTRATOR

The original Social Security Act was enacted August 14, 1935. Its preamble stated that it was "An act to provide for the general welfare by establishing a system of Federal old-age benefits, and by enabling the several States to make more adequate provision for aged persons, blind persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment compensation laws, to establish a Social Security Board; to raise revenue, and for other purposes."

This law established, among other things, comprehensive Federal-State programs of public assistance for aged persons, blind persons and dependent children. These public assistance programs were to be operated by the States with the Federal Government contributing specified proportions of the money paid to beneficiaries.

In order for a State to receive Federal money under any of these programs, the State was required to have previously submitted and to have had approved by the Social Security Board a State plan. (The powers and functions of the Social Security Board were subsequently vested in the Federal Security Administrator.) The Federal law provided that a State plan, in order to be approved, must contain certain specific provisions, none of which are relevant here.

In 1936 the State of Indiana submitted for approval plans for old-age assistance, aid

to dependent children and aid to the blind, pursuant to the Indiana Welfare Act of 1936 (ch. 3, Indiana acts of 1936, special session). These plans were approved April 7, 1936 and Federal grants have been made to the State of Indiana with respect to such plans continuously from April 1, 1936, to date.

In 1939, Congress amended the Social Security Act and added to the provisions which must be contained in State plans for old-age assistance, aid to dependent children and aid to the blind a new provision. This amendment to title I of the act relating to old-age assistance was that a State plan "must, effective July 1, 1941, provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of old-age assistance."

Identical requirements were added to the statutes relating to the programs of aid to dependent children and aid to the blind.

In 1941, the Indiana Legislature amended section 93 of the Indiana Welfare Act and added sections 93a and 93b. The amendments and additions, together with other provisions already embodied in the law, were obviously for the purpose of furnishing an adequate legal basis for amending the Indiana State plans so that they could contain provisions that would meet the requirements of the 1939 amendments to the Social Security Act referred to above. Section 93 as so amended in 1941 and as amended in 1943 and 1945 in certain respects not material here reads as follows:

"Confidential nature of records: All records concerning any applicant or recipient of assistance contemplated in part III of this act shall be confidential, and the use or disclosure thereof shall be restricted to purposes connected with the administration of assistance under this act: *Provided, however*, That applications for assistance, awards, modification or revocation of awards and amount of payments to recipients, shall be open to the inspection of duly elected State and county officials, and to township trustees for purposes connected with the administration of public assistance."

The 1951 Indiana Legislature enacted chapter 321, Indiana laws 1951. This law became operative July 20, 1951. The foregoing language contained in section 93 of the Indiana welfare law was eliminated and instead such section now reads as follows:

"Sec. 93 The county welfare board of each county shall on or before the thirtieth day of each January, April, July, and October, file with the county auditor, each member of the county council, prosecuting attorney and all township trustees of such county, a complete report showing the names and addresses of all recipients receiving payments under this act, together with the amounts paid to each during the preceding quarter. Said report shall also show the names and addresses of and salaries paid to all employees of the county welfare board.

"The reports so filed with the county auditor shall be securely bound by him in a separate record book provided for that purpose, which said book and all reports contained therein shall be and the same hereby are declared to be public records and shall be open to public inspection at all times during the regular office hours of said county auditor. Provided, however, that nothing herein contained shall be construed to authorize or require the disclosure of any records of the public welfare department pertaining to adoptions or pertaining to children heretofore or hereafter placed in foster homes for adoption or other purposes."

Chapter 321 also amended sections 93a and 93b of the Indiana welfare law in the following manner (material added by chapter 321 is italicized, material deleted is

shown in black brackets and unchanged material is in ordinary type).

"Sec 93a. Misuse of public assistance information: Except as provided in this section [, or for purposes directly connected with the administration of this act in accordance with the rules and regulations of the state department and public welfare], it shall be unlawful for any person, body, association, firm, corporation or other agency to solicit, disclose, receive, make use of, or to authorize, knowingly permit, participate in, or acquiesce in the use of, any lists or names [of, or any information concerning persons applying for or receiving public assistance pursuant to the provisions of the welfare act directly or indirectly derived from the records, papers, files or communications of the State or county or subdivisions, agencies or offices thereof or acquired in the course of the performance of official duties other than as provided in this act], for commercial or political purposes of any nature, or for any purpose not directly connected with the administration of public assistance."

"Sec 93b. Penalty: Any person, body, a association, corporation, firm, or other agency who shall willfully or knowingly, violate any provision of this act shall be guilty of a misdemeanor and upon conviction shall be punished by a fine of not less than \$25 nor more than \$1,000, to which may be added imprisonment in the county jail for any determinate period not to exceed 60 days. If the violation is by other than an individual, the imprisonment may be adjusted against any officer, agent, employee, servant, or other person of the association, corporation, firm, or other agency who committed or participated in such violation and is found guilty thereof.

"*Provided*, That nothing in this act shall be construed to prevent a grand jury or prosecuting attorney from securing by subpoena such records or information as may be necessary in the investigation or prosecution of any criminal charge. All financial and administrative records shall be subject to inspection and audit and may be utilized in determining the sufficiency of appropriations or tax levies. By financial and administrative records shall be meant any records utilized in the operation of the department except those containing or showing information concerning individual recipients or applicants for assistance or giving lists of such recipients or applicants."

When the amendments to sections 93, 93a, and 93b became effective, the Indiana State plans for old-age assistance, aid to dependent children, and aid to the blind were amended accordingly. This compels the Federal Security Administrator to decide whether these plans as so amended must be disapproved for failure to comply with the provisions of the Social Security Act which say that a State plan "must . . . effective July 1, 1941, provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration" of the three several programs.

The amendments to sections 93, 93a, and 93b completely wiped out all provisions in the previously existing statutes which required that the records concerning applicants and recipients of assistance be kept confidential. These amendments do not leave a vestige of a safeguard which would restrict the disclosure of information concerning applicants and recipients. Indeed, the amendments categorically declare that quarterly reports of county welfare boards to county auditors showing the names and addresses of recipients, together with the amount paid each, are to be public records and open to public inspection. By no stretch of the imagination can Indiana's State plans for public assistance, when so amended, be deemed to conform to the requirement of the Social Security Act that such plans

"must . . . provide safeguards that restrict the . . . disclosure of information concerning applicants and recipients to purposes directly connected with the administration" of the assistance programs.

But the Social Security Act says that the State plans must also provide safeguards that restrict the use of information concerning applicants to the same purposes. Here, the failure of the Indiana plans, as amended, to comply with Federal law is not so clear because the amended statutes do provide criminal penalties for misuse of such information. The question is thus raised as to whether or not the criminal penalties now contained in the Indiana statute can be regarded as safeguards against the misuse of the information.

Originally, the word "safeguard" was used to describe a body of soldiers detailed to protect a particular person or piece of property. It was something quite apart from and in addition to the criminal punishment that might result from assault on the person or trespass upon the property. The idea was that something was set up that would prevent a particular result from happening. Webster's New International Dictionary (2d ed.) defines the term "safeguard" as "3. A means of preventing some undesirable outcome or tendency."

Where a statute requires machinery to be safeguarded, it means that there must be some physical attachment or structure that will prevent contact with moving or other dangerous parts of the machine. It would, therefore, seem that the Indiana State plans for assistance, as amended by chapter 321, also cannot be approved because such plans do not provide safeguards which restrict the use of information concerning applicants and recipients to the purposes specified in the Social Security Act. Whether or not in some instances it may be impossible to do anything more to prevent misuse of information than provide criminal penalties raises questions that need not be decided at this time. Certainly, in this case, the Indiana assistance plans, as amended by chapter 321, cannot be held to contain the safeguards against misuse of information that are required by the Federal law. I must hold, therefore, that the Indiana State plans for old-age assistance, aid to dependent children, and aid to the blind, as amended by chapter 321, Indiana laws, 1951, do not contain provisions that are required by the Federal law and consequently cannot be approved.

OSCAR R. EWING,
Federal Security Administrator.
JULY 31, 1951.

IN THE MATTER OF THE AMENDMENTS TO INDIANA STATE PLANS FOR OLD-AGE ASSISTANCE, AID TO DEPENDENT CHILDREN, AND AID TO THE BLIND NECESSITATED BY CHAPTER 321, INDIANA LAWS, 1951

FINDINGS OF FACT AND CONCLUSIONS OF LAW

Findings of fact

1. The Social Security Act (42 U. S. C., sec. 301 et seq.) vests in the Federal Security Administrator all functions regarding the approval of State plans and other aspects of the administration of titles I, IV, and X of the Social Security Act. The Federal Security Administrator has delegated to the Commissioner for Social Security Authority, among other things, to approve State plans and amendments to State plans. The Commissioner for Social Security and the Bureau of Public Assistance, which is under his direction, have authority, among other things, to negotiate with and advise States concerning their plans and the requirements of the Social Security Act.

2. The State of Indiana has had plans for old-age assistance, aid to dependent children, and aid to the blind approved under titles I, IV, and X, respectively, of the Social Security Act. State plans for these programs formulated and submitted by the State

agency were by their terms founded upon the Indiana Welfare Act of 1936 (ch. 3, Indiana Acts of 1936, special session) and have been amended from time to time to reflect certain amendments of the Indiana statutes and other changes. These State plans were initially approved on April 7, 1936, with Federal grants commencing as of April 1, 1936, and Federal grants have been made to such State with respect to its approved plans continuously since that time. The Indiana State agency supervising the administration of such plans is the department of public welfare.

3. The Social Security Act was amended in 1939 to require that effective July 1, 1941, State plans for old-age assistance, aid to dependent children, and aid to the blind "provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of" old-age assistance, aid to dependent children, and aid to the blind. Sections 2 (a) (8), 402 (a) (8), and 1002 (a) (9) of the Social Security Act.

4. Subsequent to 1939, the Social Security Board and its successor, the Commissioner for Social Security, advised the State agencies administering public assistance of the nature of the requirements cited in the preceding paragraph, particularly in releases sent by the Executive Director of the Social Security Board to such State agencies on November 15, 1940, and May 7, 1941, and in the Handbook of Public Assistance Administration of the Bureau of Public Assistance, part IV-7000.

5. Part IV-7000 of the Handbook of Public Assistance Administration was distributed to the State agencies administering public assistance programs under the Social Security Act as an attachment to State Letter No. 61, dated January 7, 1946.

6. Section 93 of the Indiana Welfare Act prior to 1941 contained provisions for the protection of some assistance information but did not contain safeguards with respect to application for assistance awards, modifications, and revocation of awards. In 1941 the Indiana Legislature amended section 93 and added sections 93a and 93b, which provided for the protection of all public assistance records and made the misuse of assistance information a misdemeanor. (Ch. 179, sec. 8, Indiana Acts of 1941.) The 1941 amendment provided the State with a specific statutory authority for meeting the requirement cited in paragraph 3, supra. This law was amended in 1943 and 1945, in respects not material here.

7. Senate bill 86 was introduced in the 1951 session of the Indiana Legislature to amend the legislation cited above, and versions of this bill were transmitted to the Commissioner for Social Security by the administrator of the Indiana Department of Public Welfare on February 8, 1951, and March 1, 1951, with requests for comments regarding conformance or nonconformance with the mandatory requirements of the Social Security Act described in paragraph 3, supra, and the administrator of the Indiana Department of Welfare was notified by a telegram dated February 13, 1951, signed by the Director of the Bureau of Public Assistance, and a telegram dated March 2, 1951, signed by the Commissioner for Social Security that senate bill 86 did not conform to the provisions of the Social Security Act.

8. The Governor of Indiana vetoed the version of senate bill 86 finally enacted and in his veto message, dated March 5, 1951, informed the senate that reliable information from the highest Federal sources and the advice of competent legal counsel lead him to the conclusion that the bill did not conform to the requirements of the Federal statute and that it appeared to him that the Federal Government would have no option but to discontinue grants to Indiana.

9. Senate enrolled bill 86 was enacted by the legislature over the veto of the Governor

and became chapter 321 of Indiana laws of 1951, to become operative upon publication and promulgation.

10. Chapter 321 was submitted to the Commissioner for Social Security by the administrator of the Indiana Department of Public Welfare as an amendment to the Indiana plans for old-age assistance, aid to dependent children, and aid to the blind.

11. In the letter from the administrator of the Indiana Department of Public Welfare, dated April 17, 1951, which submitted chapter 321, a request was made for a hearing regarding the conformity of the Indiana plans for old-age assistance, aid to dependent children, and aid to the blind as amended by such chapter, with the requirements of the Social Security Act. Pursuant to such request the Federal Security Administrator on April 25, 1951, notified the administrator of the Indiana Department of Public Welfare that such hearing would be held on May 15, 1951, at his office in Washington, D. C. Such hearing was held on that date with the Attorney General and other representatives of the State of Indiana in attendance, as shown by the transcript of proceedings.

12. Chapter 321, Indiana Acts of 1951, amends section 93 of the Indiana Welfare Act and as a result of such amendment deletes the following provision from that section:

"All records concerning any applicant or recipient of assistance contemplated in part 3 of this act [part 3 includes old-age assistance, aid to dependent children, and aid to the blind] shall be confidential and the use or disclosure thereof shall be restricted to purposes of administration of assistance under this act . . .";

and, among other things, requires that reports shall be filed each quarter with certain county officials, including the county auditors, showing the names and addresses of all recipients receiving payments under part 3 of the Indiana Welfare Act, together with the amounts paid to each during the preceding quarter. The attorney general of Indiana, however, has expressed the view that their requirement of reporting is inapplicable to the program for aid to the blind.

Reports are required to be bound by the county auditor in a separate book " . . . which said book and all reports contained therein shall be and the same hereby are declared to be public records and shall be open to public inspection at all times during the regular office hours of said county auditor."

13. In addition, chapter 321, Indiana Acts of 1951, amends section 93a and 93b of the Indiana Welfare Act as indicated in the following quotation (material added by ch. 321 is italicized and that deleted is shown in black brackets):

"SEC. 93a. Misuse of public assistance information: Except as provided in this section[, or for purposes directly connected with the administration of this act in accordance with the rules and regulations of the State department of public welfare.] it shall be unlawful for any person, body, association, firm, corporation, or other agency to solicit, disclose, receive, make use of, or to authorize, knowingly permit, participate in, or acquiesce in the use of, any lists or names [of, or any information concerning persons applying for or receiving public assistance pursuant to the provisions of the welfare act directly or indirectly derived from the records, papers, files, or communications of the State or county or subdivisions, agencies or offices thereof or acquired in the course of the performance of official duties other than as provided in this act.] for commercial or political purposes of any nature, or for any purpose not directly connected with the administration of public assistance.

"SEC. 93b. Penalty: Any person, body, association, corporation, firm, or other agency who shall willfully or knowingly, violate any

provision of this act shall be guilty of a misdemeanor and upon conviction shall be punished by a fine of not less than twenty-five [(\$25)] dollars nor more than one thousand [(\$1,000)] dollars, to which may be added imprisonment in the county jail for any determinate period not to exceed sixty [(60)] days. If the violation is by other than an individual, the imprisonment may be adjusted against any officer, agent, employee, servant, or other person of the association, corporation, firm, or other agency who committed or participated in such violation and is found guilty thereof.

["Provided, That nothing in this act shall be construed to prevent a grand jury or prosecuting attorney from securing by subpoena such records or information as may be necessary in the investigation or prosecution of any criminal charge. All financial and administrative records shall be subject to inspection and audit and may be utilized in determining the sufficiency of appropriations or tax levies. By financial and administrative records shall be meant any records utilized in the operation of the department except those containing or showing information concerning individual recipients or applicants for assistance or giving lists of such recipients or applicants."] "

14. On May 10, 1951, the Department of Public Welfare of Indiana distributed legislative DPW Digest No. 26 to county departments of Public Welfare and county auditors and submitted it as an amendment to the Indiana plans for old-age assistance, aid to dependent children, and aid to the blind. This bulletin transmitted a copy of chapter 321 and explained the criminal provisions regarding the misuse of lists. With respect to who may inspect such lists in the county auditor's office, it states on pages 2 and 4:

"The second paragraph provides that the quarterly report so filed with the county auditor shall be securely bound by him in a book provided for that purpose, and that the book and all reports contained therein are declared to be public records and open to public inspection in the office of the county auditor

"It should be noted that the quarterly reports as filed with public officials other than the county auditor, are not declared to be public records which are open to public inspection "

"The law requires that the county auditor surround the special book with the same safeguards that surround the book containing the record of old-age assistance liens in the county recorder's office, and not authorize, knowingly permit, participate in, or acquiesce in the use of, any list or names for commercial or political purposes of any nature, or for any purpose not directly connected with the administration of public assistance."

CONCLUSIONS OF LAW

1. Section 1 of title I of the Social Security Act, as amended, authorizes appropriations "For the purpose of enabling each State to furnish financial assistance, as far as practicable under the conditions in such State, to aged needy individuals. * * * The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Federal Security Administrator, State plans for old-age assistance." Section 2 (a) of said title provides in part that "A State plan for old-age assistance must * * * (8) effective July 1, 1941, provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of old-age assistance."

2 Section 401 of title IV of the Social Security Act, as amended, authorizes appro-

priations "For the purpose of enabling each State to furnish financial assistance, as far as practicable under the conditions in such State, to needy dependent children. * * * The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Administrator, State plans for aid to dependent children." Section 402 (a) of said title provides in part that "A State plan for aid to dependent children must * * * (8) provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of aid to dependent children."

3 Section 1001 of title X of the Social Security Act, as amended, authorizes appropriations "For the purpose of enabling each State to furnish financial assistance, as far as practicable, under the conditions in such State, to needy individuals who are blind. * * * The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Administrator, State plans for aid to the blind." Section 1002 (a) of said title provides in part that "A State plan for aid to the blind must * * * (9) provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of aid to the blind "

4 Chapter 321 of the Indiana Acts of 1951 amends the existing Indiana State plans for old-age assistance, aid to dependent children, and aid to the blind, and this makes it necessary for the Federal Security Administrator to examine the amended plans in order to determine whether or not they conform to the requirements of the Social Security Act for plan approval.

5. The Indiana State plan for old-age assistance as amended, by chapter 321 of the Indiana Acts of 1951, provides no safeguard which restricts the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of old-age assistance, and such plan, therefore, cannot be approved by the Federal Security Administrator.

6 The Indiana State plan for aid to dependent children, as amended by chapter 321 of the Indiana Acts of 1951, provides no safeguard which restricts the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of aid to dependent children, and such plan, therefore, cannot be approved by the Federal Security Administrator

7. Blow for Blow

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from the New York Times of August 2, 1951:

BLOW FOR BLOW

When it comes to the Communist regimes of Czechoslovakia and Hungary every American has a right to be vindictive these days. We should all feel a glow of satisfaction at the way the White House and State Department are hitting out against the men and administrations responsible for such recent crimes as the imprisonment of Associated Press Correspondent William Oatis in Prague and the deportation of thousands of innocent middle-class people from Budapest. In quick succession we have had the Truman statement last Friday denouncing Hungary for the deportations, the moves to withdraw tariff concessions from Czechoslovakia and other iron-curtain countries, and the announcement yesterday by Secretary Acheson that the United States is noting "the identity of individual Hungarian officials, including the highest authorities," who have any responsibility for the deportations.

One's only regret is that it is impossible to hurt the men responsible in more effective fashion. The action on the Czechoslovak tariff concessions is typical. It will hurt the Prague regime somewhat because they need dollars and they have been selling goods in the United States at an annual rate of more than \$30,000,000 this year. At the same time Czechoslovakia has for several years been integrating her economy with the Soviet bloc, so there is not a wide scope for inflicting damage. Because of Czechoslovakia's and Hungary's historical, traditional, and cultural links with the West they have been forced by Moscow to be especially rough and tough with Americans, and now as a consequence we have been forced into stronger countermeasures. So the iron curtain perpetuates itself, which in a sense is what Moscow wants. However, there is no choice, and nothing could be worse than to take the insults lying down or ignore what is happening to men and women behind the iron curtain who are being persecuted because they are on our side.

The Truman and Acheson statements will give heart to those in the satellite countries who are suffering from these measures by making them realize that the United States is concerned and is doing its best to help them. Our recent moves are in the right tradition of the American defense of liberty and human rights and they are fitting policies for a great power.

Bender Challenges Democrats on Civil-Rights Legislation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. BENDER. Mr. Speaker, 3 years ago the Democratic Party adopted a platform in its national convention calling for a continued battle to establish civil rights.

In these words, they told the people:

The Democratic Party commits itself to continuing its efforts to eradicate all racial, religious, and economic discrimination.

The President made one of his most vigorous campaign arguments upon the basis of this pledge. He was hailed as a champion of all minority groups because

he risked the displeasure of the Dixiecrats.

What has happened since the elections of 1948?

We have had a few words of lip service to these ideals, but there has not been a single effective voice raised on this entire subject from the White House down to the Democratic leadership of both the House and the Senate.

This is another instance in which promises and solemn assurances have been studiously ignored by the administration once it has won votes on the strength of those promises. It is the most blatant and irresponsible kind of political hypocrisy.

I challenge the President and his advisers to take the initiative in carrying out the pledges they made: the right of full and equal political participation through the elimination of poll taxes; the right to equal opportunity of employment through the enactment of fair employment practices measures; the right of security of person through anti-lynching legislation; and the right of equal treatment in the service and defense of our Nation through regulations in all branches of our Military Establishment achieving this objective.

Let us put all the cards on the table and see which political party in America stands truly for civil rights.

Prices Under New Controls Act

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. KEFAUVER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very fine article written by our colleague, the junior Senator from Michigan [Mr. MOODY], entitled "Upward Price Trend Seen Under New Controls Act."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UPWARD PRICE TREND SEEN UNDER NEW CONTROLS ACT—BETTER THAN NOTHING, SAYS MOODY, BUT INVITES INFLATION, BLACK MARKETS

(By BLAIR MOODY, United States Senator from Michigan)

WASHINGTON, July 30.—The final draft of the new National Production Act, approved by the Senate Friday and up for House action today, is better than nothing, but falls far short of what the American people have a right to expect from their Congress.

It clears the path for price increases all along the line. This is the official report being prepared for President Truman by his top stabilization officials, Eric Johnston and Michael V. DiSalle.

It will permit, for example, an increase in automobile prices of as much as 11 percent. This is the preliminary estimate of the OPS Manufacturing Division.

It opens the gates wide to an uncontrollable black market in beef, making effective control of meat prices in the consumers' behalf virtually impossible. This situation

is so bad that the chairman of the Senate conferees, Senator MAYBANK (Democrat), South Carolina, who fought through sessions with the House for a stronger bill, plans to introduce a new, separate bill for licensing and quotas for slaughterers.

The Senate had to swallow the conference version because the alternative would be expiration of the present law on Tuesday night and collapse of the entire system of material allocation and direct and indirect controls on which our military mobilization is based.

This could flood OPS with so many individual applications for adjustment, DiSalle anticipates, that the agency would find it almost impossible to handle them.

BUILT-IN INFLATION

It contains a profit-margin provision which amounts to automatic built-in inflation. If a company's costs have doubled since Korea, it can price its goods so as to double its profits and DiSalle cannot interfere. This is contained in the provision which freezes not dollar profits, but percentage profits, into the law. An item costing \$100 with a 10-percent margin yields \$10 profit. If costs rise to \$200, the same 10-percent margin, now protected, yields \$20.

The first 10-percent roll-back of beef prices was saved. The two additional projected roll-backs are outlawed.

The key of the difficulty in the new law is the provision regulating price adjustments from present ceiling levels, both roll-back and roll-forward. The ostensible objective of this clause is constructive. As described by the committee.

"This roll-back amendment will permit the administration to roll back the price of all gougers to a fair and reasonable level, but will protect the fair and reasonable profit of those who have merely added to their pre-war price the necessary and unavoidable costs of doing business which they have since incurred."

ALLOWS ROLL-BACK

The provision would permit roll-back of prices to pre-Korean levels, with all costs of all kinds added, except those found by the President to be excessive.

This is the general structure of the Johnston formula followed by stabilization authorities. So far as it goes, it hits profiteers who marked up their profits after Korea without relation to increases of costs. From this standpoint it is an improvement over either the Senate or the House bill, but by providing that each firm must be processed separately, it threatens the foundation of workable pricing.

The amendment submitted by Senator CAPEHART, Republican, of Indiana, specifies that costs for "material, indirect and direct, labor, factory, selling, advertising, office, and all other production, distribution, transportation, and administration costs except such as the President may determine to be unreasonable and excessive" must be included in each price.

OPS executives anticipate three to four million separate applications for price-increases as quite possible under these provisions. They report that there are 3,000,000 companies handling soft goods, 1,250,000 in the service trades, 3,000,000 dealing directly with consumers. One firm, Du Pont is reported to market 300,000 different products.

CAN'T BUILD PLANTS

The bill falls short of the public interest also by errors of omission. It provides no authority for governmental construction of war plants during the emergency, though 74 percent of all war plants built in World War II were financed in that way. It thus leaves the Government helpless if private firms are reluctant to proceed.

Despite these and other faults, however, the bill renews basic powers indispensable to the war effort. If the President should veto it, and call on Congress to do better,

there would ensue a period of confusion during which he would lack powers to grant priorities and allocate scarce materials, to condemn properties, to control rents, and to grant some very limited subsidies to stimulate the production of raw, nonprocessed, nonagricultural items.

Senator SPARKMAN, Democrat, of Alabama, one of the Senate managers and chairman of the Small Business Committee, got through his Smaller Defense Plants Corporation, with special powers to help small business. Regulation W, limiting credit on consumer purchases, was relaxed, with the current limitation of a maximum 15 months in which to pay moved to 18.

This applies chiefly to automobiles, regarded as essential defense transportation, in view of the policy of dispersing defense plants. Rental increases will be held to 20 percent, including those granted since the war. The provision which would have allowed local communities to veto rental controls in defense housing areas was wiped out.

One Senator, a veteran of the conference, described it as "the best of two bad bills." Top administrators, faced with the task of checking inflation with the leaky dike it provides, take a much dimmer view. So, it is a good long-run bet, will the consuming public.

Southern Voters Can Save Freedom in America

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. MUNDT. Mr. President, in a recent address to the American Plant Food Council at its annual convention in Hot Springs, Va., I suggested that if private enterprise, individual initiative, and the constitutional rights of States and individuals are to be preserved in this country, the voters of our 12 Southern States must assume their full share of the Trojan efforts which will be required to keep America free. It may well be true that Republican voters in the North alone will not be able to turn back the trends toward socialism or to muster the votes to offset the seductive lures of the welfare state and those who would give America away a billion dollars at a throw as a tried and tested device for winning an election at a time.

I have discussed this political predicament in many Southern States, Mr. President, pointing out that except for the fact that in each of the last few elections—the gallant Dixiecrat diversion of 1948 excepted—the entire Southland has embraced the concept of the superstate and the all-powerful Government by throwing its entire electoral vote into the camp of either Roosevelt or Truman. America would long ago have voted out of office those who would spend-all rule-all, and direct-all from the Capital City of our land. Except for Rhode Island, every State in the Union outside of Dixie has in one of the last few elections registered its opposition to the welfare-state doctrine and the complete centralization of all authority in Washington by the only means available to Americans—

by voting for a Republican Governor, Senator, or Representative, and in many cases voting Republican all the way across the boards. Even such States as New Mexico, Arizona, Nevada, Oklahoma traditionally Democratic in complexion—have thus struck back against the forces of collectivism.

However, the faithful, unfaltering, steadfast support of Trumanism and the New Deal-Fair Deal concepts by the States of Dixieland has been sufficient to elect and reelect those who would be king, "again and again and again." Today nobody in America is precisely sure as to what must be done to undo the damage this has done to our constitutional American concepts of States' rights and individual freedoms. It is, however, becoming increasingly clear that the Southern States hold the key to this situation. Without the concerted support of the 12 Southern States, there is no doubt that in 1952 Trumanism and its whole coterie of planners and dreamers will be retired from public office. Will the South measure up to its challenge in 1952?

Mr. President, that question is one which must be answered by the sturdy, proud, independent, and patriotic people who comprise the voting force of our 12 Southern States. It is my studied opinion after many visits to Dixie that the South is one of our great bastions of human freedom, of private initiative, and of States' rights. I believe there is a limit to the insults and the abuse which the once-proud and spirited South will accept from the political overlords of the New Deal and Fair Deal political control posts. I believe the spirit, the pride, and the independence of the South are still operating factors despite the records of the past few elections, in which southern voters have given servile obedience to the New Deal-Fair Deal bosses, whose orders I am confident must have been most repugnant to a majority of the spirited citizens of Dixie.

I gather this from the reactions of the many public audiences which I have addressed in nearly every Southern State these past 10 months. I believe that because of the courageous voting record of many—although unfortunately not all—of the southern Senators and Representatives who sit in Congress. I feel sure of that because of what I have read in hundreds of letters reaching me from southern citizens. I am convinced of that because of the gallant fight made by the Dixiecrats in 1948 and their surprising strength in winning 39 electoral votes despite the fact that only 4 States of the South were then ready to recoil against the whiplash of political abuse heaped upon them by the city machine bosses and the left-wing pressure groups controlling the National Democratic Convention of 1948.

Mr. President, I believe all this despite the strange paradox which in the last few national elections has found most of the South voting for an administration and a philosophy of government which is inimical not only to the South, but also to all America. Habit is a relentless master, and it takes time and courage and leadership to break the voting habits of the South. I feel confident, however,

that what started in 1948 will gain strength in 1952. If those who think alike in America will work together and vote together I cannot believe that a matter of semantics and a problem of labels is going to compel the South to continue voting for people and platforms repugnant to its citizens and destructive of our American way of life.

For over a year, by one method or another, Mr. President, I have been suggesting methods and procedures by which like-minded southerners and northerners might merge their voting strength to rescue America from the shoals of socialism. It is not an easy problem to solve, but neither is it impossible. I shall continue my efforts, aided by what support there is available from sources both in the South and in the North. Freedom must not be permitted to perish in America because there are not those who believe principle is mightier than partisanship.

In yesterday's CONGRESSIONAL RECORD, on page A4862, under the heading "Can a North-South political alliance preserve America?" I inserted the staff interview which the editors of United States News and World Report recently did with me on this subject. That interview is published in full in the August 3 issue—now on the newsstands—of United States News and World Report. In concluding these remarks today, I am asking leave to reprint at this point an article on this subject I wrote for Collier's magazine, and which was published in the July 28 issue of that magazine. I invite others, both in and out of public life, both in the North and in the South, to start asking themselves seriously and statistically now the question, "What must be done in 1952 to make certain that the current trends toward socialism and insolvency in America are stopped?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD THE GOP MERGE WITH THE DIXIECRATS?

(By HON KARL E MUNDT)

The Republican Party will win next year and its philosophy remain a strong force in America for many years to come, if it forms an alliance with the South, and develops the alliance into a new party with a new name. I believe this coalition of voting strength essential not only for the Republican Party and our two-party system, but also for the most effective fight possible against communism in America. This is not a wild swing by a groggy fighter hoping to land a lucky haymaker. It is a reasoned conclusion I have come to after many years in politics. Let me explain it quickly before you decide that my long fight against communism, as a member of the House Committee on Un-American Activities, and now in the Senate, has affected my balance.

Exposure and prosecution of criminal Communists in the United States is essential, but we cannot win the great fight against totalitarian techniques by defensive warfare alone, even if scores are sent to jail, as they should be, and other scores are fired from Government jobs which they never should have held in the first place.

A fundamental tenet of the Communist movement is to set up an all-powerful central government, with control over religion, the press, transportation, communication, manufacturing, distribution, farming—over all activities. I have visited nearly every Communist country in the world, and found

everywhere the same pattern—a strong central government run by a few men who tolerate no opposition.

Communists often use non-Communists to set the stage for a coup d'état by concentrating power in the hands of a selected small group. Then if—as demonstrated in Czechoslovakia—it becomes desirable to capture the country for communism, all that is required is to change a few leading actors on the government stage.

I certainly do not say that the Democratic Party is Communist at heart or in purpose. But I do say, and the record plainly supports me in this, that it has for some years, under the New Deal and the Fair Deal, moved toward a socialized Nation and concentrated power in Washington. This is a move toward socialism, and socialism is a long step toward communism. Purity of motive does not offset the grim fact that socialism requires a powerful central control over human activities, and sooner or later a Socialist nation will be a pushover for the Communists, who will have to get control of only a few politicians to have control of the people.

That's a possibility in our own United States. It is a possibility I want to make highly improbable, if not entirely impossible, by maintaining a balanced two-party system, with the Republican Party standing foursquare against any and all approaches to, and encroachments by, communism, whether the approaches be deliberately and maliciously planned, or the result of political policy aimed at winning the next election by some giveaway program to appease a special interest group. The challenge of socialism and communism must be met by a determined party of opposition.

But if the Republican Party's foursquare stand is to be effective, we Republicans must win the Presidency once in a while, along with congressional majorities. How can we do this so long as we remain a sectional party, excluded for practical electoral-vote purposes, from 11 Southern States? That handicap is too heavy for us to carry. The Democrats have been starting off with almost half enough electoral votes to win. We have got to get support from the solid South, and we can do this only by going to the South for cooperation, not by telling the South to come to us.

I can talk about this, I hope, without having a carpetbagger label glued to me. My State, South Dakota, was not in the War Between the States. It was not even a State at the time of that war, and its few settlers, including my ancestors, were busy fighting Indians, not Confederates.

It will be futile for the Republicans to try again, as they have done in the past, to outpromise the Democrats. They are experienced and skilled operators in the dispensing of public money, while we have not had a chance to do more than declare verbally our generosity with the people's money, and the recipient voters of the Northern and Western States, aided by their reluctant brothers from the South, believed the bird-in-hand theory and have turned us back again and again and three more agains.

We have tried, also, to echo Democratic appeals to minority and pressure groups, but this hasn't worked either. We have tried just about everything except an alliance with the South. I think it is time to do that, so that we may stop operating as a sectional party, confined to three-fourths of the States. It is mighty difficult to win a horse race with a three-legged horse.

A study of the Congress over the past 12 years, of Southern State legislatures and of southern governors, suggests to me that the South is the natural and logical source of new strength for the Republican Party. If the United States Senators and Representatives, the State legislators, and the governors in Dixie represent the true South, it is plain that the Fair Deal Democratic Party does not. Every major piece of socialistic Fair Deal legislation that has been stopped in Congress

in recent years has been stopped by a combination of southern Democrats and Republicans. But for this informal, unorganized, undirected alliance that exists in the Congress, our country today would be much farther down the road to socialism, and the radical special interest and pressure groups would be riding high.

Plainly, there is strong political kinship between Republicans and the South. Their viewpoint is similar, their fears are similar. They both stand against an overpowerful central government, and for maintenance of local and State responsibilities. That means they both stand for what used to be known as State rights, a fundamental American concept, a bulwark of liberty, a safeguard against the kind of centralized government control that could lead first to socialism, later to communism. So long as we maintain 43 indestructible States the Communists will be unable to dominate the people by merely gaining control of the Government at Washington. State resistance will be the toughest obstacle they ever ran against.

I have had a careful study made of the voting records in the Congress of southern Democrats, and it shows plainly that they are not Fair Dealers. On many significant issues they join Republican Representatives and Senators, or the Republicans join them. For example: on the subversive-activities measure (the Mundt-Nixon bill) in 1948 only 16 northern Democrats voted "yes," while 47 voted "no," but 88 southern Democrats voted for this bill, and only one against. These 88 southerners joined 215 Republicans to give a majority in the House.

Similar line-ups, representative of what seems to be the true sentiment of the South, could be cited by the baker's dozen, in House and Senate. In 1939 there was a proposal to investigate the National Labor Relations Board. Seventy-nine southern Democrats in the House joined 151 Republicans for a majority, while 24 other Democrats voted the other way. On the Smith antistrike bill of 1941, the House vote showed 104 southern Democrats joined 123 Republicans, while 25 other Democrats were in opposition. So runs the story of a political alliance that has existed in fact for years, but has not been formalized. The time is here, right now, for this common interest to be recognized in all its potentialities by the Republican Party.

I have spoken to perhaps 20 groups in every Southern State except Louisiana, and the reaction to the alliance I am proposing and promoting has been positively thrilling.

QUOTES FROM SOUTHERN PRESS

The Commercial Appeal, of Memphis, Tenn., on April 9 of this year said: "The fact is that southern Democrats and northern Republicans think and feel alike on issues of essential importance, and have in increasing measure for the last dozen years or so. The potential values of the situation, however, can be only partially realized until there is a political regrouping."

From the Columbia Record, South Carolina, March 20, 1951: "As long as the South votes predictably Democratic, no matter how reluctantly or sullenly it offers up its kept votes to the city-machine bosses now controlling the Democratic Party, it will be disregarded and damned by both parties."

The Jackson Daily News, Mississippi, April 10, 1951: "Just about this time next year, maybe sooner, you are going to be hearing some lively echoes of a political speech delivered in Jackson on Monday afternoon, April 9, by Senator KARL MUNDT, Republican, of South Dakota."

Letters from every Southern State come to me. From Florida: "I beg of you not to let this movement die." South Carolina: "I heartily agree with you. * * * We certainly want a change in 1952." And so on.

A citizen develops the sinews of citizenship only by exercising its privileges and

meeting its responsibilities, and he can get that experience mainly at the local and State levels. The more he passes responsibility to Washington, the less his capacity for self-government. The Republican and Democratic Parties have exchanged positions about the functions of States. Once States' rights was the battle cry of Democrats; now it is a Republican tenet of faith. I am convinced it still is close to the hearts of southern Democrats.

The South lost its influence in the national Democratic Party in 1936 when it surrendered the two-thirds rule in the national Democratic convention. Prior to that change the southern Democrats had to be listened to because no Democratic candidate for President or Vice President could win nomination unless he had two-thirds of the delegates.

When the South gave up its veto power, derived from the two-thirds rule, control of the national Democratic Party passed to the political machines and big-city bosses outside the South. These new managers made any and every kind of appeal to the non-southern vote because they knew the South was "in the bag." The Democratic machine politicians of the North have been the main beneficiaries since 1936 of the old southern prejudice against Republicans, dating back to the War Between the States and reconstruction.

This prejudice has produced bizarre political results. A Harlem voter in New York, eager for a compulsory fair-employment-practices law, votes the Democratic ticket. So does a Georgia watermelon grower who thinks the idea originated in hell. The theoretical Socialist fresh out of some eastern university votes the Democratic ticket because he thinks the party is going his way; the Mississippi individualist votes the same ticket because he just can't bring himself to cast a Republican ballot, lest his ancestors leave off resting and begin revolving in their graves.

We Republicans can do something about this illogical political set-up if we use imagination and common sense. In 1948, four Southern States abandoned the national Democratic Party, for their own Dixiecrats. But when they walked out on the Democratic Party they really did not have anywhere to go. Every voter knew the Dixiecrat ticket was, in effect, a protest. It had not a chance to win, but it did have a chance to cause trouble to the Democrats, and very nearly did.

In the course of American political history there have been numerous splinter parties—Free-Sollers, Populists, Bull Moosers, Wallace Progressives, Dixiecrats—but since the earliest days two major parties have been characteristic of our system. Never have we had more than two major parties at any one time for any length of time. I hope this will continue to be true.

There is not a chance for southern Democrats to recapture their former party. It is irrevocably committed to a viewpoint that is not southern, and to nonsouthern special-interest groups. There is not a chance for southerners to have real national influence so long as they remain tied to the national Democratic Party. Only in the Halls of Congress where they find support from many Republican Members do the southern Democrats have real influence left. The South cannot nominate a Democratic President or even a Democratic Vice President who comes from below the border States.

My record will show that I have voted along with numerous southern Democrats against every important issue that would have promoted socialism in our common country. A large number of Republican Congressmen can say the same thing. This explains the brakes that have been put on the Fair Deal. But operating from the caboose is a poor way to run a railroad. Those of us who fear

and detest socialism as a step toward communism, whether we come from South Carolina or South Dakota, from the Atlantic or the Pacific seaboard, should combine and win the Presidency. Then we would have charge of the locomotive, not merely of the caboose.

The southern Democrats are in a trap. The easiest way out is for them to vote the Republican ticket next year, but I am afraid not enough of them would do that to carry many Southern States. They might want to. Some of them would. Several southern Senators and Representatives have spoken to me privately in approval of my one-man crusade for a Republican alliance with their South, but they ask—and political expediency requires this—that their names not be used. They know that when voting day comes thousands of their constituents, especially the elders, could not overcome the ancient feeling that the Republican Party is the traditional enemy of their social customs. This feeling, implanted in their minds and emotions when they were children, is as firmly lodged as their religious convictions.

So, somehow we must find a formula, a technique, a procedure that will allow southern Democrats to become politically free, without any feeling of besmirchment. The old prejudice no longer has any foundation in existing conditions. Its tyrannical reign should be broken.

When this is done the South will have two effective parties, which all of its leaders tell me, privately or openly, would be good. Southern States no longer would be slaves to any political label. Their voters, white and black, would move from party to party as voters in so many other States have done.

And when the solid South breaks up under some such alliance as I am proposing, we shall have two national parties that make more sense than they do now. Then there will be the possibility of clear issues between the two national parties, and millions of voters who in 1948 said, "What's the difference?" and remained at home on election day, will see there is a difference. Only about half our qualified voters cast ballots in the presidential election of 1948—an unhealthy situation that would not have existed if the two parties had not been so much alike.

Before our convention, we could confer with southern leaders about the possibility of an alliance ticket, with perhaps a southerner for Vice President, and with a platform that is not repellent to the South. I believe most Republicans would be happy to have a man like Senator BYRD of Virginia, Senator GEORGE, of Georgia, or Senator RUSSELL, also of Georgia, on their ticket. Doubtless there are many others who would be satisfactory to North and South.

If this alliance can be effected, formally or informally, before the Republicans meet to nominate their candidates, I believe most Republican delegates would be pleased. They want to win. They want to build party strength for the future. Without any offense to the regular Republicans, this invitation for participation and assistance can be extended to the southern Democrats.

In some Southern States the alliance ticket might be put on the ballot as the ticket of the Democratic organization in those States. It might appear as representing some segment of the Democratic organization. Of course, any qualified southern voter would be free to vote the Republican ticket if he wished to, but in order to persuade those who might not be willing to do that, I suggest the possibility of special nominations within the Southern States. Each State could cooperate with the alliance in conformity with its own laws and conditions.

This amalgamated party would need a name, and since I began talking about it I have received many letters suggesting names, such as American Party, National Party, Independence Party, Democratic-Republican

Alliance, or Republican-Democratic Alliance, Freedom Party, Liberal Party, and a few others.

It is interesting that not one of the scores of persons who have suggested names has wanted to call it the Conservative Party, and several have urged that the word "conservative" not be used. Unfortunately, in American politics that good word has become a sort of smear, an indication of "old-fogysm," looking backward, and the like. This is a pity, for what I am proposing is, in effect, a conservative party, to match strength with the radical party that now runs things. I am certain that if this alliance party gets going, the Democrats will do their best to hang the word "conservative" around our necks; and I am equally as certain that we can hang the word "radical" around theirs. The word "radical" smells much worse than "conservative."

THE CHAIRMANSHIP'S PROBLEM

When I first began sowing the seeds for the alliance between Republicans and the South, some of my colleagues in Congress said that such a party, if successful, would play havoc with committee chairmanships in the Senate and House, many of which are now held by southern Democrats. But I do not see this as a serious problem. The existing seniority rule could be followed for all Senators and Representatives, whether Democrats or Republicans, who come from States that gave their electoral votes to this alliance ticket.

This means that Senator GEORGE, for example, would remain chairman of the Finance Committee if Georgia voted the alliance ticket.

My earnestness in this ambitious enterprise and the earnestness of others is demonstrated by the fact that I am now working to form a National Bipartisan Committee on Realignment, or something like that, to make a preliminary study of the ways and means to get this idea going. A State-by-State study of election laws might be wise, if not necessary, so that we can make our fight intelligently and legally in every State. I hope we soon may be able to raise at least \$50,000 to finance this study, to be printed as a brochure before convention time next year, and to be used as a sort of handbook of procedure.

Since I became deeply interested in this plan, I have studied the situation in Great Britain, and find that if all the voters who opposed the Labor-Socialist outfit had concentrated on one opposing party, the Laborites would not have won. So, to some extent anyway, Britain went Socialist because the opposition was not united, but was split between Conservatives and Liberals. I am trying and hoping to develop a political formula whereby we may prevent a similar development in the United States by making it possible for all the opponents of the socialized nation to unite. This can be done. It should be done. But it can't be done without Dixie. The key to America's political future is in the South.

Our Ohio

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. BENDER. Mr. Speaker, under leave previously granted me, I should like to insert in the RECORD the following tribute to the State of Ohio, written

by Daniel Francis Clancy, of Springfield, Ohio.

Mr. Clancy is the only man except the late Ernie Pyle to win two consecutive National Headliner Club awards for outstanding achievements in journalism. A newspaperman in Indiana and Ohio for the past 10 years, he has also written tributes to three other States: Indiana, Kentucky, and Louisiana. His *It's Indiana* has been described as "already having taken its place among the historic hymns of homage to Hoosierdom." He is a member of the Indiana Society of Chicago and of the American Academy of Political and Social Science. Two of his editorial sketches were reprinted by papers over the Nation during 1949 National Newspaper Week.

OUR OHIO

(Sesquicentennial sketch for 1953)

Beautiful Ohio, commonwealth of corn, cattle, and wheat, fertile farms, industrial initiative, and political power. State stretching from wind-lashed Lake Erie to the moon-silvered shores of the Ohio River. Home of Presidents, the Harrisons, Hayes and Harding, Grant and Garfield, McKinley and Taft. Railroads rumbling across Indian paths of the past. Cleveland, center for steel and ore, Akron, rubber capital of the world; Cincinnati and sidewheelers. Cars converged around country churches on sunny Sunday mornings. Green-flagged fields of waving corn. Autumns with the OSU band blaring on the giddidon, and hushed harvest fields stretching away into a saffron setting sun. Birthplace of the airplane and electric light. State that produced the Wright brothers and Artemus Ward, Tom Edison and Clark Gable, Mark Hanna and Sherwood Anderson, Paul Dunbar and "Hell 'n Maria" Dawes. Boys with books and girls in gingham who grow into fine fathers and mellow mothers. Spring in Springfield, summer in Sandusky, autumn in Ashtabula, and winter in Wapakoneta. Annie Oakley and O O McIntyre. Cash registers and Coxey's army. Where pioneer scouts watched Indian canoes glide down blue-green curving streams; "hi" in the middle and round on the ends. The Buckeye State. Ohio and home.

Are We Losing Friends Abroad?

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Are We Losing Friends Abroad?" delivered by the Senator from Utah [Mr. BENNETT] on July 25, 1951, at the third annual Colgate Foreign Policy Conference at Colgate University, Hamilton, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ARE WE LOSING FRIENDS ABROAD?

The answer I have for that question is very clear and very human. It is, "No—but—." This answer is not mine. It has come to me in seven languages from 17 countries in the free world, and from more

than 40 people. About half of these are native citizens of the countries from which they write, and the other half are from Americans living and working in these countries. None of my correspondents is a politician or is connected with a government—ours or any other—and none is a journalist. They include, among others, an emeritus university professor, several lawyers, some men in business—large and small, one man in his country's labor movement, several clerks, and two housewives. Except for three of the Americans and one Belgian, I have never met any of them personally.

In making my request for their opinions, I quoted the phrase which is the title of my assignment—"Are we losing friends abroad?"—and at the beginning it is interesting to observe that this phrase created an almost universal reaction of resentment. They were disturbed to think that the citizens of the United States could have any such idea.

My report to you is a rather hurried classification and an analysis of these replies, and this creates obvious limitations. I myself am a limitation. I have never been abroad. Then there is a limitation of time, measured both as the time available for a Senator to study these letters in the middle of a strenuous session, and the 28-minute limit to this presentation. Then, too, I recognize that my sampling is small and that it stretches very thin over many countries, and that my correspondents, not knowing how their letters might be used, have probably been very cautious. I tried to meet this contingency with the promise that their anonymity would be religiously preserved.

With my reading, other limitations began to appear, and I think they are worth mentioning. First, neither the question nor the answers have any meaning so far as the members and supporters of communism are concerned. These are not our friends, and so long as the present Russian-American relations continue, will actually work against us. The second limitation grows out of the fact that the answers to our question have both short-term and long-run implications. I am eliminating references to the short-term implications because these are apt to fluctuate violently in response to events, to statements by Government leaders, both official and unofficial, and to reports and editorials in the press. Then, too, politicians on either side often find it of current political advantage to work violently for or against friendship. Since such changes disappear almost as rapidly as they occur, I am sure we can ignore them and concern ourselves only with the more fundamental aspects.

From this angle let me repeat that I believe we are not losing friends abroad. This is the underlying theme of all the letters I have received, but nearly every one of my correspondents immediately qualifies his affirmative statement.

My reaction to these letters could be described thus: There is a strong cable of friendship that has been slowly woven over the years which ties us to all other free nations. Into it have gone the strands of family kinship, of a common love for liberty, of understanding, and of gratitude. To this has been added lately the steel wire of material self-interest.

This cable is strong, firmly anchored in the past, and appears capable of sustaining friendship into the foreseeable future. No one expects it to break, but we and they are constantly putting strains on it. It is of these strains that my correspondents write, hoping, of course, that through better understanding they may be eliminated.

Let us talk first of the strands that went into the weaving of this cable. An analysis of the letters would indicate that there are many, five of which are probably the strongest and most important.

The first of these is the tie of family blood and nationality. From every one of these lands, particularly the old countries of Europe, immigrants have come to us in the United States, and family ties stretch back from all parts of our country to every country in Europe. As is usually the case, these ties mean more to the part of the family which stayed home, but I am sure every man in American politics realizes how important the homeland ties can be to national minorities here, too. These ties are kept strong by correspondence and by visits in both directions.

On the national scale, the strength of this tie of association is built on the memory of shared experiences in war and peace and is sustained and strengthened by the increasingly closer relations between men of common interests—vocational, philosophical, or commercial. The American engineer has a tie with the engineer in Belgium. The American exchange professors and students create a bond wherever they go. The relationship of seller and customer works both ways. So the tie of kinship and association, both personal and national, is resilient and real.

The second tie is philosophical, created by our mutual devotion to human liberty. For this reason my correspondents point out that, while our national customs may be different from theirs, their way of thinking and their pattern of living is much more nearly comparable to ours than to that of Russia or its satellites.

The third tie is that created by increased contact. The peoples of these nations are coming to an increasing understanding of American life. This is being achieved through all the obvious contacts. Tours and visits promote it. The demonstration of American industrial techniques, offered with unexpected liberality, helps to build it. The increased foreign circulation of American magazines and books broadens it. One correspondent from Brazil believes that the recent opening in that country of examples of the most modern American retail stores, filled with America's finest merchandise, has had a remarkably favorable effect.

The fourth bond might be described as the bond of gratitude. It grows directly out of our service at their side through the events of recent years—out of our participation in the wars which either saved their country from capture or, later, won its freedom—out of the Marshall plan—and out of our willingness to assume leadership in the world organization needed today to defend freedom. The selection of General Eisenhower was mentioned by many as a welcome symbol. But a few of the bolder writers remind us that there are evidences of our own ingratitude. They say we like to forget that there was a time when we needed and welcomed both military and financial help.

But finally, most of them guardedly admit that the consideration of practical benefits must be acknowledged as a binding force. Some of my more frank correspondents point out that our Marshall plan aid has been appreciated because it does represent material wealth—actual dollars—and that through it we are only sharing the benefits accruing to us because while their economies were devastated by war ours was untouched. One of the Americans who wrote me reminded me that "gratitude is often a lively sense of favors still to come."

From other letters it is evident that there are those, particularly in Europe, who realize that they are making a choice between two economic systems, of neither of which they completely approve. Some of the citizens of Europe's socialistic states mistrust both American capitalism and Russian communism, but, after weighing all the factors, prefer to work with us as the lesser of two evils. As time goes on and the pressures increase, the lines between these two alterna-

tives are more sharply drawn. While the groups which prefer us are growing in size, those who prefer Russia are growing in the intensity of their opposition to us.

The final observation in this field of practical self-interest is that, as some of these people remind us, they feel safe with us. Compared with Russia, we have a high degree of unselfish disinterestedness. We are not planning to take over either their country or their colonies.

These, then, are the threads and cords out of which the cable of friendship that binds us together has been woven. Kinship, common love of liberty, some understanding and gratitude, and the strength of material self-interest. Having described the cable, let us turn then to the consideration of the strains being put upon it which we must relieve if we are to hold and strengthen our friendships. I think it is natural that my correspondents should point out chiefly these strains and tensions for which they hold us and the United States responsible.

As I studied the letters, it became apparent immediately that the first group of problems, which are in the minds of nearly everyone that wrote me, are those that are fundamentally human in their natures. They are the national counterparts of those which could be expected to develop between any two men different in age, background, and traditional interests. This very quality suggests the obvious device that I shall use to describe the problem.

Let us imagine two men, one the symbol of ourselves in the United States, the other the personified symbol of all other nations out of which our people have come and for whose friendship we are now concerned. Our own symbolic counterpart we might call "Sam." Theirs must have a name, too, and I tried hard to think of one common to all nations. But I finally gave up and shall call him "Uncle."

In many ways the word "Uncle" describes this symbol rather well. He is older than "Sam." He stayed behind in the old family home and kept up the family customs and traditions. We in America would probably say he is of the old school. On the other hand, "Sam" pulled out early, came to the new world, and has done remarkably well. "Sam" is rich, smart in a practical way, modern, competent, and I'm afraid rather sure of himself.

Things have not been going too well with "Uncle" lately, and "Sam" has been going back to help whenever he was needed. Since he went back the last time, he stayed around.

Now so long as "Sam" and his "Uncle" only saw each other occasionally, with their party manners on, there were few personality problems. But now, as always when two people of widely different backgrounds and objectives must work together, they face a difficult period of adjustment to each other.

"Uncle" is the older of the two. He remembers the days of his youth and his strength and regrets the evil times which make him partially dependent. He cannot help but be reminded of the difference because "Sam" has moved in and is shouldering much of the responsibility, making many of the decisions and paying many of the bills.

Now that "Uncle" is seeing more of "Sam," he is deeply aware of the differences in their sense of values. He cherishes tradition. "Sam" is inclined to ignore it, this hurts. He recognizes in "Sam" many of the desirable qualities of youth—vigor, industry, courage, strength, and above all, generosity. He is profoundly grateful for what seems disinterested altruism. But he also sees that "Sam" has some of the weaknesses of youth. He finds him a little intolerant, a little too impatient, in many ways inexperienced and indifferent. "Sam" shows a tendency to go off "half cocked" sometimes, and this, coupled with his characteristic of driving straight to the point without going through

the motions required by protocol or tradition, often hurts "Uncle's" feelings.

When "Uncle" has one of his bad days, as we all do, he is apt to add to this list of shortcomings a lack of appreciation of beauty in the old things, a little too much commercialism, a tendency to show off his wealth and his power. When "Sam's" money bids prices up so "Uncle" can't buy or makes a deal that "Uncle" hoped to have money enough to make for himself, you can't blame him for a little twinge of jealousy. These human differences create tensions that in themselves seem unimportant. But among nations, as between individuals, it is the differences in the point of view and the personality clashes, the fancied slights, that set off the fireworks and make the headlines. Our only hope is that no one will get so involved in questions of prestige and "face" that retreat to understanding will be impossible.

Fortunately, all believe that the strength of this relationship is secure, that Sam and Uncle will stand together, that they will forgive each other, and as the new relationship matures, will find the power to reduce these tensions to insignificance, though they probably never will completely disappear. At the moment, then, they counsel that there is great need for patience, understanding, and consideration on the part of all of us in the United States, for whom Sam has been the symbol in my little fable.

Leaving that allegory, let us turn to the second and most important field of criticism—our foreign policy. Here the comments become pointed and often charged with emotion. They fall into two distinct areas. The first grows out of our relations with Russia during and immediately after the war. The second is described as our Government's policy of anticolonialism.

These phases of our relations with Russia seem to disturb our friends most. First, we helped Russia, both during the war and after, with arms, supplies, and materials for production through lend-lease. The people near the Russian border feel this most. The people of Finland have always admired us, today they still trust us and forgive us though they cannot forget that we failed them in their time of crisis. The second criticism comes from France and the Low Countries. It is that after the war, we were solely responsible for letting the Russians into the heart of Europe so that today their outposts are far west of their previous frontiers. One Frenchman notes that the Russians are only 150 miles from Paris. One Austrian complains that though we were in Vienna first, we have now allowed the Russians to take over their most fertile lands. Of the two occupations, they preferred the German rule.

Third, our sudden concern today about the defense of Europe, contrasted with our lack of concern at the end of the war, makes them a little cynical. The fact that we let the Russians in and then pulled out ourselves, leaving their nations without effective defense, gives them justification for the belief that our foreign policy is unstable, that it blows hot and cold. After they have lived literally within the reach of the Communists for 6 years, they are surprised that we take for indifference their inability to whip up new emotions for our sudden concern. They wonder if our concern now is not more for our own safety than theirs.

Looking back at our relations with Russia during and after the past World War, there are, apparently, still many in Europe who feel that our foreign policy must have been influenced by the Kremlin, either directly or without our knowing it. The latter seems to them, in some ways, to have been the more serious possibility. They believe that we have been stupidly taken in. One writer says that he believes we deserve the war in

Korea; it may teach us a good and needed lesson and be worth all our losses if our eyes, at least, have been opened. The phrase "anticolonialism" describes the second foreign policy question that, apparently, is exerting a strain on our mutual friendship. All European nations with colonies are aware of it, but it is most real for the Dutch and French, who are now facing the threat of communism in their East India colonies. All who wrote me on this subject express the belief that it is part of the basic American foreign policy to expect the European countries to give up their colonies. They see in this an expression of warped attitude. Because it is our own policy to have no part, as a nation, in a colonial empire, they feel that we cannot fairly impose this same point of view on any other nation.

One writer indicated that he thinks we are making a misinterpretation of our own history. Because as a colony we won our independence from Great Britain in the eighteenth century, he believes we regard similar revolutions as desirable and proper wherever they may occur. But he points out there is no similarity between the American Revolution and the present situations. The American colonists were Englishmen, by any standard peers of their fellows in the mother country. Our revolution produced a division among equals, and after the war the successful rebels actually demonstrated that they were the ablest architects and exponents of self-government in all the world. On the other hand, European colonial territories are peopled by races without a tradition or experiences of freedom. Admitting their past mistakes, my friends plead that in later years their countries have made rapid progress in health, education, social advancement, and political skill of the people under their rule. But they insist that no native nation in the Far East is ready for self-government, and they take a little wry delight in reminding us that after 50 years of unselfish effort, marked by the lavish expenditure of money, our own much-heralded experiment in granting freedom to the Philippines has not, from where they sit, been an unqualified success. They remind us that in spite of all the warnings we had about the infiltration of Communists in the Philippines, and all our efforts to support the elected government there, the Communists have, apparently, grown stronger and the government weaker since we left there.

They are surprised and disappointed that our leaders could not see this danger. During the thirties, communism was successfully planted in China, ready to exploit every opening. Their chance came when a vacuum was inevitably created by World War II—first by the Japanese victory which drove the European governments out of their East Indian colonies and by the later Japanese defeat. Far from sensing and blocking Communist plans, we actually aided their success. One Frenchman pointed out that our foreign-policy makers created in Indochina a situation identical to that in Korea when we allowed the Chinese instead of the French to take the Japanese surrender at the eighteenth parallel, just as we allowed the Russians to enter the war and take the Japanese surrender in Korea at the thirty-eighth parallel.

They feel that we did this in part, at least, because of this policy of anticolonialism. They say that, when natives in colonial territories talk of freedom and self government, we accept their representations at face value, but, say the French, we are apparently too naive and inexperienced to see that these supposed indigenous movements are at once the mask for communism and its tool. They hope that Korea will have opened our eyes and changed our policy—a policy which one Frenchman with a North African background calls unjust, inconsistent, and built on an almost criminal lack of understanding. It

is interesting to observe that, while many Americans have felt that in the fight against communism in Europe was much more important in Asia, some of the difficulties in Europe lead us right back to mistakes in Asia.

From a Dutch letter I got my most disturbing implication. One correspondent says bitterly that many people in the Netherlands believed that, as a quid pro quo for the Marshall plan aid to Holland, their government had to agree to the eventual surrender of its East Indian colonies.

These are some of the highlights of what my more than 40 correspondents have said in answer to your query, "Are we losing friends abroad?" Let me summarize and make a personal observation as I conclude. We are not losing friends abroad. Whatever our difficulties, we are drawn together by ties of kinship, association, and mutual interests. Though we occupy a position in the world today that many European nations have occupied in their turn at some point in history, they recognize that we have the money, the military might, and the leadership the free world needs. Our greatest weakness, apparently, is our inability to measure up to the responsibility of leadership. Apparently we do not yet appreciate the implication of the old motto, "Noblesse oblige." Instead, to draw on a typical American experience, we may be said to resemble the rich boy who owns the baseball, the gloves, and the bat. The other kids want to play, but if there is to be a game at all, they know they had better be nice to us because we can always take our stuff and go home.

In the Russian pattern of life the commissar has no obligation to concern himself with or consider the interest or welfare of any man or nation below his own level. But in our American definition of leadership in liberty, there is an implied responsibility for understanding—and true understanding is a two-way street. There is a challenge in the statement of an Argentine youth who quotes his father as saying, "I admire the American, but I do not love him."

Apparently our greatest official failure in the State Department and on the part of its representatives in foreign service lies in this area of understanding. While the Communists seem to be able to get down to the people and capture the minds of millions, with all of our programs and all our money we still have not reached the hearts of the people because we apparently are not willing to make the effort to understand their needs, traditions, and problems. I am sure we can beat Russia in the field of physical combat, but we are not doing so well in the battles for acceptance in the minds and hearts of men. The people of our own country, on a commercial level, are the greatest salesmen in the world. Although the oft-quoted statement, "The customer is always right," may be an exaggeration, it suggests a point of view which we seem to have been unable to apply in our foreign relations.

I shall close with a quotation from one of the letters I received. It came from Sao Paulo in Brazil. It is written in Portuguese, and the translation isn't mine:

"The United States does not under any circumstances wish to see her own mistakes, but is always trying to meddle in the affairs of others, always trying to see what is wrong with her equals. It is always disagreeable to see that in spite of continuing to preach that all of us are free, equal, and sons of the same God, that all of us have the same rights, and that all should be left to live according to our conscience without the interference of anyone, it is her manifest attitude to meddle, if not openly, at least under cover, not only in the international affairs which do not concern her but often in the internal affairs of her sister nations. We are much concerned over the fact that the North American government, having won the

war, cannot strengthen the peace. The United States does not know how to treat her old friends; even worse, she does not know how to keep those who should still be able to trust her government, since, as the leader and most powerful representative of the free nations, she should be the model for all of us."

Are we losing friends abroad?

The answer is "No," but neither are we making much progress in building new ones. The ties of association and self-interest seem to be strong enough to carry our friendship through the threat of the enemy to our common freedom. But we are putting many strains upon it—strains which we, with the opportunity for leadership, must seek to remove.

Our greatest difficulties arise out of the fact that we seem to have been unwilling to make the effort to understand the peoples we seek to help. In our anxiety to have them understand us we have probably forgotten that true understanding is a two-way street. This is not an insurmountable task if we undertake it immediately and with the characteristic vigor which our European friends admire.

Helping the Disabled Is Good Business

EXTENSION OF REMARKS OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. ANGELL. Mr. Speaker, unfortunately, we have failed to recognize the need for remedial legislation as well as governmental programs making full use of the services of the disabled and physically handicapped of our Nation. There are thousands of these individuals who are worthy, industrious, and patriotic citizens, who, under existing regimes, are unable to secure the employment which they are fully qualified to perform. In many cases their qualifications are even higher with respect to some specialized activities than are those of the physically able.

I include as part of these remarks an article by Paul A. Strachan appearing in the Washington Post of July 29 discussing this timely problem which I hope will secure favorable consideration:

HELPING DISABLED IS GOOD BUSINESS

(By Paul A. Strachan, president, American Federation of the Physically Handicapped)

Too many persons know too little about the movement to aid the physically handicapped in this country.

Vocational rehabilitation—man's retraining to skills within his capacity—is as old as the caveman's first concern for a crippled brother. Vocational rehabilitation as good business, however, is relatively new.

It had its beginnings in America during World War I, when a public demand developed for the Federal Government to set up a vocational-training program. Concern then was principally for disabled veterans.

Leading the fight was Arthur S. Holder, with the help of the A. F. of L. A national vice president of the International Association of Machinists and a representative of the A. F. of L.'s powerful Metal Trades Department, Holder knew when to act.

"We must put this over during this war while people's minds are on the honors of disablement," he insisted.

At that time there were groups which saw in vocational rehabilitation the seeds of revolution, if not the complete dissolution of our Republic. It would have been easier then, with their vociferous support, to have started a euthanasia league to kill off the cripples.

The beginnings were called "pilot programs," and their fumbblings and inefficiencies can be traced partly to inadequacies of the act itself. The Federal Board for Vocational Education started out as little more than a recommending agency.

Then the work of the Board was merged with that of the Bureau of War Risk Insurance (now Veterans' Administration), and the VA unquestionably has been the real force behind the development of rehabilitation of the physically handicapped.

With crippled veterans of the Marne and Belleau Woods as material, a working program was developed. Much of that early day work was done at St. Elizabeths Hospital, because there were no VA hospitals or facilities.

America's real pioneer in vocational rehabilitation, the late Dr. Ira D. Scott, was an official of the Board for Vocational Education. When the Board was absorbed by VA, he went along.

For some 20 years after the Federal Board for Vocational Education lapsed into a non-entity, rehabilitation slumbered as a minor division of the Interior Department's Office of Education. The leaders of the program boasted that "only 22 men did all the work for the whole United States," an astonishing statement when you consider that there are millions of handicapped, and that their problems are greatly varied. If the handicapped had had adequate attention, it would have taken thousands of trained specialists.

Necessity eventually caught up with these "experts." World War II found them totally unprepared. The present rehabilitation program dates from the passage of the Barden-LaPollette bill in July, 1943, although there are grave faults in that act.

One of these is its dog-chasing-his-tail feature. A handicapped person can go to a State rehabilitation service and be told that if he can locate a job, the service will give him the necessary treatment and training. So he applies for a job and is told by industry that if he is rehabilitated, then he will be given a job.

Rehabilitation had never been sold to the public, and handicapped persons were still looked upon with aversion and distrust by potential employers. This writer set out to change that thinking in September, 1940.

Nearly 5 years of campaigning resulted in the institution, in 1945, of National Employ the Physically Handicapped Week. There now have been six such annual weeks. During these periods, through the Federal and State employment services, 160,646 handicapped persons have been placed.

It is estimated conservatively that more than 350,000 other handicapped have been put to work through the movement since 1945.

Obviously, the program has paid for itself. These handicapped workers have received an estimated \$750,000,000 in salaries and wages and have paid taxes of \$160,000,000.

Still the need for rehabilitation is staggering. Probably one out of every five persons, or about 30,000,000 of our population today, is physically handicapped. Of this number, between 5,000,000 and 7,000,000 are severely disabled, including about 3,000,000 who are beyond rehabilitation. That leaves possibly 4,000,000 who could be treated and trained for work which would pay all or part of their way.

It is astonishing but true that there is no one place in the country where a handicapped person can be treated medically or surgically

or therapeutically; be given vocational guidance and counseling; be provided with the necessary education and training, and then be placed in a suitable job.

The Federal Government should take the lead. A start could be made by regrouping the 35 Federal agencies which now deal with the handicapped problem. They are scattered everywhere.

What can be done to develop an effective rehabilitation program, one based on the concept that rehabilitation isn't worth a tinker's dam unless it ends with a job? Congress has a way before it now, in a bill to establish a Federal agency for the handicapped. Its salient features include:

1. Provisions for maximum extension of medical services, vocational guidance and counseling, education and training or retraining, and full employment opportunities to citizens handicapped by physical or mental disabilities.

2. Effective coordination of Federal functions relating to rehabilitation and employment of the handicapped.

3. Establishment of an independent Federal Agency for the Handicapped, operated for housekeeping purposes, in the Labor Department.

4. The setting up of an Office of Services for the Blind within the agency, to coordinate the numerous agencies now aiding the blind.

5. Provisions for special programs for the severely handicapped, including sheltered workshops.

6. Establishment of Cooperative Enterprises for the Handicapped, with an initial appropriation of \$10,000,000.

7. Establishment of 20 rehabilitation centers for the handicapped.

8. Provision for \$60-a-month financial grants to those too severely handicapped to be rehabilitated.

9. The setting up of a \$10,000,000 Handicapped Revolving Loan Fund, from which States could borrow when their own funds are exhausted.

10. Provisions for special grants to handicapped persons who require home training.

11. Establishment of an advisory council on affairs of the handicapped, comprising three representatives for employees, three physically handicapped persons, three representing farmers and stock raisers and three experienced in the arts and sciences, or public affairs.

The Lead Miner and the Present Emergency

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 1, 1951

Mr. BUDGE. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an address delivered by Felix Edgar Wormser, secretary, Emergency Lead Committee, and vice president, St. Joseph Lead Co., before the Idaho Mining Association at Sun Valley, Idaho, July 10, 1951.

Mr. Wormser not only pays well-deserved tribute to the mining industry of the State of Idaho, but skillfully develops the problems facing the future of the mining industry. The questions raised in regard to the advisability of maintaining a reasonable tariff on lead, keeping an open market, eliminating the

inequities under price control as presently set up, and keeping government out of the mining business are worthy of serious consideration by every Member of Congress.

The problems discussed concern one of the basic industries of our Nation. If these problems pertaining to the production of lead are left unsolved and unanswered the whole Nation will suffer. Mr. Wormser points out that foreign lead is being bought at about 23 cents per pound in the United States and at 26 cents in Europe while the ceiling price established by the Government is 17 cents.

THE LEAD MINER AND THE PRESENT EMERGENCY

It isn't only the potato that has made Idaho famous. There is, for example, the little-known fact that Idaho, since 1944, has become the most important zinc-producing State in the Union, and that for many years it has been the principal silver-producing State. Last, but not least, Idaho holds second place as a lead-mining State. This is a most impressive record. But I didn't come all the way out here to Idaho to help out the local chamber of commerce. Rather, I want to salute the mining men of your association, who are so willing to help in any common effort to better the mining industry. One of your most distinguished citizens, J. B. (Barney) Haffner, of Kellogg, is, as you know, the chairman of the Emergency Lead Committee which did so much active work in Washington on the lead tariff, with particular attention to the impact of currency devaluation on lead mining in the United States. I am sure it was through the efforts of many of you in this room that your great State adopted a strong resolution condemning currency devaluation and memorializing Congress on the subject.

Indeed, I know of no more important subject facing the world today than a return to honest money throughout the world—a return to the gold standard, but I haven't time this morning to discuss gold with you, as I want to touch upon the immediate problems facing us all in still another emergency—the rearmament emergency. But before I do, let me report to you that the work of the Emergency Lead Committee was a splendid example of the results that can be achieved when we pull together. The Emergency Lead Committee's detailed and unchallenged analysis of the adverse effect of foreign-currency devaluation on the competitive position of the lead miner in the United States is now history. Our study was brought to the attention of the Senate Finance Committee and will be found as part of the recent hearings in the Reciprocal Trade Agreements Extension Act of 1951. At those hearings the State Department took the position that anyone allegedly injured by currency devaluation should seek relief through the provisions of the escape clause in trade agreements. We requested protection against the effect of monetary manipulation.

Apparently, rather than risk complications with the International Monetary Fund, by specific reference to currency devaluation, Congress liberalized the Trade Agreements Act, and especially the escape-clause provisions, so that should devaluation of currencies or other injurious action again occur, the likelihood of relief is considerably increased.

For the time being, while lead is subjected to price ceilings below the world market, the tariff becomes of secondary importance, but from a long-range point of view, the lead tariff is a most useful incentive and will be necessary as long as we have a protected economy in the United States.

There is a movement under way to suspend the lead tariff, as has already been done in copper. If the suspension is coupled with the proviso that the tariff is to be restored should the lead price drop below the ceiling, the miner need have no fear of the consequences. Suspending the lead tariff will be of little assistance to consumers so long as the foreign price of lead is well above the domestic ceiling. Foreign consumers can easily outbid the American manufacturer. Before closing these brief comments on the lead tariff, I should like to remark that the lead tariff today is the same as it was a year ago, or when the Emergency Lead Committee was organized.

Ever since the fateful year of 1914, with the exception, perhaps, of 2 or 3 years, we have had one national emergency after another—two world wars, the longest depression in our history, and now a new species of emergency rearmament. The Emergency Lead Committee was well named. What a tragic era. We pass from one emergency to another with such rapidity that the senses become somewhat dulled. It is sad to contemplate, but we will probably be living in emergency periods for the rest of our lives. Let us, therefore, try to analyze the latest emergency, to see how it differs from others.

Ostensibly the country is arming to meet the menace of communism. The present defense emergency differs sharply from a war emergency, in that (1) world trade is being carried on vigorously—and I might even say normally. The economic or living standards of country after country are being gradually raised. (2) There is no wartime destruction of factories and homes, but casualties are being suffered in the Korean conflagration—largely by the United States. (3) There is only a modest diversion of manpower from farm and home to the Armed Forces, and only a relatively small diversion of materials specifically to arms production. (4) The monetary or fiscal burden is vastly smaller for direct military expenditures. Nonmilitary expenditures are at a continuing high rate.

The distinction between the rearmament emergency and a war emergency is important, because many Government controls willingly tolerated and necessary in wartime are inadvisable and indeed unworkable in peacetime. They are difficult to enforce on a free people and are often so poorly administered that they become deeply resented. Our neighbor to the north, Canada, has publicly recognized this principle and does not have the controls on prices and allocations we have adopted. On the other hand, our Government is proceeding under the assumption that ever more stringent controls are needed, but the reason given now is not so much the need of accommodating the requirements of the defense program for materials, as it is the fear of inflation.

Inflation is now the bugaboo. As the rearmament program requires only a small part of our domestic production, one might expect that the best policy would be for the Government to make certain that any rearmament program is adequately served with men and materials, that it is given the priority it deserves, leaving the rest of the economy to its own resources. On the contrary, depending upon the action of Congress and the manner in which the emergency program is shaping, we may anticipate that controls may penetrate further in every direction to make an ever tighter strait-jacket for our economy, all allegedly to curb inflation.

And while our own Government departs more and more from a free enterprise economy, other countries, competitive lead producers, are significantly surprisingly loath to imitate us. I have already referred to Canada, but Mexico, Peru, and Australia should be added to the list. It is true that some of these countries have already suffered an extraordinary amount of government inter-

vention in their own internal affairs, but in sharp contrast today we see them preserving the precious freedom of an open market for the lead and zinc they export, comprising the major part of their output. Any internal price control of these countries would affect only a small part of their lead and zinc sales.

The most important control of all those exerted by our Government is price control. So let us try to examine dispassionately what price control is doing, and may do, to the mining industry in Idaho and elsewhere. Price control has been instituted by Congress to curb inflation. Yet it ought to be easy to draw upon the experience of history to tell us whether or not Government price control is effective. It has been tried many times in the past. One of the worst things we can do is to deceive ourselves, and yet, price control is not only deceptive, but misleading in operation.

The Foundation for Economic Education, a scholarly group of the highest standing, states that price control to control inflation is shown to be "economic quackery." The best informed and wisest students of the subject will agree with that point of view. The foundation has this to say in an analysis of inflation: "Not only do Government-controlled prices lie, but the process also rapidly promotes dishonesty among all groups—merchants, producers, consumers, Government employees, everybody. . . . The shortages that result from price and wage controls are purely a legal creation, created by the price-control law and nothing else. . . . In an otherwise free economy the success of any price-control law can be measured by the extent of the shortage it creates or the decline in production which it causes."

Inflation is cruel. No one can rightfully object to inflation control, but as it is the Government itself which creates inflation it is the Government itself which must and can correct it through proper taxes, credit controls, and curtailment of its own expenditures, which is bitter political medicine.

I had occasion recently to examine the items which enter into the cost-of-living index so commonly used today in adjustment of labor rates and in measuring the extent of inflation. The index is prepared from an average of 192 items comprising goods and services. Broadly speaking, they are food, wearing apparel, rent, fuel and electricity, house furnishings, and a few such items as transportation, medical care, recreation, and household operation. Only a cursory inspection of the list shows that the consumption of lead and zinc by Americans in their everyday occupations plays an exceedingly minor part in the cost of living index. Wide fluctuations in the prices of nonferrous metals cannot begin to compare, in their impact upon the cost of living, with wide price fluctuations in foodstuffs, or the clothes we wear, or the rent we pay. That is fundamentally the reason why the Government can afford to be liberal in the treatment it accords the ceiling prices of metals, and yet they are currently under rigid controls, whereas agricultural products and other items entering more prominently into the cost of living have only a slight check rein placed upon them.

Now let us see what price control is doing in lead. Since the first of this year, the ceiling price of lead under the general freeze order of the OPS has been 17 cents per pound New York. By comparison, lead sold at 21.50 cents per pound New York during the latter part of 1948, and the first few months of 1949. The world market today is 21 cents and over, and if you ask me what constitutes the world market, in the face of the controlled economies existing in various parts of the world, I would say it is the price at which lead is being sold by competitive producing countries, Australia, Canada, Mexico, Peru,

and others. Information on these transactions, as published by the press, states that foreign lead is being bought at above 23 cents per pound in the United States, and at 26 cents in Europe. Suffice it to say that the lead produced in Idaho and elsewhere in the United States is now comparatively cheap lead. The ceiling price of 17 cents established by the Government is far below that of other countries paying wages a fraction of our own.

The result of this simple situation is that a great many American lead consumers are being deprived of imported metal they need just now for conversion into various manufactured products. (Ceiling price controls on many manufactured lead products preclude purchases of higher priced foreign lead for importation into the United States.) Imports have therefore declined sharply. For the first 4 months of 1951, 72,000 tons of lead in all forms were imported into the United States, compared with 140,000 tons for the same period in 1950. I would not be surprised to see the imports of lead for this year, unless controls are modified, drop from the high of 550,000 tons in 1950 to perhaps, and this is a guess, 250,000 tons. This will create a hardship for many users. Domestic mine production in 1951 will probably be about 400,000 tons. Lead from scrap may also amount to 400,000 tons, but the reduced imports will pinch consumers.

Obviously, it is not the tariff which is preventing the importation of lead, but the great disparity between foreign prices and the ceiling here, which consequently diverts lead to Europe. Currently, a few users of lead are willing and able to pay 21½ cents or more for the lead they require, and they are buying it from Mexico, Canada, Australia, and elsewhere. The lead miner in Idaho, especially the lead miner with marginal operations, may well ask himself, How come? Why shouldn't the same consumer be allowed to buy lead from him in Idaho at 21 cents rather than from a competitor in Mexico paying a fraction of his wages? Why isn't Idaho's lead just as valuable and good as the Mexican? Why should the domestic consumer be subsidized at the expense of the Idaho miner? Why shouldn't ceiling prices be uniform for all classes of lead, domestic, foreign, and scrap, if we are to have ceiling prices?

Many inequities have grown up under our emergency control in its toleration of multiple prices for identical items. Grave discrimination has occurred which affects the moderate-sized and small miner and small user, far more than it does the larger companies.

It is not only during the rearmament period that the United States needs huge tonnages of lead, currently averaging about 10,000 tons per month or 1,200,000 per year. We can predict with considerable assurance that the industrial economy of the United States is on a plateau far higher than it was 10 years ago, by reason of population growth, and that we may anticipate a consumption of close to a million tons of lead per year for our normal requirements, except for depression periods. With the steady growth in population, not only in the United States, but all over the world, requirements for nonferrous-metal production will increase. Consequently, it would appear to be sound public policy to encourage prospecting, exploration and development of as many new mines as can possibly be found, if the future is not to disclose a serious deficiency in metal production. The National Minerals Advisory Council has given serious consideration of long-range policies which the Government might advocate to increase lead production, and has recommended revision of our tax laws affecting mining, as well as suggesting realistic periodic revision of price ceilings during the emergency. So far, nothing has come of this sound advice.

Without price controls, the lead market would undoubtedly be more attractive to the prospector and small-mine owner than any market we have had since 1948, but the lead miner is being put in a peculiar position. He is being told, in effect, by his Government, "You shall receive and accept no more than 17 cents for your lead, despite the fact that your Mexican neighbors can get 20.5 cents, or any price they choose in the world market; and you may not export your lead, either." Obviously, when the price of a commodity is established by Government compulsion at a level below the world market, there is an aspect of confiscation involved, which the small miner might quite properly resent, especially if he does not ask the Government to step in and help him when metal prices are at panic or distress levels.

One of the consequences of the unrealistic ceiling price on lead will probably be a retarding of the development of our own still large native resources. Of course, Government may well contend that raising ceiling prices gives the large and efficient corporation unparalleled profits, and so it does. When, however, you consider the fact that an excess-profits tax is in existence, and that the Government desperately needs large revenue from taxes, and that a period of high prices gives an opportunity for mining companies to dip into marginal ore reserves that would otherwise be noncommercial and thereby mine in the highest interests of conservation, then you must conclude that there are benefits to be derived from high prices as well as disadvantages.

As controls grow, the Government is veering more and more toward converting price control into profit control. Some ceilings are specially based upon a yardstick of 85 percent of the profits in a base period, 1946-49. When we touch profits, we touch the heart of the American free-enterprise economy. Disturb profits and you disturb incentives. Give the Government the right to control profits and you are well on your way to a socialistic economy. I wish there were time to expound on this fascinating subject. If you are going to control profits in mining, then you have to control the grade of the ore mined, wages paid, salaries paid and other elements entering the cost of doing business.

Many Americans are apologetic about the American system of free enterprise and our profit economy. I think we ought to stand four square in defending. Nothing in the world comparable to the American profit or incentive economy has ever shown greater results in elevating the standard of living of people. Profits are nothing to be ashamed of in our free economy—they regulate themselves. They are the crux of our capitalistic economy. There ought to be more apostles of capitalism. I am driven to this conclusion by observations on my first trip to Europe a few months ago, when I saw for myself how people live in those countries under different economic systems, and how much lower their own standards of living are than ours, despite their much vaunted social legislation, or shall I say, socialistic legislation.

All I am trying to point out in these brief comments of mine are my firm conviction that we ought to do everything we can to defend and advocate free markets, and to resist unnecessary Government intervention into our business. I am reminded of the warning, or words of advice, given me by one of Idaho's greatest statesmen, Senator William E. Borah. I used to call on the Senator periodically in Washington, and I remember that during the depths of the depression in the thirties, I discussed with him a plan of Government aid which might help cure the unemployment in the lead- and zinc-mining industry. He told me at that time that although the plan might be economically feasible, he agreed that even if we were successful in persuading Congress

to go along, the Government price tag attached would not be worth the effort. I have never forgotten his wise words. I think we can handle our difficulties in any emergency, short of war, individually. War is the only exception I make.

Once a nation embarks on the use of controls, or government planning, there is no limit to its field of operations, for it soon finds that the first control imposed will generally not work, and other controls have to be added, until the economy is saturated with them. That is what is happening in lead. Look at the sequence of events: (1) A ceiling price is established—the price proves too low to attract necessary imports, (2) imports are drastically curtailed; (3) domestic users, with minor exceptions, are unable to import the tonnages they require, (4) shortages are artificially created, inviting partial government allocation at first, and ultimately inviting complete allocation, with end-use controls. This may be good politics, but it is poor economics.

Picture the amount of Government supervision and paper work necessary to make this machine function, not only in lead, but in other articles. Do you think it is worth it? Already discrimination is beginning to appear. Just recently one segment of the lead-consuming industry was favored with mandatory allocations of lead at the expense of other claimant industries. This is just the beginning of more and more discrimination, which is inevitable, as Government officials charged with the administration of the controls vainly attempt to answer questions that a free market would automatically supply. We must not be too critical of those who administer the controls. They are undoubtedly doing the best they can. The trouble is with the law which makes such controls possible, and which divides the controls among a multiplicity of agencies, all of whom have to be consulted before definite action can be taken.

You may have read of the formation in recent months of an international materials conference, another international organization, this one with the objective of a more equitable distribution of the scarce materials of the world among the consuming nations, meaning, I take it, that the United States has been absorbing more than its share and depriving other countries of the metal they need. This premise is highly debatable, and today it is invalid for many metals, because foreign countries are very wisely reluctant—or coy—to establish ceiling prices on a level with our own. In fact, many countries haven't any ceiling prices. They therefore only need go into the world market and purchase lead and zinc from South America, Australia, and elsewhere, which we need, at prices just a bit higher than our own ceiling prices.

It seems to me that representatives from foreign countries on the International Materials Conference Commodity Committees can have things more or less their own way if they will counsel their own governments to refrain from establishing ceiling prices, or if, when they establish them, they do so at a rate above our own. Then they can have all the lead and zinc they can buy, particularly if we, through Marshall-plan aid or other governmental assistance, provide some of the funds to help them do so. The International Materials Conference has also recently been discussing the possibility of world-wide end-use controls. The mind staggers at the vast national and international bureaucracy that is growing up under the cloak of rearmament and to control inflation. Maybe all this is necessary, but I doubt it.

The Government has not, of course, been oblivious to the predicament of the lead consumer who, because of price and profit controls, as I have indicated, is unable to import the lead he needs to supplement that available from domestic mine and scrap pro-

duction. It is reported that the Government is now considering entering the world market to buy lead at above ceiling prices and resell it to domestic consumers at a loss, to protect the ceiling it has established. Such a program would, in effect, subsidize the foreign producer and the domestic consumer. The American lead miner may be pardoned for feeling that such an arrangement is manifestly inequitable in subsidizing foreign competitors paying low wages.

If it is the intention of the Government to purchase foreign lead at higher than ceiling prices, then it seems to me that the Government should either be prepared (1) to buy lead from producers in Idaho and elsewhere at the same price, or (2) to pay the Idaho miners the difference between the price it is willing to buy foreign lead and the domestic ceiling, or (3) it can raise the domestic ceiling to the price it is willing to pay for foreign lead. There is no other course for a world commodity which the Government alone is helpless to control.

What does all this add up to? On balance, the domestic ceiling price of lead is being depressed below a true market level by the main strength of the Government, presumably so that the cost of living may be kept down, insofar as it is affected by the price of lead. By how much, you ask? So small an amount, I don't think it is measurable. On the debit side, however, unless controls are soon modified, the result is less lead for gasoline to drive your car, or lower octane ratings for gasoline, and, therefore, more gas consumed, less lead to paint your house, less lead to install phone and power cables, less lead for plumbing supplies, and many other everyday uses, so that the Government resorts to total allocation to divide the remaining supply during a shortage created largely by its own policies. And allocating a supply to civilian uses in peacetime—or war—creates a good many thorny problems. Who gets the lead? The plumber, the painter, or the candlestick maker? The small manufacturer—the large? What standard of consumption will be used? What a headache for all. In addition, your tax bill may go up to pay the taxes needed, in part, to cover the losses that may be incurred by the Government in subsidizing foreign lead producers, or subsidizing domestic lead consumers. Here is planning in action. Do you feel it is deep in your interest and in the interests of the public? I doubt it.

When I see what is happening today, my own faith in free markets—and I admit I have a one-track mind on the subject—my faith is fortified. And why not? The declared enemy today is communism, which stands for government intervention and ruthless compulsion in every walk of life. I don't want to see the mining industry so enmeshed in Government controls and regulations while fighting communism that, when the battle is over, we find we have adopted the very practices we condemn in others—and have sacrificed our priceless heritage of initiative and strength.

Pilot Starts Sixty-seventh Year of Continuous Publication

EXTENSION OF REMARKS OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. ASPINALL. Mr. Speaker, we hear a great deal about the little man

and the small independent merchant and the greatness of our heritage and the priceless gem of freedom and how all of this is rolled into what is America today. We should indeed hold all of these close to our heart and stand unyielding beside these ideals whatever may be the flow of the tide.

I should like to call to the attention of the Members a fine example portraying all of these attributes which have made America great—the birth, life, and development of a small, independent newspaper in northern Colorado, together with the pathos and progress which attends man's dedicated search for a means to better the environment in which he finds himself.

Here is recorded a struggling infant in a new and untamed area and the march of events which saw such infant transformed into a sturdy institution with a place of honor in its community and among its contemporaries.

As long as there remains freedom for the editors and publishers of these small, independent newspapers to seek out and print the news as it happens, and not as someone thinks it should happen, and to comment thereon, then we may be assured that America will remain great and strong.

[From the Steamboat Pilot of July 26, 1951]

CELEBRATING BIRTHDAY ANNIVERSARY

The Steamboat Pilot, pioneer newspaper of northwestern Colorado, this week starts on its sixty-seventh year of continuous publication. It is the oldest business establishment in this part of Colorado and has not missed an issue since the first one went to its subscribers on July 31, 1885.

It is a ripe and healthy old age, but the Pilot does not intend to rest on its laurels just because of its years of existence. It constantly is on the alert for means of giving better service to its readers and to increase its value to the rich and prosperous section that it serves.

The Pilot was founded on a platform of service to this great and prosperous section. Through the years it has battled constantly to promote the growth and welfare of this area. It will continue to do so.

The growth of the Pilot has not been mere chance. It has grown because it constantly is on the alert to make it a better newspaper and of increased service to northwestern Colorado.

The early struggles of the Pilot are not going to be recounted here. It started when there were only five houses in Steamboat Springs and hardly a score of residents in a section larger than New England. It had faith then and it has faith now. We are not going to let the weight of years bog down our youthful spirit of enthusiasm and optimism.

The Pilot is known far outside the borders of Colorado as an outstanding weekly newspaper. It has never been content to rest on its laurels but constantly has been improving. Today it has one of the most modern printing establishments in the State and its circulation is exceeded by only two or three weekly newspapers in Colorado. It has a circulation that reaches practically every home in a vast area and thus is an advertising medium that cannot be excelled.

The Pilot is old in years but young in enthusiasm and it hopes to continue on for another 66 years giving increasingly better service to the vast and prosperous section that makes up northwestern Colorado. It is dedicated to supporting every worthy cause and will continue to do so and to work for the growth and development of Colorado.

This Nation Must Not Relax Its Vigilance

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARRISON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. HARRISON of Wyoming. Mr. Speaker, it may come as something of a shock to one Wyoming newspaper editor, but I find myself in the position of agreeing with President Truman.

This may be something unusual, but President Truman and I see eye to eye on at least three points, judging from the President's recent address in Detroit, Mich.

Those points: First, that this Nation faces grave danger of being plunged into another global war; second, that this Nation must not put implicit trust in the "good faith" of Communist peace negotiators; and third, that this Nation should not relax its vigilance nor its determination to strengthen our defenses.

It is interesting, to me at least, that on all three points I have the drop on the President—I cannot be accused of crying "Me, too," because I got in the first lick on all three.

I believe that many Members of Congress on both sides of the aisle are of like opinion on these important points. I do not believe there will be much argument on any of them.

But there my agreement with the President's remarks at Detroit comes to a stone wall. I will not agree that a program of smear and defeatism has emanated from any source other than those close to or controlled by the administration. What may have been interpreted—to the administration's convenience—as smear tactics have been in fact honest efforts to expose corruption in high governmental places, those efforts exerted by patriotic citizens, not all of them Members of Congress, interested in seeing honesty and moral integrity restored to our Government.

Defeatism has been an attitude fostered by administration henchmen in devious ways for many months, with the sad result many otherwise sound-thinking Americans are taking the bait.

I for one still have unshaken faith in our American fortitude and our American capacity for production, be it for war or for peace. At the moment, unfortunately, the Nation must be geared for war—not to seek war but to defend ourselves against aggression should it come about. But we must never lose sight of the fact that we are basically a peaceful people and that ultimately we will return to peacetime activities. Thousands upon thousands of American men and boys have died to guarantee that we will remain basically a peaceful people, a nation dedicated to living in peace in a free world. We must never lose sight of that dedication, regardless of the present international situation.

Someone once defined peace as "that interval between wars," and events dat-

ing from World War I would seem to bear him out.

But while we keep our powder dry, and for the time being prepare for any eventuality, we should at the same time keep an eye on the future, on the day when power-mad tyrants are put to rout and when peace shall reign supreme over the world.

Canadian Ambassador to United States Discusses Certain Phases of the St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. MACK of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable Hume Wrong, Canadian Ambassador to the United States, in which he discusses certain phases of the St. Lawrence seaway and power project:

REMARKS BY HUME WRONG, CANADIAN AMBASSADOR TO THE UNITED STATES, AT THE DINNER IN CELEBRATION OF THE TWO HUNDRED AND FIFTIETH BIRTHDAY OF DETROIT, JULY 24

The invitation to attend today's ceremonies described the theme of the birthday festival as follows: "By focusing attention on nearly 150 years of harmony between the United States and Canada, Detroit's two hundred and fiftieth birthday festival will give expression to the principle that all nations can live side by side in peace when friendship dwells in the hearts of their citizens." Certainly the affairs of Detroit and the affairs of Canada have been pretty thoroughly mixed up ever since that day 250 years ago when Cadillac's brigade of canoes, ending their long journey from Montreal via the Ottawa River and Lake Huron, swept down the Detroit River and made their landing on this site.

There is nothing that I can tell a Detroit audience about the intimacy which exists between the people of this great city and the people who live in Canada across the river in Windsor and its neighborhood. It has been remarked that the international boundary between the United States and Canada, along all its enormous length, separates the two countries without dividing them. At no point in its 5,500 miles, from Atlantic to Pacific and again from Pacific to Arctic, is this more true than here, where the line runs along the narrow waters of the Detroit River and separates without dividing communities on either side, communities bound tightly together by bridge and tunnel and ferry, as well as by fellowship and good will.

The turbulent history of Detroit in its early days as an outpost of Canada, first of French Canada and then after 1760 of British Canada, included many incidents of war and bloodshed—Indian wars, wars between the French and the British, the conspiracy of Pontiac, the Revolutionary War, the War of 1812.

That unhappy war, was, of course, the last period of fighting, invasion and counter-invasion, here and elsewhere across the boundary. Since the fighting ended in 1814, I believe forever, armed forces from the two

countries have only crossed the river to join in civic celebrations and parades, and recently on occasion to train together as friends and allies against a common enemy.

Far be it from me to try to lecture the citizens of Detroit on the history of their own city. A historic civic birthday, however, is an appropriate occasion for glancing backward through the years, for recalling old unhappy far-off things and battles long ago, if only to compare the past with the present and to measure some of the changes which have taken place.

I may permit myself to repeat one historical anecdote. It was, as you know, not until 1796, 13 years after the Treaty of Paris, that the Stars and Stripes were for the first time raised over the town. One would think that many of the people of Detroit would have been embittered because of this long delay. This does not seem to have been altogether true, for it is recorded that 4 years later, on June 4, 1800, all the public officers and leading citizens of Detroit crossed to Sandwich to help celebrate with their Canadian neighbors the birthday of King George III. This was a foretaste of the relationships across the river which have now happily prevailed for many years.

The history of the relations between Canada and the United States is reflected in detail in the growth of cordiality and interdependence between the Canadian and American communities along the Detroit River. Although 138 years have now passed since the last act of warfare, perhaps we should remember, even on an occasion such as this, that there have been ups and downs in the dealings between its two shores.

I might illustrate from my own experience, as for most of the last 25 years, I have been concerned, in one capacity or another, with the official relations between Canada and the United States. The first important piece of work in which I was involved, in 1927, was a matter intimately affecting Windsor and Detroit. A sudden change in the immigration regulations in Washington threatened to cut off from their livelihood many of the large number of Canadian residents who were employed in Detroit—the so-called commuters. It was a serious issue which aroused hot feelings across the river. After hard work, detailed negotiation, and some concession it was settled in our usual manner; the resulting compromise certainly did not satisfy everybody in either community, but it worked well enough to make the situation tolerable.

At around the same period there was plenty of trouble about another sort of traffic from Windsor to Detroit, traffic of a nature which it might be impolitic to specify in detail beyond mentioning that it seemed to meet an illegal but not easily satiated need of many Detroiters. This traffic also engendered hot feelings, especially in Washington, and brought about lengthy negotiations before a satisfactory agreement was reached. Fortunately, not very long after, the traffic became legitimate again—and it still flourishes.

When in Detroit I cannot resist from mentioning in passing a third and current difficulty which concerns this area. The failure to cope with it is causing a good many Canadians to feel frustrated. Nineteen years have gone by since the first agreement jointly to construct the St. Lawrence project was signed in Washington, and 10 years since a revised agreement, designed to meet criticisms of the earlier treaty, took its place. But all this time there has only been snail's progress toward congressional approval; at times, indeed, crab's progress would be a more accurate description, for the motion has sometimes been backward. We sorely need in Canada both the power and the means of deep-water navigation to and from the

Great Lakes which the project will bring. There are parallel needs in the United States. Must we wait much longer for the start of this development, which would almost certainly have been begun long ago if the St. Lawrence had not been a boundary water?

Matters such as these illustrate something which people are sometimes inclined to forget—that there are certain to be a great many difficult problems to resolve between two very large countries, no matter how friendly, which share a continent between them. Many are apt to assume that the happy state of affairs between Canada and United States has come about, and continues automatically. But there is in fact plenty of need for clear thinking, solid work, and tolerant understanding in conducting public business between our Governments. Were it not that, to use again words I have already quoted, "friendship dwells in the hearts of their citizens," those responsible in Washington and Ottawa would have a great deal more to worry about.

This long-standing friendship is of growing value today, and will be of still greater value in the future; for the affairs of Canada and the United States, both public and private, are getting mixed up with each other more thoroughly all the time. It is, for example, a surprising reflection that it was only just over a decade ago that the question of the joint defense of the North American Continent for the first time began to receive the serious attention of the two governments, in the grim days when the Nazi armies had overrun Western Europe. This is now, of course, a very active subject of joint planning and joint action.

In the larger arena of world affairs it is only 6 years since the Charter of the United Nations brought together for the first time the United States, Canada and many other countries in a great international organization dedicated to the solution of international disputes by peaceful means. It is just over 2 years since the United States for the first time entered into an alliance in peacetime with Canada, the United Kingdom, France, and eight like-minded countries, which had become vividly aware that the United Nations, no matter how useful its work, could not alone provide for their security in the present dangers. It is just over a year since for the first time a flagrant armed challenge to world security was met, under the leadership of the United States, by collective military action, in which troops from the United Kingdom, Canada, France and 12 other countries are now joined in Korea with the forces of the United States to uphold the cause of the United Nations. It is only a little over 6 months ago since for the first time a decision became effective to set up as a deterrent to war and integrated international force built from the armies, navies, and air forces of the North Atlantic countries, and a great American General was called from his retirement to head it.

These achievements are of a scale and character which no one could conceivably have imagined as possible a very few years ago. They have been made possible by the leadership rightly and boldly undertaken by the United States, and I take pleasure in emphasizing this in the presence of the Secretary of State. There is still a long and hard way to go, there are other bold steps which free nations will have to take for the first time, before we can hope to feel any reasonable assurance that our free world is not going to be engulfed again in the most irrational of human pursuits, the waging of general war. We must still be ready to devote a most distasteful proportion of our energy and resources to defense. We must strain ourselves to this and today and next month and the year after next and perhaps the decade after next.

Here, in one of the greatest arsenals of the free world, I am glad to speak this evening from the same platform as the Secretary of State of the United States, the French Ambassador and the British Ambassador. The history of Detroit has been closely involved in one way or another with that of all our countries. Likewise the past, present, and future of Canada is bound up with each of them; with the United States by ties too many to enumerate of friendship, of common aims, of self-interest, of the joint heritage of a rich continent; with France by ties of history, of racial origin, of rich tradition, and for many of my countrymen of common language; with the United Kingdom in countless ways, by ties strong and tried, which have changed and developed through the years as Canada emerged by peaceful evolution from colonial status into complete sovereignty, while remaining a member of that remarkable and undefinable association of independent states, the British commonwealth of nations.

What conflicts there have been between our four countries are matters of past history. They now stand together, in a period of strains and stresses which sometimes seem barely tolerable, as partners in a joint enterprise, the stakes in which are the highest that anyone can imagine.

We Can't Go It Alone

EXTENSION OF REMARKS
OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES
Monday, August 6, 1951

Mr. DUFF. Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record an address entitled "We Can't Go It Alone," which I delivered at the World Affairs Institute of the University of Denver, at Denver, Colo., on July 23, 1951.

There being no objection, the address was ordered to be printed in the Record, as follows:

WE CAN'T GO IT ALONE

(By Senator JAMES H. DUFF)

We belong to a generation plagued by the perpetual threat of war. Never in history has such a devastating series of wars occurred as in our time. This situation stems from a vast variety and accumulation of causes. However complicated the background, the period in which we live is surely one of the most revolutionary in the whole history of civilization.

In this strange, up-ended and troubled world, those desiring peace are faced by obstacles and road blocks everywhere they turn. But the enormous difficulty of the problem does not lessen the necessity for its solution.

A continuation of the world along the road we have been traveling for the past three decades will surely lead in the final analysis to chaos, and perhaps the ultimate destruction of civilization itself as we know it.

America entered World War I to help make the world safe for democracy. Despite the immensity of our sacrifice and the sincerity of our purpose, the exact opposite was the result. Less than 20 years after we sent our first expeditionary force to Europe, Hitler menaced the whole world with a warfare of

unexampled ferocity and a philosophy intended to oppress and tyrannize all who disagreed with him.

America fought World War II to free the world from the threat of the police state and the tyranny of the human mind. World War II was brought to a successful conclusion only as a result of the might and the power of the Armed Forces of the United States.

At the conclusion of World War II, America had the greatest military force in history, but shortly thereafter we allowed that force to deteriorate in accord with the intense desire of the American people for peace and out of respect to our antagonism against the maintenance of large bodies of Armed Forces in times of peace.

Russia, our former ally, meanwhile took advantage of America's desire for peace to gain thereby a position of preeminent and menacing importance by building up its own armed forces to a height and power never dreamed of before. This change about whereby American military power declined as the might of the Russians was rapidly built up gave Russia overwhelming military superiority. Thereby Russia became a menace to the peace of the whole world, because that predominant military power was used to threaten, and in many cases to intimidate and coerce, free nations.

By the immense expansion of military might, coupled with the use of that might for the purpose of territorial aggrandizement and domination of nations useful to its plans, Russia has shown a fixed purpose to dominate the world.

In the 6 years since World War II, with practically no loss of manpower and no serious dislocation of national plans, Russia has overrun and subjugated most of its neighbors, obtained control of Eastern Germany, built up a strong striking force there in the very heart of Europe, and extended its effective influence eastward more than 2,000 miles across Asia all the way to the Korean Peninsula and the Pacific Ocean. Russia has built up a strong striking force in the Far East to threaten Korea and Indochina and Japan; in the Middle East to threaten India and the Iranian oil fields, and has directed and compelled the immense build-up of all her satellites opposite Yugoslavia.

This deployment of Russian power is tremendously significant because it is the type of pattern indicated if military activity were intended on a number of fronts in different areas at the same time.

No possible explanation can be made for this extraordinary build-up of Russian military power at a time when all free nations were allowing their own power to decline, except on the hypothesis of a determination to start another war to attempt to dominate the whole world.

With this dark picture can there be any hope for peace? That question is on the tongues of all well-disposed and freedom-loving people.

This we know for sure—with Russian power as overmatching as it is today, we cannot look forward to peace with any assurance, merely by wishing for it.

Nothing has been clearer in the past one-third century than that only the strong have a chance for peace and security, and even survival itself.

In our time unpreparedness has been the outstanding invitation for wars of aggression. By that standard, world war III is as sure as tomorrow, at the discretion of Russia, unless the free nations put their military house in order immediately—not to encourage world war III, but as the only possible assurance and preventive against it.

The drop in the military power of the United States when compared with Russia's

build-up is appalling. At the outbreak of the war in Korea, Russia had 175 battle-ready divisions, without counting the divisions of her satellites or her own divisions in reserve and subject to call, while this magnificent country of ours had permitted our power to drop to a position where we had only 10 Regular Army divisions, all undermanned and under-equipped, at the end of 6 years following World War II.

As late as March of this year, Gen Hoyt S Vandenberg, Chief of Staff of the United States Air Force, referred to the Air Force of the United States as a shoestring air force, presumably as compared with the immense air force of Russia.

General Vandenberg this year also made the following observations. "Should war come, we can be expected to destroy no more than 30 percent of the planes making an attack in strength on the United States before their bombing missions are completed."

"The bleak and blunt evidence of the last war proved conclusively that no bombing attack mounted in sufficient strength by the American, British, or Germans ever was turned back by the most strenuous defensive action. The offense always has had a crushing advantage in aerial warfare, and there is no prospect that the balance will change in the foreseeable future."

"There is a dangerous delusion that radar screens and complicated electronic devices will give us an airtight defense against bombing. We could build a steel fence 5 miles high around the 17,936-mile perimeter of the United States. We could place an unbroken line of radar screens on top of the fence, ring our cities with automatic anti-aircraft guns and perfect a foolproof warning system for distinguishing between friendly and hostile aircraft approaching our boundaries around the clock. We could put an umbrella of interceptor planes over the entire country—and we could not keep out a determined enemy attacking in strength."

This month, before a committee of the United States Senate, Senator HENRY CANOR LODGE, of Massachusetts, who has specialized in attention to and the requirements of the Air Force, made the statement that it would require \$32,000,000,000 to bring our Air Force up to what it must be in order to provide the superiority necessary for our adequate protection.

Last month, Gen Carl A Spaatz, former Chief of Staff of our Air Force and designated by General Eisenhower as "the world's greatest air strategist," made this statement:

"From the best available published figures it can be concluded that, in numbers of front-line modern aircraft available for an air battle over Western Europe today, Russia holds at least a 10-to-1 margin; and on the basis of our present production tempo, even if we assume no increase in Russia's current air strength (an implausible assumption used only to emphasize our own position), it can likewise be concluded that the free world will still be on the short end of at least a 5-to-1 margin in Western Europe at the end of 1952."

"Command of the air over Europe and Asia has been lost to the free world since the end of the last war and will continue to be lost to it for some time to come. If there is a surer way to national suicide, in a world threatened by international bandits, I have yet to hear about it."

The great cities of America are within easy reach of the Russian air force and its atomic bombs. If Western Europe is not denied to the Russians, the great industrial areas of the United States will be subject to rapid and continuous bombing from the air by the Russian air force.

Several months ago a British jet bomber flew from Western Europe to eastern North America in only 4 hours and 37 minutes.

Last month a single aviator in a one-engine plane flew from Oslo, Norway, across the North Pole, to Anchorage, Alaska, non-stop.

Two weeks ago a flight of our own bombers flew all the way from Texas to England, non-stop.

Invention and discovery have completely destroyed the isolation formerly provided by distance so that today neither the oceans nor the distance that separate us from our enemies are any longer a safe and sure protection as they were in other days.

All the free world was sharply awakened from its lethargy in June a year ago by the vicious and unprovoked attack by Russian puppets in Korea. As a result of that awakening, the free world at the moment is mildly preparing for a defense against Russian aggression.

The greatest danger today is that the free world will be lulled into a sense of false security by the Russian proposed cease-fire in Korea. No greater mistake could be made than to conclude, as a result of an agreed cease-fire in Korea, that it means a cease-fire everywhere. In Indo-China, in Iran, in Yugoslavia, and in a number of other critical points, volcanic explosions may occur at any moment and without notice of even greater violence than the tremendous warfare that has now been carried on in Korea for more than a year.

A completely adequate preparation for defense is the only hope for a bright tomorrow. Everybody knows that America desires only to be let alone. We covet no one's dominions. We desire no one's wealth. But for us in America it is enormously important to keep in mind constantly that the menace of Soviet imperialism is a danger of a different character than anything we have faced before.

Russia's ambitions for expansion and world dominion have assumed an affectation of interest in underprivileged people when it merely uses that assumed interest for the purpose of advancing selfish ambitions. Like a pickpocket in a crowd, yelling "thief" to distract attention, by similar method to conceal its motives, Russia itself has been the thief of other people's lands and possessions and freedom. Nevertheless, Russian imperialism and the various imposters of communism have penetrated into places otherwise inaccessible and impossible.

We must realize that the various troubles fomented by Russia since World War II in Greece, during the Berlin airlift, in the campaign in Korea, the disruptions in the Middle East, the continued menaces to Yugoslavia, the irritating tirades by Russian spokesmen against alleged and faked American imperialism, are all parts of a strange and new and unusual procedure. They are episodes in a creeping, methodical, and diabolical plan of Russia to take over the world at its own time and in its own discretion and by its own methods.

The difference in the character of the crisis that faces us today must be studied and understood because it is that very difference that makes it so dangerous to those of us who have never seen exactly that kind of pretense before.

Here in America, besides maintaining the greatest living standards in history, in the past 5 years we have given away \$80,000,000,000 in foreign aid, whereby the productive capacity of Western Europe alone is up between 30 percent and 40 percent of what it was even at the highest peak before World War II.

We think of aiding. If we could only think of the danger in the same terms that we think of good will, then we would not

be lulled into the feeling of the false security that may follow a possible cease-fire in Korea.

In Korea, Russia pretends a desire for peace. But actions still speak louder than words. While temporary peace may suit the present purpose of Russia as a result of the tremendous military reverses suffered by its puppets in Korea, nevertheless what is happening in Hungary, in Iran, and in Czechoslovakia, and in the Russian satellites bordering Yugoslavia, all give the sure impress of oppression and hatred and intransigent communism, which seeks to dominate the world.

In the last few weeks Archbishop Groesz was tried and convicted after a forced confession before a Communist tribunal in Hungary, just as Cardinal Mindszenty was 2 years before, and as were a group of Protestant ministers by the same methods and procedure. In Czechoslovakia two priests and five aides have just been condemned to death as spies for alleged "aid to American imperialism." And in the same country in the current month an American newspaper correspondent of the highest standing and the greatest integrity, by a confession, has also been coerced into admitting that he was a spy for the western powers "in a plot that would not even stop at murder." By a strange coincidence all these trials are highlighted by the confessions of the defendants to acts completely out of character with anything consonant with their previous history. Everyone placed on trial confesses. This procedure is merely a throw-back to the brutal days of the Dark Ages when no alleged criminal was imprisoned or executed without a previous confession. Everyone knows that those confessions were obtained by physical or moral torture that overcame the will of the confessor.

In Korea today Russia pretends a desire for peace—peace in the place where it sought war a year ago and where that war has resulted in disaster to the armies of its puppets. But in other places where Russia exercises complete tyrannical control, we find a pattern of brutality and purge and deportation and trial by torture, showing that whatever its pretense, the Russian attitude is fitted to best serve its purpose of world aggression and conquest.

And as Russia suddenly shifts its public propaganda to the appearance of a desire for peace, let us not forget, as we seek to appraise the sincerity of this change, that in this very year 1951 the Russian military budget is \$24,000,000,000. This is double what it was only 2 years ago when Russian preparation vastly out-topped ours, and greater that it was in at least 2 years of World War II.

For the purpose of further comparison let us also remember that the pay of a private in the Russian Army is only \$7 a year. The lowest base pay of a private in the American Army is \$1,080. And the over-all cost of maintaining an American soldier in the field, allocating to each soldier his proportionate share of the over-all cost of the Military Establishment is \$10,000 per man per year.

To be safe we must look into more than appearances in this world of supercharge and tension.

It would be a dire outlook indeed if these were the only factors bearing on the situation today. With these alone and with the free peoples disunited and unprepared, world war III would seem as inevitable as tomorrow. But in all this darkness and gloom certainly there is a ray for a good tomorrow if the free people will only make themselves competent to win that peaceful tomorrow.

Eternal vigilance is still the price of liberty in today's world, but with eternal vigilance there also must be eternal hard work and eternal preparation for defense.

It is necessary to know the danger. But knowing it will be of no avail unless we are prepared to meet it. That means preparation by all free people everywhere.

There must be a strong and full coalition of the free nations and there must be a substantial contribution to the common pool of effort and preparation and sacrifice if freedom is to be saved. The United States cannot do all the fighting and the paying and the dying. America cannot go it alone. It requires the united efforts of all the United Nations—each doing a full share.

Whatever our glorious history, whatever our magnificent qualities, whatever our extraordinary natural resources, the fact is that we do not have the manpower to meet the Russian menace alone on a world-wide scale.

Less than 2 months ago, Maj. Gen. Lewis B. Hershey, Director of Selective Service, stated that he was frightened by the Nation's approaching dangerous manpower shortage for both military and civilian needs. General Hershey said that selective service would have a very tough job meeting the 3,500,000 Army goal even by the fall of 1952.

In the twenty-sixth report of the Preparedness Subcommittee of the Committee on Armed Services of the United States Senate, presented to the Senate on June 19, the following statement was made:

"Today the great weakness of America is lack of manpower. Of resources and technology and industry and arms, we have much; of men, we have few. We are, thus, weakest where our enemy is strongest, for the enemy's great strength is manpower."

That statement alone ought to be sufficient to persuade even the most doubtful that it is necessary for the free peoples to have a coalition if we are to be strong enough to meet this new menace of tyranny.

The free peoples must be united in the determination not to be enslaved by Russian imperialism and also must be powerful enough in the union of their military might to defeat Russia—should Russia start world war III.

In this unsettled world, it is clear that America must continue to aid those willing to make common cause with us. The American people are anxious to aid those who are anxious to aid themselves. But due to the immense draft on our resources for foreign aid, the time has come when all those who receive foreign aid must show aggressively their willingness to collaborate effectively with this program for defense. It is not enough for them to close their eyes and hold a hat in their hands and expect to wake up and find manna from America. There is need for the European countries to make a greatly increased effort in the direction of their own defense. As of now they are far behind what we are calling upon our own people to do—despite what we are doing for them in our aid program.

The time is so critical, the danger so great, and the response so necessary, that the time has come for all nations bent on freedom to get together for a common purpose and a common objective.

This struggle for freedom against slavery is world-wide and all out. Therefore, the tactics and the strategy and the plans of the free people must be world-wide and all out. No nation can go it alone.

All the free nations ask is that they be permitted to run their own governments in their own way, as their own people want them run, without any type of outside pressure or interference. On those ample and just terms peace is available today world-wide if the Soviet Union would sincerely endorse that simple formula.

It is not only necessary for us to know how peace may be obtained, it is also necessary for Russia to know and to realize that peace is possible on just terms.

This Nation is the last strong road block against world-wide domination by Soviet imperialism. The ultimate destruction of the United States thereby has been and still is a major objective of Soviet policy. This menace to our existence as a nation can only be met by an effective foreign policy.

Under the existing critical world situation, it is imperative that the foreign policy of the United States must not be permitted to depend solely upon the will of one political party. When any essential phase of our foreign policy is limited in its development and approval merely to one party, then that policy lacks the unity and backing essential to its success at a time when unity is absolutely necessary for its success. Inevitably, one-party policy comes under continuous political attack by the other party as a matter of the very character of politics itself.

Unless the United States adopts and maintains a foreign policy truly bipartisan in character, it is clear that during campaigns when the President and the Congress of the United States are standing for election, the whole free world will be unsettled during the full course of such a campaign since only the result of the campaign will determine the foreign policy of the Nation.

In this period of extraordinary world-wide crisis and danger, such uncertainty over a considerable period could be fatal. No further argument should be necessary to prove the absolute necessity of a bipartisan foreign policy in this extreme crisis.

A bipartisan policy means exactly what the words imply—a policy adopted by both parties. A policy by the party in power, handed to the party out of power, is not a bipartisan policy. A bipartisan policy can only be achieved by a contribution by both parties to its formation. The primary responsibility for the approach to such a policy inevitably must come from the party in power, since the party in power has the veto over procedure.

The North Atlantic Pact is a supreme example of the achievement that can be attained by a truly bipartisan policy. Since the problem of meeting the Russian menace is now world-wide in extent, it is clear that a similar approach is imperative with respect to bipartisan foreign policy on a world-wide scale.

If the crisis in today's world is as grave as all appearances indicate it is, then the hour is already late for a complete understanding between the two great parties in the United States as to how we are to meet this crisis.

There must be a give and take in this situation and there must be as much give and take as is necessary to achieve a common purpose. No possible excuse can be found for failure to agree on methods necessary to preserve our very existence as a nation.

An accord between the parties on these matters will not only provide a formula for peace, but also a constructive plan for the kind of action necessary to guarantee victory if Russia decides to begin world war III.

We must approach the various difficult problems facing us, not under the fear that war is inevitable, but with the fixed determination that by constructive action we can and will have peace.

Irrespective of what happens in Korea, Russia must be made to understand that further aggression can only result in another world war. If Russia can also be made to understand that it can have peace with this country by refusing to interfere with the lives of the people who don't want war, then there is in the making a successful formula for world peace.

Such a role by the United States will make us a strong leader of the free nations, able to defend ourselves against assault and also wise enough to lead the way to peace with all those who have a sincere desire for peace.

Midwest Floods**EXTENSION OF REMARKS
OF****HON. CLYDE R. HOEY**

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the CONGRESSIONAL RECORD a timely editorial from the Scotland Neck (N. C.) Commonwealth, written by Mr. Eric W. Rodgers, a thoughtful and well-informed editor of my State. This editorial sets forth the value of flood-control projects and emphasizes the great savings in life and property effected by proper flood control.

I wish to give my hearty approval to the general policy of controlling the floods along our rivers and streams, but I do not favor creating any more kingdoms on the order of the Tennessee Valley Authority; or such as is proposed for a Missouri Valley Authority. I think flood control should be authorized, controlled, and directed by the Congress and not by any authority created for that purpose.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MAYBE THE MIDWEST FLOOD WILL OPEN OUR EYES

For the past 3 weeks the Midwest area of the United States has been in the grip of a major flood. In fact, it is reported to be the most costly flood in the Nation's history from the standpoint of property damage. As the flood moved toward the Mississippi River, the estimate already was \$750,000,000 damage, with 17 persons dead and 75,000 driven from their homes. The full story is being told this week as the flood moves into the Mississippi area, where it conceivably may increase the damage by many millions. In the path of the flood is the great city of St. Louis and the tremendously valuable agricultural area south of that point, not to mention numerous towns and small cities which are likewise subject to the ravages of the water.

The Corps of Army Engineers has waged the fight against such floods over a long period of time. But sometimes there is a major flood which overwhelms man's puny efforts at control and does tremendous damage. There also is another factor involved, that Congress will not appropriate sufficient funds to provide adequate flood control until after major damage has been done. For instance, there has long been before Congress a definite program for control of the waters which are now on a rampage, but Congress has never been willing to set aside the funds. Now \$750,000,000 is being washed down the river in property of individuals, and many lives have been lost. Those lives could have been saved, conceivably, had Congress appropriated only a portion of \$750,000,000 to control the same rivers which are now causing that much damage. The engineers may have not done enough and may have not gone further enough in their control program, but they have been limited by the funds which Congress was willing to appropriate.

All of which comes back to what is known as the "pork barrel" bill which comes before Congress each year. Years ago, some jackass, thinking that he was coining a very cute phrase in his opposition to expenditure

of public funds for relief of this sort, characterized the rivers and harbors bill as "the pork-barrel measure." The phrase has stuck because the politicians have used it, and the man who originally conceived of the phrase may have been the instrument of incalculable loss and damage to his country. But nevertheless every year when Congress gets the rivers and harbors bill before it, it is confronted with this same "pork barrel" argument, and the engineers and the public, which is involved in the various areas, are constantly fighting an uphill battle to obtain protection against the forces of nature on a rampage.

What is included in the so-called pork-barrel bill each year? Well, there are such things as dikes and dams along the Missouri and the Mississippi and the tributary rivers so as to hold back the waters when they rise to unprecedented heights. There are items like that providing for Buggs Island Dam on the Roanoke River to hold back the floodwaters of this great stream and end forever such ravages of nature. There are items such as the widening and deepening of Oregon Inlet and New Inlet and Carolina Inlet on the North Carolina coast so as to provide greater protection for the men who follow the sea, so that they may get into a safe harbor quickly in times of storm, and also that the fish may have passage of sufficient depth to travel into the inland sounds. There are also such items as the long-deferred project of deepening the Morehead City Channel and building a jetty out to protect Atlantic Beach from the ravages of the surf before it is in the sad plight of Wrightsville Beach and Virginia Beach.

But all these worthy items are classified as pork-barrel legislation by opponents. As a matter of fact, included in the rivers and harbors bill is much legislation for the benefit of the people and for the economic development of the country and for the protection of posterity.

At the present time the tremendous flood in the Midwest is said to have done \$750,000,000 damage. By way of comparison, nine and a half dams of the extent and cost of the Buggs Island Dam could have been built. A major portion of the Tennessee Valley development could have been handled with this money. Every channel and inlet on the east coast of the United States could have been deepened and widened and maintained and dredged for years to come with tremendous economic benefit to the people.

But because some jackass long ago designated such expenditures as pork-barrel legislation, probably because he was opposed to any social legislation with economic possibilities, there has been a tremendous uncontrolled flood in the Midwest these past 3 weeks, and the people of that area are paying the price.

The Red Poppy: A Communist Play Mr. Morrison, of England, Might Have Asked Stalin to Explain**EXTENSION OF REMARKS
OF****HON. ALFRED D. SIEMINSKI**

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. SIEMINSKI. Mr. Speaker, I am told that a recent Communist prize-winning play in the Orient was called *The Red Poppy*. It is an example of Soviet perversion. In his next article in *Pravda*, Mr. Morrison, of England, might well

ask Mr. Stalin to explain how the play is intended to promote peace and good will, a Kremlin-professed objective.

As you know, the red poppy is a symbol of freedom in the Orient. A classic Chinese ballet is called the *Red Poppy*. Communists borrow the title—as they have the words "democracy, peace-loving, and so forth—and spin their play of hate and perversion, thus:

Two ships come into port. One is Soviet skippered, the other American. The Soviet captain rallies his crew. "Look yonder," he says, "look at those poor, naked, bleeding American sailors lashed to the boom, being bull-whipped by their skipper." The Communist crew is aghast.

The Red captain, bellows: "Go yonder to that capitalist tub of blood. Fetch those poor, naked, bleeding Americans. Bring them to our good ship, freedom's ship, the *Red Poppy*."

An Astounding View From MacArthur**EXTENSION OF REMARKS
OF****HON. GUY M. GILLETTE**

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Astounding View From MacArthur," published in the *Des Moines Register and Tribune*, of July 31, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ASTOUNDING VIEW FROM MACARTHUR

There was a paragraph or two in General MacArthur's address in Boston last week which we found pretty shocking. It was this:

"I find in existence a new and heretofore unknown and dangerous concept that the members of our Armed Forces owe primary allegiance and loyalty to those who temporarily exercise the authority of the executive branch of Government, rather than to the country and its Constitution which they are sworn to defend.

"No proposition could be more dangerous. None could cast greater doubt upon the integrity of the armed services. For its application would at once convert them from their traditional and constitutional role as the instrument for the defense of the Republic, into something partaking the nature of a pretorian guard, owing sole allegiance to the political master of the hour."

If this rhetoric has any meaning at all, it means that the armed services do not owe their primary loyalty to those who exercise executive civilian authority, and that a commander in chief is nothing more than a "political master of the hour."

In a democracy, all of our executives are "temporary"—a condition which General MacArthur obviously looks upon with some contempt. They are "temporary," because the people choose them, and may therefore dismiss them and elect others if they wish to.

It happens that the people elect the heads of this pitifully temporary executive branch of government. It happens also that the Constitution makes the Chief Executive not

only the supreme head of our Government, but the Commander in Chief over all the Armed Forces specifically.

When General MacArthur says that this concept of civilian executive authority over the armed services is new and heretofore unknown and dangerous, he is wrong three times. It is none of those. It is as old and as well-known and as safe as the Constitution itself. It is ridiculous to imply that the armed services could rush off and "defend the Constitution," while contemptuously disregarding the authority of the executive branch of government.

When General MacArthur implies that respect for the civilian executive branch casts doubt on the integrity of the armed services, he is again wrong. We may sometimes have weak executives; that is one of the risks that a democracy takes. But it is still a safer principle to have them popularly elected and to insure their authority over the military than it would be to give the military a free hand, uncontrolled by the elected civilian government.

This is inherent in the very philosophy of democracy, and it is terribly revealing for General MacArthur to speak his mind so clearly on this subject. The acts which brought about his removal for repeated insubordination now become, we think, a little more understandable.

A Reporter-Senator Reports on the Senate

EXTENSION OF REMARKS OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. MONRONEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "A Reporter-Senator Reports on the Senate," by the Senator from Michigan [Mr. MOODY].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A REPORTER-SENATOR REPORTS ON THE SENATE (By United States Senator BLAIR MOODY)

From inside, the United States Senate looks very different—even to one who has watched it closely from the Press Gallery for 18 years and long ago came to know and like most of its Members. I found that out on my first roll call.

To even an intimate onlooker the Senate gives the impression of a leisurely gentlemen's club—which uses up some 10 months a year to do a 3 months' job, enjoys free haircuts, engages in bitter but quickly forgotten flare-ups, and customarily practices a unique form of mutual insult, by neglecting to stay around and listen when one of its Members sets out to save the world by what may be (to him, at least) a history-making speech.

From the gallery the Senate seems a body whose own rules frequently tie it into knots. It is a group that makes a great deal of noise about economy but has continued year after year a system which neglects to give its Members adequate information on where money can be saved without damaging the public interest, and where it can't. It is an organization that can turn a 500-word point of argument, into a tintinnabulation of 10,000 silvery phrases. It enjoys a singular code of intramural courtesy and personal camaraderies, even among men who endeavor regularly to chop up one another into political ham-

burger. It also has a high average degree of ability and devotion to the public interest.

Senators are popularly supposed to have worries only 1 year in 6, when they stand for reelection. This, theoretically, leaves them with plenty of time to cogitate over the problems of the world and become expert before each issue reaches the point of decision. The general impression in the Press Gallery is that Senators are not exactly overworked.

Not all of these impressions, absorbed by osmosis during nearly two decades in the corridors and cloakrooms, of course, are wrong. But it is surprising how the perspective changes when the same set of facts are viewed, even more intimately, from within.

It still seems true that, while it undoubtedly is the world's greatest deliberative body, the Senate is also so deliberate that the result adds up to procrastination. As a member of the Press Gallery I could never see any reason why Congress should stall away the first 4 or 5 months of every year doing almost nothing, and then rush through legislation just before a series of midsummer deadlines without adequate consideration of many points on their merits. I can't see the reason for that yet.

The waste of time through individual wordiness is as irritating downstairs as upstairs, if not more so, because, believe it or not, the job of being a Senator is tougher, and more exacting, and requires more hours of harder work than being a Washington correspondent.

There seems no way—short of a change in the Senate rules requiring that all oratory be germane to the issue, as the House rule does—to make some of the boys sit down when they should sit down. They waste the time of men who have no time to waste. That is one reason for the custom of just not being there when general debate is in progress.

Yet, a great fund of solid information is developed on the Senate floor. If no committee meetings were allowed during Senate sessions, and speakers were required to keep to the subject, there would be a higher average understanding of what each issue is all about when the roll is called.

My education as a Senator began with my first roll call. The issue was whether the MacArthur hearings should be open or closed. As a newspaperman I have always been for open covenants openly arrived at. My instinct was that the MacArthur question had become political and the country should have every scrap of information about it.

The vote was going to be close. On the first and crucial roll call it was actually 42-40. As I entered the Chamber a Republican from the eastern "internationalist belt," for whom I have always had especially high regard, said casually, "You're not going to vote to close these hearings, are you?"

As a new Senator, just hiring my staff, I had been forced to miss the outline of the case by the chairman of the Senate Military Affairs Committee, Senator RICHARD B. RUSSELL, of Georgia, and also the heavy attack from across the aisle. I told my Republican friend, "I don't see how I can. But I'm going to find out about it now."

I walked down the aisle to talk with the majority leader, Senator ERNEST W. McFARLAND, of Arizona—seated front row, center-aisle-left. One of the sharpest changes of opinion resulting from my move from gallery to floor was in my attitude toward McFARLAND. As a reporter I rated him quite a good fellow and a pretty fair choice for the leadership. From the floor he is tops on both counts. He knows how to handle men. Several of my old colleagues upstairs asked me later whether I had gone down to get my marching orders. As a matter of fact, it was just the opposite. This was a conversation I shall never forget.

I whispered in his ear, "Ernest, I hate to leave you on my first vote. But I don't see how I can vote for closed hearings. You know my newspaper background. Why don't we open them up?"

Here was a defection which might reverse the result of the roll call. McFARLAND never batted an eye. He whispered, behind the back of his hand: "That's all right, BLAIR. I'll never ask you to vote against your convictions." Then he added: "This vote is not political. DICK RUSSELL is absolutely adamant that it would be impossible to conduct these hearings in the open without letting information out to the enemy. Vote as you like, but I'd advise you to talk with Dick."

Back up the aisle, I expressed my position to the Senator from Georgia. "That's all right, Blair," he said. "We're all independent around here. Heaven knows, I'm off the reservation often enough."

I asked RUSSELL to come out into the cloakroom and explain why he felt the hearings could not be opened. He pointed out that all of our secret war plans, all of the private teleconversations between MacArthur and the Joint Chiefs of Staff had been asked for by the committee. It wouldn't be possible, RUSSELL argued, to run the hearings open up to a point—with the Senate caucus room jammed and the klieg lights glaring and television cameras rolling—then shoo everybody out while General MacArthur or General Bradley or Admiral Sherman disclosed a bit of secret information, then herd the crowd back in. The story of our policy in the Pacific, as each witness saw it, was a single piece. If he could not speak freely, the hearings would be worthless.

"Tass has ordered a transcript of these hearings," Senator RUSSELL told me, as I already knew. He then explained the system by which verbatim coverage of these hearings, with only vital secrets deleted, quickly were made available to the press. "I am not going to let them have any of our war secrets with my vote," RUSSELL said. By the time he had concluded, I had decided RUSSELL was right.

No one had tried to pressure me or even asked me to change my vote during those hours off the reservation. And my respect for the judgment and responsibility of the Senate leadership had been enhanced.

I have found that to be the system in this gentlemen's club. The leadership explains the situation, but you make up your own mind. If you cannot go along, the leaders assume you have your own reasons and respect your right of independence. I had never so fully realized that as a newspaperman.

The different perspective one gets of the Senate from an inside view has many aspects. For example, I have felt critical for years of the sparse attendance on the floor during all but final phases of a debate, even on many important issues. As a newspaperman, I often found myself interested in the presentation of some Senator, obviously obsessed with his subject, informed, analyzing it well. More than once, from the gallery, I thought to myself that if these statesmen would only stay on the job and listen to one another, some of their votes would be more intelligently cast.

Yet since my appointment to the Senate, I have found it difficult to spend time on the floor myself. There have been presented in debate a number of important matters by Senators for whose views I have the greatest respect, but I have been able to hear them only in what has been, to me, inadequate fractions. Nor has it been, as I sometimes faintly suspected of other Senators, that I have been spending my afternoons at the ballpark.

To keep up with what has been going on, I have had to assign two members of my staff to capsuling, on a sheet or two of paper,

what has been said by the leading proponents and opponents of each issue. This system has seemed very unsatisfactory to me. I would like to be privileged to hear in full the arguments for and against each proposal on which I must vote. There just isn't time.

I am conscious of many shortcomings as a newspaperman, but during 28 years in the profession I can never remember having been accused of laziness. The blunt fact is that I have never worked so hard or so long in my life as during these months as a Senator.

Part of this, of course, results from newness in the office. I get a large number of invitations to speak in my State, which I endeavor to accept when they are for week ends and therefore do not interfere with Senate business. On a recent week end, for example, I spoke at three meetings, only one of which was political, on a Saturday night. I had planned to stay overnight in Detroit to attend a picnic being given in my honor at Portage Park, near Jackson, the next afternoon, and return to Detroit that evening to speak again before an internationalist group.

Then Mrs. Eleanor Roosevelt urged me to appear on her television program the same Sunday afternoon in New York to discuss the issue of inflation. As a member of the Senate Banking and Currency Committee, I have deep convictions that to allow skyrocketing prices to burn out the substance of our economy at a time when we need internal as well as external strength to assure our own survival would play into the hands of the Kremlin. I did not see how I could refuse. Yet the Portage Lake affair had been arranged in my honor by men whom I regard highly, and it was too late to change the date.

I made the three meetings in Detroit Saturday evening and caught the midnight air-coach to New York. Getting to bed about 5 a. m., I slept until early afternoon, participated in Mrs. Roosevelt's discussion, caught the 4 10 p. m. plane back to Willow Run Airport, Detroit, arriving at 6 55. At Willow Run there was a little group to meet me. They announced that they had hired a small plane to fly me the 40 miles to the picnic, then back into the old Detroit City Airport, which is too small for the modern big airliners. In a little four-seater Cessna, we landed at Waterloo, Mich., on an abandoned field with knee-high grass that nearly lived up to its name. We drove 15 more miles by car to the picnic, returned just as darkness fell, and ploughed our little plane through the long grass, just barely getting airborne as we reached the end of the runway. As our pilot skimmed skillfully past some woods, I was almost ready to swap my Senate seat for that old first-row spot in the Press Gallery.

Another phase that keeps the job from being a sinecure is the mail. Contact between the people and their Representatives is an essential part of democracy, and I often invite audiences to write their views to me—and to other Members of Congress. But in those early days there was in addition a huge pile of congratulatory mail. There were more than 1,800 letters of this type requiring particularly personal answers, and as this is written they are not all answered yet.

Surprising to a former newspaperman also is the quotient of misquotation that becomes a Senator's lot. Most news stories are accurate. But because I told a recent meeting of the Detroit Bar Association, during an appeal for a return to an unpartisan foreign policy, that the extreme right often plays into the hands of the extreme left, I was quoted as saying Republicans are as bad as Communists. Obviously, the reporter had not been at the meeting, but had taken the word of a personable judge whose thinking lies slightly to the right of Louis XIV. A

correction was quickly and generously made, but I think I understand a bit better now the impact of a news story on a public man's appetite for breakfast.

Even without the mail and the speaking schedule, the job of being a Senator is proving far more exacting than my association with Senators had led me to suspect.

The core of the Senate is its committee system. In committee assignments the Democratic leadership gave me far greater recognition than I had any right to expect. I was assigned to Banking and Currency—which put me squarely into the anti-inflation fight, a welcome opportunity—and Executive Expenditures, which was equally welcome because I believe Congress will not make real progress in saving money until it alters its budgeting system.

When I was named to the Banking Committee, for example, a succession of witnesses had been urging Congress to destroy the dike of resistance to inflation. In order to cross-examine such witnesses it is, of course, necessary for a Senator to attend the committee meetings. These start at either 10 or 10:30 and often continue through the day, with an hour or so out for lunch, even though the Senate convenes at noon.

But the Expenditures Committee has been meeting at the same time as the Banking Committee. When the Banking group gathers at 10 30 it is sometimes impossible to attend Expenditures for half an hour. Before being named to any committee I had attended all of every session of the hearings on MacArthur and the Far East. But with two committees of my own running obviously my opportunity to hear the Joint Chiefs of Staff and others was limited. There were moments when I should have been glad to be quadruplets—in order to attend both the Banking and Expenditures meetings, the investigation of far-eastern policy, and be on the Senate floor itself.

The day, however, does not start at 10 a. m. I try to see all the people from my State who come in to see me, even if only for a moment. That means that the only time to transact office business is before 9 a. m. or late at night.

I have been reaching my office on most days shortly after 8, and for a few days, as I have already related, it had to be 7 a. m. This my old newspaper colleagues will recognize to be a substantial departure from custom.

Most Washington newspapermen know much of the complex internal web of friendships, resentments, personalities, and issues that make up the real fabric of the United States Senate. As in the relationship within the press gallery itself, you like many men with whom you often disagree totally. One gets to know the sincerity, or lack of it, the individualisms and idiosyncrasies, the personal convictions and the foibles, and the chance possession of great power on some particular question that sometimes is decisive in molding the great policies of our time.

Party lines sometimes mean much, one finds in the Senate; sometimes little. The best public men never expect a Senator or anyone else to follow them against his convictions. When I reminded President Truman, after my appointment, that I was a congenial independent and could no more be a rubber stamp Senator than he had been, his reply, with a big smile and strong handshake, was: "Fine, get the facts and vote your convictions and I'll be delighted."

The internal courtesy and consideration of Senate members for one another is great. It is a tradition. There are, of course, bitter jealousies and animosities, which periodically flare out. But Senators realize that the problems and pressures of varying parts of the country differ. They are gentlemen, even though in the broiling heat of political debate they may not always sound like it.

This is an unusual opportunity I have been given to serve our country, and, in these times, it is a unique challenge. As a newspaperman, one reports and interprets the facts and perhaps has a slight impact on the public opinion which basically guides men in public life. As a Senator, one responds to public opinion, comes to grips with his facts and votes his conscience.

I am enjoying the responsibility. And I'm going to do my best to make a contribution to the public interest.

Point 4: Charity Without Hope

EXTENSION OF REMARKS OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. CRAWFORD. Mr. Speaker, at a time when our foreign policies in the Orient are so ill-advised, it is alarming to note the essential falsity of the impressions given the American people about point 4, the administration and State Department's world relief program, by at least two of our leading magazines, both in recent articles.

Given the run of Life to tell about Asiatic misery and its possible remedies, James A. Michener, author of Tales of the South Pacific, has made use of supposedly true statistics to show the reader that Asia is less densely populated than the State of Rhode Island. Implied is the thoroughly false conclusion that since Rhode Island's superior standards in the face of density of population are attributable to the American way of life, it is only necessary to send some point 4 missionaries, financed by the American taxpayers, to the thin population of Asia in order to create a Pacific paradise with something of the romance of Mr. Michener's book.

Point 4 plenty is, of course a Fair Deal way of outdemagoging the Kremlin with promises of peace and prosperity. But must we even falsify the record in order to justify playing Santa Claus to the whole world, assuming, as I do not, that we must play Santa Claus in the first place?

Most dismaying on this score of trying to get at the truth is the confusion created by such careless journalism. I refer particularly, Mr. Speaker, to a featured article entitled "Point 4: Hope, Not Charity," in Pathfinder, July 11, 1951.

We believe—

Says the editor, in stating Pathfinder's bias, that—

we can best support freedom by printing facts without bias, because we think that all the facts are on the side of freedom.

Then why in the name of freedom were the essential facts of overpopulation and its relation to starvation in India not even mentioned in this article? Because they were inconsistent with the romantic appeal of the hope, not charity headline? Such treatment could not present a more completely biased

account of the problem. The truth is exactly the reverse of the headline statement; point 4 is a tax-supported charity, a dole, and presents, in the plain maternalism of its offering, no hope whatever for removing the "human misery, the chief incubator of communism," which—again quoting the article—"must be wiped out if the West is to survive. Point 4 counters the vague, rosy promises of communism with positive action for better food, better health, better schools. It may well prove a decisive weapon in the cold war."

Facts that weigh against the attainment of stated goals are carefully omitted in these articles—and in pleas before Congress for appropriations of the taxpayers' money to support these giveaway projects. These regular omissions confuse the Congress by making the critics of point 4 and similar schemes appear to be contending that the food supply of India, for example, cannot or or—admitting that it can—should not, be increased. This implication is plainly false. But if the reason for such efforts be stated as self-interest because "it may well prove a decisive weapon in the cold war," that is even more false.

It is, of course, statistically true that "the average Indian farmer produces about one-twentieth as much as his American counterpart," to quote Pathfinder again. But it is not true that the farm workers of India and the United States are counterparts and therefore should, and could, become equal in welfare by the use of the same industrialization in India as in America.

Why are our farmers not counterparts of those in India? Because the Indian farmers are far too numerous and therefore have less land per capita. The land available declines in productivity per capita for every worker added to the labor force so employed. Does it follow, then, that we can or should remove these extra workers to city industries and thereby get them off the land for the sake of a mere statistical change? Would this put India on the American level of security? Most certainly not. The amount of food available is not increased by factories. It might even be decreased by less intensive culture for lack of the land labor needed.

Foreign investments will produce the machinery to do the work so as to free labor to make a living in factories at better wages, is the point 4 reply. But where are the better wages in terms of food to come from? No land is added to the farmers' equipment; if he trades his product for mechanical services, that does not increase the product which has to be divided up for feeding an ever-increasing population.

So, what it comes down to, is that American capital—not Indian capital—is supposed to invest in Indian industries so that labor may be employed in India to produce what we shall be asked to remove tariffs on in order to import from India things which we should produce by American labor at home, so that the wheat we have already loaned them can be paid for in dollars. Obviously this loan cannot fail to become chronic even if our Government does invest abroad

and undertakes to furnish food in exchange for Indian labor, a doubtful possibility at best.

This has all been described in the chapter of a new book, *Population on the Loose*, entitled "It's a Small World," written by Elmer Pendell. This misery of India, and the fact that the possible and desirable improvements in per acre—not per capita—yield by better-bred and better-nourished crop plants cannot possibly wipe out "human misery, the chief incubator of communism," is clear also from any reasonable and full understanding of the earth's content and capacity for population.

Mr. Speaker, as a member of our Committee on Interior and Insular Affairs, I have seen with dread the explosive situation in Puerto Rico; their labor has even been transported to the beet fields of my district in an effort to relieve their misery temporarily. I know that there is no possible result but pyramiding difficulties in any program other than a direct attack on the birth rate, while in desperation we slow down programs to reduce the death rate.

There will soon be no surplus food in North America; this is clear from the rate of our own growth in population. Even less can there be any surplus coming from Russia. The Kremlin's program for breeding cannon fodder to supply "operation meat grinder" makes that certain. To make this clear to the Congress, I present a few paragraphs from Robert Cook's chapter, *Two to Two Billion*, in his *Human Fertility: The Modern Dilemma*, which follow:

The new pattern of a balance in numbers, through deferment of deaths and births which caused the leveling off in the Western World, has hardly begun in Asia. Hence a population explosion on that already overcrowded continent is a disturbing possibility.

In India an upward trend due to a minimal impact of the new techniques has been developing for more than a half century. The British conquest of the subcontinent began about the time of the American Revolution. Nearly a century elapsed before British India experienced the full effect of a discontinuance of local wars between the native princes. Then the British pax plus at least a minimum public-health program was reflected in a speed-up of population growth.

In comparison with what the United States has been able to do in Puerto Rico, the British influence in India has been less pervasive. Starvation, disease, and destitution still continue to take a frightful toll. Between 1875 and 1900, it is estimated that nearly 24,000,000 people died of famine. In 1945 alone, some 5,000,000 died. Many millions are chronically underfed, with a diet yielding not more than 1,750 calories per day. Cholera has continued as a constant threat. Between 1900 and 1930, deaths from this disease alone totaled over 10,000,000. Plague has caused about 13,000,000 deaths since 1896.

In spite of these flare-ups of famine and disease, India's population has grown, somewhat irregularly but with increasing speed. The annual gain of births over deaths is now well over 3,000,000 per year, and the population is increasing about 12 percent per decade. Between 1921 and 1941, years of sustained increase, India added 83,000,000 to her population, which now numbers near a half billion. Said the India Health Survey in 1945: "This history of the growth of population in India,

therefore, seems to illustrate the contention of Malthus that disease and famine impose checks on an unlimited growth of population. . . . We recognize that the advance of science, careful planning, and concentrated effort on the part of the community to develop the country's resources may make possible the support of a largely increased population on even a better standard of living than that which exists at present. We feel, however, that such measures can constitute only a temporary expedient, because a limit to economic productivity will be reached sooner or later, and uncontrolled growth of population must, as far as we can see, outstrip the productive capacity of the country."

The rapid gain in numbers in India since 1880 strikingly illustrates a remarkable phenomenon of population growth. The improvements in health and living conditions which the British were able to initiate in India have been, in terms of western standards, quite insignificant. Yet, trivial as these improvements might superficially appear to be, they have proved ample to initiate a profound change in the population picture. Long before there is nearly enough food for an adequate diet, the first effect is to lower the death rate and to increase the number of survivors. What the United States so abundantly demonstrated on the single island of Puerto Rico, the British have proved for a subcontinent, where the doubling of numbers amounts to hundreds of millions, and where the overwhelming majority of people are still very near actual starvation.

Across the Himalayas from India lies China, the home of a full quarter of the human race. China is a land of demographic mystery and paradox. For ages, the land of China—much of it man-made desert—has supported the densest continental population found anywhere on earth. Even to this day, no one knows just how many people live in China, for a census has never been taken. Guesses by experts place the total at between four hundred and six hundred million.

Malthus' principles are perfectly illustrated in China. A high birth rate is kept in check by a high and fluctuating death rate—which over the years holds the number of people virtually at the limit of subsistence. Any moderation of the grim conditions of life is balanced by an immediate increase in number of people at a new, precarious balance. Like Puerto Rico, China is a population powder keg which could be ignited by bungling good intentions. If a full-fledged public-health program could overnight be initiated in China, the increase in numbers of human beings could easily total between ten and twenty million per year.

The other single large mass of world population is represented by the 193,000,000 citizens of the Soviet Union. There we find a unique situation. In many parts of the world, populations are growing by default as a result of the impact of vital tools on death rates and birth rates. Since the disappearance of Hitler and Mussolini, no country on earth except the Soviet Union is actively promoting a larger population. The Communist masters of Russia have a conviction amounting to a mania that overpopulation is impossible. This doctrine has obvious political implications, since it tends to swamp the world with Communist babies. Large families are encouraged by an elaborate propaganda campaign; mothers of six or more children are showered with honors and adulation. Even without this program, Russian population has grown rapidly, from 40,000,000 in 1800 to 193,000,000 in 1950. It is expected to reach 250,000,000 by 1970.

Mr. Speaker, need more be said to show how futile a point 4 program is when propounded as a "decisive weapon in the cold war" with the Kremlin?

Are Family Allowances on the Way?

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 2, 1951

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Are Family Allowances on the Way?" by J. Benjamin Beyrer, assistant professor of social work at Florida State University. This article appeared as a feature in Public Welfare for April 1949, the monthly journal of the American Public Welfare Association.

This article is indeed a provocative one, which deserves the consideration and study of every Senator. It discusses a problem which eventually must be met in the reexamination of our entire social-security program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE FAMILY ALLOWANCES ON THE WAY?

(By J. Benjamin Beyrer)

Not so long ago we were living in a predominantly agricultural era; today our economy is predominantly urban. In that change have come a multitude of problems—one of which is the fostering, maintaining, or restoring of family stability. Formerly the family was a satisfactory economic unit as well as a social unit. The cost of clothing and feeding children was small, and many of their needs were met from within the family's own production of goods and services.

Children had economic value in those days. Within a few years after their birth they were performing useful chores that equaled or exceeded the cost of their care. Having and raising children was a profitable business. Now in our city-dwelling and mechanized rural society it seldom is. With the best of social and health reasons in mind we have enacted legislation regulating child labor. Present-day Betty and Johnny have few or no chores to perform, and they spend more of each year for more of their childhood in school.

The family economic security once contributed by the labor of children is largely a thing of the past. The cost of educating and rearing a child has increased astronomically. Family allowances are a means of maintaining family stability. The United States is the only major industrial nation in the world still without such a system.

DISTRIBUTIVE JUSTICE

Family allowances? What does the term mean? Not even all social and public welfare workers are familiar with it. Briefly, it is a system of periodic payments to anyone who has the care, custody, and maintenance of a child. It has been called by its detractors a "baby bonus," a "diaper dole," a system for producing more cannon fodder, an indiscriminate subsidy to the birth of more defectives. Those who believe in its great social values have referred to family allowances as a "children's charter," "the greatest single reform since the adoption of free education," "salaries for mothers," while some think it might best be called a system of distributive justice.

Dramatically we had presented to us not long ago in the newspapers of Florida the pitiful story of parents who wished to give away and get rid of their seven children, because they no longer could endure their inability to meet the minimum basic needs

of these children. The plan which is proposed will guarantee the minimum basic needs of all children.

Children have more than a dollars-and-cents value to their parents. They mean so much in joy, love, and downright fun. But, we must be realistic—the more parents think about the welfare and future of their children, the cost of their education and nurture, the less likely they are to have them. Nearly everyone knows that the number of persons in the American family grows smaller and smaller. Why? Because most young couples are confronted with a voluntary choice of poverty for the sake of children. The use of artificial and natural means of achieving planned parenthood is believed to have become more widespread.

INSURES ESSENTIALS

The philosophy of family allowances is supported in the Federal income-tax exemptions for children. However, it is unfortunate that at present those with incomes in the higher brackets get the greater tax savings. Those families of low income derive almost no tax relief from the Federal exemptions for dependents. Our existing old-age and survivors' insurance program, benefiting only those over 65 or the survivors of persons who had covered employment is available to only a fraction of our population. It does not meet the need of the great mass of employed parents in caring for their children.

Family allowances will meet the hazard of providing properly for the maintenance of children by placing a floor under a family's costs of child care. They are not meant to provide more than limited and partial support. They are a reward to those who perpetuate our country. Proper care of the coming generation insures the greatest asset for the future our State and Nation can possess—a healthy and educated youth. Family allowances will insure for every child the basic, essential, staples of life—food and clothing.

With family allowances we also gain anti-depression insurance. Consumer purchasing power is increased and stabilized. In a period of widespread unemployment there will be less totally decreased earnings. With the same total family income the family without children can easily maintain twice as high a level of living as that family with three or more children, or can accumulate savings. Productivity is the basis for present-day wages and salaries. Wage rates are based on a man's work and not in the size of his family. To a degree family allowances adjust income to the number of dependents.

It is common knowledge that families at the bottom of the income ladder have more children than those on the higher rungs. This has disturbing possibilities on the size and quality of future generations. To be sure, the slice of security is wafer thin for the families in which a large number of the children that will be our future generation are growing up.

REDUCES INEQUALITY

The single man who is a tool and die maker, or farmer, or mason's helper works side by side with the man who is the father of five children, yet each receives the same wages. In fact, the real wages of the man with a large number of dependents may be considerably less than those of the wage earner who has no children or whose wife is employed outside the home. "From the social and national point of view the man who undertakes the responsibility of rearing new citizens under decent standards is more deserving, and from the financial point of view, he bears too great a burden."¹ Family allowances are a means of cutting down the high spots and filling in the valleys of these

burdens; they are a means of smoothing out inequality. Those parents who contribute the lifeblood of our country and State are entitled to the Nation's help in reducing their unequal handicap.

In our country during World War II, family allowances were paid for wives and children of servicemen, without any means test, without any proof of need, but merely by virtue of being the wives and children of a serviceman. The tremendous social gain that this represented has temporarily been lost. It must be followed up.

This is not a hair-brained idea dreamed up by an impractical social worker or professor. Family allowances paid for all children is a democratic system, and as it makes possible more equitable distribution of the pay for goods and services it is a religious precept. No realistic parent will be encouraged to produce additional children for the small benefit of \$7 a month. Neither Canada or any other country using family allowances found any increase in its birth rates attributable to this system of benefits.

That the idea has already been accepted in principle in our country is illustrated by the payment of additional salary for additional dependents by the Columbia Conserve Co. and Bennington College among others. We tax the bachelor and spinster for the support of public schools, playgrounds, and school lunches though they have no children.

The Hansen report released by the National Resources Planning Board mentions family allowances as one of the definite steps needed in our country to maintain a high level of consumption and production. Now, for reasons which need not be considered here, it is quite customary for our country to follow other nations about 40 years later in enacting social legislation. But, that social lag has now about exhausted its 40-year delay. The time has come for one of our States to take the action that will eventually bring our Federal Government into the scene.

FINANCE PLANS

We may expect the same steps in social progress to be followed in obtaining family allowances that our States and Nation pursued in moving to unemployment compensation, aid to dependent children, aid to the blind and others. Therefore, we may expect that first one State, and then several others will adopt plans for family allowances, and eventually our Federal Government will participate. Wisconsin, Illinois, California, Indiana have scored notable firsts in social legislation. There is no reason that Florida should not be added to this historically honorable list.

The country to the immediate north of us, our good neighbor, Canada, has had family allowances in effect since 1945. Mexico has family allowances. In Australia, New Zealand, Belgium, Denmark, France, Italy, Norway, Rumania, Russia, Spain, Switzerland, Sweden, Argentina, Brazil, Chile, Colombia, and Uruguay there are systems of family allowances.² England's system of family allowances is now in operation.

Not only does the writer wish to propose a system of family allowances for Florida, but the author is going to place his head on the block so to speak, by suggesting some additional tax sources to finance the plan. As nearly as can be estimated at present, not all of these taxes would be necessary to finance family allowances. The additional sources are suggested so as to provide some alternatives.

Some features of the system would be:

1. First, it is proposed that the State of Florida pay \$7 a month as a family allowance for each child under the age of 16.

² U. S. Department of Labor, Family Allowances in Various Countries, 1944-45, Bulletin No. 853, Washington, 1945, pp. 1-21.

¹ R. B. C'rry, Family Allowances in Canada, Public Welfare, March 1948, p. 50.

2. There would be no means test.

3. To be eligible the children of the grantee or payee must be in regular school attendance between the ages of 6 and 16 except during vacation periods, unmarried, and living in Florida, and have resided in Florida for 1 year preceding application. The latter requirement is necessary in view of Florida's transient population.

4. Payment will be made only to a parent or relative providing maintenance for the child. Ordinarily this will be the mother.

5. Administration of the system will be vested in the State welfare board. This agency is chosen because it is already familiar with meeting human needs from public funds, and with the verification of eligibility. The Florida Industrial Commission is suggested as an alternative administrative agency.

6. It is granted that the cost of maintaining a child of 14 is greater than caring for one aged 2, but the program takes a long-term view of 15 years, and the benefits are not expected to meet the total cost of child raising. It is also true that in the family of six children or so, the cost of maintaining the fifth and sixth child is probably less than that of the first children by virtue of handed-down clothing, school books, and toys. Nevertheless, the program has among its purposes that of rewarding parents, and the tenth child is as valuable an asset to the State as the first. By keeping the flat scale of \$7 monthly per child, administrative problems and costs are greatly reduced.

7. The benefits are presumed to be used directly or indirectly for children and we may rest assured that in 99 percent or more of our families they will be.

8. Our low ADC grants can be supplemented by the \$7 monthly family allowance.

9. How the money will be spent is a question that no doubt has arisen in the minds of many. Since family allowances provided from funds raised by taxation represent a transfer of purchasing power from those of higher income, who will pay a large part of the new taxes, to those of lower income, who will pay none or only a small part of the new taxes, this will mean that the money will be spent on the necessities of life. From the experience of many other countries we can be certain that there will be increased purchases of milk, clothing, better housing, school books, medical care, footwear, and the more nutritious foods such as meats, cereals, fresh and frozen vegetables and fruits. For some it may mean a raincoat and for others children's books that they might otherwise never even see.

All children in the State who are eligible will receive the benefit regardless of the income of the family. This means for example, that a family with an annual income of \$15,000 and one child would receive a family allowance in 1 year amounting to \$84, and might easily pay additional taxes to support the program amounting to \$300 a year. The family with an annual cash income of \$800 and one child would also receive a family allowance of \$84 a year and perhaps pay no additional taxes to support the program, or taxes so low that \$5 would be a more likely figure.

NO MEANS TEST

By eliminating the means test the program becomes available to all. There is no stigma of relief or being only for the needy. The children of Judy O'Grady and the colonel's lady receive equal benefits under the program. Eligibility is terminated by leaving school, attaining the age of 16, moving away from the State, death, or marriage.

There is more likelihood that the benefit will go directly to the child when the mother is the payee. The mother will seem more

rewarded for her efforts, and the income to the mother may add to her status in the family group and make for more family stability. The father or other relative within the first degree of blood relationship may be grantee or payee.

The State and district welfare boards are already acquainted with the requirements of Federal grants-in-aid, and it is hoped that Federal participation will soon become a part of the system. The State welfare board also has field or unit offices in every county of the State. The State and district welfare boards are already providing services to people without a means test, for example, child-welfare services and adoption services.

A simple application form would be filed with the district welfare board which issues to the grantee a booklet of coupons or checks redeemable in cash. This booklet contains the simple terms under which payments cease as mentioned in a preceding paragraph. The booklet will have one coupon for each month. The date of each coupon will be the monthly anniversary of birth. By using a booklet of checks or coupons the expense of monthly check mailing is avoided. The book of coupons can be issued for 1 year or 5 years or whatever length of time is practicable.

The program should have administrative costs not exceeding 1 percent of the benefits paid. Verification of birth and the other requirements can proceed after application. The program assumes that most people are honest when dealing with their Government. Penalties for intentional fraudulent use will be provided.

TAX BASIS

There are 582,589 children in Florida under the age of sixteen according to the seventh census of the State of Florida.³ While less than this number attend school, it is to be hoped that one of the social accomplishments of the program will be that all children under sixteen will remain in school. There will be less necessity for parents to feel that they must have the earnings of children in this age group. At \$7 a month this means a total cost of approximately \$4,000,000 a month. This will include the administrative costs, because not all of the children under sixteen will be eligible; some will not have resided for 1 year in the State, some will be married, and some of the parents in the upper income brackets will probably not bother to make application for the benefits.

There has never been a popular tax. No tax will be agreeable to many people. Any new form of taxation must be considered the lesser of several evils. With the help of Wilson K. Doyle⁴ it is proposed that the program be financed from the general revenues of the State which will be increased by some of these means:

1. Better collection of existing taxes, particularly the intangibles tax.

2. Reduced cost of tax collection and administration.

3. A tax of 15 percent on all hotel, tourist court, and rooming house bills that exceed \$3 per day per person. The same tax will apply to all rentals for less than 6 months' duration that exceed \$75 per month per family unit.

4. A specific sales tax on luxury items, such as beer by the bottle and bottled soft drinks.

5. An increase in the existing State inheritance tax.

6. A State gross income tax of 1 percent on personal income with an exemption of \$2,500 for married persons and \$1,000 for

³ Commission of Agriculture, the seventh census of the State of Florida, Tallahassee, 1945, pp. 64-67.

⁴ Head of the department of public administration, Florida State University.

single persons. This tax to be one-fourth of 1 percent on manufacturing, wholesale, and corporate income. A constitutional amendment will be necessary to impose this tax.

In conclusion, it can be pointed out that while the United States has trailed many years behind the other countries of the world in social legislation, the day has come for us to adopt family allowances. And in the same historical perspective, as Florida and several other States inaugurate programs of family allowances, then the Federal Government will participate in the program and give the help of that Government's greater power to levy and collect taxes.

VARIED BENEFITS

For the parents, there are many possibilities, both material and spiritual, of which we can name but a few. For those parents who have willingly sacrificed many things that they might legitimately have had in order that their children might have adequate food, shelter, and medical care, allowances would release a part of their income for their own use for things which are beyond the bare necessities of life. Perhaps greater than anything else, there would be hope and courage for the future. Thus, they might have a share in the full life.

For society, there are the benefits of good citizenship, community health, cooperation, and prosperity. There is the possibility that the proper number of children in each family may produce a better balanced community and react favorably on the general prosperity of the community. There is the possibility of saving part of the enormous sums society now pays to meet its health bills, its juvenile delinquency and its poverty bills. It is time to match modern knowledge with the appropriate action. Let us bring our social legislation into balance with scientific achievement. A brighter world awaits our children.

The President of the United States Keeps a Pledge to the People of Asia, in Spite of Being Whiplashed by Livid and Baffled Critics

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. SIEMINSKI. Mr. Speaker, about a year ago the President of the United States made an eight-point pledge to the people of Asia. In spite of being whiplashed by livid and baffled critics for hewing to the promised line, the President kept his word. A lesser man would have quailed; some did. Happily, not Mr. Truman.

It was Saturday night, September 9, 1950. "Fight or die" was the password of our troops in the Pusan perimeter. Over the radio, the President addressed an anxious America. In the Korean struggle, he said:

We must keep clearly in mind what we believe in and what we are trying to do; we want the rest of the world to understand our aims and our hopes.

To fulfill this aim the President in simple language outlined eight points

of American foreign policy in the Far East:

1. We believe in the United Nations.
2. We believe the Koreans have a right to be free, independent, and united.
3. We do not want the fighting in Korea to expand into a general war.
4. We hope in particular that the people in China will not be misled or forced into fighting against the United Nations and against the American people * * *.
5. We do not want Formosa or any part of Asia for ourselves.
6. We believe in freedom for all nations of the Far East.
7. We do not believe in aggressive or preventive war. Such war is the weapon of dictators, not of free democratic countries like the United States.
8. We want peace and we shall achieve it.

The President said:

We invite all the nations of the world, without exception, to join us in this great work, the Korean struggle has shown us again all the misery and horrors of war.

The North Koreans had learned that the penalties of armed conflict "fall as heavily on those who act as tools for the Communist dictatorship as they do on its victims."

There will be no profit for any people who follow the Communist dictatorship down its dark and bloody path.

He continued:

Against the futile and tragic course of dictatorship, we uphold, for all people, the way of freedom, the way of mutual cooperation, and international peace.

At this critical hour in the history of the world our country has been called upon to give of its leadership, its efforts, and its resources to maintain peace and justice among nations.

We have responded to that call. We will not fail.

Critics, you agree, do you not?

We Menace the Panama Canal

EXTENSION OF REMARKS OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. BROWNSON. Mr. Speaker, on Monday, June 11, the Subcommittee on Federal Relations with International Organizations of the Committee on Expenditures of the Executive Departments held hearings on H. R. 3406 and H. R. 3697, two identical bills which would create a commission to make a study of the administration of overseas activities of the Government and to make recommendations to Congress with respect thereof.

I was particularly impressed with the testimony of Edward J. Gaskin, a Panamanian, who, as a noncitizen employee of the United States Government, heads Local 900 of the Government and Civic Employees Organizing Committee—CIO. Under my unanimous-consent request, I am printing in the RECORD at this point an article by Harry Conn, member of

the staff of the Public Affairs Institute, which appear in the July 9 New Republic and which deals with the work of Mr. Gaskin and with the problems in the Canal Zone which might well be surveyed by a commission created under provisions of H. R. 3406 and H. R. 3697. The title of the article is, "We Menace the Panama Canal":

Emile Benjamin, skilled carpenter, is employed by the United States Government in the Panama Canal Zone to teach carpentry. Though not an American, he must abide by American laws and customs that rule the 10-mile stretch across the Isthmus.

Benjamin is a Negro and teaches in a segregated high school. Segregation of blacks and whites is one of the American customs brought to the Canal Zone when racial segregation and discrimination were unknown. Benjamin cannot venture into the better hotels and restaurants in the zone—they are reserved for the whites. He needs more money on which to live so he also teaches at night school. Here several of his students are white Americans and on the day they complete his course and are hired as carpenters in the zone they will be making three, four, or five times as much as their instructor.

Emile Benjamin is one of the 15,100 non-United States citizens employed in the Canal Zone, who live as aliens in their own country. Fortunately for America, Benjamin has not been lured toward communism, and neither have most of his fellow workers. Yet today, the Panama Canal, strategic artery of America's defense, is an area alarmingly fertile for Communist impregnation. And the American administration of the Canal Zone, in the mode of nineteenth century colonization, has made this possible.

In the mind of the native Canal Zone worker, America and American democracy do not stand for basic freedom for all citizens. America means to them low wages, high living costs, discrimination, and segregation. Miraculously, in such an atmosphere, no native leader espousing the cause against America has risen. This is due, at least in part, to the fact that one of the foremost native leaders in the zone, Edward A. Gaskin, has been tirelessly fighting for zone workers and just as tirelessly preaching the true principles of American democracy.

A Negro, short and stocky, 33-year-old Gaskin is a principal of an elementary school in the zone and president of local 900 of the CIO's Government and Civic Employees Organizing Committee, to which a majority of the zone workers belong. He led the fight several years ago to organize this union in opposition to the United Public Workers, eventually expelled from the CIO under charges of Communist domination. That successful battle, so completely ignored by the American press, is believed to have removed a genuine threat to the Canal.

Gaskin is visiting the United States. He sits on the edge of his chair and with pleading eyes presents a picture of injustice with an eloquence rarely heard today. Gaskin refers to 1903 when the United States leased the Canal Zone from the Republic of Panama in perpetuity and amazed the world by building the "Big Ditch." As part of a "gentleman's agreement" with Great Britain the United States developed a Caribbean wage scale under which the workers of the Caribbean countries were paid approximately what they would receive in surrounding areas. This was deemed necessary in order not to upset the economies of these countries. So, two pay scale were established in the zone, a local rate and a United States rate. Today the average local-rate pay is 55 cents an hour compared to the American rate of \$2.15, a fantastic spread.

The Caribbean wage scale did not work extreme hardship in countries such as Costa Rica, Colombia, Jamaica, and Trinidad where the cost of living was low. This was also true of Panama in 1903 when the American dollar was worth five times the Panamanian Balboa. But today the two currencies are used interchangeably. Prices in the zone are at least as high as in the United States, and it costs as much for a Panamanian to live as for an American. Milk is 27 cents a quart in Panama today; eggs are 82 cents a dozen, and other prices are comparable down the line. Their Jim Crow housing, almost all lacking modern plumbing, stands in startling contrast to the clean and modern quarters of the American workers.

Before the arrival of the Americans at the turn of the century segregation and racial discrimination were unknown practices to Panamanians. It is forever brought home that these are strictly American importations because when Panamanians leave the zone, even to cross the street to Colon, in the Republic, they leave segregation behind.

The Panama Canal Zone is the show window of democracy for all Latin America to witness. The sight has not been a pretty one for the many dark-skinned peoples of these countries to the south. The many citizens of Costa Rica, of Colombia, of Salvador who have contracted to work on the Canal in the last half century have returned to their lands with stinging words about the American system which metes out countless injustices to a man because he is of a darker race. Today Americans wonder why these people have no real heart for pan-Americanism.

The feelings of the people of Panama were vividly shown last November 3 when the Republic celebrated its Independence Day. School children, carrying the many flags of the United Nations as they marched, received warm applause. When an American veterans' group from the zone paraded with the Stars and Stripes they were greeted by a sickening silence. An editorial last January in the Panama Tribune, a respected weekly, put this silence into words:

"The administrative powers—the Bourbons—of the Canal Zone seem to have learned nothing about the changes in the world today; nothing of the advancing concepts among mankind, of new religious tolerance, of new understandings, of new social give and take. Nor do they seem to have forgotten anything they learned about the fallacy of human superiority and inferiority.

"Because a policy has been in effect over 'a number of years' it is not necessarily justifiable in principle in the light of changing conditions. The results cannot be said to be good when they are a cause of constant grievance and complaint. It would seem that in the forward march of the world's teeming millions, our friends in the Canal Zone are not only standing still, but feel that everyone in the parade is out of step but they."

This is the charge against the United States at a time when this country has undertaken to defend freedom, truth, and the rights of man throughout the world against those who would destroy it. Apparently, though, it has little concerned the Governor of the zone, Brig. Gen. Francis K. Newcomer, who told the Hoover Commission in 1949: "The organizational position of the Panama Canal has been satisfactory, and it is doubtful if it can be improved upon."

The State Department is apparently well aware of the seriousness of the Canal Zone problem. It was the American Ambassador, Monnet B. Davis, who sent Gaskin to the United States to study democratic trade-union practices, well knowing that he would also strive to reach the right people and present his case. However, the hands of the

State Department are tied. Action must be taken by the Defense Department which has steadfastly refused to alter present patterns in the zone fundamentally. As regularly as Local 900 of the CIO-GCEOC offers Governor Newcomer detailed recommendations for changes they are rejected. The most recent rejection was accompanied by the statement that "It is believed that this (wage) policy has been fully justified, both in principle and results, over a long period of years."

In September, Ed Gaskin will return to his native Panama and to his job in the segregated school system in the Canal Zone. His hope is that he can offer proof to his young, dark-skinned students that the benefits of a democracy are for them, too. "If we cannot do this," he said, "we cannot be responsible for the future of the Panama Canal or the security of the United States."

The Russian People

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article by Eugene Lyons:

A NEGLECTED ELEMENT IN THE WORLD EQUATION. THE RUSSIAN PEOPLE (By Eugene Lyons)

Opinion polls do not thrive too well under dictatorships. In the Soviet Union, besides, foreign journalists are carefully sheltered against free contact with the local population. Some of them have found it convenient all the same to apprise their readers, now and then, that Ivan Ivanovich, the average Soviet citizen, holds precisely the same views on home and foreign affairs as his bosses in the Kremlin. Why they should consent to transmit such nonsense is a mystery this essay will not explore.

The assumption that the rulers of Soviet Russia and the ruled see eye to eye is the tallest and most pernicious of the big lies nurtured by Soviet propaganda. It uncritical acceptance has been the distinctive hallmark of the regime's journalistic friends and press agents. We find it at the core of all pro-Soviet books. Its classic formulation was achieved many years ago by a correspondent who wrote that Stalin's ruthless methods fitted to the Russian character and folk ways in that they established Asiatic absolutism.

These writers unfortunately fail to explain why, if the views of the dictatorship and those dictated to are so harmonious, the Kremlin needs the greatest police force and the bloodiest terror in all history to hold down its loyal subjects. Even an authoritarian government hardly assigns a major slice of its resources and manpower to police purposes just for the fun of it. Facing the myth that the Bolshevik regime and the Russian peoples are one and indivisible, common sense cannot dispose of such realities as the following:

1. The political police establishment of the Tsars, the Okhrana, dreaded in its day and rightly reviled by the civilized world, got by with four or five thousand officials and operatives. Its Communist successors—the Cheka, GPU, NKVD, now MVD and MGB—requires more than 2,000,000, aside from millions serving as agents and informers, willingly or under duress, without formal membership in the police system.

2. In the darkest years of Tsarist oppression, political prisoners and exiles rarely exceeded 50,000. Today, according to the more conservative estimates, there are at least 12,000,000 prisoners in concentration camps, isolators, and penitentiaries, and millions more exiled to harsh Siberian, Arctic, and central Asian regions.

3. Chistkas, or purges, of every segment of the Soviet population, including the ruling party itself, are a constant feature of life under the hammer and sickle. At peak moments, such as the blood-trial period of 1936-38 or the panicky cleansings just after the recent war, literally millions are affected. But at no time in the last three decades has there been a complete cessation of the process of "liquidating" supposed traitors, deviators, spies, saboteurs, and other enemies of the people—a euphemism for enemies of the dictatorship. In the present phase, virtually every department of national life is being subjected to intensive purging, with war veterans, intellectuals, Jews, industrial, and collective-farm administrators among the most prominent victims.

4. The citizen's right to leave the country, which neither the Czars nor Hitler completely denied, does not exist under the Soviets. Attempts to escape without permission are punishable by death, but thousands take the risk continually notwithstanding. In effect the entire population is thus captive. The Kremlin knows better than any foreign experts that if the Soviet frontiers were opened, the most gigantic exodus in all history would follow.

5. When the Germans invaded the Soviet Union, the regime swiftly jettisoned its Communist slogans and propaganda, restoring old-fashioned appeals to patriotism, blood and soil, pride in Russian history. It even restored substantial religious freedoms; church bells, forbidden since the early thirties, rang out once more even over the official radio air waves. This dramatic reversal in the hour of national peril, after a quarter of a century of unlimited propaganda and terror, amounted to a confession that Communist indoctrination had failed utterly, that the government had not succeeded in selling its ideology to its subjects.

6. In the early months of the Russo-German war, before Nazi brutalities and insults had changed the climate of Russian sentiment, millions of Red troops surrendered without genuine resistance. The invaders were met joyously by the people of Byelorussia, Ukraine, and later the Caucasian areas. In no other conquered country did the Germans—until their own stupidity intervened to change the picture—find such eager cooperation on the part of the local populations.

7. Over a million Soviet men voluntarily donned German uniforms to fight against the Bolsheviks. ROA—the Russian Army of Liberation—organized by the Germans under command of a former Red army hero, Gen. Andrei Vlassov, counted more than 200,000 volunteers. It was held down to that figure by Hitler's justified fear that this army would turn against him after the defeat of the Soviets; actually nearly 2,000,000 Soviet citizens tried to enlist in this formation. At that the Vlassov army was the only significant force the Germans were able to raise among their enemies.

9. The most unfortunate of the secret agreements compounded at Yalta—an undertaking by Britain and the United States to force Soviet citizens liberated from prisoner-of-war and forced-labor camps to return to their native land—was made at Stalin's insistent demand. It was a demand without precedent in modern times. The "beloved leader" of victorious Russia knows that millions of his subjects, washed beyond the Soviet frontiers by the accidents of war, would try to evade repatriation. Despite the shameful American, British, and French use of force to drive them home,

hundreds of thousands—workers, peasants, soldiers, intellectuals, former Communists, a true cross-section of the Soviet peoples—succeeded in evading this fate. They chose freedom at the price of penury, sacrifice of homes and careers, persecution, and an outlaw status, rather than resume the hated yoke of communism.

9. Desertions from the Red Army occupation forces in Germany and Austria assumed epidemic proportions, despite the incredible American policy (in the early stages, at any rate) of driving the fugitives back to be hanged. The runaways included everything from simple soldiers to commanding generals, and even officers of the intelligence elite. To isolate its troops from contact with the local populations, the Kremlin has been obliged to impose drastic safeguards that in effect make its troops prisoners. Moreover, the occupation forces are replaced at frequent intervals to hold down the incidence of "infection" by western ideas. The stream of deserters has been slowed by these countermeasures but by no means stopped.

10. Not since Japan was opened to the outside world in the last century has any nation cut itself off so totally from the rest of mankind. There is every evidence of panic fright in the extremes to which Stalin now carries his efforts to seal off his prison-state hermetically against non-Soviet thought, culture, science. "Cosmopolitanism" and "kowtowing to the West" are the newly forged Soviet labels for the dread crime of sympathy for western ideas—a crime for which thousands of Soviet writers, artists, teachers, students, scientists, historians, and Communist officials are paying with their liberty.

This inventory could be continued to book length. It makes gibberish of the fable of unity between the Communist masters and their long-suffering slaves. The nature of an ailment can often be deduced from the medicine administered. The measure of the Russian people's opposition to their Soviet fate is in the vastness and ferocity and persistence of the Red terror.

Never before, in a world that included the Nazi and Fascist systems, has a state been compelled to develop such a colossal mechanism of surveillance and repression, terror and torture, censorship and intimidation. No government on record has felt it necessary to invent so many "crimes against the state" or to employ the death penalty so recklessly as an instrument of its rule.

The authorities as a matter of course tap the telephones of their subjects and open their mail. Every apartment house, office, plant, and subdivision of a plant, every high school and university and military installation, has its contingent of police overseers and informers. The secret police actually has branch offices on the premises of larger factories, mines, educational and scientific institutes, hotels, railroad stations. Every functionary important enough to have a secretary or chauffeur knows that these employees are reporting not only on his conduct but his political mood. No regime in the annals of man has diverted so much of its income and energies and personnel to internal security—to its own defense, that is to say, against its citizenry.

The notion that the peoples of Russia bend their necks meekly to the Soviet yoke is a cruel libel. It simply does not jibe with the unabridged compulsion applied by the government; with the hordes of political prisoners; with the perpetual alarms over sabotage and espionage and plots. It does not jibe with the suicidal resistance of the peasants to collectivization, the workers' sullen and often murderous reaction to the Stakhanov or speed-up system, and other episodes of the convulsive mass resistance that is the sum and substance of Soviet history.

Contrary to wide misconceptions on this score, both the Italian and the German people accepted their respective totalitarian chains more quickly, with less hostility, than the Russians. In a single camp within an hour's drive from Moscow during the construction of the Moskva-Volga Canal with slave labor, there were more political prisoners than in all Fascist Italy. The carrying out of any of the gigantic GPU projects—the White Sea-Baltic Canal, or the second Trans-Siberian rail line, for instance—concentrated more "enemies of the state" than all the prewar Nazi camps put together.

The cleavage between rulers and ruled in the U. S. S. R. simply cannot be exaggerated. The Communist tyranny was imposed on the peoples of Russia by an infinitesimal minority, and has been maintained by unprecedented force—the physical force that breaks bodies and the propaganda terror that mangles minds and poisons souls. From the day the Bolsheviks usurped power there has been in effect a continuous civil war between the regime and its subjects. Russia is in the final analysis an occupied country.

The propaganda fable of perfect rapport between the regime and the people is not merely false. It is deeply mischievous, for it raises artificial walls between the free world and its potentially most valuable allies: the peoples of the Soviet Union.

Fortunately those walls are at long last being razed. The truth a few of us have been shouting unheeded for so many years—that a deep gulf separates the Soviet dictators from their victimized population—is finally being understood. How quickly and how wisely its implications will be grasped and exploited remains to be seen.

The resolution introduced by Senator BRIEN McMAHON and a large group of colleagues, asserting American friendship for the Russian people, is symptomatic of a new attitude here which, we may be sure, sends a chill down Stalin's back. A number of American organizations dedicated to friendship with the peoples of Russia, over the heads of the Kremlin gang, have sprung up spontaneously in recent months. One of them calls itself significantly, Friends of Fighters for Russian Freedom. A private group has been set up, under the awkward but accurate title of the American Committee for Freedom for the Peoples of the U. S. S. R., with the explicit purpose of helping Russian émigrés to fight for the liberation of their country. Even statesmen begin to draw a sharp line between the people and the government of the Soviet Union; witness the phrasing of the British note to the Soviets on February 17 last.

A new element is thus being added to the East-West equation. More accurately, it is being belatedly recognized, for it was there all the time. That element, the Russian people, can be more decisive than the atomic stockpile in determining the ultimate answers to the questions that today plague a divided world.

The Flood Lessons

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Quincy (Ill.) Herald-Whig of August 2, 1951:

THE FLOOD LESSONS

One of the Nation's worst floods of disaster proportions ends as the Missouri delivers its recent swollen flow into the Mississippi, which will carry it to the sea. Half a million persons were forced to leave their homes, and some estimates of the damage run as high as a billion dollars. It may be extravagant to spend too much money for flood control, but the lesson in this one is that it is quite as absurd not to spend enough.

The floods came mostly out of the Kaw or Kansas River and its tributaries. They might have risen in rivers farther north. The estimated flow of the Missouri at its mouth ranges all the way from 4,200 cubic feet per second to 900,000. The factors that make the difference are melting snow in the high plains and mountains and rain down below, pouring in water at the same or different seasons of the year. Nature has her own system for getting rid of this water. She broadens the beds of the streams. The result is a catastrophe, because farms, towns, and cities have been located on the bench lands.

Nature also has her own moods for bringing rain or snow. The technique of river control calls for mastery and use of water by many devices. There is contour plowing, cover crops, reforestation, and so on; big and little upstream reservoirs; irrigation systems; dams for flood control, power, and navigation; the deepening of channels and, within limits, the construction of levees. Some of these projects have been carried out in the Missouri Valley. There is what is known as the Pick-Sloan plan, which calls for building storage reservoirs back on the smaller streams that would retard the headlong flow of water into the main streams. But this plan is only a famous compromise between the Bureau of Reclamation and the Army Corps of Engineers. It lists about 100 dams, of which a dozen are finished or under construction. The cost? It would take about two floods of the proportions of the present one to match the cost item.

Reached as a compromise the Pick-Sloan plan is not so much a plan as a collection of ill-assorted projects. The Missouri River has not had the thorough study to which it is entitled, from source to mouth, with an eye to over-all control. No one has reconciled irrigation with navigation, power with flood control. But this would be a propitious time to make this study, while people are sweeping oily scum out of their households and before another flood of the same kind comes.

The trouble seems to be that humanity failed to administer the flow of the river, and nature continued to operate after her own, often exceedingly costly, plan.

Students Make Good Neighbors

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the Christian Science Monitor:

STUDENTS MAKE GOOD NEIGHBORS—AN INTIMATE MESSAGE FROM THE SOUTH
(By Max K. Gilstrap)

NEW ORLEANS.—A field worker in Venezuela stopped with poised machete flashing in the sun to ask about the Sugar Bowl game in New Orleans. A young foreman in a Co-

lombian textile plant talked enthusiastically about Louisiana State University. Young executives in Puerto Rico, the Dominican Republic, Haiti, Jamaica, and Trinidad spoke with nostalgia of their college days in Mississippi State, Gulf Park College, Massachusetts Institute of Technology, Harvard, and Midwest State universities.

The traveler in the Americas quickly becomes aware of the importance of student interchange in inter-American relations. In the unprejudiced minds of young Americans such schooling is developing an understanding that will unquestionably prove a decisive bulwark in hemispheric and world peace.

Here in the South where a reciprocal trade program with Latin America is gaining momentum, there has been launched a significant cultural and educational exchange program which holds bright promise. Already its participants include students from the mid-South and from all 21 Latin-American Republics.

The program is run by Mario Bermudez, able, energetic director of International Relations for International House in New Orleans, under supervision of an advisory committee headed by A. E. Hegewisch, former president of International House. It was launched in 1944 with 300 students; now there are 900 attending 16 schools and colleges in Mississippi and Louisiana. Concurrently a reciprocal flow of United States students to Latin America is under way, beginning with summer courses sponsored by International House in the universities of Yucatan, Mexico; San Jose, Costa Rica; and Medellin, Colombia.

Mr. Bermudez says the program promises to spread over a large part of the mid-continent and possibly other parts of the United States. Such a prospect, he says, is possible because of the enlarged United States defense program. With many GIs gone, there is a shortage of United States students. Universities have their machinery already set up; professors are hired; classroom and housing facilities are available.

Mr. Bermudez talks of the interchange student plan in terms of a multiple variety of types and ages of students and financial arrangements. About 40 percent of the Latin-American students take 4-year courses. Some enroll in summer courses of 7 to 10 weeks. These usually pay their own expenses which average \$200 besides transportation costs. Most of them live with families in Mississippi or Louisiana towns where their schools are located.

Under another arrangement, professional persons, many of them married, are interchanged in similar positions across the Gulf and Caribbean. This is done with negligible expense other than transportation costs. Such arrangements enable the workers to obtain broader training, make lasting contacts with families in the countries, and promote their businesses.

Some students such as a Nicaraguan editor, wife, and daughter come to the middle South to study special courses in grammar, composition, culture, history, and natural sciences. A group of 35 seniors from the National University of Colombia is making a tour July 1 to August 14, to inspect engineering projects, public-works factories, and schools in mid-America.

The big problem in student interchanges, Mr. Bermudez said, is transportation. Most students pay for their travel but from countries such as Chile, Paraguay, and Argentina it exceeds an entire year's tuition. Help has been given by the Grand Colombiana Fleet, a joint company of Colombia, Venezuela, and Ecuador, which offers free passage for scholarship winners. Two American air lines offer the same consideration. It is hoped that special ship and air-line rates can be arranged for general interchange students.

From an extended trip through Latin America Mr. Bermudez and Clay Shaw, director of International Trade Mart, have found

warm enthusiasm for the cultural interchange program. Cooperation in the United States has been received from such organizations as the American Council on Education and the Pan American Union.

As an increasing number of good neighbors knock on each other's door and stay a while, the outcome, in Mr. Bermudez' opinion, can only be the achievement of the common aim of good will and understanding.

Let Free China Fight

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, an editorial in the Milwaukee Sentinel for August 3, 1951, is a ringing challenge to the administration's stupid policy in China that has prevented the free forces of China from opposing the Chinese Moscow dominated Reds.

As this editorial well points out, if we had had a realistic policy in China based on principle and not upon political expediency—if we had not been controlled by the counsels of fear emanating from the United Nations—our casualties in Korea would have been much less than they now are.

There seems to be no hope of curing the blindness in the administration, but editorials such as that in the Milwaukee Sentinel will help to awaken the people of America to a return to principle and honesty and courage in dealing with foreign nations.

I submit herewith the editorial:

LET FREE CHINA FIGHT

The most significant military event in China since the inauguration of Korean truce negotiations is the highly successful operation of Chinese Nationalist refugee forces against the Communists along the Burma border.

This is not a guerrilla action in the usual sense, because it involves an organized force of some fifteen thousand trained troops under competent command, and nearly two-thirds of Yunnan Province was occupied and held.

Since there are many hundreds of thousands of Chinese Nationalist troops available for similar operations, it is a matter for interesting and puzzled speculation that American policy makers still refuse to permit the Chinese people to fight for the liberation of their own country.

In fact, it is the greatest mystery of the war that has been raging in Korea for more than a year that the American Government has been willing to sacrifice 150,000 American casualties in fighting the Chinese Communists, but has adamantly refused to let the free China forces attempt a diversionary movement which would have saved thousands of American lives and would probably have ended the war many months ago.

Why is the American military and political command at the highest levels so determined to keep the Chinese Nationalists out of the war against the Communists, when they not only have a great stake in the struggle themselves but could vastly reduce and perhaps eliminate altogether the necessity for America's tragic investment in the conflict?

General MacArthur was removed from his Pacific command for giving offense to his political masters in Washington on many oc-

casions, and one of these occasions was that on which he earnestly and vigorously advocated the encouragement and support of the free Chinese.

Gen. Albert C. Wedemeyer, who has few peers as a specialist on the military problems of the Far East, is out of the military service of his country, at least in part because he thought Chinese patriots willing to fight to liberate their country should be allowed to do so.

Gen. Matthew Ridgway, who agreed with General MacArthur on the use of Chinese Nationalists, has been compelled to conduct the war in Korea with no better hope than that of humiliating stalemate because of the incomprehensible stupidity of his bungling superiors.

If 15,000 Chinese guerrillas can take over two-thirds of a vital border province in a few days, what a foolish and fatal mistake it is to immobilize the millions of fighting men free China could eventually utilize against our Communist enemies.

And yet our most competent and experienced military leaders are either exiled for advocating this sound policy or are compelled to conduct futile and bloody wars in keeping with senseless policy which serves the purposes of our enemies as well as if that were the real intention.

Inflation and Foreign Spending

EXTENSION OF REMARKS

OF

HON. JOHN B. BENNETT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my own remarks, I include the following radio speech which I recently gave over Station WJR at Detroit:

For the past 2 weeks the House of Representatives has been considering legislation to extend the Defense Production Act which has in it the President's economic controls program. There has been a good deal of misrepresentation in the press and over the radio concerning this legislation and much of it emanates from the President's propaganda organization. The President, of course, would like to blame Congress for his failure to effectively control inflation. But the facts are not on his side.

Early last fall, shortly after the Korean war started, Congress passed the present economic controls law. The public should know that Congress last August, on its own initiative, passed this legislation which authorized the President to impose controls on prices, wages, and credit. Mr. Truman did not suggest this action by Congress. As a matter of fact, he did not favor it. He declared in his press conference on August 10, 1950, that the Government was capable of handling inflation with existing machinery. He thought there was no need for a revival of OPA. But in spite of the President's protests, Congress did pass the economic controls bill because it was thought that the Korean war and the defense program engendered by it, would start an inflationary process which ought to be immediately controlled. Thus, in spite of the President's shortsightedness, Congress gave him a controls law on September 8, 1950. Notwithstanding the fact that prices were going up by leaps and bounds and hoarding was being engaged in by suppliers and distributors, thus sending prices higher, the President blindly refused to act. The result was that between June 27, 1950, the date the Korean war started, and Jan-

uary 26, 1951, the cost of living went up 7 percent, and the cost of food 8 percent. But in spite of this precipitous rise in prices, the President stubbornly refused to impose controls and it wasn't until January 26, 1951, 7 months after the Korean war started, that any price controls were put into effect. Moreover, the efforts of Mr. DiSalle, the Price Administrator, and his office, have proved ineffective to accomplish the job which Congress instructed him to accomplish. Between January 26 and June 1, the cost of living and the cost of food went up another 2 percent. The plain truth is that every month since the Korean war started, without exception, the cost of living has risen. Thus, it is clear that although the President has had ample and complete authority from Congress to control prices and inflation, he has refused and neglected to do it. Naturally, this situation is embarrassing to the President and he would like to get off the spot. That is the reason he is having his propaganda experts make it appear that Congress, and not the administration, should bear the responsibility for the failure of the economic controls program during the past year.

No one in his right mind wants to add to our inflationary problems. It is for that reason that I have voted in support of the extension of economic controls. I should say frankly that I have very little confidence that the President and his agencies will do any better job in the future than they have during the past year. But I want the record to be straight so the American people will know who is responsible for any further dislocations in our economy.

While most of us agree that economic controls are necessary to prevent further inflation, controls in themselves will not cure our difficulties. The most we can do with controls is to apply the brakes against the already existing pressures. But everyone should clearly understand that the real answer to our inflationary trouble is to stop doing the things that have caused the inflation.

While most people readily understand the harmful effects of inflation in their day-to-day standards of living, the average person does not give too much thought to the causes which create this condition. Hence I would like to discuss with you briefly some of the many phases of this problem.

As a basic proposition the inflation which has enveloped this country is largely due to our extravagant spending programs. The tremendous cost of World War II gave us our initial start, and we have been pyramiding on it ever since—until we have finally reached the point where it has virtually wiped out 50 percent of the savings of all of our citizens. In the 10-year period since 1941 this Government has given away in foreign-economic-aid programs approximately \$62,000,000,000. Of this amount Britain got thirty-five billion; Soviet Russia, eleven billion; France, six billion; China, three billion; and smaller amounts to practically every other nation on the face of the globe. This does not include, of course, the President's recommended \$8,000,000,000 economic and military-assistance aid to Europe for the next fiscal year. This figure, when added to the amounts previously expended on "give-away" programs, brings the total to the staggering sum of \$90,000,000,000.

Add to this the cost of the Korean war, the cost of our present defense program, together with our current domestic expenditures, and you have a rough idea of the rate and extent at which we are spending our money. It is an oversimplification to say that we are spending more than we can afford to spend, or more than we are taking in. These facts are so simple that it is difficult to believe that they are responsible for our troubles. But if you want to translate the effect of this spending on your own individual situation, there are several ways of doing

so. For example, if you had a savings account of \$1,000 in 1941 and did not withdraw it from the bank until today, it would be worth a little less than \$500 of your original investment. In other words, the Federal Government has in effect made a capital levy of \$500 against your savings. It is exactly the same thing as though the tax collector went to your bank, without your consent, and withdrew \$500 from your account. If you had life insurance or bonds or similar investments, exactly the same thing has occurred. Inflation has robbed life-insurance policyholders of one billion since 1940, and the average citizen has less real insurance protection than he had 10 years ago. Can you visualize then what another 10 years of this spending program will do to your own security, to say nothing of its effect on the integrity and solvency of your Government.

The cold fact is that we cannot continue to support the rest of the world and fight other nations' wars, without paying the penalty here at home. This penalty is being inflicted upon people who are giving the lives of their sons on foreign battlefields and the rest of the hardships that go with it. Our living standards have been reduced by increased prices and other inflationary pressures. I receive letters every day from people who are living on small salaries, pensions, or annuities who can hardly keep body and soul together. Last year Congress very wisely increased social-security benefits for millions of our people, but the inflation that has come about in the past 8 months has more than wiped out those increases, so that the people on social security today are worse off than they were before the increase was made. The same may be said of wage increases. Before the wage earner gets home with his next check the increases in prices have virtually wiped it out.

Something can be done to remedy this desperate situation, but the people must be awakened and aroused to the danger of our foreign policy spending programs before it is too late.

Everyone agrees that we must spend every dollar that is necessary to strengthen our National Defense Establishment so that we can defend this hemisphere from any kind or type of foreign aggression. We have the resources and the means to establish and maintain such a defense system. We can build and maintain the biggest navy and the strongest air force on earth. We can provide sufficient manpower and atomic weapons to implement such a force. And we can do all these things without taxing our people to death or ruining our economy.

Our difficulty arises from the obligations we incur over and above what is necessary for adequate defense of our own country. It arises from the fact that in addition to supporting our own economy and maintaining adequate defenses we have been committed by the President—without our consent—to a program of supporting the domestic economies of Europe and Asia, and to defending those areas against aggression in any form.

For more than a year we have been engaged in a senseless war in Korea. God grant that some settlement of that conflict can be made at an early date. Almost any settlement, within reason, is to be preferred to the further loss of American lives in a contest that can never justify the American casualties already sustained. The problems of Asia are insoluble. The turmoil on that continent is centuries old, and it is nothing short of ridiculous to assume that we can bring order out of chaos on that continent by alternately fighting wars there and spending billions for rehabilitation. The social and economic conditions under which 500,000,000 Asiatics are living, and have been living for centuries, cannot be improved by our engaging in bloody wars or by solutions dreamed up by economic planners in this country. We

can, by sheer stupidity, bring our own standards of living down to a level of the Asiatics. But we simply do not have the resources, the ability, or the know-how to bring their standards up to ours. The sooner we stop trying it, the better off we will be.

Our foreign-policy program in Europe is likewise in a deplorable state. Ever since the end of World War II, we have been supporting England and Western Europe. The President intends that we not only continue to support those nations but is sending troops and military supplies so that we can fight world war III in their behalf. The nations of Western Europe are not at all worried about world war III, because they have every confidence that we will fight such a war for them if and when it comes and that we will rehabilitate their countries and support them after it is over. No wonder our citizens are asking their Congressmen the question, "How foolish can Uncle Sam get?"

In spite of our generosity through foreign-aid programs—in spite of our commitments to fight their wars—the plain fact is there is not a single European or Asiatic nation upon whom we could place complete reliance if need for their help arose. This has been dramatically demonstrated by the attitude of our so-called friends in the Korean war. It is our boys who are doing the fighting and dying. Their boys are staying at home. Thus, it should be abundantly clear by this time that our extravagant and fabulous foreign-policy program is the direct cause of our inflationary troubles here at home. Even if it were desirable for us to take all of the world's burdens on our shoulders, and the responsibility for fighting its wars, the truth is that we cannot successfully carry such a load. We do not have the manpower or the resources to sustain these broad commitments unless we want to run the risk of destroying the solvency and integrity of our own Government and the security of our own people. These are calculated risks and we should not take them without having our eyes open. If we continue on blindly, we may save Europe or Asia but lose America in the process.

More Tax on Beer Hits the Workingman and Plays Into the Hands of the Prohibitionists

EXTENSION OF REMARKS OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, I am submitting herewith an article from the CIO News for August 6, 1951, which points out with significance the drive to tax beer out of the reach of the workingman. This drive plays right into the hands of the prohibitionists as the article well points out.

Herewith is the article:

PROHIBITION WEDGE—YOU WON'T LIKE HIGHER TAXES ON YOUR BEER

Prohibition must not be reimposed on the United States under the guise of a tax law, President Karl F. Feller, of the CIO Brewery Workers, last week told the Senate Finance Committee, now considering new tax legislation.

"Fanatical forces of prohibition, which are ceaselessly active in our National and State capitals, view any increase in alcoholic beverage taxes as a step toward prohibition,"

Feller said. He branded proposed increases "unfair, ill-advised, and short-sighted."

Moreover, Feller pointed out, a higher tax rate may actually mean much less in total tax income. He warned that additional taxes on beer, "the workingman's drink," might place it beyond reach of the public and destroy the industry.

Feller said that in recent years "the size of the beer glass has been shrinking and its price has been rising," primarily because of increased taxes. He noted that the Federal tax on beer has jumped from \$5 to \$8 a barrel, while State taxes range from 62 cents per barrel (in California) to \$14.40 (in South Carolina).

OTHER TAXES

There are also numerous additional local taxes, Federal and State license and permit fees, as well as general corporation taxes on breweries.

The union president said that the "saturation point" on beer taxes has already been reached and that diminishing returns have already set in. In 1947, he pointed out, the amount collected in Federal beer taxes amounted to almost \$703,000,000, but in 1950 the total fell to \$662,000,000.

Many of the same facts also apply to proposed increases in the taxation of distilled spirits from \$9 to \$10.50 per proof gallon, Feller said.

Heavier taxation, he warned, would bring back the racketeer, hijacker, bootlegger, and speakeasy and would be an invitation to organized crime on a national scale.

"This committee and this Congress," he added, "have no mandate to reintroduce national prohibition. I assume that this Committee and this Congress are too well aware of the social catastrophe which is called the 'noble experiment' to even contemplate its restoration."

Feller's remarks underscored the fact that a higher tax rate alone does not necessarily mean a higher tax income for Uncle Sam.

FIGURES SUPPORT CIO

The CIO in previous testimony has urged that most of the increased taxes necessary to pay for defense should be obtained through increases in the excess profits on corporations and by plugging loopholes in the present tax law.

Figures released by the Department of Commerce last month reveal that private industry wage-and-salary income is falling off, although the total of personal income is increasing.

Wages and salaries were at about the \$140,000,000,000 annual rate in May, about \$1,000,000,000 lower than in April, but personal income totaled \$249,500,000,000—about \$500,000,000 more than in April.

This means that most of the increase in personal income came to those on farms, and in farms and in business, in dividends and interest, rents received by landlords, and other types of individual income.

In other words, the workers' wages fell by \$1,000,000,000 while gains to capital went up \$1,500,000,000.

Corporation profits are more than double the previous record set in World War II, but spokesmen for big business are trying to pressure Congress to shift most of the tax burden upon the lower-paid wage and salary workers.

RAILROAD'S PLEA

Typical of their approach is the statement of the Association of American Railroads to the Senate Finance Committee. The AAR said proposed increases in corporation income taxes would hamper the railroads in expanding to meet the needs of the defense program.

J. Carter Fort, representing the association, claimed that railroads must rely primarily on earnings to finance expansion.

Fort conveniently forgot that the railroads are among the big benefactors of the

tax-write-off scheme made possible under the terms of the Defense Production Act.

Corporations have been getting certificates of necessity permitting them to write off 50 to 85 percent of the cost of new facilities within 5 years. Nearly 3,000 such authorizations, amounting to \$8,500,000,000, have been granted.

In the week just before Fort testified, more than \$140,000,000 of \$395,000,000 approved that week under the program went to railroad equipment and expansion projects. The Pennsylvania Railroad Co. alone got concessions on a project costing \$51,936,200.

Building Strength for Peace, Prosperity, and Democracy—Inflation and Deflation

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. ASPINALL. Mr. Speaker, the deafening din of criticism, unsoftened by the music of unity, common effort, or alternatives fully spelled out, is often discouraging and unworthy of our intelligence potential. However, it seems that in each hour of need the impetus of the challenge raises up a dedication somewhere to its solution. I am pleased to bring to the attention of the Members an outstanding example of just such a response to a present crucial challenge: two resolutions adopted by the executive committee of the Farmer's Union in a recent meeting in Denver, Colo. It is my considered opinion that this family-farm group always demonstrates its progressive spirit through constructive programs for the common good.

In that these resolutions offer alternative solutions to fit the alternative problems which may arise out of today's difficulties, I do not believe I should endorse the outlined solutions 100 percent. Neither should those who are inclined to disagree with the Farmer's Union condemn these suggestions without noting their value.

Let us rather view these flexible outlines, predicated upon different courses which may develop, in the manner they suggest; that is, avoiding minor pitfalls and personal proclivities, use these to hammer out a common program for the common good of all men everywhere.

We all agree that we have at least two major problems, Russian imperialism and the inflation generated by our varied programs against that evil force. Would it not be in keeping with the general welfare to work out a common defense against both?

The resolutions follow:

RESOLUTION ON BUILDING STRENGTH FOR PEACE, PROSPERITY, AND DEMOCRACY

Farmers Union believes that the guiding principle of our foreign policy should be the earliest possible attainment of a world brotherhood of prosperous democratic nations living at peace with one another under international authority with limited sovereignty.

There are today two major threats to true world brotherhood and peace:

One is the existence in the free world of uncorrected and indefensible evils which provide the seedbed for agitation, uprising, and revolt. The other is the fact that Russian rulers, instead of cooperating to end these conditions under free governments, have revealed imperialistic world aims and a determination to exploit every wrong for her own imperialistic purposes.

We must end starvation, exploitation, feudalism, dictatorships, and other real injustices outside the iron curtain or be prepared to take major blame for any world cataclysm which may follow. We must stop being miserly about point 4, economic aid, and technical assistance. We must cease making partners of despotic governments and launch, through the United Nations, a campaign to create a world that is truly free, in which men may find justice through democratic and peaceful processes.

The record thus far fails to reveal any Russian desire to work with other nations to achieve free world objectives. She has established totalitarian regimes in satellite countries. She has engaged in subversion and destruction within many nations. She has sponsored armed revolts and military aggressions.

It is clear that time to establish freedom and equity must be bought by the creation of military as well as economic strength throughout the free world. For that reason, the executive committee endorses the full support which we have given to Federal action to build these strengths outside the iron curtain.

The executive committee is meeting at a time when the immediate intentions of the Russian Soviet rulers as to future moves are uncertain. Russia may or may not want a genuine cease fire in Korea; Russia may or may not want an honest peace settlement in Korea; Russia may or may not plan to sponsor an extended period of pseudo peace to cause the free world to relax. And it is conceivably possible that Russia may have finally decided to cooperate with United Nations in the building of a true world brotherhood of prosperous democratic nations under a limited world government.

If an honorable and genuine cease-fire agreement is effected, negotiations should be begun immediately to develop a genuine, honest, and permanent peace in Korea. There can be no genuine lasting peace or prosperity in Korea unless the peace terms provide for free democratic elections and allow and encourage the emergence of a democratic, independent united Korea.

In the meantime, the United States and the rest of the free world should be building economic and military strength and political understanding as rapidly as possible, in the interest of a prosperous peace if attainable and for better defense if that becomes necessary. So that we will be prepared to take the most appropriate action whatever the intentions of Russia turn out to be, we recommend that the President of the United States direct the mobilization authorities to develop complete comprehensive and detailed programs with integrated scheduling of actions and movements to fit each of at least three different possible situations:

I. No cease fire in Korea, or a cease fire in Korea but outbreaks elsewhere;

II. Cease fire in Korea but no early peace settlement, or a peace settlement followed by obvious plans for early aggressive Russian expansion elsewhere; and

III. An early peace settlement in Korea accompanied by concrete Russian peace moves. (These might be for the purpose of providing an atmosphere of false security and relaxation or that might be a genuine desire to promote a world brotherhood. Since the latter circumstance is so improbable, it would take a lot of fundamental

moves on the part of Russia over a considerable period of time before we could afford to consider that we can actually plan on an extended period of world peace.)

While we do not possess the technical information that would be required to prepare complete blueprints for each of the programs to meet each of these three contingencies we do wish to present a few recommendations with respect to each:

I. In case of no cease-fire in Korea, we recommend that the presently established targets for military mobilization be continued with some immediate improvements in the methods, procedures, and programming of the mobilization effort. The executive committee believes, on the basis of information it has studied, that because of a production-restrictionist philosophy and a failure to do a complete job of scheduling and programming mobilization authorities have planned for and allowed too little resource exploration and development, too little expansion of plant capacity, and given too little attention to efficient utilization of manpower.

The result of these weaknesses is in the mobilization program that the increase in total production each year is about half of what it should be and that the amount of resources and processed goods that must be diverted from civilian channels is considerably greater than it would otherwise have to be.

We, therefore, recommend that the President of the United States direct the Office of Defense Mobilization to adopt whatever changes in philosophy and working methods as are required to develop a completely scheduled program from basic resources to finished products that will bring about an annual increase in total output each year of approximately 15 percent rather than the presently contemplated 5 to 7 percent.

We also urge the adoption by Congress of the entire \$8,500,000,000 of foreign assistance recommended by the executive branch together with the specific recommendations contained in President Patton's recommendations to the Foreign Affairs Committee of the House of Representatives.

II. Cease-fire in Korea but no early general peace settlement in Korea, or a Korean peace settlement accompanied by saber rattling elsewhere. The development of either of these circumstances would, it seems to us, indicate that Russia had no real peace intentions but did intend to hold off for a few months or years in starting new armed aggression.

Such a development, it seems to us, would allow the diversion of a limited amount of funds and resources from the manufacture of military end products that have a rapid depreciation and obsolescence rate, to more fundamental steps in building the economic and military strength and political understanding of the free world and of our own nation. We recommend that in case of a bona fide cease-fire in Korea unaccompanied by disturbances elsewhere the United States divert funds from the manufacture of military end-products to (a) fundamental projects of resource exploration and development, (b) to vastly expanded scientific and vocational education and training, and (c) to more rapid expansion of basic plant capacity. We urge that this program of resource development, plant expansion, and vocational and scientific training be pursued with the same vigor and same care for scheduled programming as we have recommended for the program in case of no Korean cease fire.

III. An early Korean peace settlement accompanied by concrete Russian peace moves. In case of the program to meet this situation we recommend that large sums be diverted from the manufacture of military end-products to projects that will contribute materially to the building of the economic

strength and political understanding of the free world.

In this program, the total national effort should be the same as in the other two plans, but the allocation of funds and resources as between different components of the programs should be greatly different. Funds should be diverted from the domestic manufacture of military end products to both domestic and foreign economic development projects.

These economic development projects would be incorporated into a total integrated, completely scheduled programing of actions and movements to vastly speed up resource exploration and development throughout the free world, to move forward with scientific and technical training as rapidly as existing supply of trained personnel will allow, and to take whatever steps are necessary to increase communication and transport and to expand manufacturing and farm productive plant capacity throughout the free world.

The completely scheduled plan to meet this situation should be developed now so that it can go into operation without the kind of delays and mistakes that usually have accompanied our shifts of emphasis, from civilian production to military production and back again.

While the executive committee is not dealing with the problem of economic stabilization in this statement, we do want to recommend that provision should be made to finance each of these plans with pay-as-you-go taxation buttressed with whatever honest controls over credit, savings, and wages and prices as are required from time to time.

The executive committee is conscious that the matters covered in this statement are of vital importance to every member of the Farmers Union as well as to every person in the free world. We know that they are subjects upon which it is of utmost importance that our Nation make wise decisions. We hereby direct President Patton to bring this statement to the attention of the highest military and civilian officials of this Nation that he continue his efforts to see that the principles we have stated are incorporated in the policies of the Federal Government.

RESOLUTION ON INFLATION-DEFLATION

Farmers Union believes that the economy of the free world and of the United States should be developed and geared to the production of a sustained and ever-expanding abundance. The modern highly developed economic system is a delicately balanced mechanism and its parts are highly interdependent. The economic system works rather well when all of its productive resources are fully employed, using the most highly developed technology available, and when all of the goods produced can be purchased with the income paid out in their production.

However, in some periods, such as the decade of the thirties, income does not flow to consumers as rapidly as goods are produced, and deflation results. In other periods, such as during World War II, the income that workers, farmers, and other owners of productive resources receive increases faster than the quantity of goods that can be purchased with that income because a sizable share of the produced goods is pulled out of the flow to consumers and is put into stockpiles or into military use.

The basic fact of inflation is the so-called inflationary gap. This gap is the amount by which earned incomes exceed the net value of produced goods that are available for purchase by consumers. Because the economy is operating at full tilt, the total amount of goods produced usually increases rather rapidly compared to previous periods. But since a certain share of the produced goods is not available for consumer pur-

chases, the real level of living of the people is not as high as it would be if all of the goods were available to them. If the increased amount of goods taken out exceeds the increase in production, the average-person real income must fall.

Regardless of what financial or statistical manipulations are engaged in, we cannot escape paying this cost in the year in which it is incurred. The arguments over taxation policies, credit and monetary policies, and price and wage-control policies are arguments over who in the economy is to pay this cost and in what proportion to others in the economy.

There are basically five different ways by which the cost resulting from diversion of produced goods from consumer channels may be absorbed by the economy:

1. **Inflation** This method allows prices and wages to rise to the place where the increased cost of the items that can be purchased just equals the total income available to consumers. By this method groups with relatively fixed incomes pay a very heavy share of the extra cost, while the lower income groups that are required to spend a greater share of their incomes for immediate consumption pay a relatively heavier share of the cost than the higher income groups.

2. **Taxation** By this method the Government collects in increased taxes the cost of the expenditures on the goods taken out of consumer channels. By this method the cost is levied on different people in accordance to taxation schedules and kinds of taxes used. If the bulk of the taxes is collected through graduated personal and corporation income taxes, inheritance taxes, and excise taxes on luxuries, the cost is borne by different people in a rough correspondence to their ability to pay. A retail sales tax or a general transaction tax on the other hand would cause low-income people to absorb proportionately more of the burden.

3. **Savings** If the people will put into savings an amount of income equivalent to the value of the goods that are taken out of consumer channels, that amount of purchasing power is saved or deferred to another day and does not have an inflationary effect in the current period. Obviously the people who save must forego expenditures to the amount of the required savings.

4. **Credit restrictions.** In normal periods a considerable amount of purchasing power is derived from borrowed funds. For temporary periods this added purchasing power can be dried up by credit restrictions which reduce the amount of credit outstanding. However, once outstanding credit balances are reduced the continuation of credit restrictions has no further deflationary effect, although relaxation of the restrictions would, of course, be inflationary.

5. **Wage and price control** When prices start up they cause a rise in the cost of living which in turn requires laborers to demand and be able to obtain higher wages which in turn increase the cost of production of commodities. Price and wage controls are used to try to hold the economy steady during times of scare buyings and in the periods when increased taxation, greater savings and credit restrictions fail to take hold and stop inflation. Even though taxes and savings were increased sufficiently over a year's time to take up the inflationary gap, the balance between increased income and decreased flow of goods to consumers would vary from week to week and from month to month. This causes recurring inflationary surges. Wage and price controls are necessary supplements to increased taxes, savings and credit restrictions in an inflationary situation.

Farmers Union's position on inflation control is solidly based upon our understanding of these economic facts. The Farmers Union anti-inflation program calls for all four of these anti-inflationary devices: increased progressive taxation, a plan for in-

come deferment based upon the income taxation principle, selective credit restrictions, and an honest genuine wage and price control system.

The executive committee of the National Farmers Union commends President Patton and his staff for their efforts to bring about the enactment of legislation and promulgation of administrative rulings that would put the Farmers Union anti-inflationary program into operation. We view with considerable misgivings the failure of both the executive and the legislative branches of the Federal Government to adopt this program.

In the economic stabilization program adopted under the Defense Production Act of 1950, jawbone inflation which characterized the last half of 1950 was replaced by the built-in legalized inflation that characterized the manufacturers' general price regulation. Amendments to the proposed Defense Production Act of 1951, recently adopted by the Senate and House of Representatives, go even further in the direction of legalized inflation. In its failure to provide for increased taxes in the amount of \$15,000,000,000, being content with less than half this much, the House of Representatives has demonstrated a desire to have about half of the increased cost of the mobilization program levied in accordance with ability to pay with the other half of the cost levied, through inflation, most heavily upon those who are least able to pay. We urge that the Senate enact tax increase legislation that will bring in increased taxes of at least \$15,000,000,000.

No group but Farmers Union has recommended the use of a progressive system of income deferments to absorb that part of the inflationary gap not absorbed by increased taxes. We urge that such a system be adopted at once.

We are meeting at a time when the final outcome of taxation and wage and price control legislation is uncertain. However, there is every indication that taxes will not be raised enough, that no income deferment plan will be put into effect, and that the so-called wage and price control provisions of the Defense Production Act will be in fact a system of legalized inflation.

The result of this combination of circumstances will be extremely painful to people of fixed incomes and will result in family farmers being subjected again rather soon to the old familiar squeeze between rising costs and falling incomes.

The cost-plus-85 percent profit price ceiling amendment adopted by the House and later rejected would have insured a continued rise in the prices of manufactured products, as will many of the weakening amendments that were adopted. This price rise will, of course, bring about an increase in the farm production expenses and family living costs. These higher prices for manufactured commodities will also absorb urban purchasing power which will have a tendency to reduce the consumer demand for and the price of the products that farmers have to sell, particularly in view of the present prospects for a total farm production considerably above any previous year. The result will, of course, be that the parity index of the things farmers buy for production and family living will continue to rise, while farm commodity prices fall to support levels.

We view with alarm the fact that farmers are facing a period when agriculture will be suffering the ills of deflation compounded with the costs of inflation in the rest of the economy.

We therefore urge that our officials make every effort to bring about the enactment of the 100 percent of parity price support bill, with coverage of all bona fide farm commodities. If farm prices do not fall below parity, these programs would not have to be used, but with all other prices rising and prices of farm commodities falling, family farmers would be required to assume too

great a financial sacrifice, particularly in view of the magnificent response they are making to the Government's pleas for increased production this year.

If Congress should adjourn (1) without enacting tax legislation providing for sufficient increased revenue to balance the Federal budget, (2) without providing the executive branch with appropriate authority to establish and operate adequate and honest credit restriction and wage and price control, or (3) without taking the flexing provisions out of the present farm price support laws we urge the President to call a special session of the Congress to be devoted to those highly important matters.

The Word Is "Controls," but It Means Tyranny

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1951

Mr. BUFFETT. Mr. Speaker, under permission to extend my remarks, I am including the following challenging editorial from the Omaha World-Herald:

THE WORD IS "CONTROLS," BUT IT MEANS TYRANNY

Those who search for a guiding principle in the congressional actions on price controls will search in vain.

There is none.

It is true that a small group of left-wing zealots fights valiantly for every totalitarian proposal. It is also true that a right-wing group takes a steadfast stand in defense of American freedom.

But in between is the vast, amorphous majority which sways this way and that, yielding to one lobby here and another there, accepting one roll-back while scorning another—and seeking always and above all to avoid record votes.

Thus the controls bill, when it comes out of conference committee for the last time, will express no coherent philosophy of American Government, but rather will echo the teeth-chattering fears of small politicians who dread to face the issue.

What is the issue?

We think it is simply this. American freedom, from now until the end of the Republic.

President Truman and his colleagues say that this "emergency" will last only 2 or 3 years—that by 1954, at the latest, it will be possible to cut down the huge defense and foreign-aid budgets, reduce taxes, and relax the economic controls which are now being imposed.

This newspaper does not possess the gift of prophecy, but it does have a memory for recent events.

It recalls that the rearmament program of 1939 and 1940 was to be only a temporary and strictly precautionary program, which (as the then President solemnly assured the people) would make it unnecessary for the American people to send their sons overseas to die in foreign wars. It recalls that each of the foreign give-away programs sponsored by the present President—including the pending eight-and-one-half-billion-dollar-a-year plan—has been advanced as a short-term proposition.

In view of experience, it would be somewhat naive to expect the spending bureaucracy to proclaim in the near future that the crisis had passed, that the budget

should be slashed, and that economic controls safely could be abandoned.

As a matter of fact, there is no reason whatever to expect an early change in the world's political climate.

The Stalin regime appears to be seated firmly in the saddle in Russia. So long as it remains there—with or without Stalin's living presence—the United States will have to be ready for trouble. President Truman and his colleagues have stressed that point repeatedly.

In the face of this danger, it is completely unrealistic to pretend that this country can build up its military forces for the next 2 or 3 years and then rest on its oars.

Military machines, especially airplanes, grow obsolete quickly, and soldiers lose their military skills unless they are kept in training. Thus, a razor-sharp national defense will require large spending, year after year, for research, for factory production, and for manpower.

That is the prospect which this country faces, and for which it should be preparing, without any illusory talk about a transient emergency or temporary programs. It should plan a defense which the people can carry—without giving up the freedoms which they love, and which are the real secret of their great economic strength.

The word "controls" is a euphemism. It means the same as "depotism" and "tyranny" meant in an earlier day. It represents an attempt to bureaucrats to abolish the free market, and eventually other freedoms, so that they, the bureaucrats, may rule by decree.

So far as old-fashioned, free Americanism is concerned the dangers represented by government control of the activities and transactions of private citizens are scarcely less ominous than the danger of communism.

Yet few Congressmen seem willing to face that manifest truth. Under the heavy political pressure applied by the administration and other groups, many of them abandon democratic principle and yield to bureaucratic authority. And while so doing they hide behind the pretext—ready-made for them by the administration—that the collectivist measures enacted now are not very important because they are only temporary and will be wiped out in a couple of years.

There is one thing that this country needs vastly more than airplanes or atom bombs, and that is simple courage. Not much of it has been shown in this session of Congress.

A Patriotic American Writes His Congressman

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 3, 1951

Mr. EDWIN ARTHUR HALL. Mr. Speaker, the writer of the letter which follows is an esteemed constituent of mine, Mr. Henry Toelke, of Binghamton, N. Y.

Mr. Toelke is a keen student of government and has been a valued contributor to my large correspondence from home ever since I have been in Washington.

In 1939, when I first ran for Congress, Mr. Toelke was prominently mentioned as a candidate to fill out my predecessor, Bert Lord's term. While at that time Mr. Toelke was regarded as my opponent, we have since become warm

friends and I have obtained much sage counsel and sound opinion from this worthy gentleman.

As operator of a local book and manuscript store, Mr. Toelke is an avid reader of the CONGRESSIONAL RECORD, which my office sends him regularly.

I take pleasure in extending in the Appendix a recent letter of Mr. Toelke to me:

BINGHAMTON, N. Y., July 25, 1951.

HON. EDWIN A. HALL,
Member of Congress,
Washington, D. C.

DEAR CONGRESSMAN: In reading the discussions of the inflation issue on the floor of the House, as appeared in the CONGRESSIONAL RECORD, the thought came to mind of very important roll-backs seldom mentioned and yet should be discussed and action taken on the legal robbery of Uncle Sam in acquiring strategic material needed for our national defense.

Refer to the outrageous increase in prices for steel, rubber, tungsten, copper, lead, etc., since the Korea conflict started. How about roll-backs on those items, which it has been stated will mean a tremendous loss of \$7,000,000,000?

Washington has a flair for asking our people to sacrifice. How about a little sacrifice on the part of these gougers in national defense materials? How about some sacrificing in nonessential positions in government? Oh, no; anything but that.

Our bloated billionaire corporations are at it as heretofore. These war profiteers again seek Uncle Sam to build defense plants for them. And, when the shooting stops turn the plants over to the corporations for about 1 mill on the dollar. That's one way to make a few more billionaires. That's been the game of the rich patrioteer after the past two wars. What suckers we are.

For economic justice

GLENWOOD BOOK MART,
H. TOELKE.

Unjust Treatment of Naval Reservists

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. AYRES. Mr. Speaker, for the past several months I have been doing my best in a constructive way to expose the injustices many reservists are being subjected to.

This morning I received a letter from another disgusted sailor who informed me of the poor mess being given the men. He states in his letter that during an inspection the officers discovered articles of food that had been removed from the galley.

A bulletin, including the plan of the day, dated August 3, 1951, was enclosed in his letter. That part of the bulletin dealing with the inspection and the stolen food is printed below.

I do not approve of stealing, nor do I approve of the Navy paying \$1,500 for the food listed. If they are paying such prices, it is no wonder our defense costs are so high.

According to a Washington wholesaler in food products, the items listed below

could be purchased for approximately \$218.

The bulletin follows:

During the surprise inspection, the following items of stolen food was discovered in the various compartments of the ship: 3 cases of fruit cocktail, 5 cans of salmon, 60 pounds of frozen peaches, 60 pounds of frozen strawberries, 60 pounds of frozen cherries, 1 can of peach preserves, 4 cans of grape juice, 1 silex, 7 cans of figs, 1 can of coconut, 9 cans of sardines, 1 can of olives, 12 quarts of milk, 2 bolognas, 1½ cases of crackers, 11 cans of tomato juice, 10 pounds of sugar, 3 cans of peanut butter, 1 can of prune juice.

This amounts to about \$1,500, much of which was expensive perishable items. The general mess will have to be curtailed to absorb any losses. Theft on this scale is a reflection on every man aboard and in particular the worthiness of petty officers involved to continue to wear their stripes. While further action is being contemplated, holiday routine and movies and ship's service will be secured through Sunday and all hands not on watch will turn to Saturday and Sunday to chip and paint the ship's sides and mast.

In the future petty officers in charge of a compartment or area will be responsible and held accountable at "captain's mast" for illegal possession of stores, materials or tools found in their respective compartments.

Korean Deal Will Benefit Reds

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence, from the Washington Evening Star:

KOREAN DEAL WILL BENEFIT REDS—COMMUNISTS HAVE EVERY REASON TO ACCEPT PROPOSAL FOR DEFENSE LINE ALONG PRESENT POSITION OF FORCES

(By David Lawrence)

The Communists have every reason to accept the United Nations proposal for a defense line marked by the present position of the military forces in Korea. Logically, the Reds have so much more to gain than to lose by agreeing to it that they can well afford to give the U. N. something to "save face."

For if the thirty-eighth parallel isn't the exact armistice line and a zone a few miles north of it is established as a basis for the cease-fire, the U. N. can say that it achieved something beyond what South Korea had when the aggression started more than a year ago. Since the United States and the U. N. have announced that the original purpose—to repel aggression at the thirty-eighth parallel—has been achieved already, the Allies cannot make much of an issue or resume fighting just because of a disagreement on the armistice line.

The Reds, on the other hand, would be acquiring undisputed possession for the indefinite future of virtually all of North Korea. This is the biggest stake of all, for which they gladly would terminate the fighting now, knowing that by so doing, they keep the U. N. forces bogged down in Korea for years to come.

From a propaganda standpoint, the Communists benefit a great deal, too. For they

know full well the U. N. troops will not be withdrawn, because there is no guaranty in sight or likely to be given that would insure against a recurrence of aggression at any moment. The demand that there be a withdrawal will, however, be repeated by the Communists at frequent intervals and the U. N. will be exhibited in propaganda as occupying Korea allegedly against the will of the inhabitants.

The Allies have fallen into the Communist trap on the negotiating tactics. By insisting that all "political questions" be excluded from the armistice negotiations, a cessation of hostilities is brought about without settling the real matters of substance—the establishment of peace throughout Korea and the withdrawal of all foreign troops. Knowing in advance the U. N. attitude, the Communists have tried adroitly to insert these two main political issues in the armistice negotiations, no doubt expecting rejection. The U. N. representatives have gone on record, on instructions from the home governments, as refusing to discuss these issues.

If this goal—a cease-fire around the thirty-eighth parallel and without a political settlement—was what the U. N. really wanted all the time, then the record will show that the same thing might have been obtained on March 24 last when General MacArthur offered to arrange with the enemy field commanders a cease-fire without discussing any political questions. The American Government and the U. N. failed to back up the MacArthur proposal. The general was never told at the time that the President or the United Nations had decided to negotiate on this or any other basis. Inaccurate statements have been made in the press that the general was so informed and that he knew negotiations had begun. But the verbatim record of the Senate hearings reveals that both General Collins and Secretary Acheson testified flatly that the far eastern commander was never given any such word.

What did happen was that the American Government immediately repudiated in public General MacArthur's overture broadcast to the enemy commander as a piece of psychological warfare.

The excuse given in Washington for failing to endorse the MacArthur move was that his message to the Communist commander had in it a few phrases saying the U. N. threatened to expand the war. It did draw attention to the weak position of the enemy and stated that if the United Nations decided to carry the war to the enemy bases the Reds wouldn't have a chance for victory. The enemy had not been using pussyfoot language in its broadcasts either, and probably were not offended by General MacArthur's words. It is incredible that the phrase describing the more advantageous U. N. military position last March could have been the actual basis for the refusal of the Reds to consider what he offered them.

The real reason undoubtedly was that the Communists did not think at that time that the U. N. would arrange a cease-fire between enemy commanders and leave North Korea in the hands of the Communists, which for all practical purposes it will be. Naturally, after the dismissal of General MacArthur and the public statements of our officials that military means would not be used to seek pacification of all Korea, the Reds, through Malik, jumped at the chance to get what they are getting now—a cease-fire without a political settlement.

Once the fighting stops, the Reds know the U. N. will not resume hostilities just to gain possession of North Korea. The Communists are back about where they started from in June 1950, and have subjected the United States to a terrific expense, a dislocation of its military forces in the world, and the loss of 80,000 casualties. And it remains to be seen whether Communist aggression has been repelled in Korea or elsewhere in the world.

Reducing the Federal Waste Line

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include my radio interview with Col. Edward A. Sherman, executive director, Massachusetts Committee for the Hoover Report, over Station WEEI on August 4, 1951, as follows:

Colonel SHERMAN. In this series of broadcasts we are bringing into your homes the voices of men who have been chosen as our leaders—our Representatives in Congress, men upon whom we have placed the extraordinary responsibilities urgently demanded by the critical period in our history in which we are living these days.

Our guest on this broadcast is the man selected by the citizens of the Seventh Congressional District to represent them in Congress, a man who is known and respected not only by those of his district and his political party but by all the citizens of Massachusetts no matter what their partisan affiliations may be. Folks meet Democratic Congressman THOMAS J. LANE, of Lawrence.

Congressman LANE. We, as a united people, have dedicated ourselves to a life-or-death struggle to resist and discourage the spread of communism.

To strengthen ourselves for that test, we are mobilizing the human and material resources of this Nation.

But that effort will be endangered if the over-all guiding hand—the Federal Government—remains bogged down in a mess of duplications, contradictions, and inexcusable waste.

In fact, the conspirators in the Kremlin are counting upon us to do just that. They believe that we will wreck ourselves through our own excesses. In their book, the material abundance and productive genius of the American people will become so tied up in a traffic jam of extravagance and mismanagement, that the Communists will find it easy to step in and take over.

We have this clear warning before us. Either streamline the organization and functions of the United States Government—or it will collapse like a building that becomes wider with each story that is added to it.

This danger has been developing for some time. The present and continuing world crisis has brought it to the critical stage. Every President since Theodore Roosevelt has sensed that Government was getting too big and was getting out of hand. Overwhelmed by minor details and needless contacts, every President has tried to bring some order out of this chaos. But this requires congressional action—backed up by citizen support—to cut through the red tape and bureaucratic opposition.

Like the fat lady in the circus, Government is becoming so big—with double chins—and overlapping belts of superfluous flesh—that it can't see its own feet. And the bigger it becomes, the less work it can do—except to lean on us with its crushing burden.

Come to think of it, Ed, I have never heard anyone maintain that a second chin—serves any useful purpose.

Colonel SHERMAN. Just excess baggage—Congressman LANE. As one wit put it, "The greatest export of Washington, D. C. is waste paper." Like all humor, it is composed of some truth and some exaggeration.

From my own experience in Congress, I can tell you that we become exasperated by the jungle of bureaus, and the multiplicity

of hands through which applications must pass before anything is cleared for action.

The frustration experienced by veterans—and by income-tax payers—by civil service applicants—and now by businessmen—in dealing with the mystifying language of Government regulations, and in filling out endless forms—is something that shouldn't happen to any human being.

Washington swims in paper. Vouchers pour in by freight cars. This flood is something that Federal employees cannot cope with. It is humanly impossible to carefully check—or even find—all these forms and their long-tailed copies. The question naturally arises as to why all this baffling paper work should be required in the first place.

There is no valid answer, except that bureau chiefs fear any cut-down in their staffs and their prestige. We see emergency agencies, still in business long after the emergency has passed. Letters and papers and forms are kept in circulation in order to create a deceptive air of indispensability.

This useless work bears heavily upon the career employees in Government. It explains, in part, the rapid and expensive turnover in Federal employment. People want to do work that has some meaning.

Colonel SHERMAN. For there are lots of folks in Government who really want to do a job, not just hold a job.

Congressman LANE. In May of this year, the Joint Congressional Committee on Non-essential Expenditures estimated that the Defense Department would hire 440,000 new civilian workers—and 450,000 replacements—during the ensuing 14 months, on the basis of the proposed military budget.

Note that the turn-over anticipated is greater than the number to be hired. No private business could operate under such wasteful conditions. If every worker hired, quit after a few months, a company would never be able to train and assemble an efficient corps of workers. And the expense involved in keeping records of these comings and goings would add to the overhead. The committee also discovered that over 90,000 soldiers and sailors were doing clerical work when their prime job should be learning to handle the planes, and ships, and guns for the defense of this Nation.

These instances—and many more that could be quoted—reveal the misuse of personnel in the operation of our sprawling Government.

Now I have the highest regard for the average Federal employee. I want to see his status improved. This will require an overhaul of the personnel system by which we hire, classify, and promote Federal workers.

Employees of the Government of the United States include both those in the military and those in the civilian departments.

Colonel SHERMAN. Can you say a word about the morale of our civil-service people, Congressman LANE?

Congressman LANE. We know that morale—the feeling that one is doing a useful job, backed by the incentive that recognition will be forthcoming for doing a better job—is necessary for the mutual progress of employer and employee.

This holds for Government as well as for private business.

An employee cannot do his best when he is surrounded by waste, confusion, and uncertainty.

Just as we are developing career system through the ranks of the Armed Forces—assigning men to responsible tasks where they can also learn, giving them clear-cut goals to work for and be proud of, welcoming suggestions for improvements from them, providing adequate pay and opportunities for promotion—so must we do the same for the civil service.

By so doing we will help our Government to become more efficient and less costly—that's what your Massachusetts Committee for the Hoover report calls for, Ed?

Your committee is composed of public-spirited citizens who seek support for the current movement—based upon the nonpartisan studies made by the Commission on Organization of the Executive Branch of the Government—to promote economy and efficiency in the management of our big Government.

We must streamline government so that it will continue to give us the necessary services that we require of it, without taking too many tax dollars from our pockets. And we all pay heavy taxes, whether we know it or not. Because the price of everything that we buy—even down to the lowly loaf of bread—is made up of many hidden taxes in addition to the cost of the necessary labor and materials.

When the Congress authorized a study and search for a plan to reorganize and improve our Government, President Truman, a Democrat—and Republican Representative JOSEPH MARTIN, who was House majority leader at the time—chose ex-President Herbert Hoover to head the Commission. This was done because of Hoover's great and deserved reputation as an organizer and administrator.

Three hundred of the Nation's ablest experts were enlisted into 24 task forces for investigation and analysis. After long and intensive work they came up with their recommendations. Many of them are now in effect, but any slackening of public demand for the fulfillment of the whole program will leave the job half-done.

Colonel SHERMAN. Congressman LANE, of all the areas covered by the Hoover report what field are you most concerned about?

Congressman LANE. Ed, tonight, in the brief time at my disposal, I can only skim the surface of one report—that dealing with personnel.

Even with a perfect organizational chart, the Federal Government cannot operate efficiently and economically, without able, enthusiastic workers. The Government's greatest single problem is how to secure—and keep—able men and women in its service.

Presidents, Cabinet members, Senators, and Representatives—and certain patronage appointments—come and go, depending upon changes in the political climate. But the day-to-day work of Government must have a basic continuity, built upon a real career civil service. We cannot afford the upheavals of the old days—for example, let us take the local level—when the first act of a newly sworn-in alderman was to fire most of the employees under his control and fill their places with his own, inexperienced friends. Transient political chiefs should determine policy on the national level. But we must have career employees to carry on the work.

The entire personnel system of the United States Government is clogged with frustrating red tape. Supervision is overcentralized in the Civil Service Commission. Recruiting machinery is slow and cumbersome. Little effort is made to recruit really promising young men and women and train them for the higher professional and administrative jobs. Of the best who are secured, many are forced to quit because of low Government pay. Government workers are disgruntled by inconsistent pay schedules, slow and uncertain promotions, lack of opportunity to offer criticisms and suggestions.

In one bureau checked, 24 subordinates receive as much compensation as their chief.

Colonel SHERMAN. That certainly is not conducive to good morale.

Congressman LANE. It certainly is not. Four to 8 months often elapse between announcement of examinations for a Government job and an actual appointment to the job. Recruiting consists mainly of posting notices on postoffice bulletin boards. No effort is made to enlist bright young college seniors as private businesses do. Planning and administration of the personnel program have not kept abreast of the times.

The Hoover report's objective is to select the best employees on merit, free from politics, and provide incentive and opportunity for advancement while eliminating waste—in brief—to encourage those who want to do a good day's work and to earn a chance to get ahead.

A few of the Hoover recommendations in this field have been accomplished. Salaries for top Civil Service positions have been increased. There has been some improvement in classification and procedure. A further achievement was the substitution of a performance rating system for the outmoded and cumbersome efficiency rating system.

With the vigilant support of you, the folks at home, so much more can be done.

The 15,000 basic skills in the Government service must be given—coherence, direction, common impulse, and daily leadership and drive.

Young men and women must be given a clear, manifest, and substantial inducement to seek career in public service.

Improved salaries, standards, and opportunities—these are imperative. Personnel operations should be decentralized in order to cut red tape. Modernized training and promotion programs should be instituted to help conscientious career employees.

The Civil Service Commission can put these and many other proposals into effect by administrative action on its own initiative.

The remaining recommendations of the report for better personnel management are being considered by the House and Senate Post Office and Civil Service Committees.

The Massachusetts Committee for the Hoover Report asks you to bear in mind that "You will get as good Government as you demand—or as poor Government as you will tolerate."

Invitation to Soviet Russia To Respond to Friendship Resolution

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. WILEY. Mr. President, yesterday I released to the press a statement on the subject of an invitation to Russia's leaders to respond to the friendship resolution which we in the Congress recently unanimously passed. At that time I promised to insert in the RECORD the interesting exchange between the Communist Party newspaper, Pravda, and the British Foreign Secretary, Herbert Morrison. I am happy to do so at the present time.

I ask unanimous consent, therefore, that the text of this exchange be printed in the RECORD at this point and that it be preceded by the statement which I issued yesterday.

There being no objection, the statement and correspondence were ordered to be printed in the RECORD, as follows:

SENATOR WILEY INVITES RUSSIAN PARLIAMENT OR LEADERS TO RETURN GREETINGS OF McMAHON RESOLUTION BY ANNOUNCEMENT OF PRO-PEACE ACTION IN KOREA; PROMISES TO PUT RUSSIAN MESSAGE IN CONGRESSIONAL RECORD IF REDS WILL RECIPROCATE

I am placing in the CONGRESSIONAL RECORD the very interesting exchange between the Communist Party newspaper, Pravda, and British Foreign Secretary Herbert S. Morrison. I believe that the fact that Pravda printed

Mr. Morrison's message to the Russian people is a very favorable omen which I, for one, would like to interpret as a possible sign of a better day—of possible closer relations between the Russian and western peoples and the press of the east and west.

I think, therefore, that this exchange is worthy of being preserved in the archives of the Congress in the RECORD because perhaps it is a symbol of the fact that the Russian people may be allowed to read more and more in their own newspapers about the real sentiments of the peoples of the west.

At this time I should like to invite Russia's leaders to respond concretely to the McMahon resolution of friendship, of which I am a cosponsor. By leaders, I refer to (a) The Presidium of the Supreme Soviet (Council) of the U. S. S. R. (which is the continuing unit of what is the equivalent of our Congress) or (b) the 14-man Politburo (the top leaders of the Communist Party) or (c) equivalent high officers or groups. (It should be noted that the Supreme Soviet of the U. S. S. R., consisting of two chambers, meets only once every 2 years, while the Presidium is in continuous session and would be the most feasible group to respond.)

So far, the McMahon resolution has unfortunately been met with complete silence in the Russian press and its receipt has not even been acknowledged by the press or by Nikolai Shvelin, chairman of the Presidium, who serves as President of the U. S. S. R. If Russia's leaders, possibly including Marshal Stalin, would respond to that resolution, I am sure that the response would be of great interest to the world, and I, for one, would be delighted at the very minimum, to place it in the CONGRESSIONAL RECORD.

ANNOUNCEMENT OF GENUINE PEACE IN KOREA WOULD BE BEST MESSAGE

Let such a response include announcement of some definite action—rather than mere words—whereby Soviet Russia could demonstrate concretely its desire for peace. A concrete demonstration, for example, would be the announcement that Red China has been advised to move no further reinforcements into Korea, and even to withdraw some of her latest reinforcements and to accept the present military lines for armistice-agreement purposes so as to break the stalemate at Kaesong. Such action would speak volumes and would be one of the most encouraging of all messages for the CONGRESSIONAL RECORD or for the world press.

The people of Russia should have no fear of the west. Obviously, we want to be friends with the Russian people; we feel that the ideas by which we live would be very helpful for the people of Russia to live by. We do not, however, desire to impose our will or our ways on the Russian people or any foreign people, and all that we ask is that the leaders of Russia cease trying to impose their will on other peoples.

We will eagerly await Russia's response and trust that it will consist of more than an expected rebuke from the New York Daily Worker.

No one is naive enough to think that a verbal response from Russia would of itself change the grim record of recent years, but perhaps it could be an omen of actions leading to genuine understanding. News of suggestion of an unbreakable, an honorable peace in Korea coming from Moscow is what we will hope and pray for—particularly those of us on the Foreign Relations Committee who have been working for a long time on cementing the bonds of international friendship.

[From the Christian Science Monitor of August 1, 1951]

PRAVDA SAYS MORRISON MASKS AIM TO NULLIFY "PEOPLE'S DEMOCRACY"

LONDON.—The text of the Moscow Communist Party newspaper Pravda's reply to

British Foreign Secretary Herbert S. Morrison's message to the Russian people:

"In his statement, Mr. Morrison raises two groups of questions: questions of domestic and foreign policy.

"1. Domestic policy: Mr. Morrison asserts that in the Soviet Union there is no freedom of speech, no freedom of the press, no personal freedom.

"Mr. Morrison is deeply mistaken. In no country is there such freedom of speech, freedom of the press, or personal freedom, freedom of organizations for workers, farmers, intellectuals, as in the Soviet Union. Nowhere are there so many workers' and farmers' clubs, so many workers' and farmers' newspapers, as in the Soviet Union. Nowhere has the organization of the working class reached the stage that it has in the Soviet Union. It is an open secret that the entire working class, literally all the workers of the U. S. S. R., are organized in trade-unions, just as all the farmers are organized in cooperatives.

"Does Mr. Morrison know of this? Evidently he does not. Moreover, apparently he does not even want to know of this—he prefers to draw his data from complaints coming from representatives of the Russian capitalists and landlords, who were driven out of the U. S. S. R. by the will of the Soviet people."

CAPITALISM CONDEMNED

"In the U. S. S. R., freedom of speech, freedom of the press, freedom of organizations does not exist for enemies of the people, for the landlords and capitalists overthrown by the revolution. Nor does it exist for incorrigible thieves, for subversive agents, terrorists and assassins sent in by foreign secret services for the criminals who shot at Lenin, who killed Volodarsky, Uritsky, Kirov, poisoned Maxim Gorky and Kulbyshev. All these criminals, from the landlords and capitalists down to the terrorists, thieves, assassins, and subversive agents, are out to restore capitalism in the U. S. S. R., to restore the exploitation of man by man, and to drench the country in the blood of the workers and farmers. The prisons and labor camps exist for these gentlemen, and for them only.

"Surely it is not for these gentlemen that Mr. Morrison seeks freedom of speech, freedom of the press, and personal freedom? Surely Mr. Morrison does not think that the peoples of the U. S. S. R. would consent to grant these gentlemen freedom of speech, freedom of the press, personal freedom, and, hence, freedom to exploit the working people.

"Mr. Morrison makes no mention of other freedoms of much greater significance than freedom of speech, freedom of the press, etc. Specifically he does not say anything about freedom from exploitation for the people, about freedom from economic crises, from unemployment, from poverty. Perhaps Mr. Morrison is unaware that all these freedoms have existed for a long time in the Soviet Union? And these very freedoms are the basis of all the other freedoms. Does not Mr. Morrison bashfully keep silent about these basic freedoms because, unfortunately, they do not exist in Britain and British workers still suffer from exploitation by the capitalists, in spite of the fact that the Labor Party has now been in office in Britain for 6 years?"

ATTLEE REGIME SCORED

"Mr. Morrison asserts that the Labor government is a Socialist government and that the radio broadcasts organized under the supervision of such a government should not meet with any hindrances by the Soviets.

"Unfortunately we cannot agree with Mr. Morrison. At first, when Labor had just come to power, one could have thought that the Labor government would take the path of socialism. Subsequently, however, it turned out that the Labor government differed little from any bourgeois government anxious to

preserve the capitalist system and insure impressive profits for the capitalists.

"The profits of the capitalists in Britain, are, indeed, growing from year to year, while the wages of the workers remain frozen, the Labor government protecting this regime of exploitation directed against the workers with every possible means to the extent of persecuting and arresting workers. Surely such a government cannot be called a socialist government?

"One might have thought that with the coming of Labor to power capitalist exploitation would be abolished, that steps would be taken to insure the systematic reduction of the prices of mass consumer goods, that the conditions of the working people would be radically improved. Instead of this, we observe in Britain the growth of capitalist profits and the freezing of workers' wages, a rise in the prices of mass consumer goods, and so on. No, we cannot call such a policy a Socialist policy."

BBC REPORTS ASSAILED

"As for the British broadcasts to the Soviet Union (BBC broadcasts), they are known to be aimed primarily at encouraging the enemies of the Soviet people in their efforts to restore capitalist exploitation. Naturally, the Soviets cannot support such antipopular propaganda which, moreover, constitutes interference in the internal affairs of the U. S. S. R.

"Mr. Morrison asserts that Soviet power in the U. S. S. R. is monopolized power, since it represents the rule of one party, the Communist Party. Arguing along this line, one can come to the conclusion that the Labor government is likewise a monopolized government, since it represents the rule of one party, the Labor Party.

"This, however, is not the point. The point is that the Communists in the U. S. S. R., in the first place, do not act in isolation, but in a bloc with nonparty people, and, in the second place, that in the course of the U. S. S. R.'s historical development the Communist Party proved the only anticapitalist, people's party.

"In the course of the past 50 years, the peoples of the Soviet Union have tested in action all the principal parties that existed in Russia—the party of the landlords (the Black Hundreds), the party of the capitalists (Cadets), the party of the Mensheviks (right-wing Socialists), the party of the social revolutionists (the defenders of the kulaks), and the party of the Communists. In the course of the revolutionary developments in the U. S. S. R., the peoples of our country swept aside all the bourgeois parties and made their choice in favor of the Communist Party, considering this party to be the only anti-landlord and anticapitalist party. This is a historical fact. Naturally, the peoples of the U. S. S. R. are giving their wholehearted support to the Communist Party which has been tested in battle.

"What can Mr. Morrison put forward against this historical fact? Does Mr. Morrison think that for the sake of a dubitable rigmarole with an opposition the wheel of history should be turned back and these long-deceased parties brought back to life?

"2 Foreign policy. Mr. Morrison asserts that the Labor government is for strengthening peace, that it does not in any way threaten the Soviet Union, that the North Atlantic Pact is not an aggressive pact but a defensive one, and that if Britain has taken the road of an arms drive this is because she has been compelled to do so inasmuch as the Soviet Union did not demobilize its army sufficiently after World War II.

"There is not a grain of truth in all these assertions of Mr. Morrison's.

"If the Labor government is really for the preservation of peace, why does it reject a five-power peace pact? Why does it oppose a reduction of the armaments of all the great powers? Why does it oppose the prohibition of the atomic weapon? Why does it

persecute those who champion the cause of preservation of peace? Why does it not ban war propaganda in Britain?

"Mr. Morrison wants his words to be taken for granted. But Soviet people cannot take anyone's words for granted. They demand deeds and not declarations.

"Equally unsound are Mr. Morrison's assertions that the U. S. S. R. did not demobilize its army sufficiently after the Second World War. The Soviet Government has already stated officially that it demobilized 32 age groups, that its army is at present approximately the size it was in peacetime before the Second World War, and that the British and American Armies, on the contrary, are double the size they were before the Second World War. Nevertheless, unsubstantiated assertions are continually advanced against these irrefutable facts."

ARMY LABELED DEFENSIVE

"Perhaps Mr. Morrison would like the U. S. S. R. not to have an army sufficient for defense? An army is in general a great burden for the national budget, and the Soviet people would willingly go to the length of doing away with a regular army, were it not for the danger from without. But the experience of 1918-20, when the British, the Americans, and the French (together with the Japanese) attacked the Soviet Union, attempted to sever the Ukraine, the Caucasus, central Asia, the Far East, and Archangel region from the U. S. S. R. and tormented our country for 3 years—this experience teaches us that the U. S. S. R. must have a certain minimum regular army necessary to defend its independence from imperialist invaders. There is no instance in history of the Russians attacking the territory of Britain, but history has witnessed a whole series of instances of the British attacking the territory of the Russians and seizing it.

"Mr. Morrison asserts that the Russians declined to cooperate with the British in the German question, in the question of European recovery. This is quite untrue. Mr. Morrison can hardly believe this statement himself. In reality, it is known that it was not the Russians, but the British and Americans who refused to cooperate, since they knew that the Russians would not agree to restoring fascism in Western Germany, to converting Western Germany into a base for aggression.

"As for cooperating in the matter of European economic recovery, far from rejecting such a cooperation, the U. S. S. R., on the contrary, was the one to propose it on a basis of equality and observance of the sovereignty of the European countries without any dictation from abroad, without any dictation from the United States of America, without the enslavement of the countries of Europe by the United States of America."

"VOICE OF PEOPLE" NOTED

"Equally groundless are Mr. Morrison's assertions that the Communists came to power in the people's democratic countries by violence, that the Cominform engages in the propaganda of violence. Only those who have set themselves the aim of slandering the Communists can permit themselves to make such allegations.

"Actually, as is known, the Communists came to power in the people's democratic countries as a result of general elections. Of course, the peoples of those countries threw out the exploiters and all kinds of agents of foreign secret services. But again, such has been the will of the people—the voice of the people is the voice of God.

"As for the Cominform, only people who have lost all sense of proportion can assert that it engages in the propaganda of violence. Cominform literature has been pub-

lished and is being published. It is known to everyone. It completely repudates the slanderous fabrications about the Communists.

"In general, it must be said that the method of violence and acts of violence is not the method of the Communists. Quite the reverse: History proves that it is the enemies of communism and all kinds of agents of foreign secret services that practice the method of violence and acts of violence."

DEFENDS COMINFORM

"One need not go far afield for examples. Quite recently the Premier of Iran, the Premier of the Lebanon, and the King of Jordan were assassinated within a short space of time. All these assassinations were perpetrated with the aim of forcibly altering the regime in these countries. Who assassinated them? Was it, perhaps, the Communists, the supporters of the Cominform? Surely it is ridiculous even to ask such a question. Perhaps Mr. Morrison, being better informed, could help us to clear up this matter.

"Mr. Morrison asserts that the North Atlantic Pact is a defense pact, that it has no aggressive aims, that, on the contrary, it is directed against aggression.

"If this is true, why did the initiators of the pact not invite the Soviet Union to take part in it? Why did they fence themselves off from the Soviet Union? Why did they conclude it behind the U. S. S. R.'s back and in secrecy from it? Has the U. S. S. R. not proved that it can and is willing to combat aggression, such as Hitlerite or Japanese aggression? Surely the U. S. S. R. did not fight against aggression any worse than, say, Norway, which is a party to the pact. How then are we to explain this surprising incongruity, to say the least?

"If the North Atlantic Pact is a defense pact, why did the British and Americans not agree to the Soviet Government's proposal to have the nature of this pact discussed in the Foreign Ministers' Council? As is known, the Soviet Government offered to have all the pacts it has concluded with other countries discussed in the Foreign Ministers' Council. Why are the British and Americans afraid to tell the truth about this pact, and why did they refuse to have the North Atlantic Pact discussed? Was it not because the North Atlantic Pact contains provisions about aggression against the U. S. S. R., and the sponsors of the pact are compelled to conceal this from the public? Was it not for that reason that the Labor government consented to Britain's conversion into a military air base of the United States of America for attacking the Soviet Union?"

ATLANTIC PACT PLAYED

"That is why the Soviet people regard the North Atlantic Pact as an aggressive pact directed against the U. S. S. R.

"This is borne out most strikingly by the aggressive actions of the Anglo-American ruling circles in Korea. For over a year now the Anglo-American forces have been tormenting the freedom-loving and peaceful people of Korea, destroying Korean villages and towns, murdering women, children, and old folks. Can those sanguinary actions of the Anglo-American forces be called defense? Who will claim that the British troops in Korea are defending Britain from the Korean people? Would it not be more honest to call these actions military aggression?

"Let Mr. Morrison point to a single Soviet soldier who has discharged his gun at any peaceful people. There is no such soldier. Then let Mr. Morrison explain properly why British soldiers are killing peaceful citizens in Korea? Or why, for that matter, British soldiers are dying on foreign soil far from their native country?

"That is why the Soviet people regard present-day Anglo-American politicians as instigators of a new world war."

[From the Christian Science Monitor of August 1, 1951]

MORRISON'S MESSAGE TO RUSSIAN PEOPLE CHALLENGES KREMLIN SECRECY

LONDON.—Following is the text of British Foreign Secretary Herbert S. Morrison's message to the Russian people published in the Moscow Communist Party newspaper Pravda of August 1:

"In a speech last month, I asked for this opportunity to have a message of mine reproduced in the Soviet press. I did so because I felt that while our papers were always ready to publish declarations by your leaders, British Government spokesmen were not properly reported in your newspapers.

"Knowledge of the truth is essential to understanding between peoples. But truth can only be arrived at if there is freedom to hear different points of view. Only then can people sift them and determine for themselves what they consider to be the truth. In Britain we impose no restrictions on access to all available news and views so the people can make up their own minds for themselves. Their views are neither made for them nor dictated to them.

"People can only draw independent conclusions properly for themselves if they have full knowledge of what is happening in the world around them. From our acquaintance with your press and radio, it seems to us that it is different in your country. Many facts and views are withheld from you, and there is no freedom of speech and free access to knowledge of how the rest of the world lives and thinks, which is essential to understanding of each other. This ignorance creates fear and suspicion of the motive of other peoples. I regret, therefore, that full knowledge of what is happening in my country is not available to you."

SOVIET BAR TO TRAVEL

"If you were able to meet more British people or free to travel to Britain, this ignorance could be broken down. I know that in the Soviet Union you meet very few British people, and, even when you do, you do not feel free to speak freely to them or with other foreigners and to exchange your ideas or hopes or fears. This is not our fault. Hundreds of thousands of our people go abroad for their annual holidays each year, and I am sure many would be glad to spend their holidays, if they could, in the Soviet Union. Your Government, for reasons I cannot understand, refuses to let you travel freely.

"You could learn more about us, too, if our newspapers and periodicals had free circulation in your country, which they have not, or if you could listen freely to our radio.

"Even that your Government makes difficult because, although we transmit broadcasts to the Soviet Union in Russian daily at 6:15 a. m., 5:15 p. m., and 12:15 a. m., Moscow time, they are artificially and intentionally jammed by your Government. I wonder why?"

ARBITRARY ARREST HIT

"What has your Government to fear? I wish it would follow our practice—broadcasts in English from the Soviet Union can be freely listened to and not only the British Communist daily paper but Pravda itself can be bought. Our view is that in a free and enlightened democracy everyone is able to judge for himself the truth of what he hears or reads.

"In Britain we set great store by such manifestations of personal freedom.

"Among them is the freedom from arbitrary arrest. If the police take someone into cus-

today, he must, within a maximum of 48 hours, be charged with an offense in open session in a court of law which is entirely independent of the Government, and he is always assumed innocent until proved guilty.

"British citizens are not removed from their homes, they are not deported, they are not sent to labor camps. If there is a knock at the door in the early morning, there is no fear that it is the police. It will probably only be the milkman or the postman. I wonder whether all of you can honestly say that you have this same sense of personal security which every British citizen enjoys. We prefer the situation whereby the Government, no less than the private citizen, is bound by law and the State has no unfettered power of arbitrary action.

"Among the other freedoms which the British enjoy are those of assembly. Persons of the most varied opinions can freely associate together and organize themselves into political or other societies whether in support of or opposed to the government of the day. This freedom, combined with others including freedom of speech and of the press, insures political freedom, which enables free choice of governments by the people themselves."

POLITICAL FREEDOM CITED

"In Britain, therefore, the different political parties, including Labor, Conservative, Liberal, and Communist, are free to express their different programs, to nominate their candidates, and put their views to the people, whether critical of the Government or not. Any evening in Hyde Park, the largest park in central London, spokesmen representing a variety of views can be seen speaking to crowds of Londoners and, if they wish to, freely criticizing the Government. Among them, most evenings, can be found Communist speakers.

"No group has a monopoly of power in Britain. Immediately before the war, the Conservative Party was in power, but in 1945 exercising their free choice of government through elections held by secret ballot and with candidates of two or more parties to choose from in the constituencies, the people of Britain elected a Labor and Socialist government. Since then that government, with no challenge of violence, has peacefully pursued its policy and the opposition its right to criticize and oppose.

"Nonetheless, much to our regret, it has been found necessary to divert much of our national energy to rearmament for defensive purposes. I would like to make it clear to you why we considered this necessary. You are told we are warmongers, that, in alliance with the other countries of Western Europe and the United States of America, we are arming to the teeth to attack the Soviet Union, that we are engaging in an arms race, that we are preparing for a new war. That is not true. None of it is true."

PEACE AIMS STRESSED

"The British people, who shared with the Russian people the sufferings of the Hitlerite war, do not want a third world war. We are a peaceful people who want to feel secure, but we are ready to make sacrifices to defend our democratic way of life and preserve the freedoms we enjoy. Our alliances are defensive alliances. With you we have the Anglo-Soviet treaty of alliance concluded in 1942. The North Atlantic Treaty is another defensive alliance. They are not directed against anyone except aggressors.

"Why is it, then, that we have considered it necessary to build up our strength and to devote so much of our national resources to rearmament when we would rather devote them to improving the standard of living of all of us?

"To be frank with you, it is because of the policy which has been pursued by the Soviet

Government since the end of the war. At the end of the war, we had hoped that the wartime cooperation between the great powers would continue and become strengthened in peace. We expected and strove for cooperation with you in the United Nations. But alas our hopes were disappointed. They were changed to doubts by your government's refusal to cooperate in Germany and in the economic rehabilitation of Europe."

RUSSIAN ARMED THREAT

"These doubts were confirmed as we watched the imposition of Communist regimes in Eastern Europe and the establishment of the Cominform. For if, as your leaders tell us, Communist and non-Communist states can live together in the world, why is it necessary for your government to pursue a policy and to found organizations whose only purpose seems to be to stir up trouble and international hatred?

"We saw that, while we had demobilized and disarmed, your government had retained vast armed forces and military establishments in being. Gradually we came to realize that the lack of balance in military power between the Soviet Union and the western powers was endangering our very existence, and that the lack of balance must be redressed. We did not want to turn over our resources to a new defense program, we wanted to carry on with our economic recovery. But we concluded that we must be strong enough to make clear that aggression, from whatever quarter it might come, could not succeed against us if we were to fulfill our purpose of avoiding war. For that is our main purpose—to avoid war, to preserve peace. It is the purpose of all our foreign policy and of all our diplomacy.

"Peoples everywhere are today afraid of war. We should like to see the causes of this fear removed and all grounds for suspicion and distrust between nations eliminated. On behalf of the British Government, I can assure you there is no reason to have any fear of our policy toward the people of the Soviet Union.

"I hope what I have written so frankly will help to bring about a better understanding between our peoples and that, now Pravda has opened its columns to me, I shall have further opportunities of putting the British point of view before the Russian people and of answering any observations which Pravda may wish to make.

"I send you the friendly greetings of my fellow countrymen and our sincere wish for the genuine cooperation of your country in advancing the peace and progress of the world."

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. POTTER. Mr. Speaker, under permission, I insert in the RECORD two newspaper stories giving evidence of the consistent support for the St. Lawrence seaway and power project among the young and thinking citizens in our communities. Such a group is the AMVETS, whose State convention has publicly de-

clared support for the development of the St. Lawrence Basin:

[From the Marquette (Mich.) Mining Journal of July 20, 1951]

AMVETS SUPPORT SEAWAY PROJECT

GRAND RAPIDS.—American Veterans of World War II (AMVETS), opening their annual State convention here today, pledged to support the proposed St. Lawrence waterway project. The executive committee in a preconvention session said the project was a military necessity.

[From the Bay City (Mich.) Times of July 20, 1951]

AMVETS SUPPORT SEAWAY PROJECT

GRAND RAPIDS.—American Veterans of World War II opened their annual State convention here today, pledged to support the proposed St. Lawrence waterway project.

Jack H. Hamm, of Detroit, public-relations director, announced action on the St. Lawrence question by members of the executive committee Thursday night in a preconvention session.

He said it had been decided by the committee that the project was a military necessity.

The West Point Situation—The Military Should Stop and Consider

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 6, 1951

Mr. MURRAY of Wisconsin. Mr. Speaker, it is indeed distressing to learn of the action of the military in connection with the dismissal of the 90 cadets from the West Point Military Academy. I do not care to be in the embarrassing position of condoning any wrongdoing, but I do think for the general welfare of the country it would not be very desirable to allow the military to do something that will be regretted for all future time.

It should be realized that they are dealing with boys at West Point, and any hasty action is going to affect not only the lives of these young boys, but their families as well. If there was ever a time when "to err is human, to forgive divine," it is now, and this philosophy should be adopted in dealing with the problem at West Point.

I would very much dislike to see any action taken that will be regretted later, and I would suggest that a cooling-off period of 30 days be granted until all of the facts involved in the incident can be explored.

I do not care to discuss what has happened in the executive branch of our Government, but we must keep in mind that many recently reported happenings are not good examples to the boys of our country.

The military should remember that people who live in glass houses should not throw stones. Within the past few

days we have observed the fact that the military took a man like Major General Crawford, who admitted that he misappropriated Government property, stating that he had done nothing more than many others but the others had not been apprehended—and instead of discharging him in disgrace, he was transferred to a station in Germany and we hear no more of it.

Neither is it too inspiring for the cadets at West Point to observe the military grafting from the Government. Even going so far as to haul the Vice President around the country when he is getting two or three thousand dollars for some of the speeches he has made. These young men at West Point might feel rather justified in cutting the corners and peeking over their shoulder in an examination.

My appointments to West Point and Annapolis are made on a civil-service examination basis and I do not know at this time whether or not any of them are included on the list to be expelled, but I do feel that the boys have been subjected to the wrong kind of discipline. I do not wish to imply that we should adopt the "spare the rod, spoil the child" attitude but the punishment should fit the crime.

It is a sad commentary when one realizes the little effort that has been taken to drive out the pinks and punks operating in and out of Government, and then the military takes such rigid action against boys who are willing to fight and die for our country. Reports reveal that 25 percent of the 1950 West Point graduating class have made the supreme sacrifice in Korea and no one knows what the future holds for those who follow.

Community's Responsibility in Use of Handicapped

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 6, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Community's Responsibility in Use of Handicapped Cited," by Howard A. Rusk, M. D., which appeared in the New York Times on Sunday, July 15, 1951.

There being no objection, the article was ordered to be printed in the Record, as follows.

COMMUNITY'S RESPONSIBILITY IN USE OF HANDICAPPED CITED—CONFERENCE SEES INABILITY OF STATE AND FEDERAL AID TO REHABILITATE NEEDED WORKERS

(By Howard A. Rusk, M. D.)

ANN ARBOR, MICH., July 14.—Two hundred persons representing labor, management, legislative bodies, citizens' groups, agriculture, and public welfare met for 3 days this week with an equal number of specialists in medicine, public health, social welfare, psychology, rehabilitation, and employment to

discuss rehabilitation and utilization of the handicapped worker over 40.

Cosponsored by the University of Michigan, the Federal Security Agency, the Michigan Office of Vocational Rehabilitation, and the Michigan State Medical Society, the conference was the fourth in a series of such annual meetings on problems of aging conducted by the university's Institute for Human Adjustment. The conferees, who represented 24 States and 3 foreign nations, had as their first objective the determination of how the Nation's manpower supply for mobilization could be expanded by rehabilitating the handicapped worker over 40 into the labor force. They did not lose sight, however, of the equally important permanent social and economic gains that would accrue to the disabled individual and to the Nation through such a program.

The conference confronted these facts:

1 While the population of the United States has doubled since 1900, the number of persons over 65, and proportionately over 40, has almost quadrupled. In 1900, four Americans in every 100 were over 65; today the proportion is almost 8 in 100.

2 While the percentage of the population 65 or older is increasing, the trend in the relative number of workers among older persons has been downward. In 1890 the percentage of men 65 or older in the labor force was 63.2; in 1950 it was 45.

3 In 1948 about 3,500,000 of the 11,500,000 persons 65 and over had no money income of their own, of the 7,500,000 with some income, almost half had less than \$500 a year.

4 Although illness is no respecter of age, persons in the middle and later years are more apt to be disabled. In one comprehensive study, the rate of acute and chronic illness among persons over 65 was 279 in 1,000 as compared with 171 among persons of all ages.

Their general conclusion was that no single unilateral action by any group could provide a solution. All types of skills and disciplines are needed to assist in resolving the interrelated medical, social, psychological, and economic problems faced by the older disabled individual.

COMMUNITY RESPONSIBILITY CITED

There was general agreement at the end of the 3-day session with the statement made in the conference's opening session by John L. Thurston, Deputy Federal Security Administrator, that the provision of such services was primarily a community rather than a Federal responsibility. Mr. Thurston asserted that although Federal programs of medical research, social security and vocational rehabilitation should be continued and expanded such Federal action should be primarily catalytic to local community action programs.

Particular emphasis was laid by the conference on the need for developing dynamic programs of rehabilitation in general hospitals as an integral part of medical care. There is great need, it was agreed, for the development of more large and coordinated community rehabilitation centers for teaching, research, and the care of patients with severe disabilities. But as the community hospital is the foundation of general medical care, the great bulk of rehabilitation services, particularly for those with less severe disabilities, they noted, must be given in such hospitals.

Few hospitals, they asserted, now have the staff, facilities, and equipment for such services. The greatest obstacle to the more rapid development of such services, both in general hospitals and specialized rehabilitation centers, is the lack of trained personnel.

Much of the failure of older persons to get needed rehabilitation services, they added, resulted from the lack of public funds, both State and Federal. Within their limited funds, it was asserted, public and voluntary

agencies have tended to concentrate on the rehabilitation of younger persons whose problems are more easily solved. Unless this is changed and public and voluntary agencies provide more service, Harry Becker, director of the social security department, United Automobile Workers, CIO, said the unions would attempt to write rehabilitation services for their disabled members into collective bargaining agreements.

CHANGE OF ATTITUDE HELD NEEDED

Although they recognized that there was great discrimination of the older worker in employment, the conference decided that the solution could be found only in increased understanding and a change of attitude by labor, management, the professions, and the public. Solution would not come, they said, from compulsory legislation that would require employers to hire certain quotas of either aged or handicapped persons.

Even on the question of the legislation proposed this week in Congress by Representative JACOB K. JAVITS, of New York, to make discrimination in hiring against workers over 45 an unfair employment practice, the score or so of persons queried by this writer expressed doubt as to its practicality. As one replied:

"Our primary problem is to get increased understanding by management, shop foremen, and others that people should be hired or retired on the basis of ability, not age and disability. Government compulsion, even to that degree, would probably negate rather than create the development of that understanding."

The conference showed that complex social problems can best be approached by responsible persons representing all elements of society voluntarily meeting in free and open discussion. Such a meeting was particularly refreshing in this particular period of history.

You'd Never Know the Old Place

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 2, 1951

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following article from the August issue of Nation's Business by Mr. Hodding Carter, a distinguished writer, of Greenville, Miss.:

YOU'D NEVER KNOW THE OLD PLACE—NATIVE SONS, RETURNING TO THE OLD HOMESTEAD, WILL BE SURPRISED NOW TO FIND CATTLE ON DEEP SOUTH ACRES ONCE GIVEN OVER TO COTTON THAT HAS MOVED TO THE WEST

(By Hodding Carter)

The parishioners of St. James Episcopal Church, of Greenville, Miss., were startled one communion Sunday last fall by the footgear of a kneeling male communicant. The stranger at the altar rail wore shoes that were pointed and extended far inside the trouser cuffs, and were supported by 3-inch heels. Unmistakably, the otherwise acceptably dressed worshipper was wearing cowboy boots. Probably a Texas visitor, they surmised, or even the star performer of a wild-west show.

But the wearer of the unorthodox boots was neither. He was, instead a bona fide Texas rancher who had migrated with five cow ponies, two ranch hands, 400 head of cattle, a round-up dog, and an attractive family to the greener pastures of the new cattle country in the lower Mississippi Valley.

Though his boots were a little surprising, the people of what is called the Mississippi Delta—that flat, alluvial land running south from Memphis to Vicksburg and lying between the Mississippi and Yazoo Rivers—were not otherwise astounded by his arrival. For more than 5 years, cotton's ancient kingdom, from Georgia to the banks of the Mississippi, has been growing as accustomed to the round-up and the stockyard auction as to the lint that clings all fall to the suits of the planter and the cotton classers.

This land, once prostrate from a one-crop cotton economy, also has been meeting other newcomers set apart less by their garb than by their occupations. Among the new citizens of the little river city in cotton's old kingdom could be counted several south Louisiana Cajuns, drawn to the Delta because they were experts at rice growing, and rice was becoming a major crop on the black, clayey buckshot along the river.

Their fellow newcomers to the Delta included Scandinavian-American dairymen from Wisconsin, attracted by the prospect of year round grazing and mild winters; an Iowan who knew about the management of grain elevators; a brisk Missourian who superintended the gigantic, newly constructed soy bean elevator and processing plant; an Arkansas hill-man who had gone into large-scale chicken processing, and two young New York brothers on whose newly acquired plantation grazed 600 head of sheep.

All of them, cowboys and Cajuns, Swedes and hillbillies and up-State New Yorkers, are human evidence of an amazing shift in agricultural operations. The changes are most pronounced in the South but they are taking place elsewhere in the nation as well; if the outsider is coming into the old cotton South to diversify and enrich its agriculture, and if most of the long-time citizenry are beginning to do the same thing, other southerners are following cotton on a long journey west.

Out in the Southwest and on the west coast, men who once talked only of livestock, or orchards, or large truck farming enterprises are shifting cotton's center to their irrigated lands. Corn to North Carolina, wheat to the East, cattle and corn and oats to the deep South, cotton to the West—not by happenstance or, at the other extreme, through Government order, but as the end result of a variety of agriculture programming.

It is difficult to determine the primary credit for this potentially most enriching and salutary development in the history of American agriculture. Certainly the original farm program back in the early thirties withdrawing lands from production of row crops, and putting a premium on soil conservation and new crops and healthy agricultural practices, hastened the day.

Equally certain, the new breed of farmers, developed in the agricultural colleges of the country, are more receptive to experimental change. The dictates of relative yields per acre, especially in a day of rising production costs on all fronts, make it imperative that the farmer turn from one staple to another or from staple to specialties in terms of what pays him best.

The demands of a wartime economy are significant too, as witness the upsurge in cotton planting—reversing the new trend in the deep South with not altogether fortunate results—because of the Government's demand for 16,000,000 bales in 1951.

These factors all have contributed to greater or less degree. But they are not as apparent, or as dramatic, and probably are not as productive of results as have been the more individualized relationships between the farmer on the one hand and on the other the field representatives of Federal and State agencies whose primary function is agricultural education. The State extension services, the scattered agricultural experimental stations, and the patient, sweating, dedicated county agents are all heart-

ening examples of Federal-State cooperation with the individual on a voluntary basis. They prove and prompt and persuade, and the farmer listens and generally follows suit, because he has learned that these educators talk sense.

Only a quarter of a century ago, probably a majority of southern farmers laughed at the agricultural scientists, the men who thought book learning had something to do with farming. Now, the agricultural experiment stations are visited by the multiplied thousands of believing farmers; the friendly agent is listened to, and the bulletins of the extension services are read and put into practice. And latterly the soil mappers have made the farmer think twice before he decides what to do with that pesky 100-acre tract.

This kind of governmental participation in farming practice is voluntary, or largely so, and it is likely to remain that way. As a reporter who has been covering the Department of Agriculture in Washington for many years explains:

"With planting patterns as they are at present, our farm output has about reached its limit. The best promise for any sizable increase is a more efficient use of the land, such as growing cotton in areas that produce the most per acre, and transferring the displaced crops to other sections which can produce them in equal measure. Thus cotton planting is increased in California and decreased in Georgia, while beef, dairy, or vegetable production is decreased in California and encouraged in Georgia. Another goal is economy in transportation. In World Wars I and II our most acute shortages often were not the result of an over-all scarcity in those commodities but rather the inability to transport them to the consumer."

Already the farmer has been conditioned to such a voluntary program, if it should be adopted, by the work of several agencies: the Soil Conservation Service, the Extension Service, the Production and Marketing Administration, the Forest Service, and the Rural Electrification Administration. They have been preaching selective agricultural production since the 1930's, and especially since World War II, at the level of the individual farmer.

So it is that historical patterns are being overturned, and that the transition will be hastened by education and by defense needs. The Nation will prosper.

As a case in point, take the production of cotton in Alabama and Georgia. Georgia's 10-year average was 243 pounds to the acre, and Alabama's 272 pounds. On the other hand, two newcomers to cotton production, California and Arizona, respectively, produced in 1950, 770 pounds and 634 pounds to the acre. Last year's total production in Georgia was only 510,000 bales and for Alabama 580,000, while California produced 880,000 bales and Arizona 428,000 as against a 10-year average of 188,000. It's easy to see in what direction cotton is heading.

But before feeling sorry for Alabama and Georgia, take a look at what is happening to livestock. Especially in the past 5 years, cattle raising has been encouraged, and new types of grasses, legumes, and other forage crops developed for the once worn-out cotton lands. Today, western cattlemen, accustomed to a ratio of 10 acres to 1 one of cattle, gape at a deep South production record of 1,200 pounds to the acre on once abandoned land.

In 1950 Georgia's and Alabama's and Mississippi's cattle increased more than 11 percent, while the Nation showed only a 3-percent rise—and California and Arizona actually declined 1 percent.

An even more emphatic demonstration of change appears in a comparison between the number of cattle in the legendary cattle-raising West, and in the South Atlantic States: 13,345,000 in the West, and 20,035,-

000 in the South Atlantic. And while the South showed an over-all increase of about 7 percent, the West showed a decline of 2 percent.

The same trend is apparent in dairying. The number of dairy cattle in the North Central States, including Wisconsin, decreased 1 percent in 1950 over 1949, while the number increased 4 percent in the South Atlantic and the South Central States in the same year.

Nor are these revolutionary switches restricted to cotton and cattle. Thanks to new hybrids and anhydrous ammonia applications, the South is now producing, on once exhausted lands, corn yields as great as or greater than those on the much higher-priced lands of the Corn Belt. A North Carolina experiment has shown that it cost only 71 cents a bushel to produce 81 bushels of corn per acre in contrast to \$1.24 a bushel on land producing only 23 bushels.

This development and cultivation of plants resistant to or adaptable to climatic peculiarities has other startling aspects. Dr. Robert M. Salter, Chief of the Bureau of Plant Industry, Soils, and Agricultural Engineering at the Agricultural Research Center, Beltsville, Md., predicts that the cost of growing wheat in huge yields per acre on irrigated eastern coastal land will some day be considerably less than for smaller yields on the southwestern plains.

This can be accomplished, he believes, through relatively inexpensive supplemental irrigation in the humid Eastern States.

"There are thousands of farms in the humid States where water is available and where the necessary investment in supplemental irrigation—light, inexpensive mobile systems—might pay off. There are more than 100 medium and large rivers in the eastern United States that flow year round. Adjacent to them are more than 50,000,000 acres of well drained land. Modern engineering would permit tapping these streams for supplemental irrigation without damming them.

The opportunities to supplement rainfall on the rich valley lands of the eastern United States are enormous. During the last few years, supplemental irrigation has been tried by farmers in the humid region with profitable results on orchards and on small fruit and vegetables and with encouraging results on pastures and certain field crops.

So much for the bright side of a transition that is both inevitable and, for the land and most men, promising. There remains the mounting problem of human displacement. It is considerably easier to effect an agricultural revolution than to make room for those who are uprooted by that revolution.

There are in the Southern States, more than 6,000,000 people—most of them Negro—who are being disadvantageously affected by proper land use.

The more skillful and better educated are finding a place on the tractor's seat and in the plantation mechanic's outbuilding, and are earning more than their fathers dared dream of. But they will be at best no more than one in four when the transition is complete.

It is estimated that Mississippi has lost since 1940 more than 250,000 of the 1,000,000 Negroes who made up approximately one half of its population ten years ago. Alabama and South Carolina will show a smaller but as significant a decline. The big cities of the East, and now more especially those of the Middle West and the Far West can tell you where many of them have gone, but they cannot give the answer as to how the newcomers and their gathering brothers will be absorbed. The switch to cattle and to new crops, and the mechanization of the southern farm, helps the majority; in terms of national defense and the restoration of the land, the change is welcome; but for the minority which weighs upon America's conscience, no profit accrues.

Evidence of Supreme Being Seen by Natural Scientists

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 31, 1951

Mr. DOYLE. Mr. Speaker, by unanimous consent heretofore granted, I am privileged to present herewith an article by the Associated Press, dated August 2, 1951, printed in the Christian Science Monitor.

Quoting distinguished scientists as it does, this article I hope will have a direct relationship to an awareness of being more humble.

In asking that this article be carefully read, I wish to respectfully state that I feel that America must not only get on her knees, but America must stay on her knees.

Mr. Speaker, do you know of any thought more important to mankind than his relationship to God?

The text of the article herewith follows:

EVIDENCE OF SUPREME BEING SEEN BY NATURAL SCIENTISTS

NEW YORK.—Does a natural scientist, unraveling the secrets of the physical universe, find any evidence there for the existence of God?

A national magazine says "Yes" to the question.

The report was contained in an article in Collier's based on a series of interviews with atomic physicists, astronomers, biologists, anthropologists, and mathematicians. It was headed "What scientists believe." The reporter, Howard Whitman, quoted all but a few of those he interviewed as saying they believe in a Supreme Being.

Their reasons, the article said, are varied. Some of them, after years of studying the patterns and laws of physical life, have arrived at the conclusion that a superior intelligence must have arranged these systems. Mr. Whitman quoted Dr. Jan Schilt, head of the astronomy department at Columbia University, as saying:

"The hope and faith of astronomers is that eventually we will find that it is so because it could not be otherwise. The greatest shock would be to find that it all just happened by chance."

One researcher, Dr. J. B. Rhine, of Duke University, told the reporter that the spiritual quality of man could be proved, scientifically, in the laboratory.

Dr. Rhine, a psychologist, has devoted most of his career to a series of experiments in "extrasensory perception." They have attempted to determine whether the human brain can reach out and obtain information beyond the limits of the five physical senses—whether an "extraphysical" factor exists in human beings.

Collier's said Dr. Rhine replied: "The question of the human soul boils down to this: Is there anything spiritual in human personality? We have proved in our laboratory that there is. We now have experimental evidence that such an extraphysical factor exists in man."

For centuries, the questions of proof, evidence, and demonstrability have constituted an abyss lying between the natural scientist and the man of religion.

The natural scientist refused to accept anything on faith. If a phenomenon could

be measured, set down in formula, and repeated invariably, he believed it. Without this evidence, he rejected it.

Some researchers still hold to that position, the article said. One told the writer that a god of love would not have permitted the existence of the materials from which the A-bomb is made.

Another said, however, "as I work at the atomic pile, I feel that God is there, I have faith that in the long run atomic energy will be beneficial."

Still another replied "Where did mass and energy come from? We know we can't make it. We have found laws to prove we can't make it. There must be a higher power who can make it."

The magazine quoted Dr. Robert A. Millikan, California physicist, as saying "just how we fit into the plans of the Great Architect and how much He has assigned us to do, we do not know—but fit in we certainly do somehow, otherwise we would not have a sense of our own responsibility."

Education in Israel

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1951

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert the following article which appeared in the May 1951 issue of the Smith Alumnae Quarterly:

DESTINY IN THE CLASSROOM

(By Katharine Asher Engel, president, National Council of Jewish Women)

(The National Council of Jewish Women is now in its fifty-eighth year of a broad program for human betterment. At the close of the last war, it undertook the most ambitious overseas program in its history. Council provides aid to Israel education and awards scholarships which enable Jewish leaders in the fields of social work to take advanced courses in American universities. In the following article, Mrs. Engel describes the cultural quandary of present-day Israel and the role the organization plays in helping to resolve it.)

In a people's struggle to survive, its soldiers fight the battle of the moment, but its teachers fight the battle of eternity. Today in the new nation of Israel, the power of the classroom to shape a people's destiny is being put to one of the severest tests in history. A flood of eastern peoples is now inundating the occidental country of Israel. Whole segments of the Near East—people whose habits and ideas have been virtually unchanged since ancient times—are transplanting themselves from their ancestral ghettos to the land promised of old. They are coming as peaceful settlers, and in high hopes, and they are being welcomed as equals.

These newcomers are all Jews, but mostly middle eastern Jews, quite different from the longer-established European-grown residents of Israel, the sophisticates of modern humanism. The ingathering has set in motion a huge ethnic whirlpool in the little country. While it might have daunted a less adaptable or less dedicated people, the Israelis have no intention of stemming the tide.

They hope that western civilization will emerge predominant; they hope that the ancient habits of the newcomers will contribute to the cultural blend of the nation without overwhelming it; that an amalgam

of east and west will emerge embodying the best that each has to offer. But because of the sheer mass of the influx from the east, this means they will have to bend every effort, short of halting the immigration itself, to prevent the country from succumbing to the backwardness, the traditional preoccupation with the past, of these incoming easterners. And they are enacting one of the most valiant episodes in the history of nations.

In view of the events of the last 2 decades, what they are attempting is quite logical. Not long ago, as a hunted people, driven into the streets of Europe, slipping through the woven mesh of death camps, they pursued the dream of a place where they would be welcome. They won such a place. And then they had to win a new struggle to hold it—a war against seven neighboring nations which had overwhelming superiority in numbers and equipment.

THIRD PHASE OF STRUGGLE

The assimilation of unlimited immigration is the third phase of the struggle. And they are fortified spiritually to tackle it. The idea of a homeland has taken powerful hold on their minds. What they had lost and sought and regained, having once become a vision, has remained a vision. It is as though they have been permanently wonder-struck at having a country.

Israel is a little larger in size than the State of Rhode Island. Her present population is about a million and a quarter—almost double her 630,000 population in 1948, at the close of what the Israelis call the war of independence. Her industry and resources are still largely undeveloped. Living standards have been lowered considerably by the necessity to stretch available income over increasing numbers of people. Yet she expects another 500,000 newcomers, or a 40 percent increase over the present population, during the next 3 years.

The country has already absorbed a majority of Europe's displaced Jews and almost all the Jews of Yemen. The immigrants who are pouring in now come from Morocco, Algeria, Egypt, Iraq, Iran, Saudi Arabia, Kurdistan, Afghanistan, Tunis, Poland, Czechoslovakia, Rumania. They are the poor, the sick, the persecuted, streaming over the floodgates to what they hope will be a better life.

If you can picture the typical man of the Arab world riding on a donkey while his wife follows from behind, you get an idea of the cultural problems the middle-eastern immigrants are bringing with them to Israel. The men are accustomed to being supported in no small part by their women and children; the women are accustomed to serving, inconspicuously. Ordinary sanitary facilities are unknown. Eating utensils, chairs, and beds are curiosities.

Typical is the instance of a group of Moroccan arrivals who entered a bus in an Israeli city one day and sat down on the floor. One of the other passengers pointed out to them that there were benches for their use. They sat on the benches until the westerner alighted; then they returned to the floor. The habits of centuries aren't broken by a word.

There is no condescension in the Israeli attitude toward immigrants. The latter are "different," and some of the differences will have to be overcome. Since the birthrate of the immigrants is among the highest in the world, the Israelis know that their western culture is in danger of being engulfed.

With the same sobriety with which they undertook the enormous burden of accepting almost the entire Jewish population of the Middle East, they realize that the changes that can be wrought in the traditions of the adults are limited. To the next generation, however, they hope to impart the full benefit of western culture. Naturally, this hope rests mainly with the schools.

The old dictum of H. G. Wells that history is a race between education and catastrophe is applicable to Israel today.

EDUCATIONAL CHAOS

The schools of Israel, however, present a picture of confusion. While they are doing the job with gusto, they are seriously hindered by their own division into separate systems, or, more accurately speaking, trends. Interested groups which developed control over the schools under the indifferent permissiveness of the mandate government still retain it. As a result, there are four separate types of elementary schools, all supported by the government but run in accordance with the variant consciences of the orthodox (Mizrachi) party; the extremely orthodox (Agudat Israel) party; the all-Israel labor confederation (Histadrut), and the secularist, business-oriented General Zionist Party.

These groups also sponsor the high schools, which support themselves by charging nominal tuition fees; and they are jealous of their prerogatives. Although this situation is the major thorn in the side of educational progress here, it is not the only one. There is also an acute shortage of teachers in the country.

One of the most hopeful aspects of the Israel education scene is the School of Education of Hebrew University in Jerusalem, where nonpartisan teachers are being trained in increasing numbers. The orientation of the school corresponds roughly to that of the General Zionist, or "general" trend in the lower schools; that is, it is not interested in inculcating any special ideal beyond the over-all one of patriotism.

Since it is the only institution in Israel which is training teachers and administrators for secondary schools, its graduates some day will be the backbone of a normal and uniform educational system in the country. Even now the school is setting high standards for teachers, and is arming its students with advanced and specialized techniques for dealing with the multiple chaos that they will have to help overcome.

A majority of the students at the university—about 2,000 at present—plan to teach; and they take courses at the School of Education. It is, by and large, a foremost weapon in Israel's struggle to reestablish cultural order and remain a modern, democratic society.

Israel's survival as an independent and reasonably advanced nation concerns not only the Israelis. Her performance in the war against the Arab countries has won her high importance in the global calculations of the western allies. Now considered a western outpost and a stabilizing influence in the Middle East, she recently was granted economic aid under the point 4 program of the United States.

COUNCIL AIDS THE SCHOOL

A number of private American organizations, too, are engaged in helping Israel. The National Council of Jewish Women is among them. With long and continuing experience on the educational and social welfare fronts of the United States, council recognized several years ago the crucial role in which the times were to cast the School of Education, and undertook to give it financial support. With the exception of the rent-free quarters supplied by the university and of a few small grants from elsewhere, it is now sponsored solely by council. Its faculty and student body have doubled since council aid began in 1947.

With the guidance of a board of foremost American educators, the school is pioneering new methods and ideas with which to meet its heavy responsibilities. It is operating an experimental nursery school and kindergarten, and a high school where students do their practice teaching. It plans to institute an adult educational program.

We of the National Council of Jewish Women derive something more from our support of this endeavor than the personal satisfaction of taking part in something worth while. We know that, as Americans, we are acting directly in our self-interest. For certainly it is the interest of America, in these times, to swing the cultural balance of Israel from the authoritarianism of the ancient east to the better way of life of the free world.

"How I Became a Dope Addict Before I Was 18"—Lucy Hooked on Heroin by Friend's Coaxing

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 26, 1951

Mr. CLEMENTE. Mr. Speaker, under permission previously granted me, I ask that there be printed in the Appendix of the RECORD the second of a series of articles on teen-age drug addiction published recently by the Long Island Daily Press:

"HOW I BECAME A DOPE ADDICT BEFORE I WAS 18"—LUCY HOOKED ON HEROIN BY BOY FRIEND'S COAXING

(By Geraldine Scott)
